THERE is no industry connected with the production and sale of a deadly poison so little subject to control and regulation as the gas industry. As originally made, illuminating gas, distilled from coal of suitable quality, showed an average composition of 47.9 per cent. of hydrogen, 38.67 per cent. of marsh gas, 6.74 per cent. of carbonic oxide, and the remainder of olefants, carbonic acid and nitrogen. It was capable of destroying life if inhaled in sufficient quantity, but such inhalation could scarcely occur without the knowledge of the person affected. The deaths from accidental poisoning due to the leakage of gas of this quality were so infrequent as to be statistically negligible. With the advent of water gas the situation changed quickly and completely. Carbureted water gas has the following average composition: Hydrogen, 30.14 per cent.; carbonic oxide, 30.79 per cent.; marsh gas, 19.10 per cent.; olefants, 10.65 per cent, and the remainder carbonic acid, nitrogen and oxygen. In both kinds of gas the deadly element is carbonic oxide, and the water gas is nearly five times as deadly as coal gas. Measured in deaths from gas poisoning, the difference is very much greater. Carbonic oxide is probably the most subtle blood poison known to chemistry. It has for the hemoglobin of the blood about four hundred times the affinity of oxygen, is absorbed by it with avidity, and when about 75 per cent. of saturation is reached death ensues inevitably, since the capacity for oxygen absorption is not then sufficient to sustain life. What is usually erroneously spoken of as gas asphyxiation is really blood poisoning by carbon monoxide, and the frequency of its occurrence in cities and towns supplied with water gas for illumination should attract more attention than it has thus far received.

It cannot safely be assumed that the dangers of carbon monoxide poisoning are expressed in the number of fatalities reported as the result of leakage from defective pipes and fixtures in dwellings. Large as this total is, it is relatively un-

important compared with the effect upon the public health of gas leakage in less than immediately fatal quantities. Judging from experiments upon animals, air containing more than four-tenths of 1 per cent. of carbon monoxide would, after a sufficient time, always cause death in man, and two-tenths of 1 per cent. would, in many cases, prove quickly fatal. The deadly character of this gas undoubtedly accounts for the prevalence of ænemic conditions among the badly housed of our city's population, as well as for the wide prevalence of a form of so-called "malaria," which refuses to yield to other treatment than a change of air and escape from contact with a gas-vitiated atmosphere. This subject was critically investigated some three years ago by a committee of the County Medical Society, and a report made which attributed much of the undiagnosable illness, with dizziness, shortness of breath, drowsiness, palpitation and impaired muscular power as typical symptoms, to poisoning by illuminating gas in quantities too small to attract attention by its odor. In the judgment of physicians who have studied this subject, the effect of carbonic oxide poisoning is cumulative, and the most serious and even fatal results are possible as the result of continued exposure to a less percentage in the air breathed than would at once destroy life or produce serious consequences. The reason for this is that the combination of carbonic oxide with the hemoglobin is much more stable than that with oxygen, which it excludes. In consequence of the restricted oxygen supply to the tissues during prolonged exposure to carbon monoxide, serious changes may be produced in the brain, heart and other organs, and grave lesions are to be expected, the causes of which are very likely to be overlooked in diagnosis, since they are external and artificial, and not apparent to the senses.

It is to be regretted that by no means all the trouble due to gas leakage occurs in consequence of the negligence of householders. Probably a much greater aggregate of evils results from the infiltration into dwellings of gas which has leaked from mains and services outside the foundation walls of consumers' houses. When it is remembered that the

gas leakage under the relatively impervious pavements of New York is somewhere between three thousand and five thousand millions of cubic feet per annum, that it goes somewhere with unimpaired toxical and incendiary power tho it may wholly lose its typical odor by infiltration thru the soil, and that in one way or another it mingles with the air we breathe, awake or asleep, it assumes a serious aspect for the thoughtful. The frequency of manhole explosions in sewers and conduits shows where some of it may be found accumulated; where the rest goes is of even more consequence. What it does to health and life and property is of still greater public concern. The suspicion that the companies engaged in the manufacture and sale of gas are not doing all that is possible to be done to minimize the evil of gas leakage would seem to point to the benefits to be expected from a critical investigation of the whole subject. In a discussion of the fire hazard of gas-leakage *Insurance Engineering* said, significantly: "If the truth was known, and appreciated in all its seriousness, it would create a popular panic." There is danger that such a panic will occur, and that all sorts of impracticable and impossible laws will be pressed upon the attention of the legislatures. It is a large and many-sided subject, with immediate and practical interest for every city and town which has a gas distribution.

The Laymen's Movement

While doubtless men have given more money to missions, home and foreign, than women, because they have more money to give, it is the women who have provided the enthusiasm, until of late years the women's organizations have provided a very large part of the funds. It was time for the men to bestir themselves, and this is the occasion for the Laymen's Missionary Movement, which last week called out so famous a meeting in this city. While there were admirable addresses by Mr. Mott, Dr. Capen, Mr. J. Campbell White and Mr. McBee—for the ministers were not allowed to be in evidence—the principal speaker was Secretary Taft. His address was all the more acceptable from being unpremeditated, for visitors had

prevented him from making the preparation he had desired. His address was in the warmest sympathy with Christian and missionary labor, and what he said had the power of personal knowledge in the Philippines and in China, of which he specially spoke. He gave a good word to the early Catholic missionaries, and he believed that the emulation of Protestant missions would be of help on both sides. For it is the missionary who prepares best the way for civilization and fits the people for the political duties of which he felt qualified to speak. Particularly are we pleased with what he said of that spirit of fraternity which missionaries represent, and which is so sadly lacking in many who represent trade. There was a song in Manila which he heard there: "He may be a brother of William H. Taft, But he ain't no brother of mine."

That is the contemptuous spirit which missions fight, and Secretary Taft condemns. He knows the evil of it, and the good work of Christian missionaries in the East.

The Clergy at the Bar

It is an irony that the Church is such a supporter of the British saloon, the public house and its barmaids. A Member of Parliament, Mr. Bottomley, has taken the trouble to look up the lists of stockholders of brewery and allied companies, and he finds in them the names of more than a thousand clergymen. Of course, those who own stock are bound to think the business legitimate, and so long as the £10 shares in the Guinness Company sell at £57 we may presume they will oppose the present Government's effort to reduce the number of public houses. Of the 174 clerical shareholders of the Guinness Company, 144 reside in Ireland. Among them are one lately deceased bishop, deans and canons. Catholic and Protestant. The Dublin Jesuits are more numerous represented than any other single institution. An old writer lamented that in his degenerate day the canons of the Church had given way to the cannons of the army, the mitre to niter, and St. Peter to saltpeter. In Great Britain and Ireland the exchange is made of spirit for spirits, holy water for eau-de-vie, and of the breviary for the brewery.

Protection of Aliens

We are glad that at the meeting last week of the American Society of International Law a prominent subject was that of the protection of foreigners by Federal legislation. We have often spoken of the wrongs suffered by Italians, Chinese and Japanese at the hands of mobs, where the local police was unable or unwilling to protect them, or even to punish those who had injured or killed them. More than once the President has asked such legislation, bringing the punishment of such offenses under the United States courts, but Congress has done nothing, afraid to seem to interfere with States rights, and our Department of State has been compelled to submit to the humiliating terms of paying damages to a foreign government. The first case that called attention to the need of legislation was one in which Italians were taken by a mob from a prison in New Orleans and hanged. Now that our lawyers are consulting seriously on the subject we may hope that within ten or twenty years Congress may be reached.

The New York State Commissioner of Labor announces that during the year ending September 30th, 1907, a total of 19,431 employees in factories and quarries in New York State were reported injured by accidents, nearly 6,000 greater than the number reported in 1906 and four times the number in 1903. The fatal accidents numbered 344, as compared with 259 for the previous year. If these appalling figures represent the normal incidence of industrial production, then the workers should be protected by some sort of employers' liability insurance. If, however, they result from preventable conditions in the factories and quarries, then our State inspectors badly need inspecting for not enforcing the laws or demanding ones adequate for the protection of the workers' lives and limbs.

The new Oklahoma constitution is the ne plus ultra of progress, for Mr. Bryan has so informed us; but those who lead the party in that new State are not familiar with the principles of academic freedom and equality, if we may trust *Science*, which tells us that every Re-

publican has been deposed by the Democrats from the head of the State institutions, including the University of Oklahoma, the College of Agriculture and the Mechanic Arts, the University Preparatory School, the Central State Normal School, the Northwestern State Normal School and the Southeastern State Normal School. We should think the Democrats appointed to take their places must feel very small.

Every step toward international peace is a blessing to the world, and therefore the agreements reached on April 23d, by which the states bordering on the Baltic agree to respect each others' territorial possessions, are of very great importance. For centuries the Baltic was the scene of warfare. The Hanseatic League, the Dutch and the Danes, Sweden and Denmark have in turn controlled the passage of commerce. These agreements assure us that Germany will not forcibly annex Holland or Denmark, nor will Russia annex Norway. Every year reduces the dangers of war, while every invention makes war more dangerous.

In his new paper, *The Issue*, of Jackson, Miss., ex-Governor Vardaman urges the erection of a monument in honor of the Ku Klux Klan, and would have its history taught to Southern boys and girls. It was, he says, "the most orderly, law-respecting, law-loving body that was ever organized and maintained in violation of the law, and drove from power a band of human vampires who, under the guise of law, robbed and plundered and opprest an outraged people." That is a strange view of law.

Immigrants to this country from the north of Europe will find this a belated country. Denmark, following Sweden, Norway and Finland, is giving the suffrage to women, not because they made violent demands for it, but from a sense of justice. The new law gives suffrage at communal elections to men and women alike if twenty-five years old and taxpayers; also to all wives of taxpayers. This does not apply to electors to the Lower House, who must be males thirty years of age.

INSURANCE

The Value of a Man

"How much is the King worth?" used to be a favorite question propounded to those claiming wisdom and advanced knowledge. The same question now crops up again in our time in a paper read before a recent meeting of the American Medical Association. That it is not always safe to accept a man's personal estimate of his own worth long ago became a certainty. The paper in question wisely remains silent on a man's personal estimate of himself, but substitutes rather the earning capacity of the average workingman in England and Germany, using $3\frac{1}{2}$ per cent. as the interest factor, and upon such a basis the finding is that a man's greatest value is at age twenty-five, when his value as a wealth producer is \$5,488.03. Some variation is naturally to be looked for according to the man's occupation and the training he has had for it. Thus, while the economic value of the workingman cited is attained at age twenty-five, a professional man lingers in reaching his highest value until age forty, when he comes into an attained value of \$29,344.68. In this country something would have to be added to the figures given for England and the Continent, because of greater average incomes in all lines of industry. Irrespective of and above and beyond what may perhaps be called the machine valuation of a man, there is the man's value to his family or himself as a wealth producer that is not unlike the value a heirloom has beyond its intrinsic value. Every man is, to a certain extent, a machine, and his life has a value in dollars and cents that is calculable because the mortality tables set forth just how many men out of a large number will die each year. The method used by life underwriters in estimating a man's value is to multiply each man's life expectancy, that is to say, the number of years he may expect to live according to experience tables, by his earning power per year in excess of the necessary cost of his own individual living, and the result is the approximate money value of his life. Thus the proper amount of a given man's life insurance

is figured out, and any man can in this manner obtain a working basis for determining the face of his life insurance policy.

Have You an Estate?

If you should die tonight, how much income would be left to your family or dependents?

| At 4 Per Interest it Requires | To Yield an Annual Income of |
|-------------------------------------|------------------------------------|
| \$25,000..... | \$1,000 |
| 50,000..... | 2,000 |
| 75,000..... | 3,000 |
| 100,000..... | 4,000 |
| 125,000..... | 5,000 |
| 250,000..... | 10,000 |
| 375,000..... | 15,000 |
| 500,000..... | 20,000 |
| 625,000..... | 25,000 |

The family man who is not insured and who is living up to his full income may well think very seriously about the figures given in the accompanying table, issued by the Northwestern Mutual Life Insurance Company. A little economy along certain lines would make the payment of his premiums possible and give his dependents an estate in case he died suddenly.

Obituary

Samuel R. Shipley, financier, life underwriter, and from 1865 to 1895 president of the Provident Life and Trust Company of Philadelphia, died in Philadelphia, on April 22d. He was one of the wealthiest men of his home city and was a member of the group of one hundred men recently named by Senator La Follette as having the financial destinies of the country in their grasp. His death is the first of the group. Mr. Shipley had been ill for several months. He was born of Quaker ancestry in Philadelphia, January 8th, 1828. His father, Thomas Shipley, was active in the formation of the American Anti-Slavery Society, and also served as president of the Pennsylvania Abolition Society. His mother was Lydia Richards, a descendant of John Sharpless, who came to America with Penn on the "Welcome" in 1682.

FINANCIAL

Banking Reform Laws

PROVISION for the banking reforms suggested by the Hepburn Commission, and embodied, with some additions, in the bills prepared and vigorously supported by Bank Superintendent Williams, is now made in twenty-one statutes enacted by the Legislature at Albany. These new laws are of interest to the entire country, because they make new and needed safeguards for banking in the great city which is the heart of the financial organism of the United States. To several of these measures we have already referred. It may be recalled that immediately after the beginning of the panic, THE INDEPENDENT held that a much larger cash reserve should be required by law to be kept in the vaults of the great trust companies. One of the new laws increases to 15 per cent. the vault cash reserve against demand deposits in Manhattan Borough, with a smaller increase for companies in other boroughs of the city. At the same time it is provided that State banks in Manhattan must have a cash reserve of 25 per cent. (instead of 15), and that 15 per cent. must be in vault. With respect to the trust companies there are also new restrictions and regulations concerning loans. In the series of new statutes, the most important are those relating to cash reserves and another which aims to end the scandal of costly receiverships under the Attorney-General by transferring initiative and control to the Bank Superintendent. It also gives this officer large powers with respect to offending or suspected institutions.

These new laws in New York are clearly the most valuable result, in remedial legislation, that has followed the panic disclosures of weakness or inadequate supervision, and they deserve to be studied carefully in other States.

....With its March number, *Freight, the Shippers' Forum*, appears under the management of a new corporation, of which John W. Abrahams is president and E. F. Eilert vice-president and treasurer, and whose aim is to furnish to the shipping public a high-class trade magazine, giving the latest information

as to developments in the relation of shipping interests to government, the relation of shippers to railroads, and the like, entirely without political purpose.

....Mortimer N. Buckner and Frederick J. Horne have been elected vice-presidents of the New York Trust Company, of which Otto T. Bannard is president. Mr. Horne was formerly secretary. The new secretary is Herbert W. Morse, and the assistant secretaries are James Dodd, Arthur S. Gibbs and H. W. Shaw. One of the former vice-presidents, Willard B. King, has been elected president of the Columbia Trust Company, and the other, Alexander S. Webb, Jr., has been elected president of the Lincoln Trust Company. The capital of the New York Trust Company is \$3,000,000, and the surplus and profits are \$10,500,000.

....The Mutual Alliance Trust Company, of this city, is about to occupy the new and commodious fireproof building erected for its East Side Branch, at 266 and 268 Grand street. In the basement will be a modern safe deposit vault. The main office is at 66 Beaver street, and there is another branch at 116th street and Lenox avenue. The company was organized in 1902 by interests closely identified with the Mutual Life Insurance Company. In January, 1906, control passed from those interests to the business men of the Hanover Square district, and an interest was acquired by the Hanover National Bank, which is represented in the management. The institution's total resources amount to \$4,810,724; it has a capital of \$500,000, paid up in cash; the surplus and undivided profits are \$546,242, and the deposits are nearly \$4,000,000. Paul Schwarz, the president, was formerly a successful and well-known cotton merchant. The other prominent officers are Albert L. Banister, vice-president; W. F. H. Koelsch, secretary and treasurer; Webb Floyd, assistant secretary; G. S. Mott, assistant treasurer. Among the directors are President Blumenthal of the United Dressed Beef Company, President Nelson of the American Typefounders Company, and others representing very substantial business interests.

NEW YORK, THURSDAY, MAY 7, 1908

No. 3101

Survey of the World

A Message on Labor and Corporations

President Roosevelt sent to Congress, on the 27th ult., a message of about six thousand words, urging again that action be taken concerning injunctions in labor disputes and for the amendment of the Sherman Anti-Trust law. At the beginning he speaks of his message of March 25th, and of progress made by Congress since that date with respect to the legislation then recommended. He asks again for the establishment of postal savings banks and for forest reserves in the Appalachian Mountain region, and remarks that failure to appropriate money for the examination of railway companies' books by the Commission "would amount to an attack on the new law at its most vital point, and would benefit, as nothing else could benefit, those railways which are corruptly or incompetently managed." There seems to be, he says, much doubt about two of the measures he recommended in March—those relating to injunctions and to the control of great corporations by the national government:

"They are blind who fail to realize the extreme bitterness caused among large bodies of worthy citizens by the use that has been repeatedly made of the power of injunction in labor disputes. Those in whose judgment we have most right to trust are of the opinion that while much of the complaint against the use of the injunction is unwarranted, yet that it is unquestionably true that in a number of cases this power has been used to the grave injury of the rights of laboring men. I ask that it be limited in such way as that I have already pointed out in my previous messages, for the very reason that I do not wish to see an embittered effort made to destroy it. It is unwise stubbornly to refuse to provide against a repetition of the abuses which have caused the present unrest. In a democracy like ours it is idle to expect permanently to thwart the deter-

mination of the great body of our citizens. . . . A persistent refusal to grant to a large portion of our people what is right is only too apt in the end to result in causing such irritation that when the right is obtained it is obtained in the course of a movement so ill considered and violent as to be accompanied by much that is wrong."

Every far-sighted patriot, he says, should "protest against the growth in this country of that evil thing which is called 'class consciousness'":

"The demagog, the sinister or foolish socialist visionary who strives to arouse this feeling of class consciousness in our working people, does a foul and evil thing; for he is no true American, he is no self-respecting citizen of this Republic, he forfeits his right to stand with manly self-reliance on a footing of entire equality with all other citizens, who bows to envy and greed, who erects the doctrine of class hatred into a shibboleth, who substitutes loyalty to men of a particular status, whether rich or poor, for loyalty to those eternal and immutable principles of righteousness which bid us treat each man on his worth as a man without regard to his wealth or his poverty. But evil tho the influence of these demagogues and visionaries is, it is no worse in its consequences than the influence exercised by the man of great wealth or the man of power and position in the industrial world, who by his lack of sympathy with, and lack of understanding of, still more by any exhibition of uncompromising hostility to, the millions of our working people, tends to unite them against their fellow-Americans who are better off in this world's goods."

National Control of Combinations

Turning to the Anti-Trust law, he urges that control of corporate wealth in interstate business can best be exercised by preventing the growth of abuses rather than merely by trying to destroy them when they have already grown:

"In the highest sense of the word this move-

ment for thoro control of the business use of this great wealth is conservative. We are trying to steer a safe middle course, which alone can save us from a plutocratic class government on the one hand, or a socialistic class government on the other, either of which would be fraught with disaster to our free institutions, State and national. We are trying to avoid alike the evils which would flow from Government ownership of the public utilities by which interstate commerce is chiefly carried on, and the evils which flow from the riot and chaos of unrestricted individualism."

Only shortsightedness and utter failure, he says, to appreciate the grossness of the evils to which a lack of official regulation for many years gave rise can excuse the well-meaning persons who now desire to abolish the Anti-Trust law outright or to amend it by simply condemning "unreasonable" combinations. Power should be lodged somewhere in the executive branch of the Government to permit combinations which will further the public interest, but the burden of proof should be upon the combinations to show that they have a right to exist:

"No judicial tribunal has the knowledge or the experience to determine in the first place whether a given combination is advisable or necessary in the interest of the public. Some body, whether a commission, or a bureau under the Department of Commerce and Labor, should be given this power. My personal belief is that ultimately we shall have to adopt a national incorporation law, tho I am well aware that this may be impossible at present. Over the actions of the executive body in which the power is placed, the courts should possess merely a power of review analogous to that obtaining in connection with the work of the Interstate Commerce Commission at present." Recent decisions of the Supreme Court in the Minnesota and North Carolina cases show how impossible is a dual control of national commerce; the nation alone can act with effectiveness and wisdom:

"At present the failure of the Congress to utilize and exercise the great powers conferred upon it as regards interstate commerce leaves this commerce to be regulated, not by the State nor yet by the Congress, but by the occasional and necessarily inadequate and one-sided action of the Federal judiciary. However upright and able a court is, it cannot act constructively; it can only act negatively or destructively, as an agency of government; and this means that the courts are and must always be unable to deal effectively with a problem like the present, which requires constructive action. A court can decide what is faulty, but it has no power to make better what it thus finds to be faulty. There should be an efficient executive body created with power enough to correct abuses

and scope enough to work out the complex problems that this great country has developed."

This body should have power to pass upon any combination or agreement in relation to interstate commerce, and every such combination or agreement not thus approved should be treated as in violation of law and be prosecuted. In all probability, to except labor organizations completely from the operations of the law would be unconstitutional:

"So far as labor is engaged in production only, its claims to be exempted from the Anti-Trust law are sound. This would substantially cover the right of laborers to combine to strike peaceably, and to enter into trade agreements with the employers. But when labor undertakes in a wrongful manner to prevent the distribution and sale of the products of labor, as by certain forms of the boycott, it has left the field of production, and its action may plainly be in restraint of interstate trade, and must necessarily be subject to inquiry, exactly as in the case of any other combination for the same purpose, so as to determine whether such action is contrary to sound public policy."

With reference to the opinion of some that there is no real need for laws looking to the effective control of great corporations, he cites the results of an official inquiry recently made in Boston relating to a combination of all the structural steel concerns with respect to business in New England. In dealing with Boston, the combination used collusive bids and false representations. The facts have been submitted to the Department of Justice. The suggested Federal legislation should be a part of the campaign "to waken our people as a whole to a lively and effective condemnation of the low standard of morality implied in such conduct on the part of great business concerns." In conclusion, the President, having denounced "the man who preaches hatred of wealth honestly acquired," speaks as follows of the undesirable rich:

"But his counterpart in evil is to be found in that particular kind of multimillionaire who is almost the least enviable, and is certainly one of the least admirable, of all our citizens; a man of whom it has been well said that his face has grown hard and cruel while his body has grown soft; whose son is a fool and his daughter a foreign princess; whose nominal pleasures are at best those of a tasteless and extravagant luxury, and whose real delight, whose real life work, is the accumulation and use of power in its most sordid and least elevating form. In the chaos of an absolutely un-

restricted commercial individualism under modern conditions, this is a type that becomes prominent as inevitably as the marauder baron became prominent in the physical chaos of the Dark Ages."

Legislative Program Revised

The message was unexpected and was not received with pleasure by the Republican leaders in either branch of Congress. It is not clear, however, that, as some reports assert, it was treated discourteously in the regular proceedings. At first there were assertions in the significant gossip of the Capitol that the President's recommendations would be ignored and that no action would be taken upon the measures in behalf of which he had spoken. In a day or two, however, there was a change of sentiment. On the 30th, the House committee's inadequate appropriation of \$50,000 for the inspection of railway companies' accounts was increased to \$350,000 after a sharp debate of four hours. There were signs of a revolt against Speaker Cannon. That night the leaders' program of legislation was revised. Newspaper correspondents reported in their dispatches that the Speaker had yielded. It began to be asserted that bills concerning injunctions, employers' liability in the Government service, child labor and campaign fund publicity would be past in the House. The President, however, had not mentioned the last of these subjects. Provision was also made for a Republican conference on Mr. Vreeland's new currency bill. Two days later it was said that the House might even amend the Anti-Trust law, altho it could not accept the pending amendment, which was prepared by the Civic Federation. The leader of last week's movement in support of the President's recommendations was Mr. Townsend. At the beginning of the present week it was admitted that the revision of the program would prolong the session for several weeks.

Railroad Coal Monopolies

A report has been sent to Congress by the Interstate Commerce Commission, in response to the joint resolution of March 7th, 1906, which directed that investigation be made as to railroad monopolies in coal. It asserts that the coal supply of Utah, Wyoming and Oklahoma

is controlled by the Gould railroads and the Union Pacific thru subsidiary companies. In Utah, the coal corporation is the Pleasant Valley Coal Company, which is owned by the Utah Fuel Company (a New Jersey corporation, with a capital of \$10,000,000), and this in turn is owned by the Denver & Rio Grande Railroad Company. Extensive frauds, it is charged, were perpetrated in the interest of this coal company for the acquisition of coal lands, by means of entries filed by "dummies," some of whom were women. The report says:

"The Commission finds that the acquisition of coal lands by such coal and fuel companies has been attended with fraud, perjury, violence, and disregard of the rights of individuals."

What is practically a monopoly in Colorado, the report says, was assured to the Colorado Fuel & Iron Company by railroad rebates, this company paying from 37½ to 56 cents a ton, while competitors were required to pay from 75 cents to \$1.25. Concerning the situation in Wyoming, the Commission says that "the Union Pacific Railway Company absolutely dominates the mining, transportation and selling of coal along its lines," altho it does not appear that the railway officers have derived personal benefit from operations in coal. Monopoly has been promoted by the withdrawal, at President Roosevelt's direction, of public coal lands from entry, and the Commission thinks these lands should be released. In Oklahoma the leased coal lands are controlled by a combination holding company, which is owned by the railways, the effect being that the price in Oklahoma has been forced up to from \$7 to \$9 a ton within 120 miles of the mines. —The commodity clause of the new Railroad Rate law, designed to prevent railroad companies from owning coal mines, went into effect on May 1st. Action upon an amendment suspending for twenty months the exaction of penalties was prevented in the Senate, last week, by those who held that the amendment was in the interest of railways, and that pending legislation for the benefit of shippers should first be considered. — Notice has been given that freight rates on fresh meat to the Southeastern States will be increased on June 1st by the addition of from 3 to 10 cents per hundred

pounds. It is expected that other increases thruout the country will soon be made. There is a loud protest in Philadelphia against an announced increase of passenger rates between that city and the seashore resorts by the Pennsylvania and Reading companies.—It is asserted in Washington dispatches to several prominent newspapers that the Government intends to proceed against the New York, New Haven & Hartford Company under the Sherman act, with reference to the company's acquisition of 1,500 miles of trolley roads.

Three-Cent Fares in Cleveland

The long contest in Cleveland, O., for three-cent fares on the street railways ended in a victory for Mayor Tom L. Johnson on the 27th ult., when what is called a security grant was given by the City Council to the Cleveland Railway Company, a new corporation, in which all the existing street railway companies had been merged. Immediately thereafter, the property of this new company was turned over, on a fifty-year lease, to the Municipal Traction Company, which is the corporation formed for carrying out Mayor Johnson's plans. For some weeks a settlement of the contest had been impending, the only obstacle being a disagreement as to the value which should be assigned to the stock of the old company (the Cleveland Electric) in the consolidation. When \$55 a share was suggested as a compromise, a settlement on this basis was urged in many public meetings of citizens, and this valuation was accepted. The old company has \$9,000,000 of bonds, and its stock goes in at \$12,870,000, while \$1,600,000 represents the value of the Forest City Railway Company, a competing corporation which was organized in the interest of the three-cent fare project. In all, the new company's capital amounts to \$23,690,000, to which \$11,310,000 will eventually be added for extensions and improvements, making a total of \$35,000,000. By the terms of the lease, Mayor Johnson's holding or operating company is bound to pay an annual dividend of 6 per cent. on this stock. If it fails to do this, the property reverts to the Cleveland Railway Company, and under the security grant the

tickets may be five cents each, or six for a quarter. Beginning with the 29th, the fare was three cents, with no transfers. For ninety days the price of a transfer is to be one cent, but thereafter all transfers will be free. On the 28th, in celebration of the low-fare victory, rides on the cars were free to all. Those who stand with Mayor Johnson are confident that three-cent fares will be sufficient to meet all the financial requirements; those who oppose him predict failure for the holding company. Immediately after the settlement a strike of the street railway employees appeared to be at hand. The old company had promised to increase wages by two cents an hour, but it is alleged that the increase was conditioned upon a victory for the company in the contest with the Mayor. The holding company declined to assume the agreement and to make the increase. At the union meetings the vote of the employees was 1,452 to 128 in favor of a strike. Mayor Johnson suggested arbitration. It was reported on the 2d that an increase of one cent an hour would be granted. On the morning of the 4th the union decided to accept the Mayor's suggestion, and it was understood that arbitrators would be selected.

The Situation in Guatemala

Since the attempt to assassinate President Cabrera, and the subsequent execution of many persons by the Government, there have been conflicting reports as to the situation in Guatemala. At first it was said that Mexico was about to intervene, owing to the forcible removal of refugees from her Legation at the Guatemalan capital, but the Mexican Foreign Minister asserted that there was no quarrel. Mexican troops were sent to the border, but only to protect Mexican interests and to restrain revolutionary bands of Guatemalan exiles on the Mexican side of the boundary. Dispatches on the 30th ult., from Mexico, said that General Barrios, the Guatemalan Foreign Minister, with a company of soldiers, had entered the residence of Uruguay's Consul and taken away the Honduran Consul, who had sought refuge there. In a dispatch to Washington, the Guatemalan Government explained that Rafael Rodezno, the Uru-

guayan Consul (a native of Honduras), had for a long time been hostile to Cabrera's Government; that in his house two notorious criminals had been found in hiding; that these men, implicated in the recent attempt to kill Cabrera, had been taken into custody, and that Rodezno's exequatur had been cancelled. Exiles arriving at Panama say that many prominent persons have recently been executed summarily by the Government, among these being Antonio and Eduardo Rubio, Dr. Pedro Cofino, Mrs. Blanco and Mrs. Castanedo. They also report that the troops of Honduras have been concentrated on the Guatemalan frontier. It is asserted that General Vasquez, formerly president of Honduras, had planned a revolution against the present Honduran Government, and that he was believed to have the support of Cabrera. On this account, it is said, Señor Bustillos, the Honduran Finance Minister, while on a confidential mission to Cabrera, a few weeks ago, was practically imprisoned by the latter for a time.

San Francisco The third trial of Tirez L. Ford, chief counsel for the street railroad company in San Francisco, ended on the 2d with a verdict of not guilty. He was accused of having bribed supervisors to vote for a trolley franchise. James L. Gallagher, the most prominent of the supervisors, testified that he received the bribe money from Abraham Ruef and distributed it. Seven of his associates in the board testified that they received their shares from Gallagher. On the 22d ult. there was an attempt to assassinate Gallagher, who is regarded as a very important witness in all the pending cases. The front part of his house was wrecked in the night by the explosion of a heavy charge of dynamite. He was not injured. The trial of Ruef began on the 30th ult.

Fleets in the Far East In view of the strained relations between Japan and China, the visits of the American and the Japanese fleets to the Chinese coast have given rise to some delicate questions. The feeling against the Japanese on account of the "Tatsu"

incident is so strong in Canton that the Viceroy of the province has advised the Japanese consul that he thinks the visit of the Japanese fleet at this time would be inexpedient. The consul has replied that the large vessels of the Japanese fleet will remain at Hong Kong. Some of the smaller vessels will go up the river to Canton and land a few Japanese marines in the daytime, under escort of Chinese soldiers. The second Japanese American people. The cruiser was the squadron, composed of the cruisers "Adzuma," "Okashi," "Chiyoda" and "Chihaya," anchored off Taku in order that Admiral Ijuin and Vice-Admiral Teragaki might pay their respects to the Emperor and Empress Dowager at Peking. Whether this cruise of the Japanese fleet in Chinese waters will check the boycott or will further excite the anti-Japanese animosity remains to be seen. The report the American fleet would not visit Chinese ports aroused much indignation in China. Yuan Shih-Kai, who was educated in America and is now the dominant force in the Government, stated that the invitation to the American fleet was the first of its kind ever extended by China to any nation, and was an earnest and sincere expression of regard for the United States. Extensive preparations had been made for their reception of the Americans when it was learned that the plans had been changed. It appears that our Minister to China, Mr. Rockwell, on his arrival at Peking telegraphed our Government that it would be unwise to include China in the voyage of the fleet around the world because it would inevitably be regarded as an interference in the Japanese-Chinese difficulty. It might be taken as an indication of the intention of the United States to resist the encroachments of Japan in Manchuria, or of a disposition to unite with Great Britain and other Powers in trying to stop the nationalistic and boycott movement in China. Apparently a compromise plan has been adopted by our Government, according to which the fleet is to be divided into two squadrons, which will visit Japanese and Chinese ports simultaneously. Both countries are preparing for extensive naval reviews as a welcome to the Americans. In Australia it is said that \$500,000 will be spent in entertainments.

—The Japanese cruiser "Matsushima" was blown up April 30th by an explosion of its magazine while in the harbor of one of the Pescadores Islands. The vessel immediately sank until only the bridge was to be seen above water, and 207 officers and men out of the 415 on board were drowned. Among those lost were thirty-three cadets, many of them from prominent naval families. President Roosevelt promptly cabled to the Emperor of Japan the sympathy of the flagship of Admiral Ito in the battle of the Yalu, where the Chinese were defeated, and she later took an active part in the blockading of Port Arthur during the war with Russia.—The Chinese war board has planned a new navy, to consist of three squadrons, each composed of one battleship, two first class, four or five second class, and five or six third class cruisers, and several torpedo boats, destroyers, gunboats, submarines and transports.—Consul-General Kato has written a letter of apology to the American Consul-General at Mukden, Mr. Straight, expressing regret for the attacks made April 6th on the Chinese servants of the Consulate by four Japanese and notifying him of their punishment. The incident is therefore settled satisfactorily to our Government.

Afghans Invade India It looks as tho England has a fourth Afghan war on her hands, for the moderate measures which have been taken to suppress the turbulent tribes on the northwest border of India have manifestly been ineffective. The natives continue to collect in large numbers at the instigation of the fanatical mullahs, and there is great reason to believe that the Amir is not unwilling that his subjects and even his own troops should engage in warfare against the British. General James Willcocks's expedition against the Zakka Khels was successful in quelling them, but in the meantime the Mohmands had been roused by the mullahs, and, finding they were too late to assist their fellow tribesmen, began a series of raids on the Peshawar border. These were checked by General Willcocks, but the accumulation of troops on the other side of the border continued until their number is now estimated to be 13,000 to 20,-

000. On the night of May 1st the Afghans took the offensive and crossed the border of India in two parties, the larger force making an attack upon the blockhouses at Landi Kotal, which defend the Afghan end of Khyber Pass. General Willcocks has made his headquarters at Jamrud, at the other end of the Khyber Pass, ten miles west of Peshawar. All despatches from the frontier are censored, so details of the movements are not obtainable. The Afghans invading India are largely composed of the militia levies which form the first reserve of the regular army, and they are under Afghan officers. The Amir cannot have been in ignorance of the preparations for the raid, but he has made no attempt to check it by proclamation or military orders. Guns and ammunition have been brought in for this purpose during several months thru ports in the Persian Gulf and on the coast of Oman. The Anglo-Russian agreement, which states that Afghanistan is within the British sphere of influence, was presented to the Amir some weeks ago, but he has refused to sign it.—While the British are occupied in this frontier warfare, the disaffected party among the natives of India shows a tendency to adopt more violent measures. A bomb explosion at Muzaffarpur in Bengal led to the discovery of an extensive plot centering in Calcutta. There the police unearthed cartloads of seditious literature and a large number of bombs and cartridges, evidently prepared for an attack upon the British authorities.

British Labor and Politics An extensive labor dispute has begun in the shipbuilding yards by the lockout of the woodworkers. The Shipbuilding Employers' Federation decided upon a reduction in wages, to which the unions declined to submit. Not being able to get the Federation to agree to arbitration the shipbuilders of the northeast coast declared a strike, and the Clyde shipbuilders retaliated by posting a lockout notice in the yards at Barrow-in-Furness, Birkenhead, Hull, Dundee and Aberdeen. This throws out of employment some 6,000 woodworkers, and if, as expected, the shipbuilders in other places join in the lockout, 70,000 men will be

compelled to cease work, and eventually the trouble may involve the entire ship-building industry of the country, affecting 250,000 men.—The House of Commons assembled April 27th after the Easter holiday, and then adjourned for a day in honor of the late Premier, Sir Henry Campbell-Bannerman, whose funeral was held in Westminster Abbey in the presence of a large number of distinguished men of England. A unique tribute of respect was the presence of M. Clemenceau, Premier of France. On the opening of the House of Commons, Premier Asquith moved the second reading of the Licensing Bill, which has brought upon the Liberal party the powerful opposition of the liquor interests. It is expected that it will pass the House of Commons, but will be rejected or very seriously modified in the House of Lords. Measures for the reform of education, the establishment of the Irish universities, the reform of the prisons, the relief of the unemployed and the establishment of a system of old-age pensions will form the program of the reorganized Ministry. In response to questions as to whether the Premier approved of Mr. Churchill's speeches in favor of home rule in the recent campaign and whether this indicated a change of policy on the part of the Government, Mr. Asquith replied that there had been no change in the policy of the Government and that he was perfectly satisfied that Mr. Churchill did not make any statements inconsistent with that policy as previously declared.—Mr. Winston Spencer Churchill, President of the Board of Trade, is entering into the campaign in Dundee with great determination and enthusiasm, taking no chances, altho the district is regarded as perfectly safe, since it has ordinarily 5,000 Liberal majority. The Irish voters will give him their support on the ground that Mr. Asquith's statement of his position is satisfactory to the Home Rule party. The free traders are very much discouraged by the defeat of Mr. Churchill in the northeast division of Manchester, for the tariff reform sentiment is manifesting unexpected strength all over the country, and they do not feel that they can rely entirely upon the Liberal Government, since the extensive expenditures for old-age pensions and other

labor measures may compel the adoption of some import duties.

King Manuel Opens the Cortes

The opening of the Portuguese Cortes, the first since the Franco dictatorship, took place on April 29th, the eighty-second anniversary of the establishment of constitutional government in Portugal. King Manuel rode from the Necessidades Palace to the Parliament Building in a closed carriage surrounded by cavalry. The entire route was lined with soldiers. In his speech from the throne the King swore to rule in accordance with the laws, and he appealed to the representatives of the people, in the names of his martyred father and brother, to unite with him for the happiness and progress of the nation. Among the measures recommended are the revision of the constitution, the reform of the electoral system, greater care and economy in the management of the finances, and the revision of the decrees promulgated by Premier Franco. It is expected that he will soon issue a proclamation of amnesty for all political prisoners with the exception of those directly concerned in the murder of the late King and Crown Prince. The new King wished to have the question of the money drawn by his father from the national treasury thoroly investigated by a commission in order that he could make a complete restoration, but it appears that neither of the two dominant parties are willing to consent to such an investigation. The Republican and the Francoist papers claim that the reason for this is that the leaders of the rotative parties had obtained a large part of this money; that of \$1,500,000 of the national funds withdrawn ostensibly for the king's private expenses only about \$700,000 was actually received by the royal family. The Ministers of Public Works and Finances in the Franco Cabinet declare that they are in possession of documents proving the alleged corruption of the leaders of the Regeneradors and Progressists. The elections for the Cortes were apparently carried out without fraud or the use of force, but it is evident that the two leading parties have, as formerly, worked by mutual agreement to distribute the power in the Cortes be-

tween them. The Regeneradors have 63 members and the Progressists have 57. Besides these the Premier, Admiral Ferreira do Amaral, has a personal following of 15 members. The Opposition altogether numbers only 18, of which 7 are Republicans and 3 Francoists. The Republican vote both in Lisbon and Oporto was larger than that of the Monarchists, but owing to the electoral system, by which a large country territory is included with each urban district, the Republicans were practically excluded. The Government organ, *Mundo*, threatens that upon the first evidence that the Republicans are trying to precipitate a conflict the Government will dissolve Parliament, suspend the constitutional guarantees and proclaim a military dictatorship. The Republican press answers this threat by warning King Manuel to remember the fate of Charles I and Louis XVIII.

Minor Wars Mulai Hafid, the pretender to the Moroccan throne, is reported to be losing ground continually. The tribes that espoused his cause are falling away, and he has recently been defeated by the Beniskarou and forced to flee to Marakesh with thirty followers. The army of Sultan Abd-el-Aziz has left Rabat for Fez, the northern capital, which not long ago declared for his brother. His army numbers 5,000 men, and is accompanied by two French and some Algerian officers.—The Russians on the Persian border are still harassed by the mountain bandits of the Shahsavan tribe, who recently attacked Beliasuver, and the country is entirely without protection, as the Persian authorities are incompetent. In the vicinity of Urumiah the Kurds have pillaged thirty-six villages and massacred 2,000 people. The Persian Cabinet has again resigned on account of condemnation that it received in Parliament because of its failure to maintain order in the provinces. The Anjoumens threaten to demand the abdication of the Shah unless he will loyally support the constitution and reform the administration.—A detachment of troops, comprising thirty-one natives and three French officers, were ambushed by the natives while

marching from Dagana to Nouakchott in Senegambia, and were all massacred except one officer.—The natives of Battambang, French Siam, have risen and the European residents are in danger, as the troops are not sufficient to protect them.—The Kloenkoeng district of the island of Bali (Dutch East Indies) is in revolt. The Dutch troops everywhere encountered resistance, and in capturing the residence of the chiefs at Gelgal lost seven men and one officer, while inflicting a loss of a hundred on the natives. On the west coast of Sumatra and many other points of the Dutch possessions the natives have refused to pay taxes.—With the spring has come the usual increase of disorder in Macedonia, and so long as the Powers are at odds over how and by whom this territory is to be controlled there is little hope of improvement. It was reported that the Bulgarian bands were to be dissolved, but it appears that they are still active, while the Servian and Greek bands are more numerous than before.

Russia and Sweden Prince Wilhelm of Sweden, who visited America last year, was married on May 3d to the Grand Duchess Maria Pavlovna, cousin of the Emperor of Russia and daughter of the Grand Duke Paul Alexandrovitch. The ceremony took place in the palace of Tsarskoe-Selo in the presence of the Emperor and Empress of Russia, King Gustav of Sweden, and other members of the two royal families and of the Government. A Swedish squadron which brought the King of Sweden to Russia was escorted into the harbor by eighteen Russian torpedo boat destroyers commanded by Admiral von Essen.—The conclusion of the Baltic and the North Sea treaties and the visit of King Edward and Queen Alexandra to all the Scandinavian courts have done much to insure peaceful relations of these Powers. Mr. von Trolle, the Swedish Minister of Foreign Affairs, has by two personal conferences come to a complete agreement with the Russian Foreign Minister, Mr. Izvolsky, on the question of the fortification of the Aland Islands. Russia has agreed not to make a military station of the islands.

Mr. Asquith, the New British Premier

BY SYDNEY BROOKS

[Our readers will remember previous articles in THE INDEPENDENT on English and Continental Politics from the pen of Mr. Brooks, who is acknowledged as one of the leading publicists of England.—EDITOR.]

THE new British Premier differs almost as much from his predecessor as Mr. Roosevelt differs from Mr. McKinley. I do not by that mean it to be inferred that Sir Henry Campbell-Bannerman was an English edition of Mr. McKinley either in his character or his political methods or that the present British Prime Minister greatly resembles the present American President. "C.-B." was a far stronger man than McKinley. He had a reasoned political creed, and he held to it thru fair and foul. He dared to face an angry and an all but unanimous nation and tell it it was wrong. He braved social ostracism and popular execration rather than compromise with the policy that led to the Boer war or with the methods that marked its conduct. He stuck by his party when it was in the very depths of public disfavor, when it was torn by internal dissensions, when one leader after another had fallen away in despair and disgust, and when Liberalism represented both in and out of the House a seemingly hopeless minority. McKinley would hardly have done that. He was too sensitive, too much of a pliant opportunist, to rise to such heights of solitary constancy; and the ding-dong pachydermatous disposition which enabled "C.-B." to keep plodding on in the face of daily rebuffs and discouragements was not among Mr. McKinley's qualities. It was not until "C.-B." had reaped

the reward of his fortitude, had become Prime Minister, and found himself at the head of a triumphant but heterogeneous party, that a certain similarity between his political manner and the late President's became discernible. Both men were eminently skilled in the diplomacy of politics. Both were endowed with that friendly, equable, warm-hearted

temperament which makes its possessor a center of agreement and conciliation, and which unravels the incessant tangle of politics by a deft and coaxing good humor. Both were lubricants of the highest efficacy. Without being great thinkers or commanding orators, both proved once more the old truism that it is not intellect, it is not eloquence, it is not the driving power of a vivid and dominating personality, that is the *sine qua non* of leadership; and that men of second-rate abilities and undistinguished

H. H. ASQUITH.

and even commonplace characteristic may yet make admirable governors if they have mastered the priceless art of ruling thru the affections. No one could possibly call either Mr. McKinley or "C.-B." a great man. But there are times when the heroic qualities are out of place and when simple good sense, a serene and cheery sincerity, a command of the lesser arts of persuasive management, urbanity, mellowness and sympathy, are of a higher political value than brilliancy and force. "Government," said Mr. McKinley, "is always

crisis"; but the man for the crisis is not always a Bismarck, a Gladstone, or a Roosevelt, and "C.-B.," like Mr. McKinley himself, succeeded where a leader of greater decision and of more imagination might easily have failed.

The change to Mr. Asquith is great indeed. It is not so revolutionary as was the transition from Mr. McKinley to Mr. Roosevelt, but, if not the same in degree, it is essentially the same in kind. Call "C.-B." a greater McKinley and Mr. Asquith a lesser Roosevelt and the point I am endeavoring to make will perhaps stand out a little more clearly. Mr. Asquith has none of the President's tingling alertness, or of his sanguine, explosive impetuosity, or of his engaging many-sidedness; but in illimitable self-confidence he is not inferior to Mr. Roosevelt, and in sheer mental power, in maturity of intellect and experience he is, I should judge, far superior. Moreover, both men share the same conception of the functions and duties of leadership. Both would subscribe to the statement that it is the business of a leader to lead. It was scarcely so that Mr. McKinley regarded the Presidency or "C.-B." the Premiership. Mr. McKinley looked upon his office as a sort of conduit pipe between Congress and the electorate; and tho' great things happened during his Presidency he can hardly be said to have presided over them. He had no policies or convictions that he was not ready to abandon at the bidding of the populace—not because he was a timid man, but because the old tag *Vox populi, vox Dei* was something more than an old tag to him and summed up and satisfied his whole attitude toward democracy. "C.-B." did not minimize the privileges and opportunities of the Premiership so completely as all that. He made full and dexterous use of its negative prerogatives as a sort of court of appeal to which all men and all groups in the party might refer their disputes. But he was less a captain than an arbitrator; he allowed his Cabinet Ministers the widest possible latitude in the management of their own departments, and he regarded himself and his office as a center rather of accommodation than of leading. To men of Mr. Roosevelt's and Mr. Asquith's temperament such a view of their duties and

responsibilities seems almost equivalent to abdication. Their instinct is to lead, not by following, by pushing from behind, but by going on in front; and it is the first thing to be said of the new British Premier that he belongs to the type of men who govern rather by insistence than by persuasion, whose appeal is to the intellect rather than the emotions, and who are somewhat too apt to think that the most direct route is also the easiest. Carlyle declared that, as the result of the Franco-Prussian war, Europe had exchanged a mistress for a master. Something of this sort has happened to the Liberal party in Great Britain.

I am bound to say that the Liberal party does not greatly relish the transformation. Its chief, if not its only, reasons for welcoming the resignation of "C.-B." and Mr. Asquith's accession are political reasons. It does not, indeed, undervalue the advantages of having as its chief a man still under sixty, in the full maturity of his powers, resolute and energetic. But in the main it consoles itself for the change in the Premiership by reflecting that it affords an opportunity for bringing fresh blood into the Cabinet, for getting rid of some of the less successful members, for quietly dropping policies that had failed to win favor, and for making, as it were, a new start. All these are very real gains, and Mr. Asquith has made the most of them. He has remodeled the Cabinet on sound and daring lines. He has shown that he is not afraid of youth, of imagination, of the democracy of talent. The personnel of the "C.-B." Cabinet was strong; that of its successor is stronger still. Mr. Asquith has shelved some distinguished incompetents, and he has opened the door to a number of young men who have neither birth, "pull," nor wealth, but only their abilities to recommend them. Moreover, it is felt that the advent of a new Premier will stop, or at least impede, the reaction that was palpably setting in against the old Ministry. Liberals hope that the country will regard Mr. Asquith as the heir to "C.-B.'s" successes, but not necessarily to his failures. They are confident, for instance, that it will prove easier after "C.-B.'s" resignation than it was before it to admit that the campaign against the House of Lords has hopelessly failed

and that Mr. Asquith will be better placed than his predecessor either was or could have been to seek an accommodation on the Education question. For all these reasons Mr. Asquith's advent has been hailed with a real satisfaction. Nobody, again, disputes that he was the only possible successor to the vacant post. The Liberal party just now is rich in talent and experience, but Mr. Asquith's claims to the Premiership far outweighed those of any other rival. Nor is there any disposition to deny either his abilities or the genuineness of his services to the Liberal cause. His career has been one of uninterrupted and almost mechanical success. As a boy he took all the prizes. As a youth he won the Baliol scholarship, became president of the Oxford Union—the famous debating society of the University—took a "double first," carried off the Craven scholarship, and so impressed his contemporaries from Dr. Jowett downward that perhaps no man ever went down from Oxford amid so many or such confident predictions of a brilliant future. It was long, however, before the predictions were verified. Mr. Asquith had his full share of the ordinary anxieties and difficulties of a briefless barrister. He entered Parliament twenty-two years age at the age of thirty-four, and had the good fortune to attract Mr. Gladstone's notice. It was not, however, until the Parnell Commission of 1889 that his name became known thruout the country. Mr. Asquith appeared in the case as junior to Sir Charles Russell, and it fell to him to cross-examine Mr. Macdonald, the manager of the *Times*. He did so with a masterly, merciless completeness that caught the popular fancy, was highly approved of by the profession, and put Mr. Asquith among the first flight of English lawyers.

From that moment his star rose steadily. He began to figure in all the great cases, in society, and in Parliament. The House of Commons as a rule dislikes lawyers, but Mr. Asquith gained its ear by the sheer force and lucidity of his eloquence. In Mr. Gladstone's Ministry of 1892 he became Home Secretary. He flung himself into the work of his office with the same renovating freshness of mind and zeal that Mr. Chamberlain was afterward to pour into the Colonial

Office and Mr. Lloyd George into the Board of Trade. Some awkward questions came before him. He had to order out the military to suppress a mining riot; he had to decide the conditions under which the unemployed were to be permitted to meet in Trafalgar Square; and he was incessantly importuned to release the Irish dynamiters. In all three matters he showed a firmness that pleased the country all the more for its unexpectedness. But Mr. Asquith proved himself a sympathetic as well as a strong administrator. He stretched all the powers and prerogatives of his office in the cause of social reform, in fighting sweating and overcrowding, and in protecting the health and safeguarding the rights of the working classes. That is old history now and well-nigh forgotten, but I well remember that at the time Mr. Asquith's practicality and enthusiasm made him the idol of Labor and penetrated the national consciousness with a new sense of its social responsibilities. In 1895, when the Conservatives came into office, Mr. Asquith returned to his law practice, and for some years afterward took only a casual, but always a prominent, part in politics. Thruout the Boer war he ranged himself with the Rosebery group of Liberals and steadily supported his political opponents in a cause which he held to be above party. It was not until Mr. Chamberlain launched his fiscal program that the country took the full measure of Mr. Asquith's abilities. The controversy precisely suited his trenchant, lucid style. In the days of his novitiate at the bar he had added to his income by lecturing on economics, and five years ago he was one of the very few Liberals who really knew why they were Free Traders. He at once took up Mr. Chamberlain's challenge, dogged his footsteps from town to town, and answered him speech for speech and point for point until it almost looked as tho the issue would resolve itself into a gladiatorial combat between the two men.

As a debater, indeed, there is no question that Mr. Asquith stands in the very front rank. He is a first-class fighting man. I have never known him at a loss for an effective retort. He is one of the men who seem to be always at the top of their form and who can bring all their

powers into play at a moment's notice. For pungency, vigor, clean-cut conciseness and a constant flow of well-turned phrases there is nobody in the House of Commons who surpasses him, and there are only one or two members who equal him. The spoken word betrays the man even more than the written one. Mr. Asquith's speeches have all the qualities I have named. Yet they are not oratory. They are models of public speaking, but they lack the tone and color, the raptures and the exaltations of true oratory. Pascal said of some orator: "You go expecting merely to hear a speech. You are surprised and delighted to find yourself listening to a man." That, of course, is the secret of the highest kind of eloquence, and I may perhaps best illustrate the nature of Mr. Asquith's defect by saying that in his case it is always the speech and never the man you listen to. A certain bloodless rigidity of excellence runs thru his efforts. The speaker, you feel, knows almost too well what he is going to say and just how he is going to say it. He will not for a moment be carried out of himself. There is no spiritual communion between the speaker and his audience. Mr. Gladstone used to say that what he received from his audience in a stream he returned to them in a spray. Mr. Asquith appears to receive nothing from his audience. You suspect as you listen to him that the ordered, resonant periods would go on just the same if there were no audience at all, that the voice would be just as vibrant and the gestures just as dramatic. You wonder, in short, whether the speaker fully feels the passion he is declaiming. You might not wish to alter a sentence or a word, but you miss the touch that fuses, elevates and transmutes the whole.

The insufficiency at which I have glanced helps to explain why it is that for all his indisputable gifts the Liberals feel some misgivings about Mr. Asquith's success in the Premiership. He is too self-contained, too metallic, for human nature's daily food. Even when men cheer his speeches they are conscious that they are not cheering the speaker. "Whatever Asquith does, he does well," I heard one of his friends remark. "That is because he does nothing that he does not do well," was the subtle re-

joinder. Mr. Asquith has measured to a nicety all his capabilities. He always has himself well in hand. One cannot imagine him committing an indiscretion. One cannot, therefore, imagine him falling into the glorious blunders or winning the dazzling triumphs of the highest statesmanship. A balanced, impeccable monotony of high and hard achievement is the "note" of his career, because it is the "note" of his character. He is not an ingratiating man. Men admire and fear, but do not love him. His drawbridge is never down; his amiable and appealing weaknesses, if he has any, are never visible. His enthusiasms are all intellectual, and his way of looking at life and politics is not without its alloy of Oxford "superiority" and arrogance. Men feel that stupidity to him is the crime of crimes, and that is always a dangerous feeling for a political leader to inspire. The factor of his personality, in short, does not work out to an easy equation. It is not insignificant that the Suffragettes honor Mr. Asquith with a quite distinctive hatred, or that the Colonial Premiers at the Imperial Conference of a year ago were more irritated by his hectoring, lecturing manner of refusing them preference than by the refusal itself. Since he became Premier he has contrived to alienate the Irish Nationalists and to provoke from Mr. Healy one of the most personal and corrosive attacks that Parliament has ever listened to. The Labor men, again, distrust his policy and regard him as precisely the kind of Whig they most wish to get rid of. The difficulties, therefore, ahead of Mr. Asquith are neither few nor slight. As an administrator and as a supremely able debater nobody has any doubts about him. But whether he will be able to acquire anything of "C.-B.'s" accordant mellowness and his remarkable knack of smoothing things out is more questionable. In the work of diplomacy he is still untried, and diplomacy is pre-eminently the quality that so composite and factional a party as the English Liberals most requires in its chief. Mr. Asquith, however, has never failed yet in any of his undertakings, and for my part I do not believe he is going to fail in his latest and greatest.

LONDON, ENGLAND, April 22, 1908.

Our Fleet

BY GRACE SHOUP

A LONG line, a strong line,
They swing along the seas,
The mightiest fleet since ancient Spain
Sent out her argosies!
Nor were the ships of any time,
Sent by the lands of any clime,
Manned by such hearts as these!

A far cry, a long cry,
Unto the Golden Gate:
"We'll send our ships unto the West:
There is no shore we love the best,
Nor fear we any fate!"

On thru the queenly Indies,
The tropic Caribbees,
Threading the wild Atlantic
To storm-tossed Southern seas;
The northern star is lost to sight,
The southern cross on high,
The Southern Light's wild streamers
At night flare thru the sky.

Ho! spirits of the olden age,
Are ye awake, I say?
Ye prank it brave on history's page,
See ye this sight today?
Columbus, Drake, Magellan,
They follow on your track;
They drink a toast, O fearless ones,
To you, who under unknown suns
Sailed on and turned not back!

Hail! queenly southern cities,
The gems that zone the West,
With names of liquid music,
You gave our ships your best!
One bond there is that thrills us,
One ardent thought that fills us,
Beats in our blood like flame!
Facing the world, a dauntless band,
Sister republics, hand in hand,
Americans our name!

A long line, a strong line,
They swing along the seas,
The mightiest fleet since ancient Spain
Sent out her argosies!
Nor were the ships of any time,
Sent by the lands of any clime,
Manned by such hearts as these!
INDIANAPOLIS, IND.

Men We Are Watching

BY A WASHINGTON JOURNALIST

The New Senate Veterans

THE passing away of the four veterans from the Senate, during the present session—Morgan, Pettus, Whyte and Proctor—took from Congress three hundred and thirty-three years of experience. It left no Senator over eighty. Senator Stewart, who has since been appointed by the Governor to finish Senator Proctor's term, is eighty-three. A dozen of the Senators are over seventy. Five are over seventy-five. Not one of them is noticeably bald. Not one is more than gray. All but one wears a full beard, kept well trimmed. The five are Allison, Stephenson, Cullom, Teller and Frye. Stephenson is a new man

and is only filling Spooner's unexpired term. The remaining four are the new Senate veterans in length of life and time of service. There are no weaklings among them. They are all strong men in legislation.

William Boyd Allison

Senator Allison, of Iowa, is now dean of the veterans, in years of service as well as years of life. He is seventy-nine, and has served in the Senate for thirty-five years. He had already been in the House of Representatives for eight years, giving him in all forty-three years in Congress.

Some people outlive their usefulness, but they are not Allison. There is not a

SENATOR ALLISON.

more valuable man in the Senate today than the senior Senator from Iowa. Outside of his own State it was difficult to believe that he was being forced to pass through the fight he has just made for re-election. There was a sincere "Thank Heaven" from all who realized his worth when he finally won out.

Senator Allison is showing his age in some ways. He is tall and broad, which emphasizes an increasing stoop to his shoulders and the careful deliberation with which he moves about. His voice is not what it used to be. But these are externals, after all. The real man is there, alert, alive and active when there is need of him. His thick gray hair shows no inclination to surrender. He wears a full beard and mustache—iron-gray, not white—close cut. His face is long and grave. All his life, I fancy, he has seen the serious side of things. But a glance under the shaggy gray eyebrows gives one a glimpse of the soul which looks out through the keen, clear windows. Allison's face has a quick way of lighting up in a genial, cordial greeting, and even in the solemn matters

which chiefly fall to his lot to discuss upon the floor, his eyes frequently twinkle and his grave lips perpetrate something which in others would come dangerously near being a joke.

In years past—no less today—Allison has helped to make important history. He has done it, not only without leaving a single blot upon his record, but with a constantly increasing popularity among all classes and partisans. As chairman of the Committee on Appropriations he was never more useful or necessary than today. He has the matter of Government supply bills better mastered than any other living man, and while he is at the helm the country has a good guaranty that neither extravagance nor injurious parsimony will be favored at his end of the Capitol.

Allison's services to the country have never been of the showy order, but there are few public servants to whom the nation really owes as much. For years he has been the great pacificator of the Senate. Following his seventy-ninth birthday anniversary I was lunching in the Senate restaurant with two of the long service members. We naturally fell to discussing Allison, and one of the two compared him with Ingalls, who entered the Senate the same day and served for eighteen years with him. I wish I might give him credit for the following, but he refused. He said:

"As much a partisan as Cannon or Foraker, Allison is always conservative, always for peace. Ingalls was brilliant, Allison plain to the prosaic. Ingalls dazzled, Allison did things. Ingalls was admired, Allison was trusted. Ingalls cut a dash on dress parade, Allison cut ice every day."

The other, referring to Allison's health, which had not been satisfactory, and to his home fight, then in progress, said:

"If we could only have him here one day a week, we would better keep him than any other man Iowa can send."

One of Allison's signal achievements—a sample of many—was the pulling together of the Administration, Aldrich, Dolliver and Knox in the tangle which tied up the railroad rate legislation two winters ago.

Henry Moore Teller

The next in long-time service—Cullom is a few months older in years—is Senator Teller, of Colorado. He is seventy-eight in May, and is completing his thirtieth year as United States Senator. His public life has in it many peculiar incidents. He never held an office till he was elected to the Senate. He was elected by Colorado on her admission as a State and has held the office ever since, with the exception of three years, when he was Secretary of the Interior in President Arthur's Cabinet. Both Teller and Colorado were Republican when he came to the Senate. They are both Democratic now. In 1877 Teller sat in the Senate with five colleagues who had worked side by side with him on a farm in Allegany County, N. Y., where he was born. When the six met in the Senate they represented five different States, to which they had drifted from the farm in New York.

Teller says that Senatorial life has not materially changed from what it used to be, but that everything else Senatorial has changed. He is without exception in any quality an ideal Senator. There is no man in the chamber who outreaches him in reverence for the Senate and respect for its amenities. Nor is there any man better respected. He is tall, but slight, with a fine head and square shoulders, that of late have been bending a little under the weight of years piling up. In every motion, whether at the Capitol or away, Teller is the acme of togal dignity. He is always grave, always intensely in earnest, especially when endeavoring to force his convictions thru partisan prejudice on the floor of the Senate, where he is often on his feet. Teller stands alone in the new set of veterans in that respect, but he is on the wrong side of the chamber for influence in debate, and often hurls the fact defiantly at the other side. He is keen and quick, and forever on the watch, and if not all of the good things have been put into legislation which he urged, many bad things have been left out thru his ability and indomitable energy in debate.

His full beard, close cut, is growing very gray of late, and his long, thick hair, which he brushes straight back

from his bold, bulging forehead, is pretty well bleached on top; but his defiant gray eyes flash as fearlessly as ever, and he shakes his clinched fists at the Republican seats while he speaks with all the self-reliance of youth, regardless of the frail body behind them.

Senator Teller is not really the distant, unapproachable man many think him. Everything has not always gone precisely as he thought it should, and his inherent earnestness sometimes gives a tinge of irony to his tongue. He is always abnormally serious, always absorbed, always inclined to walk with thoughtful strides, with his eyes fixed on the floor. Even those who know him well must attract his attention if they

SENATOR TELLER.

would receive it; but to know him is to feel sure that you know a warm-hearted friend, always ready, within the limits of courtly dignity, to be cordial, sympathetic, democratic; and always, under whatever conditions, a man of absolute honesty and unflinching courage.

William Pierce Frye

The next in the line of veterans is Senator Frye, of Maine. He is seventy-six years old, with a record of twenty-seven years in the Senate. He has served just eleven days less than his colleague, Senator Hale of Maine, but he is five years older. Hale took Hannibal Hamlin's place when he declined reelection; Frye followed James G. Blaine, who resigned to go into the Cabinet. They were both serving in the House of Representatives at the time. Hale had been there ten years, Frye twelve years; so that Frye has thirty-nine years of Congressional service behind him. He is not so demonstrative on the floor as in years past, but he is always in his seat. He is one of the most constant attendants and always on the watch, ready with something forceful whenever it is required. His face has a slumberous look about it all the time, but he must step softly and speak low who would catch Frye really napping.

Frye is the Senate authority on rules and usages. He comes very near being the court of last resort in parliamentary questions. Active and passive he has been President *pro tempore* of the Senate for the last dozen years. He instinctively feels the strength of his position and tho he frequently insists that he is "a very patient man"—which he surely is—he cannot well avoid taking the dictatorial tone, and who has a better right? Outside of general legislation, Frye's special field has been the work of the Committee on Commerce, of which he is chairman, and very little of shipping interest has past the Senate in years which has not felt Frye's influence.

He is a tall man, with a clear, deep, strong voice, and a fine, old-fashioned face, lined with intellectual furrows and lighted by New England blue eyes. He is not yet very bald, and his light brown hair seems most reluctant to turn gray. He is the only one of the Senators on the

last lap toward fourscore who recognizes the innovating razor. All the rest wear the old-time full beard. Frye has only a mustache, and when on dress parade

SENATOR FRYE.

Copyright, 1908, G. V. Buck.

there's many a suggestion about him still of the gay Lothario which those who knew the Senator years gone are so fond of recalling.

Few men are more interesting to meet, and away from the compressing shades of the Senate few are more cordial and democratic than Senator Frye. I have to thank him for more than one unforgettable hour in his old-time quarters in the old-time Hamilton. And he can fish—or tell a fish story—and do other

things today with as much zest and realism as the younger ones.

Shelby Moore Cullom

"Uncle Shelby" they call him up in the press gallery, where a good, honest gauge of the real man can be obtained, if anywhere on earth; otherwise Senator Cullom is the youngest in Senatorial service, except Senators Stephenson and Stewart, of those who have passed seventy-five. He will be seventy-nine

SENATOR CULLOM.

next November. He has had just a quarter of a century under the toga; but he resigned the Governorship of Illinois, where he was serving his second term,

to come to the Senate, and before that he had been in the House of Representatives for six years and for eighteen years in the State Legislature, where for a time he was Speaker of the House. So that altogether Uncle Shelby has been making laws for over half a century. He is surely the dean of American lawmakers. And all the laws he ever made or tried to make were such as he believed to be good ones. No one doubts that, for no one knows Senator Cullom who does not know that he is one of the old-time honest ones, who came to the Senate poor and has been growing poorer ever since, with virtue pretty much the whole thing in the way of reward.

He is the finest example extant today of the noiseless statesman. There is nothing of the modern "gum shoe" order about his inimitable quiet. It is a seeing and hearing and say nothing principle. Cullom is wise. He puts on no frills. He makes no noise. He is never sure of anything until it happened yesterday. But there is not a young blood in the Senate who does not better himself by following Cullom if he wants to keep in the way things are going to go. He has impressed himself upon legislation and politics as very few who have figured in public affairs during the last half century. He is tall, slender and frail. He has rather thin gray hair and a full gray beard. His voice is deep and strong and carries always a sense of sympathetic interest which makes one feel that Cullom is his friend. His only vanity is his strong resemblance to President Lincoln, in whose office he studied law and who was his lifelong friend. He told me once that a compliment he prized above most any he ever received came from an old Quakeress who called at his office while he was Governor. Early in their conversation she said to him, "Friend, thee somewhat resembles Abraham Lincoln." At the close of the interview she took his hand and said, "Friend, thee *very much* resembles Abraham Lincoln."

As chairman of the Foreign Relations Committee Cullom holds a most important post in the affairs of the nation, and the value of his piloting has often been evident to those who were in a position to sift the forces of legislation and give honor where it was due.

AN ENGLISH GAME PRESERVE.

Popular Prejudice Against Game Preserving

BY DWIGHT W. HUNTINGTON

[This is the sixth article in our series of "Game Preservation," by the author of "Our Feathered Game." Others will follow. They already seem to have had a wide effect and several of the States are considering the changing of their laws.—EDITOR.]

POPULAR prejudice has always held a prominent place in history, where we find many singular stories of its entertainment by those most likely to be benefited by the changes they opposed. Farmers have been arrayed against the railways; weavers and other workmen against weaving machines and other labor-saving devices; taverns and saloons against license. Towns have opposed the building of a bridge and dock; donkey men opposed the introduction of wagons. Nearly everything new, from the telegraph to the umbrella, has encountered prejudice and opposition. It is not peculiar, therefore, that there is a prejudice against game preserving (in addition to the prejudice against the English methods of shooting, which formed the subject of a preceding paper), and that it is entertained by many sportsmen and gunners who would enjoy more freedom and much better shooting than they now enjoy if game preserves were numerous. The statement applies not only to sportsmen who would own preserves, but also to those who would continue to shoot in

unprotected fields, and includes market gunners.¹

During my investigation of the American preserves I took an especial interest in observing the effect of the preserves upon the shooting in their neighborhood, and in every case where gamekeepers are employed I ascertained that the shooting is better in the vicinity of the preserves than it is elsewhere in the State, and in many places the only open shooting to be had in the county where a preserve is located is at game overflowing from the preserve. The deer shot by local gunners and others in Suffolk County, N. Y., come from the preserves. The only pheasants shot in New York State are shot on or near preserves. Wild ducks, which fly out of a preserve in New Jersey, are shot in a place where a few years ago there were no wild ducks, and many other instances might be cited where the local shooting

¹In the paper on "The State and the Game," I pointed out that both the market gunner and the millionaire enjoy better shooting in England (where preserves are numerous) than they do in America. In England the market gunner may even shoot a punt gun. In America he is prohibited from shooting any weapon in most of the States.

on unpreserved ground is due entirely to the game preserves and where the local prejudice against the preserve has changed to a prejudice in its favor.²

When it became evident that our game birds were rapidly diminishing we hastily formed the opinion that market gunning and the sale of game were the chief causes of our loss. A young man just out of college, who was not a practical sportsman, soon began an attack upon the market gunners and the sale of game in a magazine which no doubt influenced the legislation which has practically put the game dealer out of business. The shooting of the sportsmen next engaged our attention, and we conceived some lovely and unselfish thoughts of moderation, which are expressed in many unexecuted laws³ placing a limit on the bag.

A vigorous champion for this new found notion was soon heard from in another magazine, which undertook to enforce this doctrine of moderation by a somewhat lively vilification of those who shot too much. Many were now heard to say that it was atmosphere and foliage that should lead sportsmen out of doors; we soon had numerous game laws placing a limit on the bag, and all of this was pleasing to the foxes, hawks and cats.

The "game hog" doctrine became widespread and popular, and influenced many who did not fully approve the preacher's methods, since he included in the denunciation those who made good bags of game on preserves where the birds had been made plentiful (at some expense) by their owners. The quill proved to be mightier than the gun. Many who were able and willing to create game preserves of great value to country went abroad to shoot. Land values rapidly increased in Scotland,

where game is properly looked after, and the English sportsmen complained in their magazines that they were being driven out by the Americans, who came in large numbers to shoot where there was more "freedom," as was said by an observing English editor.

Some Americans continue to wonder why our farms are abandoned, but the editor of the *Shooting Times and British Sportsman* knows the reason well.⁴ Lecky, in his history, informed us long ago that field sports tend to keep people in the country and form a sufficient counterpoise to the pleasures of the town.

Mr. Sweeney, the able and observing Game Commissioner of Indiana, writing of the "moral value" of fish and fishing, conveys a similar idea. He says:

"In regard to the moral value I would say that it is well known that children reared on farms almost invariably desire to 'go to town.' This is largely because they associate the farm with hard, drudging toil and 'town' with pleasure. Our forests have largely disappeared; our birds have gone, and the depletion of our streams has left the farmer boy with hardly anything in the shape of recreation. Hence he must go to 'town' if he would take any pleasure. We all know what 'town' has nowadays for the farmer lad. Far better a fishing rod on the banks of a beautiful stream back of the old home than a billiard cue in a 'town' saloon."⁵

Or still better, Mr. Sweeney, a shotgun in the stubbles and the brush. Why should the game preserve which promises to give agreeable and lucrative employment to thousands of country boys, who will have the care of more game birds than they ever dreamed of and the management of handsome dogs, be restricted out of existence? The entire proceeds of the bird crop will remain in the country, and additional money will be brought from "town" by men who are not ashamed to shoot, whose acquaintance is well worth having—"now that the birds are gone."

It is often said that sportsmen make the game laws. There can be no doubt that the sportsmen's magazines and the numerous associations which have been formed to save the game have largely in-

²The last time bobwhite was mentioned in a New York State report the Game Commissioner said: "Quail are becoming quite scarce except in Suffolk County, where a fresh supply is liberated every spring by private clubs."

The reader will find many references to the benefits of game preserving in the *American Field* for April 11th, 1908. There is also an important note on the absurdity of opening the marshes owned by duck clubs to the public in the same magazine for April 4th, 1908.

³"It is a fact that in many parts of the State the game laws are a dead letter and the game, to a large extent, is practically exterminated." (Rep. Ohio Game Com.) Similar statements are found in other State reports.

⁴The number of Americans shooting in Scotland and England has not only increased land values much, but many Englishmen have been crowded out. The *Shooting Times* says: "It is enough to know the Americans are here."

⁵Biennial Report Comr. Fish and Game, Indiana.

fluenced legislation.* It is quite evident that the State game officers do the same. An official report is seldom issued which does not contain many recommendations for changes in the laws.⁷

When we read in an official report that "the game preserve always tends to arouse the greatest indignation"⁸ we may well believe that prejudice is near the legislative hall.

The constituent parts of popular prejudice often are found to be self-interest and ignorance. The farmers who opposed the railways feared the destruction of their animals; the hackney coachmen feared the umbrella might cost them a loss of fares; the taverns preferred not to pay the tax; the weavers and donkey men apprehended the loss of their employment, and each town feared the other would profit by the bridge. All were quite ignorant of the benefits near at hand. Those who object to the game preserve seem to be entirely unaware that an abundance of game in any neighborhood is far better than extinction.

It is quite natural for those who are interested in majorities to listen to the voice of popular prejudice. The politician may be led by popular prejudice to form a wrong conclusion. The statesman often sees that the number to be benefited is not represented by those who at the outset make the most noise. Since it is evident that in the absence of game preserves no one can ever sell or serve game, and that only a few sportsmen can shoot it or eat it until it becomes extinct, many sportsmen, in addition to the game

dealers and hotel men, who have become tired of being mulct, and all those who like to eat game and know that it would be an easy matter to have cheap game plentiful in the markets, must be included in the count.

Many sportsmen have already associated and have game preserves, and do not wish to be limited to five or seven birds or have laws enacted prohibiting for a term of years the shooting of the birds which they have made abundant. Many are now heard to say that the game preserve is the salvation of the game. There are signs of discontent among many sportsmen, who, having paid a license, are arrested as they come near home. When (as it now happens with some frequency) a game preserver has an abundance of birds reared at his own expense and on his own grounds and is prepared to sell them to the dealer or hotel, it is quite natural that both parties to the proposed contract should resent the interference of the law; and there are many others, who, observing that the sale of food is thus prohibited, openly declare the law is wrong. The innkeepers and dealers are well organized in many States, and there are many farmers who would gladly see a game crop reared upon their lands.

There can be no doubt that it was necessary to call a halt; that both sportsmen and market gunners were shooting the game which nature intended for restocking after vermin had freely dined, and in this sense Mr. Thomas, the capable game officer of Vermont, was clearly right when he said: "Man is the worst enemy of game." A careful reading of the paper on "Game Bird Enemies" will indicate that the writer assents to the statement made by Mr. Thomas, as explained in a recent letter. Man undoubtedly is the worst enemy of game because "he knows better" than to take game when he is aware that by so doing he fatally upsets nature's balance and causes the game to become extinct. Field sports, as I observed, when I quoted Mr. Thomas, must be discontinued unless the people are permitted and encouraged to make game abundant. We must create before we can destroy.

While it was undoubtedly necessary to prohibit the sale of game, to shorten the

*A recent circular sent to the affiliated clubs by the Massachusetts Fish and Game Protective Association contains the following suggestion: "You are aware that the time is near when the clubs ought to be prepared to present to the incoming legislature such changes in the present laws as they desire."

⁷The Rhode Island Commissioners recommend seven changes in the laws (the number is not unusual), among them: "That the law protecting pheasants *be extended until October 15th, 1910.*" These birds were successfully introduced into the United States over a quarter of a century ago. When under the present system are we to know how they taste?

⁸Rep. Game Com. New Jersey. The State Commissioner of Indiana says: "The creation of a public park or game preserve for the benefit of the people in general does not arouse the antagonism or criticism sometimes caused when a large tract is purchased or maintained as a game preserve for the exclusive use of a private individual or club." Rep. Indiana Com., 1904. Professor Pearson, the State game officer of North Carolina, is in the best position to give an opinion on this subject, since there are more preserves in North Carolina than in any other State. In a letter to the writer he says the game preserves are popular and that it would be well if there were more of them.

season, and to limit the bag, and it cannot be denied that all who sought to bring about such legislation and to enforce it by denouncing big bags, were actuated by good motives, a serious mistake was made in not excepting those who increased the game from the operation of the restrictive laws. Vermont has already discovered the error, and now permits those who wish to have game in abundance to do so, and to sell it to pay the cost of protecting it, and Mr. Thomas well says it is now "up to the people." The best game bird in Vermont, the ruffed grouse, is reported to have become very scarce, alarmingly so everywhere, during the past season. Various causes for this diminution have been assigned—disease, a bad breeding season and others. I have, however, reports from widely separated places, where the birds are protected by gamekeepers, that the ruffed grouse have increased during the same period. Intelligent game preserving will soon make these splendid birds abundant in Vermont and thruout their range.

In an entertaining letter, Mr. Oldys, of the biological survey of the United States Department of Agriculture, informs me that he is "unalterably opposed to the substitution of the European system of game preserving for the American." "The wild game belongs to all the people," Mr. Oldys says; "not to the sportsmen or the game preserver."

In discussing our legal blunder, in a paper on the failure of our game laws,⁹ I pointed out that we had borrowed from England—the land of preserves—the idea expressed by Mr. Oldys, but that we had overlooked the fact that the crown,

⁹We made an important legal blunder at the start. "The title to the game is in the Crown," is a well known maxim of the English law. This we copied almost word for word. Our game codes say: "The title to the game is in the State."

We seem to have reasoned that the State must look after the birds because it is declared to be the sole owner of them, and our lawmaking has indirectly proceeded on this theory. In England the declaration of title to which we have referred is regarded as a legal fiction, not to be urged too strongly when it appears to come in conflict with common sense.

The crown is well aware that it cannot engage to destroy the game enemies, collectively termed vermin, which are found on every farm, or to mitigate the losses due to climate, or properly to look after the birds, in order that they remain plentiful. On this account the crown property, or the care of it at least, has been intrusted to the people. Those who wish to have game or to shoot it may use the crown property as if it were their own.—*New York Tribune*, January 19th.

altho it holds the title to the game, just as we the people hold it in America, long ago decided that it could not personally look after the foxes, hawks, snakes, cats and other game enemies thruout the kingdom, and it had, therefore, insisted that the people should attend to these matters if they wished to have any game. The result of this sensible method of game handling has been a wonderful abundance of game, not only on large estates, but on smaller places, where syndicates of sportsmen employ some one to control vermin and make game plentiful, and on small farms, where the farmers find it profitable to look after game.

Mr. Oldys presents some interesting figures, and forecasts some dire results if we make game plentiful by giving it our individual attention. He says:

"In Germany, where the private game preserve system is in full sway, 600,000 of the population of 60,000,000, or 1 in 100, shoot annually. In the United States a conservative estimate places the number of shooters at 3,000,000 out of 86,000,000, or 1 in 29. That is, if we adopt the European system, we may look for the cutting off of nearly 3 out of every 4 that now enjoy the privilege of hunting game; or, in other words, the change involves depriving 2,140,000 American citizens of the privilege they now enjoy of hunting."

This would be too bad. If the change would result in putting 2,140,000 guns out of business the writer would certainly not favor it. Mr. Oldys evidently has not had the opportunity the writer has of seeing an increase of guns in the vicinity of game preserves in America or of getting some fairly good shooting, quite near New York, in the vicinity of a game preserve, where, in the absence of the preserve, there would be none. Mr. Oldys evidently has not undertaken the rearing of a few game birds, as the writer has, or he would know that his neighbors, in such case, necessarily get some shooting which otherwise they would not enjoy.

I once had a few pheasants, in order that I might study them. They wandered about the neighborhood, and (altho they came to me in a box) they belonged, as Mr. Oldys says, to all the people in their sovereign capacity, and, I may add, some cats, too, in their sovereign capacity, since the cats, as usual, discovered there was some game in the

neighborhood; a most unusual thing for that part of the country. The statistics indicate that the local guns in my neighborhood shot more pheasants than have been shot by all the sportsmen in Ohio during the past twenty-five years, altho Ohio has spent a large sum of money in pheasant rearing. The statistics also show that the sport in the vicinity of my experiment station was 300 per cent. better than my own shooting was, and that the entire pheasant shooting was due to my experiment. Had I employed a gamekeeper my neighbors would have shot more pheasants, since the overflow would have been larger. I have, however, referred to the benefits of the overflow in a preceding paragraph. Mr. Oldys's figures, which are office figures, are not the figures any one makes who is familiar with localities where game preserves are located. The tendency of such figures is to excite prejudice; and prejudice, here as elsewhere, is clearly wrong. Mr. Oldys, in making his figures, has overlooked the fact that the area of the country where only one in one hundred shoot is smaller than the State of Texas, while the population is about two-thirds as large as that of the whole United States. There is absolutely no danger that we will have too many preserves under the most favorable legislation. The danger is that we may have too few, unless all prejudice against those who intelligently save the game can be made to disappear.

Mr. Oldys overlooks the fact that the farms in America are rapidly being abandoned, and that there is room and to spare for all who are willing to do something practical. Mr. Oldys overlooks also an economic fact of the first importance. The people of Germany are supplied with cheap game in abundance, but the greater part of the game now eaten in New York comes from abroad. To pay for this money in large sums is sent away which should go to the American farmer, who is said to be the best "American citizen" that we have. In the North American Society of Game Preservers (which includes sportsmen who do not own preserves as well as those who do, and also those who wish to deal in game and serve it) the

American farmer holds a prominent place.

It is gratifying to observe that in all probability our prejudice will be overcome in time to save our vanishing game birds from extinction. Mr. Shields, the well-known editor of *Shields's Magazine*, and president of the League of American Sportsmen, who has done as much as any one man in America to call the needed halt, believes, as the writer does, that it is time to encourage those who will make game plentiful. In a recent letter, which I quote with his permission, he says:

"I am in favor of anything and everything that can in any way prolong the life of the few game birds and quadrupeds remaining in this country. The time will come, and that within a few years, when the only game to be found in the United States will be on public or private preserves, with possibly some overflow, so I am always glad to hear of individuals or clubs creating game preserves. Your scheme is a good one in many respects. If the owner of a preserve propagates and protects game he should have the privilege of shooting any quantity he may see fit during the open season, and of marketing it without restriction."

Mr. Charles Hallock, the founder of *Forest and Stream*, after reading the paper on the "State and the Game" in THE INDEPENDENT, wrote: "Truly we need a revolution of thought and a revival of common sense."

Mr. Grinnell, who now conducts *Forest and Stream*, seems to think that the time to favor the preserve by legislation will be after there are more preserves than there are at present.

Legislation which caused the building of railways and the starting of various other industries, however, has always preceded the work. *Forest and Stream* editorially says that they now have inquiries for gamekeepers. This is a most encouraging fact, since in populous regions gamekeepers are absolutely necessary to increase game, just as shepherds are necessary for flocks and cowboys for cattle. It is an easy matter for a gamekeeper almost instantly to show a large increase of any kind of game. We have learned that a dozen new game laws, more or less, do not accomplish such results.

The American Field in an editorial

calls for an expression of opinion. The editor of *Forest and Stream* says he is open to conviction; that his only fear is that some game may be sold from places where it is not properly looked after. Those interested in increasing the game can and will assist the State officers in prohibiting the sale of "moonshine" game until the time comes when game will be so plentiful that there will be no objection to the market gunner making an honest living from the overflow and enjoying the same freedom that the market gunner has in England. Mr. Pond, the editor of the *Sportsman's Review*, calls my attention to the fact that his paper has always believed the American people should eat some game. Even Mr. Oldys, who, as we have observed, is unalterably opposed to substituting the European for the American system, says that game should be sold from the game preserve when identified. This is as it should be. Let us not regard the farmers and sportsmen, who in combination make the game abundant, as European in any way. Let us think of

them as fairly representing the true spirit of American industry, thrift and enterprise. If the game dealer contributes to pay the expenses of the game-keeper, who sends him some of the turkeys or other game birds which have the true game flavor, because they have been reared wild in the woods, let us no longer regard him as a criminal, and arrest his customer, the innkeeper. Such performances, which are looked upon with amazement by people from civilized countries, may soon be unnecessary. I confidently predict that the time is at hand when our prejudice against game preserving will take its place in history in the long line of absurdities, a few of which I have cited.¹⁰

¹⁰There is much to be done. The game preservers (especially the duck clubs) must be urged to establish refuges and multiply the birds; to employ game-keepers; to create more than they destroy. The N. A. Society of Game Preservers now has correspondents in many places and soon will be in a position to supply its members throughout the land with much information. Anyone who wishes to aid the increase of the game is eligible. Sportsmen, farmers, game dealers, and innkeepers are now members of the society.

PRESIDENT OF THE AMERICAN COLLEGE FOR GIRLS, CONSTANTINOPLE, TURKEY

TURKISH literature abounds in stories illustrating the popular attitude of the land toward women.

There is the story of the man who was invited by a pasha to visit him. Of course, he must take a present with him on this great occasion. "What shall it be," he asked his wife, "quinces or figs?" "Quinces," replied the wife, "they are so much larger and handsomer than figs." As the wife advised quinces the man took figs, and when he was asked by the pasha to stand in the corner while the figs were one by one thrown at his head, he said to himself, "What a mercy that I did not follow the advice of my wife."

Yet, on the serious side of life, Mo-

hammedanism recognizes the rights and privileges of our sisters behind the lattices in at least one respect, and that is in regard to property. Turkish law leaves women free to hold property, independent of any control, and this is perhaps one cause of the sturdiness of mental development among them, and of their receptiveness and eagerness in regard to education.

The American College for Girls was established as a high school in 1871 by Americans, with the aim of giving higher Christian education to the women of Turkey. Its field was soon extended to include the countries of Eastern Europe, and in due time the high school became

an incorporated college, and received also, as a mark of special favor from the Sultan, an irade, freeing it from taxation for all time. It is situated in Scutari, on the Asiatic shore of the Bosphorus, overlooking the wonderful harbor of the Golden Horn, which is perhaps the finest in the world. In the grounds of the college violets, roses and pomegranates blossom in profusion, and from the terrace one can distinguish against the background of the domes and minarets of Stamboul the approach of the steamers that bring expected visitors, and later on one can watch them as they steam away again toward the west. In the harbor may be seen the flags of all nations, but one regrets the fact that the American flag is seldom there. All the other leading nations keep a gunboat in this harbor with its flag flying, as a visible protection of their interests in Turkey. America does not, and, as a consequence, is not considered by the people as strong a power as the other nations.

The American College for Girls is the only cosmopolitan college for women in Eastern Europe or Western Asia, and students have been enrolled there from as many as fifteen different nationalities. Thus it comes about that one hears a babel of languages in the college halls, yet in the classrooms and in social life all combine in the use of English, and it is wonderful how soon new students understand and speak the English language. The education of these students cannot be complete, however, without a knowledge of their own language, including the ancient and modern forms, and the literature. There are, therefore, many languages taught in the college—ancient and modern Greek, ancient and modern Armenian, Slavic and Bulgarian, Turkish, Persian and Arabic, French, German and Latin. This array of languages does not mean that all the students must study so many, but that each is expected to be thoroly conversant with the language which she uses at home. The require-

ments for entrance to the college are the same as in colleges in America, but the ancient form of the vernacular of a student is accepted for a classic language.

In other respects the curriculum is similar to that of colleges in America, with its work in biology and physics, English and mathematics, psychology and philosophy. The departments of art, archeology and history have special advantages in the surroundings, so closely connected with the rich past of Byzantium and Asia Minor, and offer attractions to Western as well as Eastern students. There is a strong musical department in the college, which adds greatly to the college life, and offers also occasional concerts to the public.

Oriental girls lend themselves easily to all that belongs to the esthetic side of academic training, and give very graceful entertainments of different kinds. One of the literary societies presented "Cranford" last year, to the satisfaction even of the English part of the audience, and the Greek classes have several times given dramas in ancient Greek, among others "Antigone," "Medea" and "Iphigenia in Tauris." When the latter was given, there were many prominent Greeks present, who said that the drama was wonderfully well staged and presented. The music of the choruses was written by a Greek who has made an

exhaustive study of the music of the ancient Greek drama.

The graduates of the college are of twelve different nationalities, and some of them are notable in their various countries. One of the Turkish graduates has translated a book from English to Turkish, "The Mother in the Home," of which a thousand copies were distributed among the wives of the soldiers, and which so pleased his Majesty that he conferred a decoration upon the author. This book has lately been in demand as a textbook in some of the schools of Southern Russia. This woman has other books also ready for publication, and she has written from time to time for the Turkish press. She is the only Mohammedan woman in the Turkish Empire holding the degree of Bachelor of Arts, but she is not the only writer, as there is a strong movement at the present time among Mohammedan women of the higher classes in the direction of culture of all kinds.

Two graduates of the college are in Albania, a province of Turkey, where the people are so illiterate that they are called by the Turks "the bookless." These two women, Sevastia and Paraskeve Kyrias, are at the head of a fine boarding school for girls, the place in Albania where Albanian girls are taught in their own language, and for this pur-

pose many of the textbooks now in the school have been translated from English to Albanian.

An Armenian alumna is a graduate of the College of Physicians and Surgeons in Chicago, and is now practicing medicine in a city in Asia Minor, and another is carrying on a college settlement under

A Greek graduate, Cleonike Clonari, is at the head of a hospital for children in Athens, which is under the patronage of Princess Sophie, the wife of the Crown Prince of Greece. Miss Clonari is from the island of Mitylene, the home of Sappho, where, six hundred years before Christ, there was a school of music

THE ART CLASS.

circumstances of great personal sacrifice in a remote village of Asia Minor. Her work includes teaching simple industrial arts, classes in reading for both men and women, and very many other things. The men of the village, for instance, came to her and asked her to explain the cause of the seasons and of day and night; she is accordingly giving lessons in elementary astronomy, using a large squash for the earth with its flattened poles, and a small squash for the moon, and a lamp for the sun. As the result of her work the village must soon have improved moral and industrial conditions.

and poetry for women, carried on by the greatest of all women poets. Miss Clonari studied nursing in the Massachusetts General Hospital; thus she is bringing to bear upon her work in Athens the results of a complete American training.

The influence of the alumnae has been very widespread. Twice it has happened that a Hungarian has stood among the recipients of the degrees on commencement day, and this year there will be a Servian graduate for the first time. Graduates of this college have had their share in producing the rapid transformation which Bulgaria has undergone dur-

ing the last thirty years, as the college is very popular in that enterprising little country, and often receives as students the daughters of its highest officials. The college has affiliated officially with the Department of Public Instruction in Bulgaria, with the intention of doing the utmost possible in education for the Bulgarian people, and this year, of the one hundred resident students in the college, forty are Bulgarians, who come, many of them, from a great distance. Russian students are also beginning to attend the college, altho there have been as yet no Russian graduates.

Two years ago a great fire destroyed one of the principal buildings, including more than half of the general equipment

controlled. This is in great contrast to the hysterical tendencies of many of their sisters in the Orient, for in a time of sudden crisis in an Eastern household it is not unusual that the mother in the family presents the greatest problem, often throwing herself upon the floor in violent hysterics, and being usually rather stout and heavy to move, gives perhaps more trouble than fire or earthquake, or whatever is the cause of the disturbance. The sight of the students of the college, walking two by two, half clad, but perfectly self possessed, thru the streets of Scutari the night of the fire was a wonderful revelation to the people in the houses on either side of the street thru which they passed, and the story of this

THE BIOLOGY CLASS.

and dormitory accommodations of the college. Picture a long procession of half clad girls in the unpaved and badly lighted streets of Scutari, hurrying away on a winter's night from the scene of confusion to a place of protection; all that many of them possess is in the burning building, yet they are calm and self-

remarkable result of college education for girls spread so rapidly over the city that we heard it from Pera, on the European side of the Bosphorus, early the next day. The students returned in the morning to a dismantled college. Among them was a young Slav girl from a wealthy family who had quickly donned

a gymnastic suit when she fled from the burning house.

"Why, Jedila," said one of the professors to her, "did you save only that gymnastic suit?"

"Oh, that does not matter," replied the young girl, "but I am so sorry that the college is burned."

A father of one of the students who lost everything came on from his home on the borders of Greece. Sincere regret was expressed to him by the president of the college that his daughter had lost all her clothing.

"Madame," he replied, "the shops in town are full of clothes, but supposing that I had lost my daughter, what then?"

Since the loss of the principal dormitory the college is not able to receive all who wish to enter, and many students are being turned away. The building which was destroyed has not yet been replaced, as the trustees plan to rebuild on a larger scale, in order that this college for women in the near Orient may be adequate to all the demands upon it from Turkey and surrounding countries.

Plans for the future include improved facilities in the general academic work. This college must lead in education for women in that part of the world. A strong pedagogical department is much needed, as teachers are in demand for schools of all classes and grades. For example, one of the graduates of the college is at present in charge of the biology and chemistry in a school in Bulgaria, and, in fact, more than half of the graduates have taught for a longer or shorter time in different schools. These teachers who are sent out from the college receive training of the highest grade. The college also plans to unite with Dr. Thomas S. Carrington in a training school for nurses, which it is hoped will eventually develop into a medical department. Dr. Carrington is at the head of the American Hospital in Constantinople and his medical work in Turkey is well known. There is peculiar need of medical work among the women in the harems, whose sufferings we cannot easily picture.

A doctor of my acquaintance was once passing a house from which violent screams were heard.

"What is the matter?" he asked a servant of the house.

"The hanum is ill," was the reply.

"I am a doctor," he replied, "and I should be glad to come in and help the hanum."

The servant went inside to consult his master, and on returning, said:

"My master wishes that his wife may die before she may see a man doctor," and, as a matter of fact, the woman died. Altho this was an extreme case, yet the opening for medical work among the women is large beyond the power of language to express.

The college also plans to affiliate with American colleges in offering advanced work in archeology in connection with the wonderful opportunities for that kind of research in Asia Minor. A thoroly equipped preparatory school is also a necessity, with teaching of simple industrial arts included in the program. Such a college for women as we have described in all its equipment would add very much to the charm of the Bosphorus, making it a center not only of natural beauty, but of intellectual privilege.

Nazr-eddin-Hoja, the great Turkish satirist, tells the following story:

"On one occasion he saw twelve women sitting on a bank beside a stream, waiting to cross. Seeing their forlorn condition, he offered to take all across on his back for twelve coppers (that is, a cent apiece).

"All went well until he started with the tenth woman, who rolled off into the stream and was drowned. After returning for the other two, he found all the women weeping and wailing on the other side. 'Foolish women,' he cried, 'why do you lament? Do you not know that I shall take off one copper, and charge only eleven?'"

The graduates of the American College for Girls have proved that the value of human beings is increased by education, and more and more the power of the trained woman will be felt in the school, in the hospital, in the press and in thousands of cultured homes. We must give our best to the girls of the Orient in intellectual, moral and religious training, studying the special needs of the situation, and producing a result that will be creative and will show itself in improved social, economic and spiritual conditions in the national life of the East.

Premonition

BY LEWIS WORTHINGTON SMITH

WHEN you and I have sailed away
Across the sunlit sea,
If you should have a last regret,
Should search my eyes to find them wet,
There would be nothing I could say,
No prayer that I might dare to pray,
Just silence for my plea.

When you and I have touched the strand
Where all our fancies bloom,
Your garden walks, your soul retreats,
Shall fold you from the summer heats;
And so I seem to see you stand
With rapt, strange eyes in that far land
Of asphodel perfume.

When I have given you all and set
Your life in its delight,
Dear heart, dear heart, if you should sigh
While some dead memory drew your eye—
I could not ask you to forget;
I am not all your life, and yet
My day were then made night.

DRAKE UNIVERSITY, DES MOINES, IA.

The Christ of the Andes

BY CAROLINA HUIDOBRO

[In the issue of THE INDEPENDENT of October 5th, 1905, Señora de Costa contributed an article telling how she was instrumental in placing the statue of Christ on the summit of the Andes in commemoration of the peace treaty between Argentina and Chile. At that time she had already in mind the establishment of a hermitage near the statue where monks from St. Bernard could aid the travelers crossing the Andes during the winter. As this is the most practicable pass between Chile and Argentina there will always be herders crossing with their cattle and flocks, even after the railroad is finished in 1910. The following article shows that Señora de Costa's dream has finally been realized. Señorita Huidobro is a Chilean and has now for some years resided in the United States, where she has been endeavoring, with great success, to bring the two continents nearer together by telling of the real conditions in South America. She has contributed frequently to the magazines articles on her home countries and is in great requisition as a lecturer on South America.—EDITOR.]

THE two most southern republics of this hemisphere, Chile and Argentina, are the first in the history of nations to have, at the beginning of this great century, stood for universal peace, and given a tangible example to the whole world of what can be avoided by arbitration, even tho two nations may be on the verge of a bloody war; and it was only just that a fitting recognition of this great fact should have been made at the last Hague Conference, when the treaties between Chile and Argentina were brought forward. Away up on the very crest of the Andes, where the travelers who go from Argentina meet with those who come from Chile, buffeted by the snows, raising its redeeming cross and piercing the mists of evening, stands the great bronze statue of "The Christ of the Andes"—and can aught be more significant? It was cast from molten cannon, placed there by the efforts of the noble women of Argentina thru the initiative of Señora Angela de Oliveira

SENORA ANGELA OLIVIERA CEZAR DE COSTA.

BLESSING THE CORNER-STONE.

The monastery is to be erected a few feet beyond the cross in the middle distance to the memory of travelers who were frozen to death crossing the Andes last winter.

César de Costa, in that solemn and memorable hour which augured well for the peace of South America, when Chileans and Argentines met and fraternized, and the treaties of amnesty, arbitration and disarmament were consummated, thus finally settling a long-time dispute over boundaries, which not only involved the great watersheds of the Cordilleras, but the sovereignty over 83,000 square miles of territory. And it is a coincidence that two great nations of the East lately resorted to the sword in order to settle the rights over Korea, also a territory of 83,000 square miles.

Since both great republics are alike in tradition, history and destiny ever since the glorious days of independence to those of progress and prosperity which the future offers, war between Chile and Argentina would have been fratricidal. It was the great Argentine soldier-patriot, San Martin, the real George Washington of South American independence, who marched his armies

over the Andes early in the last century to the succor of the almost vanquished Chileans and gained ultimate victory over the Spaniards in April, 1818, which makes it significantly fitting that on the 22d day of last February a pilgrimage should have been made from Argentina to the foot of the great peace monument, with the purpose of there consecrating the flag of the South American Association of International and Universal Peace, recently founded by the same Señora Oliviera de Costa, with the same prevailing spirit which inspired the heroes of peace and independence when they passed there over a century ago—the spirit of the Prince of Peace, to the symbol of which, at its unveiling the 13th day of March, 1904, over 3,000 persons assembled. The venerable Fray Marcolino del C. Benavente, Bishop of Cuyo, who first thought of the Christ statue as a fitting way in which to commemorate another century of Christianity, offered up a solemn mass and then

blessed the peace flag, which embodies the colors of all the flags of the two Americas, embroidered in gold, with laurels and palms. On one side a large sun is seen, while on the reverse a white dove; at the top is the motto, "*Paz á todas las naciones*" ("Peace to all nations").

Among the sponsors to this ceremony we find General Roca, ex-President of Argentina, and Señor Luis Maria Drago, of Drago Doctrine fame, and whose voice was heard at the last great Hague Conference. This part of the ceremony ended, a few feet only from the Christ statue, at an elevation of nearly 14,450 feet above sea level, was laid the cornerstone of an "ermita"—a house of refuge for travelers in the winter months, a convent similar to that of St. Bernard, on the Alps, and, according to Señora Costa's plan, to be presided over by monks from St. Bernard. Strong electric lights from high poles will cast their rays over the cañons and valleys, and the almost human St. Bernard dogs will aid the good monks in their work of rescue.

THE NEW SOUTH AMERICAN PEACE FLAG.
The Bishop of Cuyo and Señora de Costa.

Again, it was thru the efforts of Señora de Costa that the land for the hermitage

AT THE FOOT OF THE STATUE.

The Bishop blessing the corner-stone. Señor de Costa standing at his right. Flag of the new South American Peace Association used for the first time. Ex-President Roca is the president of it.

was given by Señor Carlos González, of Mendoza, and since verified by the Pacific Railway (Trans-Andean).

Who shall gainsay the future of it all? A simple ceremony in the extreme, witnessed by less than one hundred faithful souls, on this great height and where stands the first monument to *Peace*, on whose pedestal we read:

"Se desplomaran antes estas montañas que

chilenos y argentinos rompan la paz que han jurado à los piès del Cristo Redentor." (Sooner shall these mountains crumble unto dust than Chileans and Argentines break the peace which at the feet of Christ the Redeemer they have sworn to maintain.)

Surely this is the sentiment which to-day should stand as the very cornerstone of the great peace movement, not only in South America, but in the entire world.

BOSTON, MASS.

Governor Hughes's New Book*

BY GENERAL STEWART L. WOODFORD, LL.D.

EX-MINISTER TO SPAIN AND PRESIDENT OF THE HUGHES LEAGUE OF THE UNITED STATES

I HAVE been looking carefully thru the addresses and speeches of Governor Hughes, collected by THE INDEPENDENT, just published by G. P. Putnam's Sons, and with an introduction by President Schurman of Cornell. This book is a timely contribution to present civic and political needs. I have known Governor Hughes from his early manhood, and each year he grows larger in the thought of our people. He is certainly a unique figure in our public life. He has many of the personal characteristics of Washington; he is always dignified and yet always kind; he is wise, patient, brave; he makes up his mind very slowly, and sits in judgment on himself and his own opinions more judicially than any man I have ever known. When he has to act promptly he acts with a soldier's instinct; but he always withholds decision, if he can, until he can look at the given question from both sides and be sure that he is acting from judgment and not impulse.

His addresses and speeches as published in this book give almost exact photographs of the real man. During the last two months I have been somewhat closely associated with him in the matter of his possible Presidential nomination, and have learned to know and appreciate his modesty, his courage and his conscience. I do not believe there lives a man to whom he has ever sug-

gested any desire to be nominated for the Presidency. In this there is no affectation, no playing of a part. More than any man in our generation he holds to the old Washington idea that public office is a public trust, which no man is compelled to seek, and which, when conditions permit, no man should lightly or selfishly decline. Every public duty which has so far come to him has come without personal solicitation. Every public duty has been accepted modestly, resolutely. And every public duty has been discharged with the single purpose of serving the State and the people. Should the Presidential nomination come to him I believe he will be elected. Should it be withheld, he will be relieved of an unsought and heavy burden, and will not have one moment of regret.

As I have said, these speeches reveal the man. They should be widely read and studied. They will be an uplift to our young men in this time of graft and self-seeking. It is certainly a large example for good citizenship when a man named for the Presidency keeps himself at his present official work and daily duty, leaving all effort in his behalf to others, and doing nothing for himself. This is the highest ideal of democratic citizenship. Years ago a great American said: "The Presidency is an office which no citizen should seek and no citizen should decline." In Governor Hughes this ideal of the days of the early Republic lives again.

NEW YORK CITY.

*Addresses and Papers of Charles Evans Hughes, Governor of New York, 1906-1908. With an introduction by Jacob Gould Schurman, President of Cornell University. New York: G. P. Putnam's Sons.

Proper Banking Legislation

BY FRANK A. VANDERLIP

VICE-PRESIDENT OF THE NATIONAL CITY BANK

THE cost of the financial crisis of 1907, measured by whatever standard one may choose—measured either by the direct financial losses, by the disorganization of industry, by the destruction of confidence or by the discouragement of thrift—makes it one of the great calamities of history, the burden of which has by no means been confined to wealth alone. That burden falls with severity on every class and on all sections.

Financial crises have occurred with such periodic regularity in the United States that many have, with Mohammedan stolidity, come to regard them as "the will of Allah," and to look alike upon banking panics and crop failures as dispensations of an inscrutable Providence, just as we once regarded visitations of plagues and fevers.

In no other great nation of the world are such financial catastrophes regularly enacted. Nowhere else may be found an important financial system subject to such violent turbulence as is the money market of the United States.

If there is any lesson to be learned from history, then there is none clearer than that the financial system of this country inadequately fulfils its functions and ineffectively serves the interests of commerce and industry. If there is any lesson to be learned from experience and example there is none more obvious than that the other great nations have evolved orderly systems of finance which, in their application to the problems of banking and currency, are immeasurably superior to our own, and that there are no inherent reasons in the position of our affairs which would prevent our profiting by their experience and example.

If these general statements are true, if their force is not exaggerated, then there can be few subjects that are of greater importance for general public consideration. If the crisis, the effects of which still surround us, has been a national calamity; if similar crises have come, and

under unchanged conditions are likely to continue to come, with periodic regularity; if intelligent examination indicates that such disturbances bear no relation of necessity to general commercial development; if the example of other nations working under financial systems different from ours shows comparative freedom from such crises, then clearly it is time to give to these somewhat intricate problems the consideration which their importance merits.

The fundamental proposition which I first wish to establish in regard to all commercial banking is that the business of the modern bank is almost solely the exchange of credit; to use a homely but clear phrase, the swapping of credits. The business of a bank is not in the main the reception of money and its safe keeping, nor is it the loaning of money. The money transactions of a bank are, under ordinary conditions, comparatively insignificant; almost its entire business consists of receiving from its customers their evidences of indebtedness, which have a narrow currency, and giving to those customers in exchange the bank's evidences of indebtedness, which have a wide currency. These evidences of a bank's indebtedness are, then, transferred from one individual to another and from one bank to another, and in that way the credits created serve the purpose of the medium of exchange by which, perhaps, 95 per cent. of the exchange transactions of commerce take place.

It is a misconception to suppose that a bank first accumulates deposits and then loans them out to borrowers. The operation is the reverse. The bank first makes a loan to the borrower and in so doing creates a deposit. The borrower exchanges his credit, his evidence of indebtedness, for the bank's credit, a deposit balance. The creation of these credits has relation to production. Their liquidation is related to consumption. If production increases, the demand for this exchange of individual credit for bank

credit increases; and the indebtedness incurred is liquidated as the articles upon which the financial credit was based enter into consumption.

The manufacturer buys raw material and in order that he may pay for it exchanges his credit for the bank's credit. The raw material is converted into a finished product and sold, and by its sale the means are provided by which the indebtedness may be liquidated. The merchant who in turn buys the manufactured product may exchange his credit for the bank credit which he will use to make the purchase; and when in turn he sells to the retailer or to the consumer, he provides the means for the liquidation of his indebtedness. That is the true business of a modern bank. It swaps its credit, which has a wide currency, for the credit of its customers, and the bank deposits thus created become the medium of exchange for the greater part of the transactions of commerce.

Obviously erroneous is the conception that so-called deposits represent an actual deposit of money. When the nature of fundamental banking transactions is understood, the error is made plain; but the conception is a persistent one, and confuses much discussion of banking questions. There is comparatively little money deposited in a bank. No person can say that he has money on deposit. What he has is a credit on the bank's ledger. Such money as the bank holds belongs to the bank rather than directly to the depositor.

Resolved to its simplest analysis, the main figures in a bank's statement are, on the one side, the totals of the promises of individuals to pay the bank money, and on the other side the promises of the bank to pay the individuals money. The one results from the other. The one has been exchanged for the other. Now while this accumulation of evidences of indebtedness, this total of credits called deposits, are promises to pay money, they become in the aggregate an amount vastly greater than all the money that might by any possibility be available for such purposes. It should be evident that it is not possible nor desirable that a bank should keep itself in a position to pay in money all its deposits if demanded at once; just so it is evident that its cus-

tomers could not redeem in money their promises to pay the bank if such demand should be made by all banks at once. There is a co-operative quality in the functions of a bank which should be understood by the bank's customers, and, whether understood or not, must be accepted by them; as, for instance, in a time of panic, when they have impressed upon their minds that no matter how solvent a bank may be it cannot possibly be in a position to redeem all the credits that are evidenced on its books in cash at a given time.

This co-operative quality ought to be more clearly understood by bank customers. They are clear enough in their desire to enjoy the advantages of the modern banking system. They wish to convert their credit into a credit that may be used as a generally acceptable medium of exchange. They expect to share in the profits from the use of capital temporarily idle in the hands of its owners. They demand the facilities which the banking system offers them for making credits instantly and cheaply available at distant points from their places of business. But even tho they gain all these advantages they frequently see with indistinctness that they themselves must play their part in the financial mechanism; that they must recognize the co-operative nature of the system and comprehend that so-called deposits are not deposits of money, but are the book entries resulting from an interchange of credits, and that they are of a nature where their wholesale redemption at a particular time is impossible.

One of the principal functions of money is that of a medium of exchange. In the modern system of finance, however, money is only so used in petty transactions. In transactions important in amount money is seldom or never the medium of exchange, the medium in such cases being bank credits. As I have said before, it is estimated that 95 per cent. in value of all commercial exchanges are effected by an interchange of bank credits rather than by the use of money. It is, of course, obvious that a bank credit must be related to money, and in the ordinary course must be redeemable in money. It is for this reason that a bank, after giving its custom-

ers credit upon its books, permits its credits freely to be transferred from one customer to another, and agrees to honor the credit upon demand by redeeming it in money. The bank must keep itself in a position to fulfil that obligation by having constantly in its vault an amount of money equal at least to all of the ordinary demands that may be made on it. All banks must, therefore, hold a cash reserve against deposit liabilities. The minimum amount of that reserve in relation to the deposit liabilities may be fixed by law, as in the case of national banks, or it may be left to the discretion of the bankers, as is permitted by the laws of some States. Ordinarily it may be anticipated that the amount deposited in a bank will equal approximately the amount withdrawn. The reserves are held against those unusual occasions when demands predominate. Reserves are the only part of the bank's assets which can immediately be used to pay off depositors. Should the predominance of demand develop into a run on a bank, its ability to meet the situation must depend upon its reserves, plus the amount of its assets that may be quickly converted into cash.

Reserves, however, have another extremely important function. They furnish a natural and necessary check to inflation. Were there no immediate necessity for the redemption in cash of any portion of a bank's promises to pay, the bank, so long as it found customers who would borrow and whose obligations it was willing to take in exchange for its own, could go on indefinitely expanding its liabilities. The relation which must be maintained between total deposit obligations and cash reserves forms a definite check upon such inflation. Under proper banking methods deposits cannot expand without a proportionate increase of gold reserves.

Conversely, supposing a bank's book credits to have expanded to the limit permitted by the legal relation between deposits and reserves, then if the reserve be reduced and the bank is without means to make good from outside sources the deficit in reserve, it must meet the situation by the calling of loans. It must induce its customers to cancel a portion of the bank's indebtedness to them, thru the

bank, on its part cancelling an equal amount of the customers' indebtedness to it.

This intimate relation between loans, deposits and reserve is an extremely important one to comprehend. Most people are, of course, familiar with the legislation concerning it and I will recall it in but the briefest words. Under our National Banking Law banks in the three central reserve cities are required to hold a reserve in lawful money equal to 25 per cent. of their net deposit liabilities in their vaults. Banks in the forty reserve cities must also hold a reserve equal to 25 per cent. of their deposit liabilities, but they may keep half of their reserve on deposit in banks in central reserve cities. Banks located in neither the reserve nor the central reserve cities are required to keep reserves equal to 15 per cent. of their deposits, altho only two-fifths of that reserve must be in their vaults and three-fifths may be with their reserve agents either in reserve cities or central reserve cities.

As one of the primary objects in the organization and operation of a bank is to earn profits for the stockholders, and as under ordinary conditions these profits are increased in proportion to the size of the loan account of the bank, it is natural that banks will habitually run with their loan account as large as possible; that is to say, they will swap their credit for their customers' credit until the total credits which have been granted on their books bear as high a relation as the law will permit to the cash reserves which they hold in their vaults. The governing factors are the ability of the bank to make what it regards as safe and profitable loans and its ability to secure and hold cash reserve which will sustain the proper legal ratio to the credits it thus creates and calls deposits.

Two consequences of enormous importance to the whole community flow from the condition of affairs which has been set forth. One is that to avoid dangerous inflation bank reserves must be maintained in gold or its equivalent. It seems to me obvious that the danger which would follow the plan which many bankers favor, of counting in reserve the notes of other national banks, would be extreme. Such action would break off

the inter-relation of volume of credit to the gold stock, and would open the door to an inflation which would be limited only by the bounds that the laws might place upon the issue of bank notes. These limits are now marked by the total of interest-bearing obligations of the United States and the total capital of the banks. Should the law remain unchanged it is easy to see how some national disturbance might sharply increase the total of interest-bearing obligations, create a basis for dangerous inflation, result in extraordinary exports of gold, and bring our whole financial system face to face with a crisis at the very moment when such a crisis might be most dangerous to the life of the nation. Whatever new legislation we may have should always keep embodied in it the principle

that a bank reserve must be definitely related to the stock of gold.

The other important consequence to which I have referred follows from the fact that while two of the fundamental qualities of money are that it must be a medium of exchange and a store of value, its use for either of these purposes is a varying one. Under the development of our banking system very little money is ordinarily used as a store of value. Occasionally, when confidence is disturbed, distrust of banks widespread, and panic conditions prevail, that function of money assumes the utmost consequence. If the disposition to use money as a store of value increases, that is to say, if hoarding becomes general, the entire credit fabric may fall in ruin.

(Concluded next week.)

NEW YORK CITY.

“Religious Overlapping”—Testimony of Our Readers

[In our issue of April 9th Mr. Alfred J. Kennedy gave the sad story of an over-churched town in Minnesota. He showed what had been the waste of missionary money in a community quite able to support its own religious institutions were it not for the pernicious rivalry of sects calling themselves Christian. That article has attracted much attention and we publish herewith some of the comments sent to us, unable for lack of space to print many others. A pastor in that town recognized the description and his is the first of these replies. Very valuable is the discussion by a secretary of a leading Home Mission Board. Just one letter did we receive defending the multiplicity of sects, and that one we include.—EDITOR.]

He Recognizes the Portrait.

The article on “Church Overlapping” in your issue of the 9th inst. has brought cheer to the heart of one who is struggling with the local problem. We had no difficulty in recognizing our own portrait, and do not feel proud.

We should welcome joint effort on the part of the denominations represented to cut off appropriations made to the two existing organizations.

We should be glad if one denomination could present its unused building to the city for use as a public library, and that another could give its building, now going to ruin, to be transformed into a dwelling for a minister, and that all would pray for grace and wisdom, which is so much needed in order to have a Church that can make available for the people “all things that pertain unto life and godliness.”

THE RESIDENT ENGLISH MINISTER OF
“Y.,” MINN.

A Defense of “Overlapping.”

In my opinion, the statistics furnished by Mr. A. J. Kennedy prove the opposite of his contention. They prove that the best years for his illustrative town were those in which all the four evangelical churches had pastors and the machinery of each was going. I refer to the years 1890 and 1891. Then the membership was largest—213, and the churches’ contribution to pastors’ salaries the greatest—\$2,075; yet competition between the churches was then supposedly at its height. Since the closing of the Episcopalian church in 1892 there has been a gradual decline in the town’s church membership. When the Methodist church was closed in 1903 there was another slump. If competition was a bad thing for this community, then the less of it the better, and yet, in 1906, with two churches closed and no longer competing, the town’s church membership was but 83, and the contributions \$1,000. Reduce the competition still more by

closing one of the two remaining churches, and the above mathematical analogy would give about 30 members and \$500 contribution.

In the year 1890 there were 575 American born persons in the town.

In 1905 there were 475 of American descent.

In 1890 the total contribution of 575 persons was \$2,075, an average of \$3.60.

In 1906 the total contribution of 475 persons was \$1,000, an average of \$2.10.

In 1890, out of 575 persons, 213 were members of the churches of the town, or 1 in every 2.2. In 1906, out of 475 persons, 83 were members of the churches, or 1 in every 5.7.

In 1890, when the mission societies contributed \$725 to the town, there were 213 members. In 1906, when mission societies gave \$300, there were but 83 members.

Therefore, the largest membership, heaviest contribution by local members, heaviest contribution by mission boards, and time of greatest competition—all these four things were contemporaneous and coincident.

All four evangelical churches should have been kept open and at work to their full capacity, and with four pastors.

1. Because four men at a salary of \$700 each can do more good than one man at \$2,000. The four will go to see more sick people, hold more religious conversations, teach more Sunday school classes, preach more sermons, lead more prayer meetings, act as spiritual policemen in more sections of the town, than one man, and by discussion among themselves come to a wiser decision as to any moral or spiritual crisis in the town than one man with his own judgment could come to.

2. In these days, when men in all lines of work are trying to find and are content with a living wage, it is better that four should have a salary of \$700 than for one man to have the whole work at \$2,000. It is better for the country, for this is a poor man's, a common man's country. It is better for the community, for the \$2,000 man will be above the average of his congregation, will spend half his salary for necessities and the rest for luxuries, whereas the \$700 man will be on the level of his parishioners and most of his salary will be spent well within the line of necessities.

3. One man with all the work upon him will not have the time for study which four men, with one-fourth the work each, would have, and it is study, not so much travel or luxuries, which makes the preacher. From these four men studying to show themselves workmen that need not to be ashamed there is more likelihood of some great preacher coming than there would be were there just one of the four doing the whole work of a community, rushing from weddings to funerals, from banquets to sick calls—always in a hurry.

4. One united church in a town is so likely to be captured by a wealthy and worldly clique, who will select officials in accord with their wishes and form rules according to their own taste. In my opinion the Roman Catholic Church fell into corruption in the Middle

Ages not so much because of its religious tenets as from its monopoly of religion in each town.

My conclusion is—Open the closed doors, send an evangelist to the town, don't be afraid of competition, and give more generously.

A HOME MISSIONARY.

OHIO.

Religious Tiddledewinks.

I began my ministry in a small town in Kansas of 600 people. We had four church buildings, six religious organizations, seven resident preachers, the representatives of twenty-two denominations and very little religion. Money was wasted and my salary of \$400 mostly behind. I was told I ought to make sacrifices, but I found I was not sacrificing for God and humanity, but for denominational rivalry and stupidity. I was pastor of a church in North Dakota in a town of 1,200 people, in which we had eight churches. There were only 300 English-speaking people, and for these there were four churches. One of the buildings was abandoned and rotted down. A second was closed and a third had services only at long intervals. The fourth of the English churches, the Congregational, had survived out of the wreck and decay, but the feuds and rivalries engendered in the eliminating process had alienated and embittered people, and very few attended the surviving church. We bought a parsonage with missionary aid. The preacher put \$100 of his own money into the price, then painted the building with three coats of paint, the church only paying for cost of part of the paint materials. The preacher's salary of \$800 ran nearly a year behind. The church has not yet paid up, tho the preacher left nearly a year ago. And now the church wishes to deduct rent of above parsonage in settlement! And they are not poor people in that town, either. In this town sectarianism went to seed and religion among the English people has about died out. What does God care about our hair-splitting divisions? The difference between pouring water on a man's head or holding him in the water until the water runs out of his shoes is religiously about as important as the difference between tweedledee and tweedledum. We are playing at our religious tiddledewinks, while humanity is staggering down the dark ways of human sin and human woe.

H. V. R.

"This Useless Waste of Money."

The town which I have in mind is one in which my family lived during my boyhood. It is a village of 600 inhabitants, located seven miles from a railroad, in Southwestern Iowa. At the time of which I speak it had about the same population that it has now, 600. It had five churches—United Presbyterian, Methodist Episcopal, Congregational, Wesleyan Methodist and Free Methodist. These denominations all had church buildings and there was also an old deserted building which at some former

time had been occupied by the "Old School" Presbyterians. A small "college" was located in the place and was largely supported by the United Presbyterians, who had a strong and growing congregation. The Methodist Episcopal denomination was also quite strong. The churches mentioned were all English churches, as there was practically no foreign-born population in the community. The two stronger churches mentioned were drawing to some extent from the three weaker denominations. The Wesleyan Methodist and the Congregational churches struggled along and at one time considered the proposition of uniting, but were prevented from doing so by one vote. I do not know whether the former church received missionary society aid or not, but I well remember the time when such aid was offered to and accepted by the Congregational church, for my family were members of that church at the time. Missionary society aid was given for several years, altho the church was growing weaker instead of stronger, the town was not growing, and with two strong Protestant denominations in the place it would hardly seem like the sort of field for which pleas are made for home missionary collections. The Congregational church has since died, while the United Presbyterian church has grown to be one of the strongest branches of that denomination.

The time has surely come when different denominations should unite in saying that this useless waste of money, which is needed so badly in Christian work in other places, should cease.

F. E. SHORT.

CHICAGO, ILL.

A Case of Successful Competition.

I am acquainted with a minister who, in two pastorates, covering thirty-five years, quietly and steadily took his stand against the policy of religious overlapping. He felt it was an exhibition of zeal not according to knowledge for his own denomination to go into a community with a missionary-supported church where the gospel was already fairly well preached. To do so was not only contrary to worldly prudence, but also, by reason of the pauperization of preacher and people, added to the reproach of the name of Christ. Even in places where the financial conditions were satisfactory, it seemed to him like putting the Master to an open shame when two or three churches were planted within gunshot of each other and occupying the same territory; and the finer the edifices the more they advertised to the world our differences!

In course of time he moved into a small community, where there was only one evangelical church; and, tho of a different denomination, he believed that to be an ideal condition, especially when he learned that the people were just able, without help from a missionary board, to give the church a decent support. But he had not much more than unpacked his trunk when he learned that a movement was on foot to start another religious organization and to join itself to his own denomination. When approached in re-

gard to co-operating with it, he at first said he would have nothing to do with it, repeating his objections to increasing the number of churches in sparsely settled communities. But, upon investigation, he learned there was a large number of non-churchgoers who were ready and anxious to give their support, by attendance and means, to a new enterprise; that these persons, under no circumstances, could be induced to attend the existing church. Whereupon he privately interviewed several of the leading men of the community, begging for a candid expression of opinion, and they all, with one exception, expressed their belief that, under existing circumstances, it would redound to the best interests of true religion if another church was started. He could not refuse to preach the gospel to the twenty-five or thirty people who assembled Sunday mornings, but with the hope that his spirit and ministrations would be of such a character that all the people might be led to return to the already established church. Besides, he hated to seem to lend a hand to separation and schism. But the new enterprise prospered; a Sunday school was organized, and a young people's meeting was established for Sunday evenings, with an average attendance of forty. The morning congregations have grown from twenty-five persons to seventy-five and a hundred, a marked proportion men, some of whom have not attended church for ten or twenty years. So the people were united, industrious, happy, and business prospered for six months, until four months ago, when a church was organized with forty members, half of whom professed faith in Christ for the first time. Now there are forty-seven members, with a score, in due season, to follow. This week the financial reports were completed, and it appears the society, without solicitation or solicitude, has raised \$750. And the Sunday school has a membership of eighty-nine.

What about the other church? Has it gone to pieces? Oh, no; the members were aroused to unwonted zeal; those who had been missing for several years came back; the pews no longer left all the work to the pulpit. New energy, like an electric fluid, diffused itself thru all departments of the church. Spring-tide, with the promise of summer, is in the air. So far as I know, the average congregations are undiminished, and the usual required sum of money, \$650, has been raised, it being one of three meeting-houses under the same pastor.

The net results up to date are: \$1,400 contributed for religious purposes in a village which hitherto found it difficult to raise \$650; from two to four times more men, women and children attend church than were ever known; the standard of piety has been lifted up in the daily (domestic and business) lives of many; the social atmosphere is sweeter; the sense of personal responsibility has been deepened, and in prayer meetings we have evidence of phonascetics! And it is the determination of the new church not to appeal for aid to a missionary board. It has at command a minister who can *cheerfully* serve for what the people can *comfortably* raise. And when the church hasn't money enough to pay a minister

to come to preach to the people it will go without the minister, but go on with its Bible school and prayer meetings. The sensible officers prefer to have an occasional sermon for which they can pay rather than regular sermons paid for by some outside agency.

N. B. REMICK.

PINE HILL, N. Y.

Two Preachers—Sixty Churchgoers.

The article and the editorial on "Religious Overlapping" are most timely. I am pastor of a little church with a resident membership of thirty-five. All my people are workingmen. The town has about 700 population and we have just dedicated a second church. Some one got dissatisfied because of his inability to control the political situation and wrote to the presiding elder to send a minister to organize a church. That very amiable gentleman looked over the field and came to the conclusion that they had a work to do here, sent on his man, and a new organization was established.

What has been the result? The religious interests of the town have been divided. The leading families who undertook to build the new church became so tired of the burden that they have left the community. The crop of animosities and jealousies which has sprung up is immense. Many of the best people in the community decline to have anything to do with the religious situation. Both pastors are preaching to about thirty people every Sunday morning. Both get \$50 a month. The new church was dedicated a few weeks ago. The presiding elder and the Governor of the State raised in pledges \$2,500. Two-thirds of these pledges were made by people who could ill afford to give them. The town has just voted to abolish its saloons. There is not a reading room or any decent place of the kind where the men can go. The churches look upon each other with jealous eyes. If the religious people of the town had religion enough to convert one church into a parish house it would mean more to the town than the "dry" vote, but catch them doing it!

PASTOR.

COLORADO.

A Twofold Reply.

Mr. Kennedy's article in THE INDEPENDENT for April 9th is well worth the consideration of all Christian denominations, churches and individuals. The editors desire replies, giving other instances of like waste of money, power and love. Alas! it is too easy to give them! And they need not be sought in the West, but within a few miles of New York City.

For example, here is an excellent illustration of the polemic relations between Christian denominations. In a town we will call Y—there was organized recently a Congregational church to meet the worshiping needs of those who were fast building up an outer corner of the town. The church started well, and included in its number members of several denominations, and a promising Congregational church was started. It happened that the ma-

jority of its members were Presbyterians, who gladly joined the new church by letter. The presbytery that included that section heard of this and promptly said, "We need a church there, then." They, backt with ample funds, canvassed the district, built a church edifice superior to that of the Congregationalists, and formed their new church. The ex-Presbyterian Congregationalists went back to their original denomination, the promising Congregational church was forced to the wall, its building sold and its pastor left without a charge—fortunately, not for long.

Another example, less distant from New York and in another direction—the former was a scant twelve miles from the City Hall—has parallels all over the country. In a town of less than 8,000 inhabitants, and covering very little territory for its size, there was a church (it is unnecessary to particularize the denomination) which was situated quite in the center of the town, equidistant from the "rich" section and the "poor" section. But the dwellers in the former thought the dwellers in the latter should have a church of their own. They even gave generously of their money toward founding, and, for a few years, largely supporting a new church for the latter; and now, besides five (or six?) other denominational churches, this one denomination has two churches where only one is needed, two buildings, two pastors, two organizations to support, and there is a great waste, not to mention the lack of Christian love that separated these two.

A CHRISTIAN MINISTER.

Three Churches for Three Hundred.

We have a situation in our home town which is very similar, on a smaller scale, to the one described by Mr. Kennedy.

Our village has a population of about 300 and is in a prosperous agricultural community, but the whole township has about the usual percent. of churchgoers, probably 25 to 30 per cent. There are three churches in the village, any one of which is of ample capacity for all the church-going people of the town and surrounding community, and any one of which, with comparatively slight additions, would be far better adapted for efficient Sunday school work than any one of the three is at present.

The oldest and strongest church has been organized twenty years, has a membership of about sixty, and has four regular weekly services. Its influence in the community is considerable, but the power of all the Christian people to accomplish something worth while would be greatly increased if the three denominations could see their way clear to unite or federate in one strong body.

One of the other two churches has no regular services except a very small Sunday school. The third has a preaching service twice a month, a small Sunday school and prayer meeting weekly. The membership of the second is about thirty-five, of the third about twenty. The third and newest church has a mortgage indebtedness on its building of over \$1,000, and not very good prospects of paying it off soon.

There is at least twice as much invested in church buildings and twice as much in the way of church organization as is needed to efficiently carry on the religious work of the community.

RESIDENT.

ILLINOIS.

Missionary Money.

A town in Western Washington, having a population at the last school census of 1,450, has one Catholic Church, one Norwegian church which is also used by the German Lutheran, and the following churches that have stationed pastors who live in the town and hold regular services twice each Lord's day—Methodist Episcopal, Free Methodist and Baptist. The combined membership is less than 200, the combined salary less than \$1,800.

And as if this were not enough, the Congregationalists for some time past have rented a hall that is used for lodge purposes and public dances, and have, during the past eighteen months, had four pastors, some of whom declared to the writer on leaving the town there was no outlook for their society, and the money they were receiving from the parent board could be better spent elsewhere; yet within the last month another pastor, a married man, has come to minister to about fifty people.

Is the missionary money wisely expended?

X. Y. Z.

Religious Overlapping in the Large.

That is a capital article in THE INDEPENDENT for April 9th, from Mr. Kennedy. He is conducting his studies in a field where the Lord and everybody else knows study is needed. God speed you in your efforts to induce more of such study and over the broadest possible area.

But Mr. Kennedy stops where most investigators in this field have stopt, which is far short of the end. Mr. Kennedy expressly disavows attempts to fix responsibility, intimating, however, that the attempt would be "easy." And his closing paragraphs seem to afford some intimation of where he considers the responsibility is to be fixt. These missionary fields in which overlapping occurs ought to be brought to time, and evidently the "authorities" ought to bring them to time. There ought to be a central-interdenominational-union—"Associated-Charities" bureau to control operations. We must "weed out" a lot of "dead churches," and we must further "weed out" a number of "poorly paid" and "poorly equipt" ministers. And so on.

This is quite the common formula—as tho the human nature involved awaited passively the application of the prescription; as tho Western missions might be made over and turned out to order from an office in New York or Boston. One of our Presbyterian field officers went into a community the other day to expostulate with a group of Presbyterian people who were clamoring for the organization of a Presbyterian church, urging

them to abandon their effort, since there were already too many churches in the community. Greatly scandalized, the people replied, "But have we not souls worth saving as well as the Methodists and Baptists in this town?" When Presbyterians are capable of such narrowness and sectarian perversion of the means of grace, what in all reason can be expected of others? There is a deal of human nature which ready-made theories do not fit.

The narrow sectarianism of new territory is transplanted from old territory; there is no other source whence it might come. It certainly is not indigenous to the new territory. Our home mission fields are often compared disparagingly with the foreign, and we wonder why the Christian unity which charms so at the distance cannot be duplicated on our American frontiers. All of which presupposes an unaffected pagan or at least uniformly unchristian constituency with which the home missionary is to deal; a presupposition which is so wide of the truth as only to demand the statement to reveal its absurdity. Where the home missionary encounters unspoiled ungodliness he has no difficulties with sectarianism. It is the old-country sectarian importations which are turning him gray.

Mission headquarters are supposed to carry the final responsibility. Mission secretaries are armed with the club. If they would only wield it doughtily the sectaries on the mission fields shouting their claims would be so occupied with their cracked heads that they would shut their mouths. Those with their hands on the purse strings are judged to hold the key to the situation—if a string can be turned into a key.

But two observations are in place at this point. First, the powers of a board secretary are greatly misunderstood by the spectators and the theorists, and they are usually immensely overestimated. A board secretary is not nearly the autocrat and wielder of ecclesiastical destinies he is supposed to be. He has not his hands on the purse strings with the grip he is thought to have. Most of the American Churches are controlled by principles and restrictions of democracy which place the power in other hands than a made-to-order autocrat. Many a board makes appropriations of missionary aid quite against its own judgment, and cannot, even in justice, do otherwise. Mr. Kennedy's central bureau presupposes ecclesiastical conditions which do not come within miles of existing, and which will never exist until some measures are taken far more thoroging than the establishment of a central interdenominational bureau.

It is at last the smug sectarianism of the older sections which is playing the mischief in the missionary work of the Church, the very sectarianism which finds itself so horrified by the militant sectaries of the new territory. Sectarianism where it exists on missionary fields has at least this virtue, and it is in its way a noble one—it knows why it exists; it knows how to fight; it believes in itself; it shows no shame of face; it is frankly going to heaven, and by the same token, sectaries of the other complexion are going elsewhere.

Such sectarianism has stuff in it, at any rate, even if the stuff is scorned by sectaries or milder manners.

But your smug sectarianism of the older sections has not even conviction; it is ashamed of itself; is so ashamed of itself that it actually repudiates its own existence; it scorns its own more virile offspring; it regards it as criminal that its money should be employed in reproducing itself in new territory. A cold shiver runs up and down its flaccid spine when Mr. Kennedy informs it that almost eighteen thousand dollars of its hardly extracted pennies and dimes have been spread over twenty-six years in maintaining the means of grace in a Western town during that period, incidentally reproducing itself meanwhile. And it does not lift its eyes to contemplate with any serious appreciation the enormous piles of next to useless equipment which it has erected and maintains at prodigious cost on its own city and town four-corners. It is certainly awful that those eighteen thousands of dollars should have been expended, many of them so needlessly and worse than needlessly, during the last thirty years in the Minnesota town, but what of those four different religious institutions which I have seen in one of our leading cities, and which probably you also have seen in the same or in the duplicate, erected at an expense of \$250,000, each on the four corners at the crossing of two streets, when one of them would have fulfilled all essentials? Yet the sheer waste of \$750,000 in one spot at one time is probably quite overlooked by our smug old-country sectarianism in the horror of this partial waste of a pitiful \$18,000!

The West is commonly made the scapegoat. By way of vindication of the real liberality and unity of Western Christianity, it is safe to prophesy that, if some comprehensive and radical measures are not soon taken by the national ecclesiastical elements, the Christian forces of some progressive Western State will combine independently of denominational affiliations and demonstrate what a Church can do for a commonwealth when it takes itself seriously as a unified regenerating force. It would be just like some of our Western States to teach the whole country that lesson, as much of the real progress in civic and economic affairs has come from the same source.

THE INDEPENDENT'S editorial reference to movements thru the Federal Council and otherwise is timely. Each such effort helps some. But the most advanced of them are decades behind the times. All formal ecclesiastical movements, instead of leading on, are ploddingly bringing up the rear. A leading minister of one of the denominations frankly declared the other day that progress in this direction at anything like the pace the pressing exigencies of the day demands is hopeless if ecclesiastical councils are to be depended upon to furnish the initiative. Nothing short

of the mighty tug of popular churchly consciousness and conscience can do the business.

The complacent *modus vivendi* among the denominations adopted by a sort of sluggish common consent in the older sections, has little of the grace of Christian unity in it. More conspicuous in it, perhaps, is the evil spirit of inanition and stagnation which Reginald Campbell has pronounced the final incarnation of his Satanic Majesty. I know of one city where the parishes of four different churches of the same denomination overlap, and it would be difficult to catalog the churches of other denominations whose parishes cover the same territory. All which saves those churches from violence in their onslaughts upon each other is their all-round and constitutional inactivity.

We make much of the essential diversities of human nature, which dooms one of us Methodist by a sort of temperamental fate, another of us Baptist by the same token, another Presbyterian, and so on. There will always be denominations, therefore, and there is naught but to resign ourselves to the divinely appointed ordering. All of which reasoning is, to be sure, fundamental in its premises, but crudely superficial in its conclusions. It is a blessed truth that human nature develops marked diversities, and that certain marked and irrevocable psychological types appear. But it is certainly time we discovered the *e pluribus unum* of grace and of ecclesiastical functioning, just as we have discovered the civic principle and have applied it in civil government.

A unified Church would still leave abundant room for all healthy temperamental differences, and some room even for unhealthy ones if we should insist upon carrying them over with us. There are already as marked diversities, both in thought and in manners, within certain distinct denominations as now organized as there need be in an organism comprising the entire Church. It is today often true that given churches in different denominations are more alike in manners and essentially than are given churches in the same denomination. And yet we go on bungling and bluffing it out by repeating hackneyed remarks about the fundamental differences in human nature. The most ignorant of us know, down deep in our hearts, that we are bluffing, talking big and psychologically to cover our cowardice and indolence. Shall we wait forever for ecclesiastical temporizing to haggle thru all the conceivable moot questions?

It is the sheerest sort of bluffing to raise hue and cry over the wastes of missions, which are the merest trifles in the final reckoning. The final question is up to these big, easy-going churches at the center of things, and they and everybody else know it.

JOSEPH E. MCAFEE,
Associate Secretary of Presbyterian
Board of Home Missions.

NEW YORK CITY.

Russia in Turmoil

OF the many books that have appeared on Russia since it has come prominently before the world on account of its internal convulsions, we select three for special comment, as giving the American, the British, and the Russian points of

interesting material gathered in the short space of one year, and admiration for the author's ability, notwithstanding his ignorance of the language, to come into direct touch with all sorts and conditions of men, to become a witness to the most diversified phases of life over the vast

THE AUTHOR AND HIS BRIGAND GUIDE AND INTERPRETER.
Frontispiece of "The Red Reign." Copyright, The Century Co., 1907.

view. Of these the most attractive and instructive is that of the American, Mr. Durland.¹ One reads the volume with supreme astonishment and genuine admiration: astonishment at the mass of most

extent of the European portion of the empire, and even beyond in the Caucasus and Western Siberia, and to participate in a multitude of daring ventures without losing his head in either the literal or the metaphorical sense. Mr. Durland seems to us the ideal newspaper reporter

¹THE RED REIGN. A True History of an Adventurous Year in Russia. By Kellogg Durland. New York: The Century Co. \$2.00.

—born, not made—with an unfailing sense for the thrilling, the striking, the pathetic, the place, and the persons. *The Red Reign* covers the year 1906, the year of the ferocious counter-revolution to a revolution that failed to materialize and was never more than an aspiration. It is a most impressive indictment before the bar of civilized public opinion of the present so-called Russian Government. Mr. Durland does not say it in so many words, but the overwhelming impression one carries away from his book is that in the year 1906 government in Russia had ceased to exist. There was a barbarous and infuriated power that devastated the country, burned down villages, bombarded defenseless towns, massacred men, subjected women to dishonor by the soldiery, perpetrated all the horrors attaching to the name of an Attila, a Jenghis Khan, a Tilly. But of government there was no trace—not even in its most elementary form, that of maintaining public order.

Mr. Maurice Baring, the Russian correspondent of the London *Morning Post*, came to Russia equipped with a knowledge of its dominant language, and a familiarity with the best literature on its past and present. His book² is based in the main on letters to his paper from August 8th, 1905, to August 6th, 1906. During this year there took place the peace of Portsmouth, the general strike, the October manifesto promising a constitutional government, the Moscow uprising, the convocation of the first Duma, and its dissolution. But *A Year in Russia* makes no pretensions to being a systematic exposition of conditions or a complete narrative of events. It merely aims to convey the momentary impressions, views and opinions of the author and of those with whom he came in contact. This modest purpose is achieved in an easy, graceful and interesting manner. The strongest impression the peasants made on Mr. Baring is that of their essential humaneness, notwithstanding their occasional excesses. It is interesting to note that Mr. Baring found Mil-

ton's "Paradise Lost" to be one of their favorite books.

Prince Urussov³ has become widely known by reason of his speech in the first Duma, in which he exposed the leading role played by the Police Department of the Empire in the organization of pogroms. The Prince was governor of the province of Bessarabia, of which Kishinev is the capital, from June, 1903, to November, 1904. He was appointed to this post for the especial purpose of bringing order out of the confusion resulting from the Kishinev pogrom of 1903. It is owing to this circumstance, as well as to the fact that the Jews, who number 250,000 in the province, or 11 per cent. of the total population, are subject to innumerable restrictive regulations constantly calling for the interposition of the governor, that the subject of the Jews so frequently recurs in these pages. Their real theme, however, which runs like a connecting thread thru the various subjects under discussion, is the incessant conflict between Governor Urussov and the Russian system. To express it in more general terms, it is the conflict inevitably arising between an enlightened and able administrator on the one hand, and, on the other hand, a stupid, ineffective and chaotic mass of endless laws, rules and regulations, an arbitrary police superior to all law, and a heterogeneous population, the component elements of which are, as a matter of high policy, being constantly goaded on one against the other. It is the details of this absurd and anarchic system which Prince Urussov sets forth most convincingly, and at times in a highly amusing manner.

graft and crime, and of the real measures taken to prevent and punish them, or, at least, to confine them within bounds that will keep the respectable part of the community fairly well satisfied with the measure of its protection against the powers that prey. It has gradually taken all our social system for its province, from top to bottom, from the anarchist who plots against the life of crowned heads to the "dip" who "lifts" your watch on a street car, but it invariably returns to its old romantic traditions, which have little in common with the real facts—to the picturesque lawbreaker and to the superhumanly clever detective, who prefers inductive reasoning to the prosaic employment of stool-pigeons and of a familiarity with the pictures in the Rogues' Gallery, the "records" of their subjects, and with their haunts. And it is this older, romantic form that will probably continue to flourish, long after its more modern realistic developments shall have had their day and been forgotten. By the same token, a mysterious murder is more interesting than a businesslike burglary, because the one suggests an infinity of motives, the other but one, thus hampering the author's inventiveness.

It has been said by no less an authority than the late Dion Boucicault that "plays are not written, they are rewritten." It may be said of the detective story that it is not written; it is constructed, often backward, from conclusion to the point of departure, and that the practitioners of the art are inventors rather than authors. Plot is the thing, not character—even plain, everyday human nature may be ignored—literary nuances are not necessary, the problem is to present the reader with a puzzle in a

box, to mislead him by wrong ways of solving

him the real solution and unexpected

then to remind him in the last chapter that everybody has forgotten to look in the top tray, so carefully put aside in the first, but it is inadmissible to keep him ransacking that trunk, and then to inform him casually in the end that, six years before the beginning of the story, an old lady, of whom no mention has been made, hid the solution in her cupboard, six miles away. The *dramatis personæ*, the real criminal as well as the wrongly suspected, the real clue as well as the false ones, must be presented to the reader from the very beginning. It is not playing the game to cast suspicion upon the peerless daughter of the house unless the wicked woman be "in the picture" from the first.

And, apropos of women, here is one of the most effective rules of construction for this kind of story: Seek the woman and you will find another one. It is a markedly successful constriction of the wider rule, Seek the right man and you will suspect many wrong ones. As to motives for crime, it has already been suggested that love, jealousy, hatred, revenge, ambition, are much more promising than mere professional law-breaking for the sake of revenue. And, of course, there is the inexhaustible topic of the rivalry and conflict of the amateur detective and the professional, between whom there has arisen of late a third aspirant for fame, the enterprising reporter. But however complicated and ingenious the story may be made, it remains in the end a puzzle, whose interest is killed the moment its solution has been revealed to us. We rarely care to read a story of mystery a second time. Hence, no doubt, the uninterrupted flow of new puzzles from our printing presses.

No less than eight books of this kind have recently made their appearance. In four of them Woman plays an important part, in two of these¹² as the cause of murder, in one³ as an involuntary and justifiable homicide, and in the fourth⁴ as the redeeming influence, unconsciously pitted against that of another, in whom

passion overrules all considerations of right or wrong. In the fifth⁵ *das Ewig Weibliche* plays but an unimportant rôle; it is more to the fore in the sixth,⁶ without, however, being implicated in the crime. The seventh⁷ is a collection of ingenious puzzles, pure and simple, the offense and its detection following each other within a few pages. The eighth⁸ is not a detective story, nor is it a tale of mystery, the homicide occurring at its close instead of its beginning, and the case going to trial at once. Jealousy and revenge are the motives in most of these stories; there is but one case of theft, and that is spoiled by the amazingly unprofessional recklessness of a professional thief under the influence of an infatuation. There are three amateur detectives in the eight books, of whom two are reporters, and four professionals, tho one is inclined to rank Professor Van Dusen, the Thinking Machine, with them.

Of these books, the first is by far the most interesting. It is apparently the work of a criminologist, who is probably also a judge or a criminal lawyer, to employ an amusingly ambiguous current designation. Its plot leaves nothing to be desired; it is a "capital puzzle," but its treatment by a trained mind lifts it above the average. The story is a striking argument against the reliability of circumstantial evidence, the defense's demonstration that all that has been brought out against the accused may be directed with just as much plausibility against the public prosecutor being notably ingenious.

With the last page of *The Magistrate's Own Case* we bid farewell to the scientific and legal aspects of crime to enter upon its romance. Mr. Walk's book is an analytical rather than a narrative piece of work, a remarkable amount of cleverness having been expended upon the construction and explanation of the processes of detection employed by its hero, who is a member of the New York detective force. The great Converse discovers that there is a woman in the case the moment

it is placed into his hands, almost immediately after the murder has been committed. He sniffs the air and discovers a faint trace of the perfume she uses; the fact that the cigaret stumps which he so carefully collects must have produced an odor of their own while in the course of consumption does not deceive his olfactory organs. He has an eagle eye, for it discovers the imprint of a woman's heel on a rug—in short, he is all that the traditional detective of this sort of fiction should be, and when a second murder is committed immediately after the first he is really in his element. Mr. Walk has constructed a very complicated puzzle. There may be a bit of incredulity mixt with our marvel at Captain Converse, but his ingenuity keeps us entertained, and what more has one the right to ask from a story of this kind?

A reporter pitted against a detective—this is an important ingredient of Mr. Doubleday's tale. He is a reporter faithless to his trust, for one concludes from the narrative that he serves, not so much his employer, the paper with which he is connected, as the man accused of murder. No less than two women are plausibly implicated, with a third held in reserve in a minor part until the right moment. Chance claims a goodly share of the credit for the solution of the case. Another reporter, one loyally out for glory, promotion and a "beat" for his yellow journal, will be found in *The Four Pools Mystery*, whose scene is laid in the South, on a plantation. The negroes begin to see "ha'nts," and when the old master is murdered it is to "ha'nts" that they ascribe the deed. But the lawyer who tells the story and the reader know that one of these "ha'nts" is a white one—appears to be

one and possibly be-

⁵THE MASTER CRIMINAL. By G. Sidney Paternoster. New York: Cupples & Leon Co. \$1.50.

⁶THE COAST OF CHANCE. By Esther and Lucia Chamberlain. Indianapolis: Bobbs-Merrill Co. 8vo. \$1.50.

⁷THE THINKING MACHINE ON THE CASE. By Jacques Futrelle. New York: D. Appleton & Co. 8vo. \$1.50.

⁸THE CLUTCH OF CIRCUMSTANCE. By James Barnes. New York: D. Appleton & Co. 8vo. \$1.50.

ing of a vengeance nursed thru many years. He has planned to strike the father thru his son, but love interferes, the love that purifies and ennobles. It may interest the reader to know that it was this master criminal who planned the theft of the antique snuffboxes from the London home of Mr. Wertheim—Floersheim he is called in the story. A touch of pseudo-realism of this kind is always effective. The book will furnish rather entertaining occupation for an hour or two.

The social highwayman reaches San Francisco in Esther and Lucia Chamberlain's *The Coast of Chance*. It is an ingenious story, in which the victim of the theft and the thief are made to change places with good effect. But why was the thief bent upon making discovery almost unavoidable by his recklessness? A well-planned love interest, ably handled, is not the least attractive part of this story. Mr. Futrelle's "Thinking Machine," Professor Van Dusen, is by now a well-known and popular amateur detective of fiction. In the new volume devoted to his amazing feats of reasoning he solves one problem after the other with unerring neatness and dispatch. Mr. Barnes's story, as has already been said, ends with a case of sudden death under circumstances that point to manslaughter, if not to murder. The trial of the accused and his acquittal are well handled, but the book is marred rather than made by its sensational ending. Most of the way it is a telling study of American life and character, of a woman and two men in an interestingly complicated situation. Mr. Barnes chooses to cut the Gordian knot he has tied himself; it is his right to do so, one supposes, but one cannot help feeling that he did not find an easier way of sleeping with the major

GEORGE MEREDITH.

style. Only the lazy call Mr. Meredith's English obscure, but no one calls it simple. Of several attempts to treat his collected novels critically or to furnish a guide to them, Mr. Bailey's work is easily the best. It is the fullest and the most philosophical, and it springs from a riper study of nineteenth century fiction. It narrowly misses unquestioned right to a place beside Mr. Trevelyan's splendid study of Meredith's poetry and philosophy. Mr. Bailey treats the novels as an evolution, showing Mr. Meredith's first efforts in literature—that is, in verse and his fantasies—and then his breaking forth in "Evan Harrington," and one by one the galaxy that followed it, are discussed in what may be called a comparative method. The influence of Dickens, Thackeray, Trollope, George Eliot and other novelists on Mr. Meredith is inquired into, and some attention, too, is paid to those novelists of the more immediate present who have learned or borrowed a turn from him. This is inter-

esting as showing the debt of literature to literature, and as showing perhaps how Mr. Meredith set about his calling after he, with due deliberation, had called himself to it—for the critique of Mr. Bailey, and the novels too, suggest more of intellect than of inspiration. And it matters not that Mr. Meredith used a bit of scaffolding that another used. It served his purpose in brilliant character studies and demonstration of life, such as no other living writer possibly, unless Mr. Hardy, has given us.

The English Stage of Today. By Mario Borsa. Translated from the original Italian, and edited with a prefatory note, by Slewyn Brinton. New York: John Lane. \$2.50 net.

Not for a long time has there been published a more pertinent treatise on current stage matters in England than that of Dr. Mario Borsa. So well has it been translated that the idiomatic freshness of the style enhances the undoubted excellence of the critical attitude. As an expression of foreign opinion, this new volume takes its place by the side of the noteworthy French view of "The English Stage," by A. Filon, and very well supplements it in point of historical consecutiveness. As a popular book it has the excellent advantage over Henry Arthur Jones's "The Renaissance of the English Drama" in being fraught with a certain flavor of humor. But, like Jones, Dr. Borsa is fearless in his arraignment of English conservatism of a particular kind. Dr. Borsa's analyses of English temperament are very keen; they deal with dramatist, actor and audience. He has the journalist's grasp of theatrical detail, the student's sense of historical perspective. He has kept apace with the present day English dramatist's activity, and has been wise enough to connect their activity with the work of their predecessors. Being familiar with the pliable art of foreign actors, he is not given to criticising the English "star" without praising his polish. Yet it is evident that Dr. Borsa is not particularly impressed with the fate of the drama of ideas in England; he acknowledges the scenic accuracy, the Thespian polish, but he denies the actor any power of mimicry; he believes the English public's conservatism is one of the drama's chiefest drawbacks. With a definite view-

point of English character and of English taste, the author's estimates of individual dramatists are most potent, and his power of creating the dominant atmosphere of a particular movement is well exemplified in his chapter on The Irish National Theater.

The Judgment of Eve. By May Sinclair. New York: Harper & Brothers. \$1.25.

Miss Sinclair has carved a tragedy on a cherry stone. The story of Aggie Purcell, "the pretty one," is a pathetic little history of a life that was meant to be "intellectual" and became sordid, with many cares; yet not quite sordid, either, but glorified with the mother love which surrounded husband and children alike. Aggie is not a wise woman, but she is brave, patient and loving. She makes a foolish choice in her girlhood, but she stands by it with pride and courage. She chooses a refined man instead of a strong one, and finds that weakness is more cruel than strength; but, in spite of narrow means, failing health, and a house full of children to care for, she does not

MISS MAY SINCLAIR.
Author of "The Judgment of Eve."

flinch, nor, but for one unguarded moment, is there a regret in Aggie's faithful and affectionate heart. One is sorry for the husband, too, because he is not

strong enough to conquer success or himself. He is a sorrowful failure.

Hill Rise. By W. B. Maxwell. New York: Empire Book Co. \$1.50.

Mr. Maxwell, whose former novel, "The Guarded Flame," was one of the most powerful of recent books, in *Hill Rise* turns from somber and lurid passions to a simple theme—that of suburban snobbery. "The Hill Rise set" looks down upon the rest of the inhabitants of a small city with a scorn only matched by Mr. Maxwell's as he picks out this selfish social promontory with the long searchlight flash of his satire. The hero is a braver man than he who faces cannon, for he fights a caste prejudice as old as English society. The father of the heroine resents a slight to his daughter with a fire and avenges it with a success not often granted to middle-class rebels against the established order. The only wonder is that so sane and substantial a man as the Master Builder should care so much about the inept people of *Hill Rise*, the aristocratic suburb of the town he has built. But English ways are not as our ways, except when we forget ourselves and our finer traditions and imitate the bad manners of the snob. The new novel, pitched in a lower key than "Vivien" or "The Guarded Flame," is quietly successful in its quality and interest as a clever satire upon self-sufficient uselessness.

Foreign Religious Series. Edited by R. J. Cooke. The Virgin Birth, by Richard H. Grützmacher. The Resurrection of Jesus, by Eduard Riggenbach. The Sinlessness of Jesus, by Max Meyer. The Miracles of Jesus, by Karl Beth. New Testament Parallels in Buddhistic Literature, by Karl Von Hase. Our Lord: Belief in the Deity of Christ, by Karl Muller. The New Message in the Teaching of Jesus, by Philipp Bachmann. St. Paul as a Theologian (two parts), by Paul Feine. The Peculiarity of the Religion of the Bible, by Conrad Von Orelli. Do We Need Christ for Communion With God, by Ludwig Lemme. New York: Eaton & Mains. 40 cents each.

Any one who has the impression that German theological professors are all radical and heterodox may correct his

opinion at small pains by procuring one of these little translations from the *Biblische Zeit- und Streitfragen*, by which some of the "positive" theologians of the land of the Kaiser have sought to counteract the influence of Schiele's *Volksbücher*. Professor Orr himself is not more strenuously conservative than the authors of these little volumes. Sincere lovers of the truth can only welcome the fullest and most earnest presentation of all that can be said on the traditional side of such questions, but it may be hoped that these convenient and attractive volumes will provoke perusal of some of the books they were designed to combat, such as Professor Bousset's "Jesus" and Professor Lobstein's "Virgin Birth of Christ." The attitude which the editor seems to encourage, that since some competent scholars still hold the traditional views, one may rest on their authority, is not commendable. It is doubtful if any one can secure from these treatises alone thoro realization of the difficulties and problems of the subjects which they treat.

The Christian Faith and the Old Testament.

By John M. Thomas, President of Middlebury College. 16mo, pp. x, 133. New York: Thomas Y. Crowell & Co. \$1.00.

We do not need to recommend this present volume to our readers, for portions of it have appeared as articles in our columns. It represents frank, free and devout study of current biblical problems, by one who has the taste of study and the art of expression. We commend it heartily to thinking people who have no fear that the ark will tip over, and we find in it the promise of fruitful and successful service for Middlebury College. The drift of this book is not destructive, even when the conclusions of the higher criticism are accepted. To be sure, President Thomas tells us of the disadvantages that have come to Christianity from clinging too closely to the Old Testament, but that is a lesson that Paul taught quite as radically. By such a study as the present we learn the place of the various books of the Old Testament in religious history, and the supreme worth of the teachings of Christ.

The Political History of England in Twelve Volumes. Volume XII, "The History of England During the Reign of Queen Victoria," 1837-1901, by Sidney Low, M. A., and Lloyd C. Sanders, B. A.; Volume VII, "From the Accession of James I to the Restoration," 1603-1660, by F. C. Montague, M. A. New York: Longmans, Green & Co. \$2.60 each.

The period covered in the twelfth and final volume of *The Political History of England* is at the same time the most difficult period of English history to treat and the period concerning which the most ample and voluminous material is accessible. Reports of the debates in Parliament; parliamentary papers, newspapers and other periodicals; political pamphlets and manifestos; monographs, treatises and contemporary histories; and letters, diaries and biographies of all the great figures and of many of the lesser ones, in the first three-quarters of Queen Victoria's reign, make a mass of literature which might well daunt the most valiant historian. On the other hand, the authors have to avoid the danger of partisanship and of prejudice. Mr. Low is now fifty years of age, and to say that for thirty years back he has taken a keen interest in British politics is merely to say that he is an intelligent Englishman. It is easy to discern almost from the first chapter of the volume that his bias is strongly Conservative, and of the events that occurred during the whole of the latter half of the Queen's reign he was an intelligent spectator, and a spectator who, by the nature of things, could scarcely be impartial or unprejudiced. Nevertheless, Mr. Low and his colleague, Mr. Sanders, have succeeded in detaching themselves from party interests and party strife, and in making clear and not unfair estimates of the personalities and achievements of the great leaders of the Liberal party. As would be expected from any work from the pen of Mr. Sidney Low, the *History of England During the Reign of Queen Victoria* is scholarly and exact in statement, full authorities being quoted in any case where doubt might arise. It is comprehensive, clearly written and excellently well arranged, and must prove of inestimable value as a ready book of reference for the period it covers. There was manifestly a need for such a history. It is more concise and accurate than Justin McCarthy's

"History of Our Own Times," besides being more colorless. Sir Spencer Walpole's history only extends to 1870, and two volumes are occupied with the twenty-five years from 1856 to 1870. Paul's "Modern England," which covers from 1845 to 1895, is the work of a brilliant journalist, but is neither scholarly nor impartial. Besides these three histories, there are in existence various text-books written for the use of students in English advanced schools and colleges, but the present volume is the first history of the entire reign which can be safely reckoned as one of the permanent classics of English history. Volume VII of the *Political History*, which has been published almost simultaneously with Volume XII, covers the first half of the seventeenth century. From the point of view of the monarchy the story is anything but agreeable. James I came to England with no knowledge of the English character, with no comprehension of that indefinite but powerful entity, the English constitution, and with an overweening sense of his own powers and importance. The whole story of his reign and of that of his son, Charles I, is a story of mistakes and ineptitude on the part of the sovereigns, and of the slow evolution of self-government by means of Parliament on the part of the nation. The folly of the kings was the salvation of the people, and two mighty nations—the United States and Great Britain—may look back with recognition if not with gratitude to the first two Stuarts as the involuntary founders of their self-government. Mr. Montague's story is remarkably well written, and it is scarcely possible that the history of the period could be presented in a more attractive or interesting manner.

✻

Oficio divino de la Iglesia Filipino Independiente. Published under the authority of the Filipino Independent Church by Isabelo de los Reyes, Barcelona.

This is a book that should have a much wider circulation than will probably fall to its lot, for it is a distinct contribution to the world of religion. Halting and inadequate as it is in many ways, indeed, often puerile, it still marks an effort, an aspiration toward an ideal, and a seemingly sincere and earnest endeavor to discover the truth. The Filipino Independ-

ent Church, born partly from jingoism, partly from patriotism, and partly from sincere religious conviction, has been separated now some years from the Church of Rome, under the religious leadership of the secular priest, now Bishop Maximus, Gregorio Aglipay, an Ilokan, and the lay leadership of the somewhat notorious and shallow Isabelo de los Reyes, also an Ilokan. In great measure it attracted to its ranks the disaffected and seditious element which was active during the insurrection of 1898. It has worked in harmony with the various Protestant sects in the Philippines; has furthered education among the masses; has sought to build up a patriotic priesthood; and, above all, has endeavored to bring its religious tenets to the full understanding of its adherents, of whom it claims about two millions. The present book is the "Divine Office" or the ritual of the sect, which still calls itself Catholic, and may be likened in some ways to the Old Catholics. The book is divided into three parts: first, "the Unified Gospel of our Lord Jesus Christ, carefully expurgated of heresies and other interpolations, and rounded out with the writings of Moses, and of the prophets and apostles"—in which the attempt is made to cull from the four gospels, the real words and teachings of Jesus; and second and third the Ritual proper. The first part is divided into thirty-one sections, one for each day of the month, and as its title given above indicates, is a composite made from the Old and New Testaments. This part, as well as the remainder of the book, is annotated very fully, some of the notes being of historical value. In the Ritual, it is expressly stated that all dogma, mystery, miracles, belief in saints, and belief in what is called the "pagan Trinity of the Roman Church" are *not* tenets of the new Church. Jesus is a manifestation of God, and hence one with God. The Aglipayan faith is thus really Unitarian, but is not so confest. The explanation probably lies in the character of the people for whom the new worship is intended, who it must be remembered, have been Catholics for several centuries. One startling innovation is the permit to priests to marry, which is doubtless an answer to the charge that

Aglipay did not demand personal purity from his priesthood.

Morals in Evolution. A Study in Comparative Ethics. By L. T. Hobhouse. New York: Henry Holt & Co. 2 vols. Pp. xvii, 375, 294. \$5.00.

In the first volume of his *Morals in Evolution* Mr. Hobhouse inquires into the principal variations of the conception of the Good as held by men in different places at different times. It is shown, for example, how the conception of justice emerges out of dark beginnings in private revenge and the blood feud; how "composition" modifies instinctive ferocity; how justice finally becomes public, and its administration falls to society, which at first goes about its business clumsily, with trial by ordeal and duel, thinks only of punishing the criminal, regardless of his motive, and at last arrives at the conception of the criminal's regeneration as the chief aim of justice. The relations between community and community are traced in process of development. Moral obligations at first are restricted within the community. Upon this primitive state of inter-tribal hostility the great world-religions have had a mixed influence. Ferocity has reached its height in religious wars; in such, for instance, as those that preceded the peace of Westphalia, as well as in those of the ancient Hebrews. But by generalizing the conception of personal rights the world-religions have contributed toward the formation of modern ethical sentiment on international relations. The ideal of humanity as a whole of which each nation is a member—the ideal of Mazzini and of Comte—has begun to play a part in practical politics. The Hague tribunal, still in the position of a court in primitive society for the settlement of disputes, which had no power except that of public opinion, will have become a fully developed court of justice when its decisions have acquired such authority that to dispute them will be held "an outrage on justice and a menace of the public peace." The ethical synthesis deemed most successful by the author is presented in the chapter named "Modern Ethics." He refers to it frequently as Humanitarianism, but since he quotes Comte as its chief exponent, we cannot be far wrong in calling it by the

more familiar name of Positivism. The author sums up the course of moral development as a tendency to combine strength and order in the state with the utmost freedom of the individual members.

Ship Subsidies. An Economic Study of the Policy of Subsidizing Merchant Marines. By Walter T. Dunmore. New York: Houghton, Mifflin & Co. Pp. xviii, 119. \$1.00.

There are already in print two thousand books and pamphlets on the question of Government aid to American shipping. Notwithstanding this fact another book is welcome when it is of as good service as Mr. Dunmore's monograph. The value of Mr. Dunmore's book lies in his lucid and careful examination and summary of the causes which led to the loss of the place which the United States once held in the ocean carrying trade, and of the arguments for and against further Government aid to the ocean transport business. Mr. Dunmore shows that Government aid in the past, and the experience of France with subsidized shipping, do not go far to justify additional subsidies from the Washington Government. As a matter of fact Anglo-Saxons are today not nearly so fond of sea service as they were in the days of wooden ships. Every year there is an increase in the number of Lascars and non-British seamen serving in the British mercantile marine. In 1906 Lascars on British vessels numbered 44,300, and non-British subjects, 38,000; and even in the Maritime Provinces of Canada there are today fewer men available for sea service than at any time since the change from wooden to iron and steel ships. In the summer and autumn of 1907 captains of lumber carrying sailing vessels from New Brunswick and Nova Scotia ports were compelled to send to Boston and New York to recruit their crews; and in one case a bark had to lie in port until a crew could be secured in Norway. In the Maritime Provinces, as in Great Britain and in the United States, the standard of living of the men who fifty years ago went to sea, either as officers or before the mast, has been enormously raised. The consequence is that in proportion to population there are fewer Anglo-Saxons

in the ocean transport business today than ever before; and men of nationalities other than American or British are now serving on the vessels which carry the world's commerce for the same reason that Italians and Poles are today digging the sewers and building the railroads of this country and Canada. These social changes are not always taken into account by those who deplore the small share of the world's carrying trade that is done by vessels flying the American flag.

The Inquisition in the Spanish Dependencies. By Henry Charles, Lea, LL. D. S. T. D. New York: The Macmillan Co., 1908. 8vo, pp. xvi, 564. \$2.50 net.

Dr. Lea has now rounded out his life work in religious and ecclesiastical history, and has capped his four-volume *History of the Inquisition of Spain* with a separate volume on the same institution in Spain's dependencies. The record of the tribunal is traced separately in Sicily (with a sub-heading for Malta when under the Spanish Crown), Naples, Sardinia and Milan, while these Italian principalities were under Spanish suzerainty; for the Canaries and for the American colonies, under the headings of Mexico, Peru and New Granada. These three tribunals covered in their operations all Spanish America, and there was a commissioner of the tribunal of Mexico in Manila, the Philippines being in matters of civil administration also a dependency of the Mexican viceroyalty. Twenty pages are given to the Inquisition in the Philippines, in the chapter on the Mexican tribunal. These pages deal mainly with a few famous clashes between Philippine civil and ecclesiastical authorities, in which the commissioner of the Inquisition played an odious part. The islands now under American suzerainty were so fortunate, owing in great part to their distance, as almost to escape the terrible inquisitorial zeal in matters of religion. The natives being exempt from the tribunal's operations, anyway, the comparatively small number of Spaniards in the Philippines gave no great scope for the activity of the commissioners. Hence, a small number of prisoners were sent from the Philippines to Mexico for trial, and these chiefly for minor offenses. Dr. Lea

has drawn his notes about the Philippines chiefly from the Chilean student of the subject, J. T. Medina, and this record is not complete. Medina has also been the chief source regarding the Inquisition in Mexico and South America. In fact, this volume is a less notable contribution on Dr. Lea's part than its predecessors alluded to above. This is because, on one hand, he is writing (as regards the Spanish colonies) in a field less familiar to him than Spain in Europe, and the effects of his own research do not here show so well; and, on the other hand, because the inevitable division of the work territorially, as above indicated, interferes with any continuity of argument. The volume is, in truth, a piece of compilation that serves as an appendix to the *History of the Inquisition in Spain*, and must be read in connection with the latter work in order to get a satisfactory view of the Inquisition in the dependencies themselves.

Thomas Gainsborough. By William B. Boulton. Chicago: A. C. McClurg & Co. \$2.75.

Gainsborough is an artist in whom the modern critic takes peculiar interest. First, he is one of the greatest of all of the craftsmen in paint. His delight and success in the handling of the pigment are apparent in every stroke of his brush. Sir Walter Armstrong has gone so far as to say that even Velasquez is not his superior as a craftsman. However that may be, his pictures are, for those interested in technique, among the most fascinating in the world. Any one who has followed the work of Mr. Sargent for the past few years will recognize the profound influence of Gainsborough on the modern master. In the second place, he is the first of the English landscapists. The modern impressionist movement may be traced indirectly to him thru Constable. The main part of Mr. Boulton's book is a carefully written account of Gainsborough's life and works. It will be found to meet all the requirements of the student. This is followed by a temperate and admirable account of Gainsborough's general artistic achievement, an account certainly on the near side of idolatry, but not therefore the worse. The reproductions in half tone are not extremely good, but considering

the low price of the work, they are as good as could be expected.

Our Domestic Animals: Their Habits, Intelligence and Usefulness. Translated from the French of Gos. De Voogt, by Katherine P. Wormeley. Edited for America by Charles William Burkett. Boston: Ginn & Co. \$3.50.

There is one field in which civilized man has never been able to equal the achievements of his prehistoric ancestors—that is in the domestication of wild animals. For petting, service and food supply we have practically the same domestic animals as men had ten thousand years ago, and no more, except in so far as we have been able, by selective breeding, to split them up into new varieties or even species. This volume is devoted to dogs, cats, horses, asses, sheep, goats, pigs, cattle, fowl and rabbits, described in an easy popular style, with abundant photographic illustrations. There are over five hundred of these, besides seven full-page color plates, making it an interesting and profitable book to look over.

Literary Notes

....Students and editors of chess problems will be greatly interested to find a good guide thru the labyrinth of problems in the newly published book, *Terms and Themes of Chess Problems*, by S. S. Blackburne, of New Zealand. It classifies the different kinds of problems thoroly and in a most scientific way. (E. P. Dutton & Co., New York. \$1. net.)

....A person who does hard intellectual work does not find it a relaxation to chop wood, but he may be rested by indulging in some light gymnastics to clear his brain. A little book by Dr. Anders Wide, describing the Ling system, originating in Sweden over fifty years ago, is valuable to the man of sedentary occupation, who is anxious to keep himself in good physical condition. (Funk & Wagnalls, 50 cents.)

....*The Rosicrucians*, by Hargrave Jennings, is a large hodge-podge of labored, learned and ignorant nonsense. It discourses of mysteries, alchemy, kabhala, and a multitude of unrestrained and undigested divagations of an unguided or misguided imagination. Nothing is tested; assertion takes the place of evidence, and it is a happy chance if anything stated is true. It is a book for those who have time to amuse themselves with the extravagancies of fancied mysteries. (Dutton, \$3.00.)

....There are still new things to be said and new applications to be made of the four cardinal virtues of the Greeks—Courage, Pru-

dence, Temperance and Justice—and a goodly portion of new light breaks forth from these old topics in the pages of Paul Revere Frothingham's *Temple of Virtue* (Boston: Houghton, Mifflin & Co. \$1.25 net). A Christian atmosphere pervades the discussion of these themes, as well as the last chapter on "The Altar of Love." Mr. Frothingham writes in a gentle, pleasant style, with much persuasiveness.

....Any one who is desirous of learning how the Rev. R. J. Campbell's new theology will preach might read his *New Theology Sermons*, recently issued by the Macmillan Company. Many will find them altogether too theological, and too much of any theology, old or new, is bad for sermons. It is difficult to see how the common man can make much of such statements as this: "Whatever else he may be, God is eternally man." An older prophet declared in the name of the Almighty, "I am God, and not man," and there are many who think that this is better theology as well as better preaching.

....A sign of the increase of rational and scientific methods in the study of the Bible appears in a little volume privately printed by the author, Miss Isabella T. Redfield, of Pittsfield, Mass. Miss Redfield has divided carefully the material in both the Acts of the Apostles and the Epistles of Paul into convenient and related sections, and by a series of questions has prepared the way for the student to arrive at independent opinions on the course of the history and the various types of religious thought. The price of the volume is 50 cents.

....The German "Who's Who," which goes by the title *Wer Ist's?* should be always found beside the American and English volumes in our public libraries. Since it consists largely of names, addresses and dates, it can be used by any one who has a smattering of German. The 1908 edition contains 18,000 biographical notices of living men and women of importance, mostly Germans, of course, but including also many British, French and other European names, and a few American. Lists of pseudonyms and of the rulers of all nations, and tables of statistics, add to the value of the work. It is sold in this country by G. E. Stechert & Co., New York, at \$3.

....We seem to discover an overmastering ambition on the part of our young women to surpass their brothers in high scholarship which sometimes excites wonder and admiration. Here are cases of the daughters of two distinguished scholars: A daughter of Professor Charles F. Briggs is his helper in his Hebrew studies and is the author of a considerable part of his late critical commentary on the Psalms. Another case is that of a daughter of Professor W. C. Wilkinson, whose Socratic dialog, after the manner of Plato, in Greek, is published in the *Classical Weekly*, and has very high praise from Grecians. Miss Maud Wilkinson's sister Florence is an author and playwright of reputation.

....The Open Court Publishing Company, Chicago, has done a good work in reprinting

the late Prof. L. H. Mills's *Avesta Eschatology Compared with Daniel and Revelations*. In this thin octavo the aged Zend scholar gives his conclusion that the doctrines of angels, devils, the resurrection and the eternal life were adopted by the Jews at the time of the exile from the religion of Media and Persia. In this he follows Kohut among Rabbinic and several Avestan scholars, but he develops the points of comparison, even to an extreme, especially in treating of the Revelation, for here the dependence is very indirect on any Persian source, but its angelology follows that of the later Old Testament books. The author often see parallelisms that are not convincing, and his arguments are at times inconclusive, as when he ventures to assume that the names of Hebrew and Babylonian months came from the Persian, as that *Adar* means *fire*. The book is not easy reading, but deserves critical study, for Mills was one of the best Zend scholars.

Pebbles

WHIT—How does the new mare travel?

SKIT—Fine. Took my girl out driving yesterday, and she went great. My arms are sore from holding her in.

WHIT—Holding who in?—*Illustrated Bits*.

DOCUMENTARY EVIDENCE.

HER MOTHER—I should rather you would not go sailing with that young man, Clara; I don't believe he knows a thing about a sailboat.

CLARA—Oh, but he does, mamma; he showed me a letter of recommendation from a New York firm he used to work for, and they speak very highly of his salesmanship.—*The Circle*.

AMBITIOUS.

THE toiler in the city had been given an advance in salary.

"Now," said he, jubilantly, "I can begin saving to buy a farm."

Out in Washington the agriculturist looked at the check received for his season's wheat.

"Another such crop or two and I can move into the city," he mused.—*Philadelphia Ledger*.

HER ESSAY.

A SCHOOLGIRL was required to write an essay of 250 words about an automobile. She submitted the following:

"My uncle bought an automobile. He was riding in the country when it busted going up a hill. I guess this is about fifty words. The other two hundred are what my uncle said when he was walking back to town, but they are not fit for publication."

A DIFFICULT ROLL-CALL.

THE professor of English in one of our Western colleges was noted for being very absent-minded. It was his custom to call the roll each morning before the lecture. One morning, after calling a name to which there was no response, he looked up and, peering over his spectacles, asked, sharply:

"Who is the absent boy in the vacant chair I see before me?"—*Lippincott's Magazine*.

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, \$2.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, \$1.75 a year extra; to Canada, \$1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with \$1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

Ten Years of Dewey

It is ten years since, on the 1st of May, Admiral Dewey annihilated the Spanish fleet in the Philippines and put an end to Spain's colonial empire. That day began a new era in American history. It was not Sampson's defeat of Cervera that created the epoch, but Dewey's capture of Manila. Out of Admiral Sampson's victory we got Porto Rico, and we may get Cuba, but Porto Rico makes no great show in our history, no more than would the purchase of the Danish Islands, had they been secured. It was the hardly welcome, the quite unanticipated possession of the Philippine Islands that made the United States a colonial Power, with its part to be accepted in the high politics of the world. Admiral Dewey did as he was bid, but he did more than he knew, and more than President McKinley had any thought of doing. From the date of May 1st, 1898, the world has looked upon the United States as something other than a negligible quantity in world diplomacy. Where the nations of Europe consult our country must be called in counsel, and our judgment and will must have its influence.

How do our people like their new atti-

tude and duty? Do they wish to go back to the old days, when Washington's advice to a little and feeble country, to live secluded and keep hands off, was our policy? Are we content to take a strong nation's part in the task of giving good rule to the world? Have we fairly well begun the task we reluctantly assumed?

These questions must be answered first in the Philippines. We have not done all we ought, but we have done much; on the whole, we have begun pretty well. We have begun so well that the chorus of the hooting owls of ill omen has about ceased. They, even they, see that the United States means well by the Islands, and that it is impossible to dispossess ourselves of them. Were Mr. Bryan to be elected President it would make no difference in their dependence or independence. We have shown that we believe that the Philippine people ought not to be ruled as a subject state, as all other nations rule their subjected colonies of alien people, but that they should be taught to rule themselves. In this we are consistent with the principles which underlie our own Government. We assert that other people, brown people, have by nature the same sort of rights that we possess, and we are trying as fast as we can to teach them to exercise those rights. To that policy there are just two possible outcomes. As the Philippine people become ready to be fully self-governing, they must be made self-governing, either under the American flag or outside of it. They may either be given their full independence, or, if that seems to them undesirable, they can under our flag have the relation to the United States which Canada bears to Great Britain, or they can become States in our Union. We are on the whole ruling them well, giving them education and civilized development, and that policy is assured.

But we have not done our full duty. Congress is slow. Sugar men and tobacco men are selfish. We are imposing a tariff on goods from the Philippines which ought to be removed. The President and Secretary Taft have done their best to relieve the disabilities of Philippine commerce, but not with full success. Even more unhappy, there and in Porto Rico is the prevalence of a spirit among the American officers, soldiers and resi-

dents to treat the people as inferiors instead of as equals, and we have had about as little success in securing their affection as the British have had in India. Nevertheless, the main movement has been helpful and right.

As a result of the naval battle in Manila Bay ten years ago the Pacific Ocean became the great highway of the world, with the United States holding the chief ports of entry on the Western Continent, at Panama, San Francisco and Seattle, and Japan and China holding those on the Eastern Continent, but with the United States in possession of the half-way port of Honolulu, and strongly intrenched close to China and Japan. Our position is strategically an admirable one—could not be better. It is admirable for the peaceable rivalries of trade; it is, properly defended, what we would need in case of war, for it gives us harbors for our fleets from which we could reach any foe.

But we are not a people that love war, and these ten years have given our nation the opportunity it could never have had before Dewey's victory to exercise a great influence for peace in the councils of the nations. It may seem a far cry from Manila Bay to the Hague conferences, from a naval battle to arbitration treaties, but the connection is close. After Manila the United States were recognized as a Power to be considered, having influence and the right to be heard. So we spoke at the first Conference for peace, and it was our demand that created the court of The Hague to settle international disputes, and we have in the second Conference made our influence still further felt for the avoidance of the occasions of war.

So on this decennial occasion we give honor to Dewey and Sampson and McKinley and Roosevelt and Taft, and the other men whose acts have created our new era. We have no chance of quarrel as a nation with the nations of Europe; will we cultivate the brotherly arts of peace with our own people in the Philippines and the mighty Empire of Japan, and the Empire of China, so soon to be the mightiest empire in the world? Will our people have the sense to be friends with them? It rests with us whether we

will awaken the yellow peril, which is the chief peril of this century, but one so easily escaped.

Congress and the President

CONGRESS was preparing to close a session which has not been marked by important legislation outside of the annual supply bills when it was reminded by the President that it appeared to be avoiding action upon several of his recommendations. The earnest message of last week was unexpected. At first, those who control the House were inclined to ignore it. Sober second thought, however, and the arguments of a protesting Republican minority have convinced them that it must be taken into account.

Mr. Roosevelt has not lost the confidence of his party. No recent Republican State or district convention has failed to commend enthusiastically both the man and his policies. Two years ago many of these Representatives were greatly helped, in their campaigns and at the polls, by his report that they had done well. It has now occurred to them that they cannot afford to face their constituents with an admission that they have failed even to consider the measures which he has repeatedly pressed upon their attention.

And so it comes about that the message is not to be ignored. An attempt to withhold from the Commission the money needed for the inspection of railway companies' accounts has been defeated. There is now promise of legislation against child labor, for the relief of employees who suffer injury in the Government service, for the modification of injunction practice, and even for an amendment of the Sherman act. All this in the House; what the Senate will do no one can foresee.

The chief subjects of Mr. Roosevelt's message are the proposed modifications of injunction practice and his plan for the supervision and control of great trade combinations. What he suggests concerning injunctions is not what organized labor, as represented by Mr. Gompers, seeks, but something much less radical. It is approved by Mr. Taft, whose record on the bench shows that he has no bias

in favor of the unions. Some modification of injunction practice in labor disputes is needed. The pending Payne bill may or may not be sufficient. By those who desire that injunctions be prohibited it is called a mere subterfuge. But it may serve as a basis for discussion, and the question should be discussed thoroly in the House and in the Senate. Congress ought not to avoid it. And the discussion should take place now.

It will be observed that Mr. Roosevelt, in his remarks about the Anti-Trust law, does not ask that labor unions be permitted to indulge in injurious or unreasonable restraint of trade, such as was condemned by the Supreme Court in the Danbury boycott case. In fact, his recommendations concerning the relation of unions to Trust legislation involve no changes of any importance:

"So far as labor is engaged in production only, its claims to be exempted from the Anti-Trust law are sound. This would substantially cover the right of laborers to combine, to strike peaceably, and to enter into trade agreements with the employers. But when labor undertakes in a wrongful manner to prevent the distribution and sale of the products of labor, as by certain forms of the boycott, it has left the field of production, and its action may plainly be in restraint of interstate trade, and must necessarily be subject to inquiry, exactly as in the case of any other combination for the same purpose, so as to determine whether such action is contrary to sound public policy."

But it is lawful now for laborers to combine, to strike, and to make agreements with employers. Their rights so to act have not been affected by recent decisions. He would not legalize boycotts. The exemption of which he was speaking related to the working of his plan for requiring statistics, reports, etc., from combinations.

It is not practicable, in our opinion, for Congress at the fag end of a session, when members are longing to go home and their minds are full of politics, to deal thoroly and wisely with the plan he suggests for the control of all corporations and combinations engaged in interstate business. We do not expect that it will attempt now to legislate upon this subject. He ought not to be surprised if it fails to do so. The present law is objectionable, in that it condemns all combinations in restraint of trade, whether they be harmful or not. Rail-

way traffic agreements, subject to the Commission's approval, should be excepted. Restraint of trade by combinations of industrial companies or firms, if beneficial or harmless, should not be prohibited. But is it not possible to obtain the desired modification of the law without subjecting all existing combinations and combination agreements to the judgment and authority of a Federal Commissioner or a Federal Bureau?

In the plan suggested by Mr. Roosevelt, enormous power would be given to this bureau or this officer, power to pass upon all combination trade agreements, and practically to grant immunity to the corporations whose agreements should be approved. The question is one of great importance. If the method which the President commends is ever adopted, it will be only after discussion for which one entire session of Congress will not suffice.

It is reported that among the bills which the House now intends to pass is one which requires full publicity for campaign fund receipts and expenditures. We do not understand why the President failed to ask for this either in last week's message or in the one he sent to Congress in March. Some time ago such a bill had his public commendation. A national campaign and a Presidential election are now at hand. Recent testimony before a grand jury in New York and a widespread discussion of that testimony must have directed his attention anew to the need of law to compel such publicity. We hope that the bill for such a law is one for the passage of which Congress does not require the spur of his earnest recommendation.

Executive and Legislative at Odds

It is a very curious parallel which we have between political conditions at Washington and at Albany. In both cases the executive is at odds with the legislative department of government, and in both the executive appeals to the people. The New York Legislature refuses to pass a law to enforce the provisions of the State Constitution against gambling. So the Governor sends mes-

sages to the Legislature and appeals to the people with speeches here and there and everywhere. When a State Senator has sided in his vote with the gamblers the Governor goes to his district and addresses the people in great mass meetings, and tells them how false their representative has been to them, to the organic law of the State, and to the demands of morality. Of course he has the ear and the heart of the people, but the politicians think it is very irregular, that it is an attempt to browbeat and coerce the Legislature, and that he should keep his hands off.

There was an interesting incident in Ithaca last week which shows how the people stand with the Governor. There was to be a great public meeting, and Governor Hughes was to be the principal speaker, and he was sure to protest vigorously against the vote of the local Senator in support of the race-track gamblers. So the local politicians made ready and had a series of milk and water resolutions all prepared "regretting" the vote of their Senator, and "respectfully" requesting him to change his vote. Thus far they had to go in deference to public opinion. The resolution might have slid thru, but there was in Ithaca a professor of the Cornell Law School, who gave up the musical entertainment of the evening because he had a presentiment that some crooked work would be attempted, and he went to hear Governor Hughes, or, rather, to hear the resolution. It was presented as drafted, when the chief excitement of the evening occurred. Professor Woodruff rose, declared that "regret" was not sufficient, that it was the time for denunciation and condemnation; that he could not "respectfully" make a request of a man for whom he had lost respect altogether, and he presented amendments that really met the case, and the meeting adopted them enthusiastically. Thus Governor Hughes terrorizes, coerces, the Legislature.

The case is as nearly the same in Washington as the circumstances allow. The leaders in Congress, that is, the Republican leaders, had settled among themselves that they would have no legislation in this session before the Presidential election—they did not want

to risk anything. But President Roosevelt saw that there was economic and labor legislation needed that the people want, and he asked Congress to pass it. He did it in the usual way by a message such as the Constitution directs him to send when he sees fit. But Congress declined, refused. Then he sent a second message, a long one, nothing formal in style, vigorous, popular, for it was addressed only in form to Congress, but really to the people, and then a third. He is getting to be known as the Great Message-Writer, because he makes his appeal so strongly and frequently to the people, not simply to Congress. These leaders do not like it. They do not want the President thus to go over their heads and appeal to the people. They don't want to be "coerced." There is really serious friction in Washington between the President and his party leaders in Congress, just as there is friction between Governor Hughes and his party leaders in Albany. At Washington they are afraid the President will send in another message, and again urge them to do something. They wonder why he does not mind his own business at his end of the Avenue, and let them mind theirs—or neglect theirs.

Well, the people appealed to will decide the questions. They have their ways of influencing the votes of their representatives. We shall see, but we believe that neither President nor Governor has gone beyond his constitutional duty, and that the omnipotent people will side with their executives.

Our Wretched Rich

WHETHER it were more irritating in these days to be a bank president or a "parlor socialist," a President of the United States or a multimillionaire "whose son is a fool and his daughter a foreign princess," we are not in a position to say with absolute certainty.

But let us at a venture make the guess that the lot of our self-made American rich folk is just now peculiarly undesirable. For what shall it profit a millionaire if he gain the whole world and buy with it nothing but discomfort and derision? It is hard to be so magnificent that you

have to give up the simple joy of eating with your knife, if you have been brought up that way; or, if you can't break yourself of the habit, to be told by people who make you feel that they were born of "ancestors" that you "betray your origin."

For at least two generations our self-made men and their wives have been subjected to annoyance by supercilious persons of good breeding. American liberty, as everybody knows, runs easily into license, and no restraint has been put upon people of good taste addicted to the cruel sport of baiting the vulgar rich. The consequence that might have been expected now confronts us. Ridicule has become aggressive persecution. No longer confining themselves to disparaging allusions to fortunes made from oil wells, lumber camps and stockyards, or to innuendos about "table manners," our self-appointed censors of the successful now openly charge them with "wallowing in their wealth" and with being, in certain instances, "the least admirable of all our citizens."

We would not think of paying attention to such ungenerous attacks by culture upon pecuniary psychology if they were anonymous. They no longer are. So bold have become the apostles of genteel behavior in their crusade against what they are pleased to regard as the esthetic and moral imperfections of the rich that they declaim over their own names in communications to the press, and even in official communications to deliberative bodies. Such aggressive tactics can no longer be ignored.

Here, for example, is an English lady, one Mrs. Humphrey, described by the London newspapers as "a prominent social writer," who says:

"The American Four Hundred has thrown into lurid light all the worst features of humanity. They are brutal, purse-proud, avaricious."

Mrs. Humphrey seems to be aware that this is more than uncomplimentary, for she presumes to offer proof. She brought to the notice of two wealthy American women the case of an American girl in London "who was starving and desperate, but deserving." They did not even send postal cards in reply. And, as if this were not enough, Mrs. Hum-

phrey knows of a rich American woman who gave a freak dinner party and engaged a number of artists, one of them well known, to entertain the company:

"After dinner the hostess put her head over the bannister and shouted to the footman to bring up the animals."

One of the animals heard the remark and called up to the lady: "The animals will not come up; they are going home."

The only comment necessary upon all this is that Mrs. Humphrey's case is obviously weak. She does not tell us whether she inclosed "stamps for reply" in her communication to the wealthy ladies, or if she has ever taken the trouble to read Mallock's "Lectures on Socialism" or even his book on "Aristocracy." Were she acquainted with those works she should know that "the struggle for distinction" has now superseded the old Darwinian "struggle for existence," and that a lady who gives a freak dinner must be able in some way to indicate to her guests the difference between herself and artists. If she did not happen to be well versed in zoölogical terminology she might not like to announce: "The pachyderms are now ready to witness the antics of the quadrumana." It was really safer to call the artists merely "animals," because that designation was general, and, tho vague, was not inaccurate.

Of President Roosevelt's concluding paragraphs in the message of April 27 we really do not know what to say. The Constitution lays upon the President the duty to keep Congress informed "upon the state of the Union"; and, if it be true that we are breeding a type of the multimillionaire who is "a man of whom it has been well said that his face has grown hard and cruel, while his body has grown soft," the President had no choice but to transmit the information to Congress. If Congress finds upon investigation that the fact is as alleged, it should provide a way to put this particular species of the multimillionaire under the personal charge of the ex-President when next spring he goes to equatorial Africa to hunt the lion and the hippopotamus. The discipline might not soften the multimillionaire's face, but it should toughen his legs and diminish the excessive activity of his gall.

The Color of Religion

WE are getting the five or six senses so mixt up these rhetorical days that we need not be surprised that color has strongly invaded religion. We have color tones in both music and literature; poetry has its chromatic effects which match the chromatic scale, and taste is not limited to gastronomy, but has invaded every art, and Milton annexed two of the senses to religion when he denounced the false clergy as "blind mouths." One is imprest with the alliance of color with religion when he reads the accounts of what stirs the admiration of the reporters of the public functions connected with the centennial of the archdiocese of New York.

We run down the column: "Spectacular effect," "gorgeous colors of the elaborate vestments," "red and purple cassocks," "cloth of gold," "the brilliant red of the robes worn by Cardinal Logue," "the purples of Archbishop Farley and the monsignori," the golden vestments of Monsignor Lavelle, "the scarlet and white and black of the processions of acolytes," the "purple cassocks and white surplices" of the vested choir, and the "fifty altar boys in scarlet cassocks and white surplices" who followed them; again "the purple robes" of the Archbishop, and Cardinal Logue's "scarlet beretta," and finally the two "little pages garbed in white with broad scarlet sashes," and the "two more little boys in scarlet cassocks to hold the hem of his train." It is wonderful; it is beautiful; and thus art, like music, is made the hand-maid of religion. But the hand-maid it has been in all ages, from Moses's tabernacle and Solomon's temple, and Saint Sophia at Constantinople.

But it should not be imagined that gorgeous color or magnificent architecture or pealing organs are themselves any part of religion, any more than polychrome hoods and sashes are any part of education. John B. Gough sat with the dignitaries on a college commencement stage, and did not understand a word of the saluatorian's Latin until he came to the word "*ignoramus*." "That's me!" said he. The colored glory is as distinguished on the shoulders of an *ignoramus* as on those of a university

don; and a cardinal or archbishop or altar boy is not a whit sanctified by his outer decorations. He must quite disrobe himself of them when he comes to St. Peter's gate, and must enter in as plain as a Quaker. Color makes more show on earth than it does in heaven.

Far be it from us to disparage color and show. We believe in the simple life, but not too simple. We want sauces with our meat, syrup with our buckwheat cakes, laces on our gowns and frills on our rhetoric. They are for ornament, not for use, and we all like ornament. Cardinal Logue feels no more spiritual for his scarlet, but he knows that it impresses others, if it does not impress him. We are not wholly spiritual, not all of us, and the splendor of chromatics is meant legitimately to affect with admiration and respect the less spiritual, or, perhaps, the less intellectual among us, and it has a great influence. We find it very difficult to live up—or down—to the utter bare simplicity of Galilee. By nature we are more priest than prophet. The Gospels do not tell us the color of the seamless robe divided between the soldiers. We think it was blue, and that it was not embroidered. We are not as artless as were the disciples who followed Jesus. We know more; we have more taste. Some one long ago contrasted the golden priests and wooden chalices of the primitive church with the golden chalices and wooden priests of his own time; can we not now have both of gold? Can we not claim both splendor and sanctity? So let Paul's cloak, left at Troas, be all brodered over with gold, and send it to him, but don't forget the parchments.

Woman and the Land

Is there anything essentially degrading in land culture? Is there essentially any reason why a woman may not be a farmer? We do not mean to ask whether a woman can become a farmer's wife, and do a certain amount of indoor work, measured off to her as "woman's work"; but is there any reason why she shall not go into the field, swing a sithe if you please, hold a plow if you please, or make hay? There is certainly a very

widely disseminated prejudice against field work for American women. In the dairy countries of England the women have entire control of the herd, not only the butter-making, but the milking and the feeding. It is asserted, and we believe with good reason, that the finer breeds of cattle in Europe are mainly the result of woman's control. The German woman works in the vegetable garden, and she is pointed out to us around our larger cities as an example of degeneration. Yet her children attend the high schools, become our teachers of science, and the farms are bought up and well managed by the combined product of the labor of man and woman. Possibly we have labored under a misapprehension as to the effect of this outdoor work. It has not made the women less muscular nor has it destroyed their nerve stability. It has worked well for the body at least; has it injured mental force? There does not seem to be the least possible demonstration of any such mischief.

This question is coming before us with doubled interest from the fact that in our Western States farming by women is getting to be a fashion. These women farmers are doing a large part of the State and county fair exhibitions, and are said to be quite as zealous and effective in the way of showing wheat, corn and fruits as they used to be in exhibiting patched quilts, bread, cookies and wearing apparel. There certainly is romance and poetry enough in land culture to stir all the sentiment that is dormant in the woman's heart. She likes to compete, and likes to surpass. There is room enough for this on the farm. If you will attend a Grange exhibition you will see, very quickly, how woman comes to the front in these affairs, where she is permitted. We recently made note of a Farmers' Institute which was manned and commanded entirely by women. The work was well done, and called out the heartiest commendations of the press as well as the audience. The speeches were practical, directly to the point, and by no means lacking in the spirit of investigation. It was most notable that these women agriculturists held foremost the relations of food and work to the human being—the relation of labor to health as well as wealth.

We make no apology in this case, by setting apart a handful of employments as particularly associated with femininity. It has been the fashion to say that women could conduct an apiary, or raise turkeys and chickens; or possibly a truck garden might be assigned to them. What we mean to affirm is that there is no work at all associated with farm life, in these days, which cannot be managed by women as well as men. She can run an engine, or ride a reaper; and a woman, born and educated as all women should be, can handle a spade or a digging fork, or run a strait furrow, planting corn and potatoes and harvesting them without consideration of her belonging to a weaker sex. We are thru with the back-bending work that used to make our fathers old at fifty. Woman can command science just as readily as man, and come in from her day's labor with rosy cheeks. Such a woman need not be any the less a good cook or a good housekeeper—on the contrary the probabilities are the other way. The right philosophy of health drives the indoor worker out of doors for recuperation. The rule holds good for both men and women. Life should be adjusted so that a change of employment can be commanded.

There is, in fact, very little outdoor labor that can be compared for its nerve wear with housework—we are inclined to say there is very little that can compare with housework in muscle exhaustion. What we are breaking down with is fret, and tedious repetition, and the uninteresting. Housework is mostly monotonous. It would wear out the husbands and sons with great rapidity. Not long since the president of a farmers' club said: "I would rather plow than sweep; much more endure the sweeping of servants." Cooking is a tax beyond apple-picking or potato digging. There are few things in the line of toil that are alleviated so well as this tossing up of a long line of 'handsome tubers. Berry-picking is medicine. A physician could prescribe nothing better for nerve wear and pale cheeks than a few weeks spent in the raspberry and currant gardens. It is said, and boastfully, of the Southern woman of the ante-war period that she could handle a horse or ride a horse with skill equal to her father and brother.

There certainly is nothing to be ashamed of in the ability to handle a horse skillfully, either in harness or otherwise. A well-kept homestead involves a clean stable as well as a clean kitchen. The cleanest stable that we have ever seen, and the best groomed horse, were the property of one of the most cultured women we have ever known.

We have come to a crisis in this matter, and woman is fully aware of it. The victims of heart failure in New York increased 27 per cent. in 1907 over 1906. This means nothing else than a collapse of the present race of human beings under present conditions. It means that we have come to a period when we must change our methods of doing and living. The woman must become a healthier mother, and going back to Nature must mean taking her by the hand in our everyday employments. Circumstances are favorable. Agriculture has come to the front as an industry. Agricultural colleges are making land tillage the most scientific of all employments. Perhaps we are engaged in a work of supererogation—for we believe that, whether we favor it or not, the women are going to take possession of the fields and the orchards. We feel confident that the bulk of the gardening of the next fifty years will be done by the mothers and the daughters. The new ideal is catching. It loses something of the social functioning and the shopping, but it does not exclude social economics and the refinement of a clear judgment and physical health. The outlook is infinitely preferable to that of the women who spend their unwholesome hours over mending and stitching, or even over fancy sewing. Much pleasanter is it to look forward to women, strong, even if obscure; healthy, even if less womanish; with children well fed, well taught, and themselves thoroly wholesome—while the whole family co-operates and shares together the fresh air as well as the labor of home-making.

The Encyclical Abroad

LAST December the bishops of Germany met at Cologne under Cardinal Fischer. After the meeting rumors began to spread that Cardinal Kopp, of Breslau, had declared that Rome should

post itself on how things stood in Germany before publishing documents bound to have serious consequences in the land. Later on this interview was denied. Now it has leaked out not only that Cardinal Kopp had expressed the aforesaid views, but also that the German bishops agreed to accept the Encyclical only on condition that the section or diocesan vigilance committees be abolished for Germany. They demanded and won their canonical rights as bishops and were well within the limits of Canon Law. There are thus now two important exceptions to the operation of the Encyclical, in France for Catholic youth aspiring to degrees at the State schools, and in Germany the suppression of the "vigilance" committees.

This practically means that Rome allows the Encyclical "*Pascendi Gregis*" to go into abeyance, where it can not help itself. This is exemplified by two grave disputes in Germany, in which Rome has followed two different methods. Eberhard was Professor of Church History at Vienna, whence he was removed because of his advanced views. Friends secured the same chair for him at Strassburg. He attacked not dogma, or Scripture or Church history; only Church politics. But Rome could only demand a retraction which Eberhard gave. He is in a German university with William II to be reckoned with. Far otherwise Rome dealt with Professor Schnitzer, of Munich, who, like Eberhard, touched only on Church politics. Altho he had voluntarily abandoned his course of lectures, yet Rome suspended him *a divinis*. Unhappily for himself Schnitzer is in clerical Bavaria. Events, however, have avenged—and pretty thoroly—his punishment of a brother professor. Bardenhewer—the author of an excellent handbook on patrology—in one of his lectures attacked his fallen colleague. A storm of indignation broke out and the seminarians are in open rebellion. The storm is spreading to the other universities of Germany, and everywhere solemn meetings of academic senates denounce "the accomplice of Roman authority." Furthermore, the professors of the Gymnasium in Munich, ninety-one in number, have sent an address of sympathy to Professor Schnitzer. To conclude, a petition

has been laid before the Bavarian Government demanding that the faculties of Catholic theology in the State universities be suppressed.

Perhaps the strongest proof of how much the present Pope is opposed to the policy of his predecessor is seen in the letter denouncing the two Catholic weeklies, *Justice Sociale*, of the Abbé Naudet, and *Vie Catholique*, of the Abbé Dabry. The former held a brief of Leo XIII approving his work and its weekly organ. He has submitted, but adds that he is not the director of *Justice Sociale* and can only advise the laymen who control it. The latter published *Vie Catholique* in one lone page, which announced its death, premature certainly.

The Encyclical is making trouble enough in Europe, but in this country those affected think much and say nothing.

A Newspaper Sensation

A little company of men and women have met occasionally at private houses in Brooklyn to consider in what way they can help the colored people of the neighborhood and relieve the inter-racial prejudice. They include several white men and women engaged in social work and a number of colored clergymen, editors, etc., with representatives of old families of abolition heritage. Last week they agreed for the first time to hold a dinner in this city and invite a number of friends to meet with them. It was a very quiet affair, for they were most respectable people. The subject under discussion was caste prejudice, and it was treated conservatively. Not a word was said or a thing done in the least out of the way. We know, for one of our editors was there and spoke, as did an editor of the leading evening paper of this city. The *New York Times* gave a few lines to it the next morning, and its reporter said afterward that he did not see anything in it to make a "story" of. But there are papers which expect their reporters to make a "story" whether there is one or not; and the reporter of such a paper was present, and he made a "feature" of it, describing it as a disgusting attempt to exhibit close social relations between white and colored men

and women and to defend and urge intermarriage of the races. There was absolutely nothing of the sort said; not an act or expression that was not perfectly seemly; and yet that journal so distorted the facts as to do a serious injury to modest and self-respecting women, and send a foul sensation over the entire country. Not one of those present has any occasion to be ashamed of his part in it—in fact, their purpose and their conduct were highly creditable to them. As they have nothing to regret our sympathy goes more to those who are condemned to read such products of invention and in-veracity than to those thus travestied. The latter suffer some wrong, but they know the truth; it is the readers of the journals who are deceived that suffer the greater wrong.

Mr. Taft's Optimism

One of Mr. Taft's virtues is his optimism, and we are glad to follow him; and when he predicts rapid results from education and self-government in the Philippines, or the speedy completion of the Panama Canal, we gladly believe him. We will also try to believe him when he tells us, as he did in a late address, that as the Republican party freed the negroes from slavery, so "the time is coming soon when the disfranchisement of the negro in the South will be obliterated entirely." We wish we saw the evidence that this will soon take place. It will come, of course, in time, but the hope for it seems to lie in the organization of a strong popular party in the South, opposed to the aristocratic Democratic party. Some fifteen years ago the emergence of the Populist party gave us some hope, but the fear of "negro domination" put an end to it. We have one little spark of evidence in the late declaration of a Georgia candidate for Congress that the negro should not be disfranchised in that State because his vote would be wanted to beat Tom Watson and his party; but he hardly gets a second to his motion. And yet in 1892 a Fusion candidate for Governor had 90,138 votes in Louisiana and 115,522 in Alabama, while in 1894 the Fusion candidate polled 148,344 votes, and in 1896 there were 85,832 votes cast for the Fusion

candidate in Georgia. But there is not now enough independent politics visible in the South, in either party, to warrant the hope that a party of the people, whether Republican or Populist, can be developed. Southern Democracy has been given out in commission to Northern Democrats, and no live Southern candidate is proposed. Indeed, the voting of the people has been handed over to a caucus system, and on election day the voters stay at home. Not half the white voters qualify. So long as the negroes are kept from the ballot they do not care how other things may go.

Forest Fires It is a surprise to learn from the Forest Service at Washington that fires in this country have destroyed more timber than the lumbermen have cut. We have heard so much of the injury done by reckless lumbermen that we have not sufficiently considered the importance of protecting our forests from fire. And yet every country boy where there are trees knows the excitement every year when there is "a fire in the woods." Under direction of our Department of Agriculture the owners of timber in various parts of the country are organizing to protect their holdings from fire. A fire association in the State of Washington has made plans to protect three million acres by a system of patrol, and similar work is done in Oregon and Idaho, in the latter State by public taxation. Forest owners in Maine have gone to work in the same systematic way to combat their chief enemy, fire. Now that there is a threat of wood famine, and we even have to import wood pulp from abroad, it is wise to preserve what we have from needless waste.

**Sumptuary Laws
in Illinois**

The temperance wave stirs up the mud in Illinois politics. Both the Republican and the Democratic conventions met that wave and both beat it back with a plank in favor of "personal liberty," which means, against prohibition. The Democratic resolution, after some verbiage, ends positively: "We are

opposed to all sumptuary laws." One would think that definition enough, but it does not satisfy Mr. Koelling, president of the United Societies of Brewers and Liquor-Sellers, which presented longer resolutions that ended with an attack on the Church for its meddling with temperance legislation, and said:

"Whenever church organizations meddle with politics and assume to dictate to law-making bodies, they should be treated as political organizations."

Well, what of that? We trust they will be political organizations wherever politics is bad. What Mr. Koelling did not like in the Democratic resolution adopted was some rather general statements prefacing the conclusion, which talked about "fundamental principles," etc. He wants to hit somebody, and he knows whom he wants to hit, for, in a press interview, he says that "it looks as tho the convention was afraid of the skirt and the Church." He does not like women and religion. Those United Societies are not at all pleased with Mr. Bryan either, for he is an abstainer. The Chicago organ of the liquor dealers calls him "a rabid Prohibitionist, a chaser after the Christian Woman's Temperance Union Chautauquas." He was given a loving-cup in Louisville the other day, and he thanked the Kentucky givers, and told them he would fill it with—*buttermilk!* That was unkind.

An interesting discovery in Christian archeology we fear will miss many scholars who would not think of looking for it in an article in *The Ecclesiastical Review* of Philadelphia, by the Very Rev. H. Vincent, of the Benedictine Biblical and Archeological School in Jerusalem. Among the common looking objects excavated by Mr. R. A. S. Macalister at the mound of Gezer was a little round, flat earthen dish, made to hang up, and having the middle depressed and covered with glass. It was found in a Christian tomb of the fourth or fifth century. Under the glass are the remains of what was the reserved wafer of the Eucharist. The author shows, with a wealth of patristic and other evidence, that at this early period communicants were allowed

to reserve a portion of the consecrated bread and keep it as a sort of talisman, perhaps, hung up at home, as now a crucifix is used, and that it might be buried with the dead, as a sign of his union with Christ. This humble object presents a very interesting bit of evidence as to early Christian worship.

We still have some pretty bad "slews" on Western river roads, and we have some knowledge of the adhesiveness of "gumbo" mud, but we doubt if anything in any town in this country can compare for vileness with the description given by Mr. Angier, the representative of the London and China Express, of conditions in Vladivostok. He tells us that not long ago a pony was actually drowned in the liquid mud of a presumably main road leading to the railroad station, and about two hundred yards from it, and almost in front of the Russo-Chinese Bank. Only a few yards of the main street are paved with stone. Money has been poured out for docks and other purposes, but the requirements of a decently civilized town have been quite neglected, even street lights. We do things differently in Panama.

Here is the argument which Lord Rothschild presents to the British people against the passing by Parliament of the licensing bill. It will, he says, cause a tremendous financial crisis, because so many people hold brewery bonds which would lose their value if the bill reducing the number of saloons should be enacted. Some years ago the great brewery firms, the Basses and Allsopps, etc., very likely seeing danger ahead, unloaded on the public and bought them peerages, and now we are told that the foolish brewery buyers must be protected at the expense of public morality and thrift; for temperance, we are told, may be a good thing, but not at the expense of injuring the value of brewery shares. Such property is sacred.

Perhaps not a sillier law has ever been enacted in the supposed interests of labor than that which provides that any workman may enter this country who does

not know how he will make a living best, but if he does know how he will get a job he is to be sent back. Sometimes it works strangely, as in a case lately decided under the law by Secretary Straus. Two rival glass-workers' unions got into a quarrel with each other, and one of them planned to import several hundred Belgian glassworkers. When they began to arrive the Government was informed and was compelled to send them back. Such a law is against the principle of free trade, and applies to labor the extreme principle of protection.

The anti-saloon movement, so strong in the South, is gaining strength also in the North. In the elections last week local option made very large gains in Illinois, Nebraska and other States, shutting up thousands of saloons. But the breweries and whisky men are combining and fighting, for they have no such vested rights in the good will of saloons as property as is allowed in Great Britain. They will get no compensation when the town or State goes dry.

It is greater to be rector of Trinity Church, New York, the wealthiest church in the United States, than it is to be bishop of any diocese, and Dr. Morgan Dix refused bishoprics to maintain his higher post of honor. He was not a great man, but he was a fairly strong man, and held his conservative position well. The succession is already provided for. A successor can hardly be found more opposed to women transcending their traditional duties.

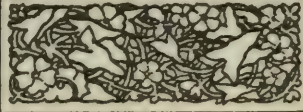

The Advance, discussing the removal of Andover Seminary to Cambridge, tells the story how Harvard University was "captured by Unitarians." But it fails to add the later story, how Harvard University was lost to the Unitarians.

There was the annual debate between Harvard and Yale last week, and the daily papers of this city gave nine lines to it. If it had been a boat race or a football game they would have given nine columns,

Insurance

Insurance Before, Not After

THERE have been so many cases where men who had been repeatedly solicited to take out insurance against death or accident, but who died or were injured while yet the protecting policy remained unwritten, that it makes good reading when it is possible to cite a case like that of W. L. Allen, sometime freight conductor on the Central of Georgia Railway. He was just an average man—not half as smart as thousands of other men that are now living and moving and continuing to have their respective beings. And yet Mr. Allen took out a policy of insurance in favor of his wife last October, just eight days before he was instantly killed by the explosion of the locomotive of his train, instead of putting the matter off until after his killing, as many men do. It is not always possible to win by such a close margin of time, and it is far better to insure today, when it is possible to do so, than to gamble on the uncertainty of living even until tomorrow.

THE “who is who” idea, which has been so successfully applied to professional men, has now been adapted to the insurance world, and in the first edition of “Who Is Who In Insurance” (The Singer Company, New York; cloth, \$5) we have a book that contains a mass of material that cannot but prove exceedingly valuable to insurance men generally. The new book includes nearly twenty-six hundred biographies, both foreign and domestic. As was, of course, inevitable, some names are omitted that ought to have been included, but the editor has done a painstaking piece of work, and we may well overlook certain shortcomings. The review of 1907 from an insurance standpoint covers much ground, and the twenty-seven essays devoted to the different phases of the insurance business in various parts of the world are illuminating. They present certain

features of insurance here and there that are but little known, but which are exceedingly interesting. The chapter on insurance legislation contains the particulars of United States enactments during 1907. The insurance bibliography in the book is a helpful one.

AN ordinary postage stamp is not generally regarded as very much of a life hazard. And yet, strange as it may seem, a letter held for postage out in Cleveland, O., not long ago came near costing a human life. The circumstances in brief were as follows, viz.: A man was under sentence of death for the murder of his sweetheart. The Governor, for good and sufficient reasons, commuted the man’s death sentence to life imprisonment. By some oversight in mailing the papers in the case the envelope lacked the needed transmitting postage stamp. A commonplace two-cent postage stamp thus became a life hazard that would have sent a man to the electric chair except for the telephone and the salvation that arose because of its use at a critical moment.

THEODORE M. BANTA, cashier of the New York Life Insurance Company, celebrated last week the fiftieth anniversary of his connection with the company. Mr. Banta is seventy-four years old. He has held his place through the administrations of five presidents. During the time of his connection with the company he has seen its business increase from \$10,000,000 to \$500,000,000.

OFFICIAL returns made to the Massachusetts Insurance Department indicate that the net losses of the insurance companies from the Chelsea fire were very largely underestimated, and that the loss figures will easily reach over \$8,500,000.

Railroad Coal

THE commodity clause of the new Railroad Rate law became effective on May 1st. It was designed to compel railroad companies to withdraw from the business of mining and selling coal. Since May 1st every railroad company carrying its own coal across a State line to market has been liable to extremely heavy penalties. If the largest fine named in the law should be exacted the penalties, it is said, would amount to \$16,000,000 a day for the anthracite roads alone. The passage of a bill suspending for twenty months the exaction of penalties has thus far been prevented in the Senate. Those who object assert that it is for the relief of the railroads, and that bills for the relief of shippers should first be taken up and past. It was unfortunate for the friends of the bill that while they were asking for the passage of it, last week, there was laid before Congress a long report of the Interstate Commerce Commission, showing how the coal supply of the Rocky Mountain States has been monopolized by the Gould and Harriman railroads, whose subsidiary coal companies, it is alleged, obtained much of their coal land from the Government by perjury and fraud.

Suits are to be brought by the Government against several companies to test the constitutionality of the new law. Believing that the law will be annulled by the courts, the companies—one or two excepted—have taken no step to meet its requirements. It affects about three-quarters of the anthracite output, and a great volume of securities based in part upon railway coal property. Whatever may be the fate of the statute, the people will continue to insist upon either a withdrawal of the railroad companies from the business of mining and selling coal, or a thoro official supervision and regulation of railroad coal business in the interest of the public.

Business Indications

NEW YORK CLEARING HOUSE bank reserves exceed \$60,000,000; in April we exported \$11,000,000 of gold; money on

call in New York has been averaging less than 2 per cent.; stocks and bonds have advanced on a broadening market; the sale of \$40,000,000 Pennsylvania Railroad 4 per cent. bonds drew an enormous oversubscription; \$6,000,000 of Philadelphia 4 per cents were sold at a little more than 104 $\frac{1}{4}$; since January 1st the redemptions of bank notes have amounted to about \$150,000,000. These things show some revival of confidence, a release of hoarded cash, and a good demand for first-class investment securities. On the other hand, among unfavorable indications are the condition of the iron trade and the recent large increase in the number of idle cars, from 306,000 on April 1st to 375,600 on April 15th.

....At its recent session, the New York Legislature past a bill providing for the adoption of the Torrens system of recording transfers of real estate.

....The Whitman Savings Bank is the second institution of this kind in Massachusetts to take advantage of the new law of that State permitting savings banks to issue life insurance policies. The first was the People's Savings Bank of Brockton, of which ex-Governor Douglas is president.

....The Interboro Bank of New York, of which A. E. G. Goodridge has been president, has been combined with the Guardian Trust Company, of which Frank W. Woolworth is president. Mr. Goodridge becomes vice-president of the Guardian, whose capital and surplus are \$1,000,000. Its total resources are \$4,000,000.

....Frank A. Vanderlip, vice-president of the National City Bank, whose paper on "Proper Banking Legislation" appears elsewhere in this issue, returned to New York from Europe last Saturday. In a published interview he denied the rumored merger of his bank with the National Bank of Commerce. He was optimistic regarding the future, and he concurs with the French financiers in their expectation of an early revival of general trade in this country.

The Independent

VOL. LXIV

NEW YORK, THURSDAY, MAY 14, 1908

No. 3102

Survey of the World

National Politics

Nearly all of the delegates to the two national conventions have been chosen, and it is now quite generally expected that the nominees will be Mr. Taft and Mr. Bryan. The managers of Mr. Taft's canvass claim for him 554 votes on the first ballot; only 491 are needed. A prominent independent journal gives him 513. For some time past none of the other Republican candidates has gained anything. It was thought that Mr. Knox could rely upon the support of all the delegates from Pennsylvania, but now there are indications that some votes from that State will be cast for Mr. Taft on the first ballot. Reports are published that Mr. Fairbanks will withdraw before the convention is held, and that nearly all of his delegates will join the Taft forces. Some think Mr. Hughes will not decline to stand for a second term as Governor of New York. Before the State Senate failed to pass his bills against race-track gambling, it was understood that he would not accept a second nomination for the office. Since the adjournment of the Legislature he has been going thru the State, making a vigorous campaign for the bills. The politicians say that if the bills are defeated again at the approaching special session, his party must nominate him for a second term, and he must accept the nomination. The prediction is made that he would be unwilling to give up the fight. —At the New Jersey Republican Convention a motion to instruct the delegates for Mr. Taft was tabled. No instructions were given. It is said, however, that Mr. Taft will have a majority of the delegates. They were directed to urge the nomination of ex-Governor Franklin

Murphy for Vice-President. Instructions for Taft have been given to a majority of the Connecticut delegates. The State's two Senators withdrew their names as candidates for delegates-at-large because they were unwilling to be instructed for him. But they had really been rejected for the same reason by the party leaders. Kentucky gave instructions for Taft; Utah Republicans declared that President Roosevelt was their first choice, with Taft second.—The Ohio Democrats nominated Judson Harmon for Governor and instructed their delegates to vote for Mr. Bryan. Mayor Tom L. Johnson, of Cleveland, opposed the nomination of Mr. Harmon, asserting that he was attorney for the breweries, that he was the legal representative of J. Pierpont Morgan in railroad affairs, and that he was the choice of those who defeated Bryan in 1896 and 1900. His nomination, he added, would be "hailed with delight by Wall Street" and be regarded by the country as "an abject and unconditional surrender of the live principles of Democracy." In the convention Mayor Johnson's candidate received 363 votes and Mr. Harmon 512. At the Massachusetts convention the delegates-at-large were instructed to support Mr. Bryan.—Headquarters have been opened at Washington by the National Negro American Political League, which has undertaken to organize the negro voters of the North against Mr. Taft. This association has sent a letter to each of the other Republican candidates, asserting that the nomination of either Mr. Taft or Mr. Roosevelt will cause nine-tenths of the negroes to oppose the Republican ticket at the polls.

Washington Notes Mr. Foraker has given notice in the Senate that before adjournment there must be action upon the bill for restoring to the army the negro soldiers dismissed on account of the Brownsville affair. Three Senators have recently received from the President letters defending his course. It is said that in these letters he declares that he would veto the bill, if it should come to him, and would even ignore it if Congress should overcome the veto. It is expected that the letters will be quoted in debate.—There may be no legislation whatever at the present session concerning injunctions in labor disputes. The bill now pending in the House is unsatisfactory to the labor unions as well as to employers. A child labor bill for the District of Columbia was past in the Senate last week. For this the House has substituted a bill of its own, but it is expected that all differences will be adjusted in conference.—No action is to be taken upon the Hepburn bill for amending the Sherman Anti-Trust law. It is reported that Attorney-General Bonaparte has pronounced the bill unconstitutional. This is the measure embodying in legislation the policy advocated by the President in recent messages.

Increase of Freight Rates It is now admitted that the presidents and other officers of the railroads east of Chicago, at their conferences last week, decided upon an increase of both the class and the commodity rates for freight. Final action was taken on the 7th. Mr. Harriman is said to have been prominent among those who urged that the increase be made, while Mr. Baer earnestly opposed it. As a large majority favored the proposition, however, the latter voted for it, and it is said that there was no dissenting vote. The average increase of class rates, which affect less than one-third of the business, is to be about 12 per cent., and the addition to nearly all the commodity rates is to be about 40 cents a ton. The aim of the companies is to increase their gross revenue by 10 per cent. Some say the changes will take effect on October 1st; others assert that the increase will not be

made until after the Presidential election. Commercial associations and shippers generally are making loud protests. In the Senate, on the 7th, Mr. Culberson denounced the act of the conference as a violation of the Anti-Trust law, and read newspaper articles asserting that the increase had been approved by President Roosevelt and the Commission. Mr. Foraker sarcastically remarked that those who voted to increase the Commission's power ought not to complain. Commissioner Lane denies that the Commission has in any way indicated approval. It is understood that rates thruout the country will be adjusted to conform with the increase in the East.—There are indications that Senator Elkins's resolution suspending for twenty months the exaction of penalties under the commodity (or coal) clause of the new Rate law will not be past at this session of Congress. Attorney-General Bonaparte gave notice on the 5th that arrangements for the test suits had been completed. On the 6th, the Senate adopted a resolution introduced by Mr. Foraker, directing the Commission to report whether the railroads were obeying the law (which went into effect on May 1st); whether disobedience was due to any agreement or understanding with the authorities for immunity; and especially to show what action had been taken by the Western Maryland Company, which is now controlled by a Federal Court. Mr. Foraker read newspaper articles which said that immunity had been granted to the roads in the interest of the nomination of Secretary Taft. The Commission has replied that while as yet it has no official information, the roads do not appear to be complying with the law; that it is a party to no agreement involving immunity; that the Western Maryland receiver says he cannot at present comply with the law; that the Commission's recommendation that the exaction of penalties be suspended was made with the approval of the President and upon a report of the special counsel employed, because it was impossible for the roads at present to dispose of their great coal properties.—It is held by the Supreme Court of Massachusetts that the New York, New Haven & Hartford Company violated the law in obtaining control and

possession of five trolley roads in that State.

Night-Riders in Ohio

Kentucky is no longer the only State in which independent growers of tobacco are persecuted by night-riders. For two weeks past lawless bands like those in Kentucky have been burning tobacco warehouses and destroying tobacco plants in three river countries (Brown, Clermont and Adams) of Ohio. On the 5th martial law was declared in Brown County, and two companies of mounted militia (one of them the well known Troop A, of Cleveland) were ordered to the disturbed district. About 80 miles of the river bank has since been patrolled, but the guard is inadequate and the county sheriffs have called for more troops. On the night of the 8th shots were exchanged between the militia and a band of night-riders attempting to cross the river from Kentucky. The presence of troops is resented by those tobacco growers who are members of the Society of Equity. Their opinions were expressed at a mass meeting on the 9th. Dispatches from the river counties say that this society seeks to prevent the growing of a crop this year, and that the farmers who suffer are those who oppose this policy. Tobacco growers in the southern counties of Indiana are threatened. Companies of minute men have been organized there, and troops are held in readiness for use. Night-riders are still at work in Kentucky. A warehouse near Lexington was burned on the 4th, and it is asserted that on their way to the place the outlaws defiantly "dashed by the soldiers" who were on guard in the neighborhood, and who made no attempt to restrain them.

Secretary Taft's Visit to Panama

It is understood that Secretary Taft, who landed at Colon on the 6th, is making an investigation as to the boundary dispute with Colombia, and is seeking a settlement of the claims of Colombia, arising out of the loss of her isthmian province. Panama resents Colombia's recent seizure or occupation of Jurado, near the boundary. Venezuela

asks Colombia to give her a considerable tract near the Venezuelan boundary, and the Colombian President, General Reyes, thinks, it is asserted, that Panama and Venezuela are intriguing to draw his country into war. This accounts for his presence now at a seaport near the tract which Venezuela desires to possess. It is expected that Mr. Taft will meet him there. Owing to rumors in Washington that Colombia has again asked that her claim against Panama and the United States be submitted to arbitration, Senator Bacon has introduced, and the Senate has adopted, a resolution calling for all the correspondence between our Government and Colombia concerning Panama and arbitration, since January 18th, 1904. It is said that Colombia's request for arbitration has been rejected twice. There is a report that a treaty has been prepared, providing that Panama shall pay Colombia \$800,000, and that Mr. Taft will urge Panama to accept it.—In the House, at Washington, last week, an attempt of the Appropriations Committee to reduce salaries and wages on the canal was defeated. The committee had reported a provision that salaries and wages there should not exceed by more than 25 per cent. the prevailing rates for similar work in the United States. Mr. Tawney asserted that they did exceed these rates by 75 per cent. He and his committee were beaten by a vote of 110 to 10.

Philippine Islands

The new Assembly has been considering a report from its Appropriations Committee for a general reduction of salaries, beginning with that of the Governor-General, from which the committee would take \$5,000. A reduction of from 20 to 45 per cent. is proposed for many subordinate officers. A large majority of those whose pay would be cut down are Americans. It is understood that the bill would be rejected by the Commission (or Senate) if it should be past by the Assembly, because such changes would make it difficult to obtain the Americans who are needed in the civil service. To the regular annual appropriation of \$2,000,000 for education the Assembly has added \$875,000 for

new schoolhouses in villages and for teachers to serve in them. It is asserted in the local American press that the Filipinos oppose instruction in agriculture and the mechanical arts, which is said to be needed, and prefer that kind of education which makes clerks, for whom there is no employment.—It is expected that the Assembly will pass a pending bill which gives to women the right to vote, but not the right to hold office. This bill provides that the right shall be acquired at the age of twenty-three years; that a married woman must have the consent of her husband, in writing, before she is allowed to cast a ballot, and that an unmarried woman who is under the care of her parents must have their consent, in writing.—Coal from the Government's mines in the islands is now to be tested on the naval cruisers. There is plenty of it, and tests on the transports have been quite satisfactory. In the navy it may displace the more costly coal of Australia and Japan.

Central America

William I. Buchanan and Ambassador Creel, special envoys from this country and Mexico to the Central American republics, will sail this week from Salina Cruz (Mexico) on the cruiser "Albany" for Costa Rica, to be present at the opening of the new Supreme Court of Justice, which was created by the recent treaty agreements of the five countries. Reports from Guatemala say that in addition to the cadets who attempted to assassinate President Cabrera, twelve soldiers were executed for refusing to fire upon the cadets, and that Cabrera's life was saved only by a coat of mail worn under his clothing. It is said that he was struck by four bullets. The prisons are full, and among those recently placed in them, refugees say, are women of wealth and social prominence. It is now said that Señor Bustillo, the Honduran Minister of Finance, who was in Guatemala on a confidential mission, was arrested by the Government because it was suspected that as an agent of President Zelaya (of Nicaragua) he was plotting the assassination of Cabrera. Dispatches from Nicaragua and Mexico say that Bustillo is still protected at the Mexican Legation in the Guatemalan capital, believing

that if he should leave this refuge he could not get out of the city alive.

Winston Spencer Churchill Elected Churchill, who was defeated in Manchester, has succeeded in getting an endorsement from the people in Dundee, and will therefore be eligible to his new Cabinet position of President of the Board of Trade. The week's campaign was the most intense and exciting that was ever known in Dundee, but the total vote was less than in the last election. The tariff reformers, which in England means protectionists, forced this issue to the front by ascribing the poor industrial conditions to the free trade policy. The local jute works were closed, and this was laid to the American tariff. On the other hand, the announcement of Mr. Asquith that the duty on sugar would be reduced helped the Liberal cause, since Dundee is the center of the jam industry. The result of the election was as follows:

Winston Spencer Churchill (Liberal), 7,079; Sir George Baxter (Unionist), 4,370; Mr. Stuart (Laborite), 4,014; Mr. Scrymgeour (Prohibitionist), 655.

This is about one-half of the former Liberal majority. The Labor candidate also lost 2,500 votes. The suffragettes adopted more obnoxious methods than before, interrupting his open air speaking by the clanging of bells. Mr. Churchill attributes his success partly to

"the ridiculous antics of the professional suffragists, which caused a lively feeling of resentment in the minds of the electors generally, and whose frenzied behavior had the effect of rallying an enormous mass of Liberal votes."

—An immense demonstration in favor of woman suffrage is to be held in London on June 13th by the women of England who are opposed to the violent methods of the suffragettes.—In Wolverhampton, an election was held to replace Sir Henry Fowler, who takes his seat in the House of Lords as Viscount. The Liberal candidate, G. R. Thorne, got in by a bare majority of 8. In the election of 1906 this district gave a Liberal majority of 2,865. The opposing candidate was L. S. Amery, one of the most brilliant advocates of protection and imperialism.

Old Age Pensions

Mr. Asquith's budget is regarded by both friends and foes as a skillful piece of financial ingenuity. He was able to show that the Liberal party had carried out its pledges of retrenchment and reduction of taxes and is prepared also to fulfil its promise to establish an old age pension system. The Premier said that the national debt had been reduced by approximately \$90,000,000 during the past year, and that a further reduction of about \$75,000,000 would be effected during the current year. This would bring the debt of Great Britain down to what it was twenty years ago. The change in the income tax brought in \$9,400,000 more than the Government had anticipated. There will be a total surplus for the year 1907-8 of \$23,630,000. The estimated expenditure for 1908-9 is \$764,345,000 and the revenues on the existing basis of taxation will bring in \$788,850,000. The revenue from wines and spirits last year decreased \$151,000. On account of the favorable condition of the finances he was able to propose the reduction of the sugar duty from 4 shillings 2 pence to 1 shilling 2 pence per hundred-weight. The duty on marine insurance policies is also to be reduced from 3 pence to 1 penny. The pension system provides for the payment of \$1.25 a week to persons over seventy, excepting criminals, lunatics and paupers. It is applicable only to those whose weekly incomes is less than \$2.50. It is estimated that the number of pensioners eligible will not exceed 500,000 and that the cost would not exceed \$30,000,000 a year. It is to go into force January 1st, 1909. This budget, which was drawn up by Mr. Asquith when he was Chancellor of the Exchequer, is regarded as a very strong one, and is as well received by all parties as could be expected. The general object of attack is, of course, on the establishment of the pension system for workingmen, which is opposed not so much on account of its immediate effect as because it is universally regarded as the first step in the establishment of a new national policy, which is feared by many on the ground that it will lead to socialism. Mr. Asquith met this objection by saying that if such measures were socialistic both parties in the country were re-

sponsible for them, for it is based upon the same principle as free education. The Laborites criticise the plan as altogether inadequate, and are much disappointed because the age limit was not made at least sixty-five. This scheme, they say, will only benefit rural workingmen, because few of those in the city reach the age of seventy. Some of the Liberals object to it on the ground that such a burden placed upon the revenues of the country is bound to force the establishment of a tariff, a deduction which Mr. Asquith himself emphatically repudiated. *The Spectator* styles it "A Plan to Discourage the Working Classes from Making Adequate Provisions for Old Age"; calling attention to the fact that a workingman who earns 10 shillings a week gets 5 shillings added to it, but if he is earning 11 shillings or has saved up enough money to give him that income he gets no pension at all. The Conservatives complain that the Government is adopting an expensive policy without providing any revenue for its maintenance, so when the Conservatives come into power, as they expect to before long, they will not be able to meet these demands without increasing the taxation. —The bill repealing the Irish Coercion Act of 1888 past the House of Commons on its second reading by a vote of 201 to 7. —Premier Asquith, when closely questioned as to the policy of his party in regard to Home Rule, said it would be impossible for any one to determine now what issues would be placed before the country at the next general election, but the disabling pledge given at the last election applied only to the existing Parliament, and thereafter the Liberal party would claim an absolutely free hand to deal with the whole problem of Irish government. Mr. Asquith reiterated that the policy of the Liberal Government had been plainly expressed in his speech in the House of Commons on March 30th and in the amended resolution then adopted. This resolution was as follows:

"In the opinion of this House a solution of this problem can only be attained by giving the Irish people legislative and executive control of all purely Irish affairs, all subject to the supreme authority of the Imperial Government."

—The *London Times* has again got into trouble on account of its campaign

against the high prices of books. It published, last October, a letter charging John Murray, the publisher, with extortion and "exploiting a great personality for his own ends" in charging three guineas for "The Letters of Queen Victoria." A suit for libel was brought against *The Times* and damages to the amount of \$37,500 have been awarded to Mr. Murray.

China and Japan

The Japanese Minister at Peking, Baron Hayashi, has made another protest against the boycott of Japanese goods in China, presenting to the Board of Foreign Affairs the names of four Chinese merchants who are promoting it. Great Britain is acting in conjunction with her ally and the British Consul-General at Canton has advised the Viceroy there to suppress the boycott. The Viceroys at Tien-Tsin and Nanking have been successful in preventing the spreading of the movement from Canton into their territory.—The Chinese Board of Foreign Affairs has conveyed to the Japanese Government and to the British Minister a reply to the protest which Japan made against the construction of a railroad connecting Tsin-Min-Tun and Fakumen in Manchuria. China objects to the construction put upon the treaty by Japan, implying her right to prevent the building of railroads anywhere in Manchuria on the ground that they would compete with Japanese lines. Japan is asked to fix the distance at which she will permit the construction of lines paralleling the Southern Manchurian Railroad.—A formal protest has also been made by the Chinese Government against the extension of Japanese administration over the territory of Chien-tao which Japan claims is a part of Korea. The Japanese Residency-General maintains three officials in Chien-tao.—The disturbances in Annam, resulting from the anti-foreign movement, have extended thruout the whole territory controlled by France and over the border into China. Meng-tse, a treaty port in the province of Yun-nan, is threatened by the insurgents, who number several thousand and are said to be possessed of French arms.—The British Government has shown a disposition to co-operate with China in her efforts to

suppress opium smoking. The House of Commons unanimously adopted a resolution urging the speedy abolition of the system of licensing opium dens in the Crown provinces of Hong Kong, Straits Settlements and Ceylon. Sir Edward Grey, Secretary of Foreign Affairs, said that it was a policy of the Indian Government to reduce the exportation of opium with a view to its eventual abolition. Great Britain, he said, would act altogether independently of the commission which the United States proposed, and he thought perhaps as much might be effected by purely British action as from an international commission. But, he continued, Great Britain welcomed, and would do its utmost to assist and co-operate in, the American proposal, and he was exceedingly glad that the United States, as it had so often done before, was taking the lead in trying to effect international improvement.—Japan is finding it necessary to take more active measures against armed bands of Koreans who wage perpetual warfare against the Japanese in the name of patriotism. Two more regiments of Japanese troops have been ordered to Korea for this purpose.—A general arbitration treaty was signed on May 5th at Washington by Secretary Root and Baron Kogoro Takahira, the Japanese Ambassador. This treaty is of the same nature as those that have been recently concluded with European States, and provides for the settlement by arbitration of all disputes of a legal nature or as to the construction of existing treaties, with the exclusion of all questions affecting the honor and independence of the two contracting States, and concerning the interests of a third State. The treaty goes into effect after the exchange of the ratifications at Washington and will remain in force for five years.

Fighting at Khyber Pass The trouble on the Afghan frontier looks to be more serious than before, but the reports from the scene of action are so meager and contradictory that it is impossible to form a correct idea of the situation. There is no communication between Kabul and Peshawar, so alarmist rumors of massacres and risings in the Afghan capital are rife, and the fear of

another Afghan war caused a sudden and severe fall in Consols on the London Stock Exchange. The British forces under Major-General Sir James Willcocks cleared the enemy from the vicinity of Landi Kotal in Khyber Pass, inflicting a heavy loss upon the Afghans. It is reported that General Willcocks has received orders from London to evacuate the Pass; an inexplicable change of tactics, since it is simultaneously announced that he will lead an expedition against the Mohmands, who were supposed to have been subdued, but appear to be more active than ever. That the British have to deal with something more important than impromptu border raids is proved by the fact that there is an organized system for the supplying of food and ammunition. Many men and some officers have been lost thru "sniping" by the hill tribes. The Amir of Afghanistan has at last replied to the remonstrances of the Indian Government, stating that he has issued stringent orders recalling all the Afghans who have joined the tribes beyond the frontier, and has directed his officials to prevent them in the future from crossing into India. More evidence is being divulged every day of a close connection between the disaffected party in India and the Afghan belligerents.

Foreign Notes

Russian artillery, cavalry and infantry are being rushed from the Caucasus across the Persian frontier to reinforce the punitive expedition against the mountain tribes. Tabriz is in turmoil on account of the refusal of the insurgents to accept the newly appointed Governor. After a day of street fighting the Governor was expelled.—Mulai Hafid has sent two delegates to the Emperor of Germany asking for his recognition as Sultan of Morocco, on the ground that he has possession of the two capitals, Fez and Marakesh, and is therefore the true Sultan. The claim is also made that he is a friend of progress, and would afford better protection to European residents in Morocco than Abd-el-Aziz. Despatches from Morocco, however, make it doubtful whether Mulai Hafid will succeed in retaining Fez much longer as his rival is approaching it.—In

Germany the old scandal in regard to the personal habits and evil influences of Prince zu Eulenberg has been revived by the production of new evidence in favor of the charges brought by Editor Harden. The Prince, in spite of his poor health, has been placed in confinement, and bail amounting to \$125,000 has been refused.—The Kaiser has invited Dr. David J. Hill, the new American Ambassador, to attend the Kiel regatta.—In the French municipal elections the Radical and the Radical Socialist parties gained votes thruout the country at the expense of the extreme Socialists and the extreme Reactionaries.—On May 6th Manuel, the young King of Portugal, took the oath to support the constitution and was formally proclaimed sovereign of Portugal and the Portuguese possessions. The crown of Portugal was on a table at his right hand, but according to the Portuguese custom it was not placed upon his head, for it is consecrated to the Virgin Mary. On his return to the Palace the King conferred an honorary decoration upon the soldier, Valente, who, on February 1st, saved Queen Amelia's life by striking up the carbine one of the assassins who killed King Carlos and Crown Prince Luis had leveled at her.—In the city prison at Kieff an epidemic of typhoid is raging which has already caused over 200 deaths and is not yet checked. The political prisoners at Alexandrovsk made an attack upon their guards and ten of them succeeded in escaping. They seized the weapons of the guards and killed three of them. Two of the escaping prisoners were killed, four wounded and three others were recaptured. The prisoners were led by Illinsky, the man who assassinated General Count Ignatieff at Tver in 1906.—The German Ministry of Foreign Affairs has begun the prosecution of the German military official who was found to have in his possession the marriage certificate of the Chinese Emperor, which was a part of the loot gathered by the expedition against Peking in 1900. The Chinese regard it as a sacred document and the Government has been searching for it ever since its loss was discovered. The document was picked up as a souvenir after having been rejected by other foreign officers on the expedition.

GOVERNOR JOHN A. JOHNSON.

The Political Situation

BY JOHN A. JOHNSON, LL.D.

[This article and the following character sketch of Governor Johnson, of Minnesota, should interest the whole country at this moment, as they give a graphic presentation of the views and personality of one of the most interesting men now in our public life. What Governor Johnson says on the currency problem is, we believe, the first public expression he has made on the subject. The following article was given especially for THE INDEPENDENT in the form of an interview, and the character sketch is by a member of the staff of the St. Paul *Pioneer Press*.—EDITOR.]

A FEW months ago a Republican friend said to me: "The Democrats are in a bad way. If they make a fight at all in the coming general election they will have to make it without an issue, and they might as well

give up from the start. It is easy to foresee another great Republican victory." That was the Republican view then. It is the view of some Republicans now. It is even the view of some of the less thoughtful of our own party.

But since the day when that friend made his remark a significant change has taken place in public opinion—a change brought about by the attitude and evident principles of the present administration.

The political situation today involves three great issues which stand out above all others, three issues so important, so vital to the welfare of the country, that the sincere espousal of the American principles involved in any one of them should carry into favor the party which makes those principles its own. First of all, and indeed the basis of the other two, is the present tariff system. Next comes the trust question, and last, but perhaps most significant, even most dangerous, of all is this principle of a new federalism which has been forced upon us within the last four or five months. There are many minor points, for those in authority in the government are making many mistakes, but these three things that I have named stand out pre-eminently, and should, in my opinion, form a nucleus for the fight this year.

Of these I believe the tariff question to be paramount. Our present tariff system is an established falsehood, which, while pretending to be for the benefit of the man who works, is a lie on the face of it. Even the makers and maintainers of the system have been forced to acknowledge this, and have decided, publicly at least, that the tariff must be revised. What their private plans may be we are left to judge from the facts that this is not their first such public decision, and that in spite of former declarations their continuation in power has brought no changes. I do not advocate free trade. The time may come, when our country is as thickly populated as are the nations of Europe, when unrestricted interchange of commodities will be not only desirable, but necessary. That time is not yet. But our present tariff system is an absolute contradiction of the beneficent principles of democracy and equal rights on which our government is founded, and our experience has been such that we cannot accept with confidence the promises of some Republicans that the system will be altered after the election.

The next great issue is that of the con-

trol of the trusts. Organization of capital is not to be condemned *per se*. It makes possible enterprises which accomplish greater industrial progress and cheaper production than could be brought about by individuals. But when a corporation or a combination of corporations reaches that stage where it crushes competition regardless of consequences, either to its competitors or to the public, when it develops such power, commercial, financial or political, that it feels safe in setting at defiance the will of the people as expressed in the laws, it is a menace alike to individual freedom and to our national life. The Republicans have conducted a series of spectacular onslaughts on the trusts; they have legislated against these great juggernauts, and they are seeking to carry this principle of antagonistic legislation still further. But they are not striking at the root which sustains the evil—the tariff system—and until that system is corrected the trust question will remain unsolved in spite of everything. We must strike at the basis of the evil in order to restore the equality of privilege established by the founders of our government, under which every man, rich or poor, shall have the right to the investment of his capital, whether it be represented by labor or by dollars. And the men who are planning to maintain our present tariff system know this.

I have spoken of the new federalism. There seems to be a desire among those in authority to abide in a central bureaucracy, rather than a representative democracy, and it behooves us to protest against any departure from the government as it is embodied in the Constitution. The danger today is that the people may be lulled into a false security and permit the breaking down of constitutional provisions. Because some laws are found irksome by a class and interfere with their selfish aims is no reason why we should deprive our sovereign States of that measure of home rule which until now they have seen fit to reserve to themselves. I recognize that on the grounds of expediency executives sometimes are tempted to do things not justified by the written law of the country. Expediency never permanently benefited a nation. It never

permanently benefited any one, particularly the Democratic party. The written law of the country, to my mind, has a majesty which compels the allegiance of every man who lives under the government. I believe the Constitution of the United States is a sacred compact, and cannot be broken or violated except by the specific action of those who entered into the compact and contract.

We have seen the spirit of the new federalism in the efforts of the central government to control railroad affairs in the entire nation. The effort has been called "control of the domestic commerce." But it has gone beyond the power delegated to the national government by the Constitution in that there has been an effort to control the affairs of certain of the sovereign States with regard to this commerce. The Eleventh Amendment to the Constitution says that no State shall be placed in jeopardy or be sued by a citizen of that or any other State, and yet, within the last few months, the United States Marshal has laid violent hands upon the Attorney-General of Minnesota, and that official has been haled before a subordinate Federal court to appear and give reasons why he should not pay a fine of \$100 for doing the very thing which the Legislature mandatorially required him to do, and the Supreme Court of our country has held that the court had a right to compel him to do that very thing. It is but an example of this new federalism, and one which deeply concerns every citizen and should arouse him to an interest in the affairs of the nation and its attendant dangers. It distorts the theory of popular government laid down by Thomas Jefferson and his compatriots who helped to make this nation what it is.

Our duty is not to unjustly or unfairly criticise the executive, the Legislature or the judiciary. Our duty is to recognize the majesty of the law when enacted by the Legislature, to abide by and with the honest executive administration of the laws when so enacted, and to respect, even tho wrong, the opinions of the courts of the land, because when respect for these institutions is gone then the framework of our government is bound to crumble and decay. But

having thus given our acquiescence to the voice of authority, if, in the opinion of the people, the action taken is one which should not be exercised by that particular department, it is our inalienable right so further to limit its powers as to prevent the recurrence of the error. In this new federalism there seems to be a wresting of authority from the States. If there is a gap in our governmental fabric which admits of such action, it is time that opening was sought out and remedied. But if, as seems more probable, the principle is the fruit of administrative ambition, or even a concession to "expediency," it should be cut off now before it reaches such proportions as to give apparent ground for overthrowing those rights which we have held and cherished since our nation's birth.

Among the several suggestions which have been made as to possible planks in the party platform are two in particular regarding which I would give opinions. One which is closely allied to the principle of the new federalism is the government ownership of certain railways. I do not believe in that solution of our present difficulties. Government regulation is necessary, but government ownership, I fear, would breed greater evils than those we now experience. But we should restrict government regulation to affairs of national scope, such as interstate commerce. The right of each State to control intrastate commerce should remain inviolate.

The second suggestion to which I refer involves the financial problems which have been given a foremost place thruout the present session of Congress. None can doubt that among the important problems requiring immediate solution and certainly demanding the best thought of men is that of so adjusting monetary conditions as to make a recurrence of the recent panic impossible. The fault, to my mind, is not so much in our national currency system as in the banking methods which have grown up in the great financial centers. Under these methods, misuse of deposits and maladministration of trust funds, particularly for the exploitation of auxiliary institutions promoted for private gain at public cost, have become com-

mon practices. In the development of such practices have grown up the added evils of inflation of values and the cornering of the money market, and the result of all has been financial stringency and consequent loss to interests that affect the entire country. The laws most needed to restore and preserve public confidence are laws which will compel honest banking methods and put an end to financial piracy and its attendant practices. Our currency system, if it is to be changed at all, should be changed only after the most careful consideration.

It is poor policy to boast in advance of a political victory. Too many interests are concerned in the outcome to

make such a course advisable or justifiable, and in the national campaign of 1908 we are to face greater and more powerful interests than have ever before entered the arena of American politics. But the strict drawing of party lines has past away, as men have learned to think independently and intelligently on the questions involved, and the Democratic party this year can build its platform of issues which not only will command attention, but should appeal to every man who has at heart the preservation to our country of a government of the people, for the people, and by the people, under which all men's rights shall be equal and special privileges unknown.

ST. PAUL, MINN.

Governor Johnson—A Character Sketch

BY DON E. GIFFIN

A YOUNG attorney was showing his fiancée thru the Minnesota State Capitol, and they stopped to rest a few minutes in the magnificent reception room just outside the gubernatorial chambers.

"How would you like to meet the Governor?" he asked.

She was an Eastern girl, and she had some curiosity as to the kind of man who would be given the highest office in a Western State.

"Oh, yes, I am a little acquainted with him," her companion said as he hastily wrote a few words on his card and handed it to an attendant. "If he's not too busy I guess we can see him a minute or two."

A moment later a tall, smooth-faced man of medium build, dressed in a business suit of a greenish brown color, came from the inner room with quick, almost nervous, steps. He glanced about him as he entered, said "Hello, boys," to three or four reporters who were waiting for the adjournment of the pardon board, and then walked to where the attorney and the young woman were standing. He greeted the former cordially, and acknowledged his introduction to the girl with earnest warmth

which called forth an involuntary response.

"And how do you like the West?" was his decidedly conventional question on learning that she was from another part of the country.

"Oh, I rather like it," she answered, "tho, of course, it is very different from home. I live in Boston, you know," she added with just a tinge of pride in tone and manner.

The Governor smiled quietly.

"Of course such proximity to great institutions develops an atmosphere of its own in any city," he said. "But, do you know," and here a broad, strong hand made a sweeping gesture which seemed to include all the points of the compass, "we have culture out here, too—the culture of manliness. You will find it in every city, every village, every community in the country. We all acknowledge it and admire it, and it is the best kind, after all. It is what has made this country the greatest on the globe, and it is what has made America respected wherever true Americans are known."

The interview lasted about two minutes, during which time the girl from Boston scarcely let her glance wander from the Governor's face. When he

finally excused himself, and disappeared with such suddenness that he almost seemed to have vanished, she stood gazing after him for a moment, and then turned to her companion with the words:

"Why, I like him. Somehow I feel as if I'd always known him."

Such a man is Governor John A.

MRS. JOHN A. JOHNSON.

Copyright, 1908, by Waldon Fawcett, Washington, D. C.

Johnson, of Minnesota. To meet him is to like him. To talk with him is to become his friend. To know him well is to join the ranks of his admirers. He is possessed of a compelling power, which may be personal magnetism, or may be the attraction of inherent manliness, deep-seated sincerity and absolute

integrity, that draws to him every one with whom he comes in contact. It is impossible to describe, yet it is there, and it never fails to make itself felt. Perhaps it lies partly in his belief in men, for his remark to the girl was not a mere platitude, but the expression of a firm conviction born of experience that has included association with many classes of society.

Perhaps the most effective thing in Governor Johnson's greeting to a stranger, next to the frank, direct look in the blue-gray eyes, is that hand clasp of his. It is free and hearty, absolutely lacking in ostentation or condescension, warm with the warmth of instant friendliness. Hours, or even days afterward, you remember it and can recall the exact sensation it gave you. If several other persons are present at the introduction you forget them for the time being, and realize only that you are meeting John A. Johnson for the first time, and you are even conscious of a hope that it may not be the last. As you study his face you see there lines of thought, of care, which it is easy to believe are the result of a lost boyhood, an assumption of the duties of life all too early according to our standards of child development.

John A. Johnson was born forty-seven years ago just outside the village of St. Peter, Minn., and his life until his thirteenth year was much like that of other poor boys of the village. He liked the games out of school hours, the romps in the dusk, and the hard knocks that come to all spirited lads in the first years of their association with mates of their own age. Never quarrelsome, he was able to take care of himself in untoward physical circumstances, and nobody ever called him coward. Between his mother and himself there was an understanding and a bond of affection which never wavered, even up to the time of her death, two years ago, and the boy never deceived her in but one thing. That was in going swimming on Sunday. His mother never knew of these Sunday plunges, and the boy even took the precaution of going alone to the river, fearful that if his comrades knew of it they might let the secret out by some thoughtless word.

But he had a remarkably loyal spirit, for when, at the age of thirteen, he realized that it was only by his mother's self-sacrifice that he was enabled to stay in school, he dropped his education entirely and sought work to help meet the family expenses. His last teacher says that "John was all but heartbroken over giving up his books, for he really was fond of his studies and easily led his classmates." That was the end of his school days, but they have been supplemented by a course of individual study which has given him exceptional knowledge of history, politics, economics and other branches.

"It would surprise anybody to see how versatile the Governor is in his conversation," said an official who has accompanied him on some of his speaking tours. "No matter what topic is brought up he seems able to prove himself more than ordinarily well posted, even to the smaller details. Much of his speaking in public has been practically extemporaneous, and yet he never is at a loss for an illustration or for data. He is a rapid thinker, a ready speaker, and in argument he is a kind of chain lightning, never being obliged to hesitate an instant."

It was as a druggist's clerk that young Johnson took his first place in the business world, and he held the position about seven years. "He did well at it," was the comment of a former fellow villager of the now Governor. "In fact, John seemed to do well at anything he took up. He always did his best, and I guess that has something to do with it." It was during his work in the drug store that he became interested in politics, for "Jones's" was the favorite resort of the village politicians, and the young clerk spent many hours with his elbows on the counter and his chin in his hands, absorbing the wisdom expounded by these Nestors. It was in listening to their debates that he learned the futility of argument by question and the certainty of chagrin which awaits the man who submits to such an attack. He made use of the lesson before he was out of his teens by routing two Republican traveling men who were carrying off a street discussion on that same principle. The drug

clerk opened on the pair with such a rapid-fire battery of rising inflections that they finally fled to the sanctuary of their rooms in the hotel, followed by a hooting crowd of St. Peterites, who only stopped their shouts of derision to congratulate the new champion. It was his first political battle, and the victory, tho comparatively small, was quite as great in its way as those which he has since achieved in the larger field.

It was during his term in the drug store that a friend found the boy clerk reading some sensational literature and sought to offset its effects by purchasing him the right to the use of other books. The yellowbacks were dropped at once, and the course of reading and study which still is going on was begun, prompted by an ambition for education that is found in few youths. In his manhood the Governor has proved an omnivorous reader, and the wide range of his information is one result.

Meanwhile newspaper work had attracted the young man's attention, and even such experience as he could get in his home town and by correspondence for St. Paul and Minneapolis papers laid the foundation of a keen knowledge of men. He was obliged to leave the confining work of the store to avoid a break in his health, and for three years he served as paymaster of a railroad construction crew, but at the end of that time he was offered an opportunity to secure an interest in the village Democratic organ, the *Herald*, and on taking that opportunity he began his active work for the party with which he still is affiliated.

It was during his term in the State Senate, to which he was elected in 1898, that he created a sensation by standing firmly for the patriotism of which he is an ardent advocate. Governor Lind was a "free-silver Republican," and a bitter opponent of the McKinley administration and all its principles and acts. During the legislative session the Governor drafted or had drafted a resolution condemning the government's course in the Philippines, and secured its introduction into the Senate. The measure met with considerable Republican opposition, but some of the Democrats spoke in favor

of it, and it was about to be put to a vote when Senator Johnson secured the floor. His speech was the sensation of the session. He threw aside party lines, denounced the spirit that sought to put the Legislature of the State on record as a critic of the national government, and advocated justice and loyalty in terms which drew a storm of applause from both sides of the house. The resolution was promptly killed, and the members of the Senate all but carried their colleague about the Capitol on their shoulders.

During his service in State offices Governor Johnson has given other evidences of having the courage of his convictions, but perhaps the most striking was at the passage of what was known as "the Indian pension bill," a measure which, it was freely predicted, would prove a severe drain on the State. In spite of these predictions the bill met with much popular favor, and there seemed no question that it would become law. But when it was sent to Governor Johnson for signature he promptly used his veto power in spite of a hue and cry against such action. That the bill left too great an opening for dishonest claimants to take advantage of it was the explanation given out from the executive chamber, and the veto stood in spite of harsh criticism.

To see Governor Johnson in his office is to see a busy man hard at work. He is exacting toward those under him, but he is more exacting toward himself. He takes comparatively little time for recreation, and most of that is spent at home with his wife, and their life together gives every sign of being ideal. But the door to his office is never closed to those who want to see him, and the humblest citizen of the State finds a ready welcome if he has occasion to visit the executive chamber.

It is when the Governor is in his office that his great power of concentration is most manifest. He needs no sign telling him to "Do It Now." Whatever is to be done is the important thing with him, and he goes about it directly and energetically. The only article in his office that has no direct association with State affairs is a silver hound which serves as a paper weight, and one im-

agines that the alert expression on the dog's face has been caught from the intense application of its owner.

It is not unusual for the Governor to walk the mile or more that separates the State House and the apartment building where he makes his home while in St. Paul, and his steady, rapid gait tells of a delight in outdoor exercise which he finds but little time to indulge. When he patronizes the rapid transit company's car lines he often stands on the back platform, where he chats freely with the men about him, for, as a friend has said, "He is as plain and democratic as an old shoe."

And yet John A. Johnson is one whose office does not suffer thru its incumbent's free association with his fellow-men. During his recent trip to Louisville he joined the other members of his party in a rollicking good time on the occasion of their visit to Mammoth Cave, and drew from an utter stranger who was present the comment: "It is a great thing for a full-grown Governor to be able to be a boy again without loss of dignity. Some people have insisted that Governor Johnson, because of his plain, democratic way, can have no dignity. But he has. The beauty of it is that he doesn't take it so seriously himself that other people are oppressed by it."

On the trip down the river to dedicate the Minnesota monument on the field of Shiloh, the boat on which Governor Johnson and his party were traveling met another steamer coming up with some officials who were to be transferred. The boats swung together in midstream, and a request was made that Governor Johnson board the upbound steamer that those on board might have the pleasure of meeting him. A gang-plank was thrown across between the lower decks, and a committee went to meet the Governor there, but instead of making the roundabout trip down the steps and up again he nimbly mounted the railing, stepped across, and in an instant was among the other party, shaking hands and talking with the members, making fast friends wherever he went. And the last persons to meet him were the members of the reception committee

which had gone down to the gang-plank.

It is on the platform that Governor Johnson's dignity is most apparent and most appreciated. Every inch of his six feet one helps to give force to his words. As an orator he is unstudied, always natural, and he always makes himself clear. He is much given to the use of gestures, even in private conversation, and a deep, orotund voice adds materially to the effect. A peculiarity of his public speaking was well illustrated at Louisville, for after his address at the Jefferson Day banquet several of his auditors remarked: "He was talking right at me all the time," and all were surprised on comparing dinner cards to find that even men who had sat far apart had received that same impression.

But one of the most interesting sides to John A. Johnson's character appears in connection with the proposition for his nomination for President of the United States by the Democratic party. Earnest, vigorous, intensely interested in public affairs, and possessed of a clear knowledge of the questions of the day, it is only natural that Governor Johnson should be deeply interested in the coming national convention of his party, but no man ever was farther from being carried away by the possibility of preferment. "If my party should call on me to make the fight, I should realize that the Democrats had given me the highest honor they could bestow, and I would go to work to give them the best I had in return," is his expression of the situation as it concerns himself. In the meantime he is sailing under no false colors. His speech is frank and open. He gives the impression that he is concealing nothing, and indeed secretiveness and deception are foreign to his nature. He

has work to do, and he goes about it earnestly, allowing nothing to come between him and the duty that lies immediately before him.

Governor Johnson is not insensible to honors. It is doubtful if any man could be more appreciative. But he believes firmly in the principle of *noblesse oblige*. In the two campaigns which he has fought for the Governorship he maintained his attitude of absolute calmness thruout the contests, and even on the night when returns from the election showed that the State's Presidential vote was to be overwhelmingly Republican, he evinced no anxiety over the prospect that the national ticket might sweep the Republican candidate for Governor into office. He remained late at the headquarters, but no man there was more jovial or apparently less concerned in the returns, and none took the victory more quietly than he. His attitude then as always was that new honors would mean new duties, new responsibilities, and when these came upon him he met them with determination, energy, unflinching strength and unswerving devotion to right as he saw and understood it.

But no better summing up of John A. Johnson's character can be made than was included in the tribute paid by prominent men who talked with him and heard his address in Louisville:

"We never heard of Johnson until lately, and we wondered who he was and what he might be like. When we met him here tonight he struck us favorably. As we watched him we liked him better. But now that we have both seen and heard him, let us tell you that we have been taken completely by surprise. You've got a man there, a real man—the kind of man who counts for something and who does things."

ST. PAUL, MINN.

The top picture shows the main building of the College of the City of New York as seen from St. Nicholas Terrace; the middle picture shows the main hall, with a seating capacity of about 2,400. The immense paraboloid seen in the distance contains a mural decoration by Edwin H. Blashfield; the lowest picture is a view from the campus, looking toward the main building. The whole group was designed by George Post and built at a cost to the city of over \$6,000,000. The dedication ceremonies take place today.

Proper Banking Legislation

BY FRANK A. VANDERLIP

[This article, by the Vice-President of the National City Bank, concludes the one begun in our last issue.—EDITOR.]

UNDER perfectly normal conditions the use of money as a medium of exchange shows a considerable variant. Nearly 50 per cent. of the people of the United States are engaged in agriculture. The results of their year's labor are concentrated in the autumn's harvest. That harvest period marks an extraordinary demand for money as a medium of exchange. It has been estimated that during the autumn months \$200,000,000 additional currency is in active use as a medium of exchange for which there is no such use during the remaining months of the year. The total amount of cash in the vaults of national banks is, roundly, \$700,000,000. The relation which the extra demand for \$200,000,000 of currency bears to the total reserve requirements of the national banks is thus seen to be extremely important.

During say nine months of the year the medium of exchange for 95 per cent. of the transactions of commerce are bank credits. These credits answer every purpose of safety and convenience, and answer these purposes in a degree far greater than would money itself; during three months of the year a large portion of the population of the country has a very considerable need for a medium of exchange, but having no relations with banks is unable to make use of bank credits in the form of the ordinary bank deposit. A bank credit in the form of a circulating note answers its purpose perfectly, but our laws have been so contrived that the natural right of a bank to issue its credit in the form that its depositor most desires it has been greatly curtailed. A prohibitory tax prevents all but national banks from issuing circulating notes under any conditions, while the national bank, in order to issue its notes, must first part with its funds to buy Government bonds. As the bonds sell at a premium, it must part with more funds than it will obtain circulating notes. A governor of the Bank of Eng-

land has wisely said that success in banking depends upon being able to distinguish between a note and a mortgage. There is more of the correct science of successful banking in that sentence than in any other that was ever uttered. The business of a bank is the facilitation of the current operations of commerce, the exchange of its credits for the credit of the merchant, and when it departs from that and devotes its funds to the purchase of long-term obligations in the form of mortgages or bonds, even though they be Government bonds, it has departed from the banking ideal.

There may be reasons in the enormous development of corporations and the great issue of corporate securities which warrant a bank in departing from strict commercial business, but there is no adequate reason in the natural laws which govern good banking to compel a bank to tie up its funds in a long-term investment as a prerequisite for issuing its circulating notes. As our laws stand there is no relation between the volume of circulating notes and the commercial demand for currency. The motive for issuing notes does not lie in the need for currency, but in the profit arising from an investment in bonds which can, in part, be paid for by circulating notes obtained against the collateral deposit of these bonds.

For more than forty years under the operation of the national banking act we have seen the annual recurrence of the fall demand for a larger amount of currency for use as a medium of exchange. In no single year since the passage of that act has the volume of notes shown a natural tendency to increase with this fall demand and decrease when it has ceased and currency become redundant. The issue and retirement of national bank notes is almost entirely regulated by investment consideration affecting Government bonds, and is influenced but slightly by additional demands or decreased needs for currency.

We have noted that banks will normally increase their loans and deposits to as large a total as the reserve which they hold will legally permit them to do. At all times, under normal conditions, reserves with the banks of the whole country stand at practically the legal minimum. When the period comes that our currency is called upon to increase largely the work which it does as a medium of exchange, the only place that this additional currency can come from is from the bank reserves, and a financial disturbance follows with almost as much regularity as the fall harvests follow the spring plantings.

It would seem to be one of the most obvious of conclusions that if banks were permitted to issue their credits in the form of circulating notes, so restricted as properly to safeguard the involuntary holder, that the part which bank credits play as a medium of exchange would be practically uniform thruout the year, instead of there recurring such a condition as now comes with every fall, where \$200,000,000 must be taken for this purpose from the bank reserves.

If the banks are unable to make good some part of this vast withdrawal thru gold imports or thru Treasury deposits, the effect must be that they must reduce their loans and deposits until they can bring about the legal relation. If no fresh supplies of reserve money could be obtained, it would mean that loans and deposits must be reduced \$800,000,000 in order to again establish a legal relation after the withdrawal from the reserve cities of \$200,000,000 of reserve money. Of course, in practice, part of the burden falls on other than national banks, and part of the reserve loss is made up from gold imports and Treasury deposits, but after every device has been utilized to soften the blow the withdrawal of reserve money almost invariably leads to disturbance and frequently to crisis in the money market.

There is another consideration affecting reserves, as they operate under our banking laws, which is of the most vital consequence. We have no banking system; this is to say, we have no related organization of banks. Instead of that we have fifteen thousand individual

banks, each a financial unit, each operated in regard to its own position rather than with regard to its relation to the whole situation. A few state banks have branches, it is true, but in the main the statement of absolute individuality is correct. *E pluribus unum* has been conspicuously left out of our banking legislation.

In a time of crisis two things are likely to happen. The public becomes suspicious of the banks and resorts to money as a store of value, converting its bank credits into cash and hoarding the cash. At the same time the bankers are likely to become suspicious of one another, as well as apprehensive of the probable demands on the part of their customers, and there begins a scramble for reserve money. Each institution stands alone, concerned first for its own safety and using every endeavor to pile up reserves without regard to what the effort may cost the financial situation at large.

The result is an absolute immobility of reserves, and the effect upon the general situation is probably far more disastrous than that produced by all the private hoarding. We are, at the moment, in the midst of such a situation. Many banks are carrying reserves far in excess of their needs. They will neither increase loans and thus build up their deposit credits to a normal ratio to the reserve which they hold, nor will they remit their surplus reserve to their reserve agents in the financial centers, for fear they might be unable to get the money back again promptly if they should need it. It requires but a moderate development of fear of such character to produce a most disastrous result. There are twelve to fourteen billions of deposits in all the banks of this country. The decision on the part of the managers of each individual bank to increase that bank's reserve but 1 per cent. above the normal absorbs \$120,000,000 to \$140,000,000, and becomes hoarding on a gigantic scale.

If our laws permitted branch banking by banks of issue such a condition would not arise. In respect to branch banking our legislation is unique. The laws of every other important nation encourage branch banking, and the results of it have never tended to enslave the people, to

build up dangerous monopolies or to increase the interest rate. The result, in fact, has been quite the reverse. Rates are kept uniform over a wide territory, the tendency toward violent fluctuations is reduced, and the privileges and benefits of safe banking widely disseminated. I believe there are groundless fears in many directions in regard to the possibility of evil from monopolies, but of all commodities the last one that will ever be successfully monopolized will be credit.

Thruout the terrific crisis which we have been experiencing, affecting as it has every banking institution in the United States, and bringing most of them to a point where they were forced temporarily to suspend full cash payments, we have heard no word of difficulty from across the national border. Canada has been going thru a land speculation more important when compared to her total resources than any speculation that has been engaged in here for many years; she has experienced all the difficulties that have followed the world-wide strain upon capital which the industrial activities of the last two or three years engendered; she has had no wiser bankers and no more conservative business men than are the rule in this country; but there has been hardly a ripple on the surface of her financial affairs, and to our shame we have seen the banks of Canada perform a great service in moving the crops of our own Northwest, while we stood financially paralyzed, with our credit fabric shaken to the foundation.

Is there not some obvious reason for this? Is it not apparent from the most casual reading of financial history that business interests of the United States are subject to periodical financial disasters which are escaped by the business interests of every other important nation? Is it difficult to see that the reason for this lies in our laws which have warped and twisted the natural development of banking out of normal lines? We know that our bank note system is the result of an ingenious device of a harassed Government to sell bonds; that the need for the device long ago disappeared, while the hampering laws relating to it remain.

Some bankers are apt to answer any

suggestion for fresh legislation with the declaration that the present notes are safe and that they know of no requisite greater than safety in banking. Such an answer is no answer at all. A bank vault that cannot be unlocked may be safe, but it will poorly answer the purposes of business. A bank note currency that has no relation to the demand of commerce may be safe, but it has in it the elements of commercial disaster the extent of which cannot be measured by ordinary totals.

Many of our lawmakers and bankers are ignorant of the principles underlying this subject. If they were not we would long ago have had scientific and adequate legislation, or rather, perhaps, we never would have had the legislation that has so warped and hampered the natural development of our banking system as to make it what it is today.

I have attempted the briefest outline of what I believe to be some of the principles that must be recognized in any correct solution of the problems of banking and currency. The more clearly these principles are apprehended, the less likely is one dogmatically to believe that he has arrived at the only correct solution of the problem.

There are many solutions, in my opinion, that will measure true and sound by an application of these principles. I believe that one ideal solution would combine the Scotch system of branch banks with the German system of a central bank of issue. I recognize that there is profound political prejudice against both of these ideas, but I believe it is a prejudice absolutely lacking in sound foundation. That there are other solutions I have no doubt. The mobility of reserves that is an essential to safe banking and which is insured by the branch-banking system may possibly be secured thru a utilization of Clearing House relationships. Such relationships have been signally developed by the present financial crisis, and it is not unlikely that a legalization and expansion of the powers which Clearing Houses have evolved in the stress and exigencies of the crisis may offer a solution which will be more in harmony with the present political ideas than will either the branch-banking system or the central bank.

The disposition to provide merely for an emergency currency to be secured by bonds other than Governments I believe would fail almost utterly to recognize these principles which should govern a solution of the problem. Any solution that leaves the fifteen thousand banks of this country compelled to prey upon one another in a time of panic, with reserves immobile and with management isolated and having such secondary regard for the general welfare, will fail of its ultimate purposes.

There are some sound objections to extending to every bank in the national banking system the power of currency issue against assets. If completely adequate redemption facilities were provided, however, I believe that the danger would be minimized, if it did not entirely disappear. That the result aimed at—a currency expanding and contracting with the larger or smaller need for currency as a medium of exchange—will be better met by a central bank having the power of issue and covering its notes in part by

a gold reserve and in part by legitimate commercial paper created against actual commercial transactions, I have no doubt, nor do I believe that the political prejudice against a central bank will be found to be so serious as is apprehended. If a well considered and definite plan for a central bank were presented for public discussion by those whose duty it is to offer a proper solution of the problem, much of the political prejudice would disappear.

The subject is technical. Opinions formed without a grasp of fundamental principles and conditions are without value. The verdict of the uninformed majority gives no promise of being correct. In this country we have had one great campaign of financial education, and the majority of the voters of the nation know that the free and unlimited coinage of silver was financial fallacy. If to secure proper banking legislation now it is necessary for a similar campaign of public education, it is time it were begun.

NEW YORK CITY.

On Dress Parade

BY SAMANTHA WHIPPLE SHOUP

O WASHINGTON! O glorious name!
August and mighty shade!
O white star on the field of fame!
In confidence, 'twixt you and me,
Now, is it not a bore to be
Always on dress parade?

A child, you could not tell a lie;
A schoolboy, virtuous maxims made;
A youth, you put ambition by
To soothe a widowed mother's sigh,
Calm as on dress parade.

In looking back on strenuous years,
When all our fates were on you laid,
And, spite of treasons, losses, fears,
You held your firm, unconquered way,
Would you not like an hour for play
Free from the dress parade?

The homely Lincoln, like own folks,
In careless garb arrayed,
With humorous mien that lightly cloaks
His sadness and his power with jokes,
Is nearer to our hearts, 'tis true,
O Pater Patriae, than you,
Always on dress parade.

Forgive, forgive, this frivolous strain,
August and mighty shade!
Still may your glorious name remain,
Without a flaw, without a stain,
In every land, thru every age,
At top of History's golden page,
Always on dress parade!

INDIANAPOLIS, IND.

Hetch-Hetchy Valley and the Tuolumne Canyon

BY WILLIAM FREDERIC BADÈ, Ph.D.

[Since the following article was accepted we have received a letter from Professor Badè in which he says: "It occurs to me that you may possibly not be aware of the fact that Secretary Garfield is soon to decide in the matter of San Francisco's application for the use of Hetch-Hetchy Valley as a reservoir site. It seems to me a very vital matter that this privilege should not be granted, for, aside from the destruction of this wonderful valley, it will mean the ultimate withdrawal of the choicest and most picturesque portion of the National Park (Yosemite) from the use of recreation seekers. This will be done (the promoters of the scheme admit it) on the ground that the drainage area of the Tuolumne must be closed against camping parties lest they contaminate the water. If the people of the United States knew just what is involved in this request of San Francisco, such a protest would be made that the privilege could not possibly be granted." The photographs accompanying the article were taken by the author and E. T. Parsons.—EDITOR.]

THE application of the city of San Francisco to the Department of the Interior for permission to use Hetch-Hetchy Valley as a reservoir site raises issues of considerable consequence.

with the situation do not regard the Tuolumne as the city's only adequate source of supply. The promoters of the project emphasize the convenience of the site. On the other hand Hetch-Hetchy

WHERE THE TUOLUMNE ENTERS HETCH-HETCHY VALLEY.

Since this valley is part of the Yosemite National Park it becomes necessary to determine upon what ground the claims or needs of a municipality may prevent those of the nation. Engineers conversant

Valley is one of the chief scenic assets of the National Park. Many competent judges, among them John Muir, rank its scenic importance scarcely second to Yosemite Valley itself. The gray gran-

ite walls rise, in what are mostly sheer precipices, to hights varying from 1,700 to 2,300 feet. On the northern wall hangs the long silver scarf of Tueeulala—a thousand feet of white water dashed into whiter spray upon an earthquake talus. A little to the eastward the greater fall, Wapama, with thunderous roar, plunges into the valley from a hight of 1,700 feet. No one who has seen Hetch-

But there is another aspect of the matter which, so far as I know, has not received attention in public print. Hetch-Hetchy Valley is the lower exit of a canyon that deserves to be counted among the greatest natural wonders on earth. For a long time it was considered impassable. In places the walls rise in terraced and almost vertical precipices to a hight of four and five thousand feet.

AN UPPER SECTION OF THE CANYON WALL.

Hetchy with its ancient groves of oak and pine, its wonderful waterfalls, its meadows riotous with bloom and deeply set in granite frames, can feel happy over a project that would turn this valley into a lake bottom.

Tho the canyon is scarcely more than twenty-five miles long the fall of the river within that distance amounts to five thousand two hundred feet. It would be hard to imagine a wilder career for a river than that upon which the Tuolumne

enters during this part of its course. Captain Clarence King, after a futile attempt to follow it thru the canyon, is said to have declared such an undertaking impossible for "any creature without

"meadows," bestowed by hunters and prospectors who were first at the christening of many a Sierran landmark, does not adequately describe the beautiful alpine valley in which the Tuolumne meets

A SERIES OF CASCADES IN THE UPPER PART OF THE CANYON.

wings." He somewhat misjudged the difficulty of the task, at least at low water, for up to 1904 a few venturesome explorers had succeeded in penetrating the canyon. In that year the writer also, in company with a few friends, undertook the adventurous trip. A little reconnoitering in the upper part of the canyon had convinced me of the necessity of going unencumbered. Accordingly our sleeping-bags and additional provisions were sent by a roundabout way to Hetch-Hetchy. Carrying only our knapsacks, filled with condensed rations calculated to last about five days, we started with the dawn of a July morning from the Tuolumne Meadows. The term

its tributaries before plunging into the gorge. Lying in the heart of the Sierran wilderness, at an altitude of 8,500 feet above the Pacific, it forms a wonderfully picturesque starting point for a future trail thru the canyon to Hetch-Hetchy. The little rivers that know the way to this valley are the maddest mountain torrents that I have ever seen. Tho often hidden in deep gorges, mostly carved thru solid granite, they always are heard, now leaping a precipice with shouts of thunder, now singing the joys of a gentler career among pines and ferns. All of them are true Jordans—descenders from the snowy summits of Dana, Lyell, Ritter, Conness, and other imposing peaks

that form the valley's nearer or remoter periphery. But none of them are found dead at the end, for they all join the Tuolumne, a river of turbulent and abounding life. Even late in summer, when a showy procession of spring flowers has pushed the snowbanks far up the pine-clad slopes, it would be dangerous, if not quite impossible, to ford on its foamy speedways.

The rough work began soon after we had entered the gorge. Earthquake taluses, overgrown with extraordinarily dense thickets, impeded our advance. In places we had to lower ourselves with ropes. One of our number lost his footing on a narrow ledge four hundred feet above the churning river, and would have lost his life had he not caught with his left hand a tough-rooted young oak that grew in a crevice. Nervous moments they were, until we succeeded in rescuing him from his perilous position.

The canyon walls became steeper and steeper. Numerous abutments, resembling giant towers in relief, led the eye to dizzy heights. It was no doubt partially due to the extreme height of these stupendous granite walls that we seemed unable to make any headway. At every turn of the narrow stream-bed the beetling parapets were still looming above us. A never-to-be-forgotten night overtook our party on the edge of a series of magnificent, abruptly descending granite terraces over which the river plunged seven or eight hundred feet into unseen depths, a furious mass of roaring foam and spray. Under some daring pines at the edge of a precipice we built a campfire and cooked our evening meal. A few minutes' use of rod and reel sufficed to add to our menu a delicious *entrée* of rainbow trout. Surroundings more abysmally grand it would have been hard to imagine. The sunset glow on the heights above, the witchery of the fire-light on pines and rocks, the reverberating thunder of the river's batteries, the white glimmer of endless falls far down the canyon, the unearthly brilliance of the Sierran stars, the flutter and scream of wild creatures terrestrial and aerial, the far-flung shadows of lowering cliffs gliding thru every gamut of form under the light of the rising moon—these and many other assets, in extraordinary measure, were

among the features of that indescribable night. One can only guess what reinforcement the imagination of Dante might have gained from the contemplation of scenes like these. But it was not difficult to think of the somber bard treading the giant stairways in the footsteps of Vergil.

The second day we past thru what is probably the wildest and deepest part of the canyon. The river now had gone stark mad. One who has not seen the Tuolumne during this part of its course would hardly deem a river capable of such acrobatic feats, such impetuous *abandon*. Its behavior is in large measure due to the unique character of the stream-bed, composed of smooth-polished granite, and often inclined at an angle of fifty-five degrees. With the friction reduced to a minimum, the water responds to the pull of gravity with almost incredible momentum. Occasionally the stream, in its descent, dashes into a depression shaded like the bowl of a gigantic spoon, and on emerging soars heavenward in a majestic white column of spray. Here it resembles a great brilliantly white apron flapping in the breeze, there it is some foam-born goddess of the wilderness seeking to disengage herself from a thousand yards of filmy lace. In one place a number of concavities on the surface of a sharply inclined plane produce the effect of half a dozen beautiful ever-changing fountains that seem to shoot up thru the swiftly gliding waters. In some of the longer cascades the speed of the water, occasioned by the conditions described above, leads to other spectacular phenomena rarely or never seen elsewhere. It frequently happens that the flying current impinges against a mountainous boulder tossed into the channel by an earthquake, or against some well-buttressed ledge that successfully resists the impact of the river. The collision resembles nothing so much as an enormous explosion covered by a pall of misty smoke thru which bombs of spray and fantastic water-wheels are hurled with titanic energy. Even the rainbows spanning the tumult in brilliant segments seem to break with every new shock of the rushing waters. The writer must confess to great curiosity to see the river at such points in early

spring, when it carries more than a double volume of water. The spectacle must be awe-inspiring in the extreme.

The general trend of the canyon is a little north of west, a fact that entails a great variety of light effects in the course of the day. Its width varies constantly, sometimes narrowing to little more than a hundred feet of churning water, sometimes widening to a quarter of a mile of forest and meadow. Wherever erosion has widened the floor of the canyon colonies of trees have established

better than people dream who fall asleep among the chimney-stacks and telegraph wires." In the upper reaches of the canyon the make-up of the tree societies is about the same as in Yosemite. The sugar pine, yellow pine, spruce, and incense cedar are the social magnates. Haughtiest and most beautiful among them all stands the sugar pine, who even in her youth affects a fine scorn of "lesser breeds." The yellow pine, gowned in somewhat larger patterns of bark, lacks something of the grace and distinction

ONE OF THE MANY FALLS IN THE CANYON. AT LOW WATER.

themselves. Most of these miniature forests have remained untouched by fire, and are wondrously beautiful against a background of waterfalls and towering cliffs. Every night we were the guests of pine trees that already were kings of the forest in the days of Queen Bess. Even now, to remember the shifting splendor of those nights as it beat down in waves of beauty on the intricate lace-work domes pillared far up against the sky—this is to share the sentiment of Robert Louis Stevenson that "life is far

of her sister, but is of royal race also, and second to none other in the sylvan society of the Tuolumne. The incense cedar wears the air of a distinguished foreigner, but is thoroly indigenous. Her fine buttress roots seem to mark her as the descendant of a race of fighters who have transmitted to her the attitude of determination and preparedness with which she faces her environment. The edges of the river for miles are lined with dense hedges of the western azalea, whose magnificent bouquets of creamy,

fragrant blossoms are a delight to the wayfarer and at least a partial compensation for the difficulties encountered in penetrating the thickets.

During the fourth day's climb the vegetation of the canyon changed considerably. There was a large intermixture of scrubby oak, and open places frequently were covered with *Rhus*. We had descended from an altitude of 8,500 feet to one of 4,000, and were entering upon the zone of foothill vegetation. The river, checking the headlong momentum of its plunges over a thousand falls, began to loiter in immense pools that might have been taken for lakes. Enormous specimens of the California black oak, worthy of the traditions of Dodona, spread their shapely crowns against the horizon. The evening light was weaving strange tapestries over the western mountain walls as we past thru the portals of Hetch-Hetchy, next to Yosemite the greatest natural cathedral

on the Pacific Coast. From richly carved choir galleries came the joyous music of many waters, and the deep organ tones of full-throated waterfalls pealed forth ever and anon as we threaded its aisles on subsequent days. One would suppose that its own sublime beauty were argument sufficient for the preservation of the valley. But still more cogent reasons for its preservation are found in the fact that it is the natural entrance or exit of the Tuolumne Canyon. The time is not far distant when the Government will wish to build a trail thru the wonderland of this gorge in order that thousands may look upon and enjoy what until now few human eyes have seen. But men will long consider before tunneling granite cliffs above a reservoir. If Hetch-Hetchy is dammed the canyon trail is doomed, and the people of this nation are deprived at one blow of two of their best sources of future enjoyment and recreation.

BERKELEY, CAL.

Confessions of a Baptist

BY WILLIAM LYON PHELPS, Ph.D.

SAMPSON PROFESSOR OF ENGLISH LITERATURE AT YALE UNIVERSITY AND DEACON OF CALVARY BAPTIST CHURCH, NEW HAVEN.

IN March, 1876, on profession of my faith in Christ, I was baptized by my father, who was a Baptist minister. I have thus been a member, in good and regular standing, of the Baptist denomination during thirty-two years. During all this period I have never signed any creed, nor have I given my assent to any printed or written form of dogma.

I believe in the essential unity of all Christians, but I do not believe in church unity. I think that any junction of Protestants and Roman Catholics is impossible and undesirable. The former believe in the individual interpretation of both dogma and ethics; the latter believe in the principle of authority. There is no possible common ground to stand on. And it is eminently desirable that those who prefer authority to the uncertainty of the individual mind should have a se-

cure and satisfactory abiding place. Furthermore, it seems to me exceedingly fortunate that we have a variety of Protestant sects, Episcopalians, Baptists, Congregationalists, Presbyterians, and what not; because all these differ to a slight extent in church discipline and organization, and to a much greater extent in forms of worship; so that each Christian may join that denomination where he feels most at home. Personally, I do not care, except historically, about a ritual of any kind; but there are an immense number of deeply religious people who are spiritually uplifted by a ritual, and who would feel religiously homesick without it. It is fortunate that the great Christian Church, both Catholic and Protestant, is sufficiently variegated in form to please all worshipers. If the various sects quarreled, as in former times, or if the Catholics and Protestants looked

upon each other as damned, the situation would be entirely different; but it is now quite otherwise. All Christians today, whether under a minister or under a priest, worship in externally different ways the same divine Leader. As a humorist once expressed it, each sect used to issue tickets of salvation, good only on that line: now they issue transfers, good on any line.

In a letter to Robert Browning, written August 15th, 1846, Elizabeth Barrett said:

"Wherever you go, in all religious societies, there is a little to revolt and a good deal to bear with—but it is not otherwise in the world without; and within, you are especially reminded that God has to be more patient than yourself after all. Still you go quickest there, where your sympathies are least ruffled and disturbed—and I like, beyond comparison best, the simplicity of the Dissenters, the unwritten prayer, the sacraments administered quietly and without charlatanism! and the principle of a Church, as they hold it, I hold it too, quite apart from State necessities, pure from the law."

The poem "Christmas Eve" sprang directly from this letter, and Browning's reply to it. No one has ever more successfully combined intense piety with absolute toleration than Mrs. Browning.

The Baptists represent the extreme radical form of devout Protestantism. There is indeed no Baptist Church: we have simply a collection of individual churches. Each separate society has absolute control over its own affairs; and no other church nor other person outside of that individual church has any jurisdiction or authority over its members. We have no hierarchy, no bishops, no binding organization. Each Baptist minister is the absolute, free, untrammelled leader of his own church; and no other person may tell him what he shall say or do. If his own church does not like his views, he may be requested to resign, but only by his own flock. We Baptists, therefore, from the time of Roger Williams, have stood for extreme individualism.

The fact that we have no creed is a great blessing, and has saved us from the melancholy quarrels over religious heresies that have upset so many churches in other denominations. If a minister be very conservative, he will ultimately find a church that either shares his views

or sympathizes with them; if he be rather advanced, he will likewise find, sooner or later, a congenial atmosphere within his own denomination. The late President Harper was an ardent Baptist, but by no means a conservative thinker. Incidentally, if all ministers preached the Gospel, instead of their views on theology, higher criticism, literature, socialism and politics, there would be much less trouble and a good deal more religion.

Baptists are often accused of laying too great stress on baptism; whereas, as a matter of fact, the Baptists attach less importance to baptism than any other sect; for they are the only Christians in the world who positively refuse to baptize unless they are convinced the candidate is already a Christian. No Baptist believes for an instant that a person's chances for salvation are assisted by the rite of baptism, an idea current with more or less strength in every other sect. To me infant baptism is not in the least an impressive ceremony, tho I can understand perfectly why it is deeply impressive to many fathers and mothers; even if it does the child no good, it may help the parents, and so be effective. On the other hand, the baptism of a Christian by immersion is to me so profoundly affecting that I am often moved to tears; yet I find no difficulty in understanding that other persons regard it as comic. It is perhaps our one symbol, and has to Baptists real significance—the burial of sin and the rising in newness of life.

With reference to the theory of close communion, *that* has always seemed to me from childhood a detestable doctrine, and has doubtless very often in the past brought Baptists into ill-repute. With the exception of Southern churches, close communion has almost ceased to exist. We have had no fight over it, we have not had to strike it out of our creed, for we have no creed; we have simply sloughed it off. I have not myself happened to be in any Baptist Church during the last twenty years that believed in or practised close communion.

We are fortunate also in having no church discipline. Our friends, the Methodists, who are very close to us in so many respects, do not exactly resemble us here. If I am not mistaken, the Methodist discipline forbids church

members to indulge in that old trinity of amusements—the theater, card-playing and dancing. With the Baptist theory of extreme individual liberty, this would not do for us at all. A considerable part of my work as a college professor is the teaching of the drama; and it would be ridiculous for me to stay away from the theater. There are many Baptists who do not indulge in these amusements, and if it hurts their conscience they do well to abstain. But there is no rule or law in the matter.

The Baptist denomination, with no creed, no hierarchy, no discipline, is a

fine place for sincere Christians who do not want these things, and who are not helped by a ritual or a prayer-book; for other equally sincere Christians, there are fortunately plenty of other churches, both Protestant and Catholic, where they can worship God in a manner which is to them more fitting, more pleasing and therefore more productive of good results. But as for us, our only guide is the New Testament, which each Baptist interprets according to his own reason; our only Leader is Our Lord and Saviour Jesus Christ, and even in the dark we follow Him as best we may.

NEW HAVEN, CONN.

England's New Administration

BY JUSTIN McCARTHY

THE great political crisis has come, but it has not yet taken full form.

We all knew that Sir Henry Campbell-Bannerman's health would not allow him any longer to endure the responsibilities of office when he felt that he could not attend to its duties. We knew also that Mr. Asquith was certain to be invited by the Sovereign to assume the vacant office and not one of us felt the slightest doubt that Mr. Asquith would accept the gracious invitation. Thus far, therefore, things have turned out exactly as we all felt sure that they were destined to do. But at the same time there was an almost bewildering uncertainty as to the final course which the development of the crisis was destined to take and as to effect which the construction of the new Ministry was likely to have on the next succeeding chapters of Britain's political history. In all ordinary cases of a change of Ministry we know perfectly well what the new administration is to be. The Liberal statesmen succeed to the Conservatives, or the Conservatives eject the Liberals, and we all know what the meaning of the change must be, and even before we know the names of all the incoming statesmen we are quite clear in our minds as to the policy which is to be the inspiration of

their measures. But in this present instance we were most of us filled with various doubts, conjectures, misgivings and fears.

As I have already explained more than once to my American readers, Mr. Asquith is not an advanced Liberal in his political principles. Now this was not a fact to create much anxiety among even the most advanced Liberals during the ministry of Sir Henry Campbell-Bannerman. No administration, Liberal or Tory, is ever made up entirely of men who represent the same degree of advancement in their respective political principles. With a man like Campbell-Bannerman at the head of the Liberal Government, with men like John Morley, Augustine Birrell, Lloyd-George, and John Burns presiding over some of its most important departments, the advanced Liberal could have little serious dread as to the maintenance of the political principles which made him a supporter of that government.

But now we have a change which is believed to bring with it a prospect of other and serious changes, and the Government has so many measures of intense importance bequeathed to it by Sir Henry Campbell-Bannerman's administration that any internal lack of cohesion might

lead to a political crisis of the most serious importance. There are, for instance, two strong parliamentary parties in which the coming of Mr. Asquith into office has raised very serious doubts as to the probability of these two parties being able to place as much confidence in the policy of the new administration as in that of its immediate predecessor. These two parties are the Irish Nationalists and the English representatives of labor, or, as they are now commonly termed, the Socialists. Mr. Asquith is known to be a very platonic admirer of Home Rule, if, indeed, he now continues to profess even a platonic admiration for that political principle, and he is not generally believed to go very far in his sympathies with the doctrines of the British Socialists. There is therefore a serious doubt entertained thruout a large number of constituencies in this country as to whether the views of the advanced or the reluctant Liberals in the administration are likely to prevail in the near future, and as the formation of a new Ministry carries with it the necessity for several new elections the general state of public feeling has been one of considerable distrust and even alarm.

Mr. Asquith does not, as other statesmen have done on several former occasions, combine in his own person the offices of First Lord of the Treasury, that is, of Prime Minister, and Chancellor of the Exchequer. He is now Prime Minister and nothing else, and the King has conferred the office of Chancellor of the Exchequer on Mr. Lloyd-George, who was until now president of the Board of Trade. I may say that this appointment has given universal satisfaction thruout Parliament and the country. Winston Churchill has been appointed to Lloyd-George's former office, and this appointment too has been welcomed everywhere. Another remarkable appointment is that of Reginald McKenna, up to the present Minister of Education and now transferred to the position of First Lord of the Admiralty. This seems at first sight a somewhat remarkable change of office. An observer from the outside would not perhaps be likely to understand why the head of the education office should be considered an appropriate figurehead for His Majesty's navy; but

every one who has followed the political career of Mr. McKenna feels well assured that whatever office this young and rising public man is willing to accept he will be sure to discharge its duties with foresight, with judgment and with full efficiency.

Much surprise has been created in literary as well as in political circles by the fact that John Morley, Secretary of State for India, has consented to accept from the King a place in the House of Lords. Morley retains his position as Indian Secretary, but gives up his seat in the representative assembly and moves into that hereditary chamber which no English public man has ever condemned and denounced more strenuously and more justly than he has done. I must say that I cannot help deeply regretting Mr. Morley's consent to become Lord Something-or-other and to take his place among those hereditary legislators who have in all modern history proved themselves the persistent opponents of every legislative measure which tended to promote the growth of human freedom and of equality before the law. It might, perhaps, be said that Mr. Morley enters the House of Peers with the hope of effecting some improvement in the doings of that chamber, but Mr. Morley is by far too keen-eyed a statesman not to know, as, indeed, he has often and often explained, that there is only one possible way of really improving that legislative chamber, and that is by abolishing altogether the hereditary principle on which its existence is based. I remember feeling much disappointed when the present Lord Courtney, one of the most able, enlightened, and sincere of writers and public men, consented to accept a seat in the House of Lords, but I may admit that I am still more surprised and still more disappointed to find that he has a successor in the person of John Morley. Nobody who knows either of these two men as I have done would for a moment suspect one or the other of them of any selfish or ignoble motive whatever in adopting any course, and those of us who thus knew and know the man can only lament the fact that any course of reasoning could have led such men to such a decision.

I must now turn away from the po-

litical figures of the present to say something about one political figure of the past. While Sir Henry Campbell-Bannerman was still Prime Minister the Duke of Devonshire died at Cannes, whither he had gone in the hope of obtaining a restoration to health. The Duke of Devonshire was in his seventy-fifth year when he died and he had been conspicuous in political affairs during the whole of what may be called his working lifetime. He entered the House of Commons in his twenty-fourth year and had held all manner of Ministerial and Cabinet offices. During the far greater part of his public life he was known as the Marquis of Hartington, and as such, being only the eldest son of a peer and not a peer himself, he was enabled to represent a parliamentary constituency in the House of Commons. It may seem like an attempt at paradox to say that he became a remarkable figure in politi-

vey a correct idea of the impression which he made upon the public mind. He was not a man of intellect, he was

SIR HOWARD VINCENT.

THE DUKE OF DEVONSHIRE.

cal life, chiefly because of the absence of any remarkable qualities in him, and yet I do not know how I could better con-

not in any sense whatever a statesman, and never apparently made any effort or showed any ambition to become one, although, owing to his high position and his great family influence, he held again and again some of the foremost offices of the State. He was never an advanced Liberal—perhaps I could not give a clearer idea as to his political complexion than by saying that he was a sort of negative Liberal, if such a phrase might be used; that at all events he could not during his working career be described as a positive Tory. So far as I could judge, he never seemed to take any actual interest in political doctrines—Liberalism of a certain conventional and aristocratic order lay in his way and he found it. It seemed to belong to his station somehow and he discharged steadily the duties which it imposed upon him. He made no attempt whatever at eloquence, but he could make a steady and coherent statement of any case which it became

his duty to set before the House of Commons. Every one knew, however, that any statement coming from him could be thoroly relied upon and that he was as incapable of any political artifice as he was of any flash of eloquence or flight of fancy. He always appeared to me as if he really belonged to the order of English county aristocracy, as it might have shown itself somewhere about the days of Fielding and Smollett, when the culture or chivalry had passed away and the principle of political equality had not yet come to be a recognized faith even with the minority in England. In a certain sense, he was a popular statesman, for he never made any profession which he did not also realize as a practice, and of him it might truly be said that his word was his bond.

A man of a strangely different order in English political and public life passed away about this time in the person of Sir Howard Vincent. The Duke of Devonshire had taken life exactly as he found it; Sir Howard Vincent was ever seeking after some new field of work. He had been, in turn, lawyer, soldier, Member of Parliament, member of municipal councils, traveler, Conservative agitator, and was always apparently sighing and seeking for new forms of labor. He had traveled more, I am inclined to believe, than any other Englishman of his time, except, perhaps, Sir Charles Dilke. He spoke fluently all or almost all the languages of Europe, including even Russian. He sat in the House of Commons for many years and was an energetic Conservative, but his natural taste for exploring in all fields made him anxious to come to a full understanding as to the purposes of other

political parties, and, indeed, he made himself personally popular with the members of all parliamentary sections, unless on the rare occasions when some sudden impulse toward another course of action led him into a temporary quarrel. He was the active mover in the once famous effort to bring about some terms of arrangement between the Conservatives under Lord Carnarvon and the Irish National party.

We have not had thus far in this spring many novels of modern society which call for any especial notice. I may, however, mention one, at least, which is entirely out of the common, alike in conception, in character drawing and in its curious blending of the real and the ideal. This novel, which is the work of Mrs. Campbell Praed, bears the title of "By Their Fruits," and is published by Messrs. Cassell & Co., London. It is a book of substantial size in one volume, according to the now prevailing fashion here, and closely printed. I may certainly venture to say that the reader who begins it will not be in the least likely to think it too long. It is a very powerful story, thrilling with interest from first to last, and with character drawing which in some of its figures displays a genuine and captivating originality. In the formation of more than one of the characters are combined the elements of passion, pain and wonder. I shall make no attempt to tell even in the most summarized form the story of "By Their Fruits," and shall only say that I feel well convinced it will add to the already high reputation of Mrs. Campbell Praed, as the authoress of romantic and often mystical fiction.

LONDON, ENGLAND.

The Library

BY GERTRUDE HUNTINGTON McGIFFERT

Is anything so good as to return,
After a bookless visit, to one's books?
To seek one's own accustomed easeful place,
Snow-girt without, the blazing logs within;
The mullioned window gay with daffodils;
Books on the window seat, and close at hand
Low tables full of them; and one new book
That waits enticingly—a choice event—
What if it prove the Book of Books for me?
I chide myself for giving to new books
That of myself should go to make new friends.
For somehow living books do seem more dear
Than many I have called by name of friend.
It is enough ofttimes to lay one's hand
Upon a well-loved book and feel its power
Electric thrill. Ofttimes a casual glance
Between old covers lets great spirits loose—
And so surrounds me with familiar friends
I know not if myself am one of them,
Or they the jostling ghosts of life itself.
Sequestered days are days wherein we grow;
When new ideas grind blunt wits sharp again;
When splendid bursts of bloom surprise the mind
And take enchanted colors from the soul;
When thoughts detached and vague slowly emerge,
Become ours to dispose of as we will,
And richly nurtured by immortal books,
Do make us kin with lofty master minds.
So, welcome, snow-girt days as days of gold,
To spend apart in a Great Company.

NEW YORK CITY.

The Women and the Future

BY MRS. L. H. HARRIS

THESE are hard times for the women, not that they have ever had an easy time, but some of them are beginning to think and to have a lively sense of their grievances. And when women get a grievance it makes a piercing shrill sound, all the more pathetic because there is no danger in it. So the women suffragists in this country, the suffragettes in England and the advanced women sufferers everywhere arouse sympathy and indignation by their

protests against their wrongs. And nobody is likely to deliver them. The slaves of the South were freed from bondage and given the rights of citizenship without even knowing that they needed them. But somehow women do not appeal to this part of the imagination of men. They will fight to keep them pure, to protect them from bodily insult, but Don Quixote himself would not go to battle to win civil rights for women, and it nearly makes a man ludi-

crous to advocate such a thing. Nobody knows why, unless it is because we are still hypnotized by primitive ideas. The excuse made that it is because not enough women want to vote is not honest nor even serious. If they are entitled to the ballot, they should have it without being made to beg for it or show the virago qualities recently exhibited by the suffragettes in London. The negroes in the South did not ask for the ballot, nor even know what the right to vote meant, yet it was given them with a grand flourish and a sentimental anguish that lasts to this day in some sections.

However, I have never worried over the serfdom of my sex as some nobler women have, because I have observed the disintegrating effects of the ballot upon men. Power is the one thing men cannot continue to exercise morally. This is the reason why the kings and their favorites in olden times were so corrupt. They had the monopoly of power. It is the explanation now of the greed and graft and corruption in political and commercial circles. The smart fellows there could not resist the temptation to go as far as they could stretch their privileges. And it indicates the reason also why the wickedness of men is worse than the badness of women. The men have a powerful evil "drop" upon the situation. We do not have policemen to look after the mothers of families, nor the young ladies, nor the old maids, but we need them more particularly to take care of the men who have an instinct to get drunk and vote, or at least to get drunk. It is the asinine sense of the jolly-boy privileges of manhood that accounts in a very great measure for drunkenness among men. Everywhere, in Church and State, the right to exercise power over others tempts the majority of men and tends to make them vicious. This is why no government ever lasts. The constitution, the theory upon which it is based, may comply with all the ethics of political economy, but the governing class becomes conscienceless, tyrannical, insufferable. And this leads to rebellion from below where there is less exercise of power and more manhood.

It is not clear to my mind that women could or would withstand the same temptations any better, and so while the

time must come when we shall have the ballot thrust upon us as a moral duty by a revolution of ideas, every thinking woman dreads the day and the burden. It is better to bear with the indignities of the "Jim Crow" laws of segregation in universities, to endure the grosser injustice of unequal laws governing the property rights of women and other offenses than to become like the aldermen and ward politicians of the nobler sex. And this is what political ambition would mean to the average woman. Very few of us could hope to be Senators or Presidents of the United States, and most of us would want to hold office, just as a man will "run" for coroner if he can get nothing better. So, while my position is not a brave one, I prefer to remain the victim of man's love and injustice rather than compete with him politically, face his temptations and risk the chance of being elected to some indelicate office, like that of sheriff.

And after all the danger of suffrage for women is not yet imminent. So much is said about it in connection with the advanced woman that one might infer there has been a change and development in the character of women in general sufficient to justify a wide application of the term. But the truth is, the advanced woman is only one of the signs of the times, and may pass with it. The great majority of women are still just women. They accept the advantages the times offer as they would accept a bouquet, but they are no more advanced in consciousness than they were in the beginning. They belong to the order of eternal women that remains the same in all times. Education does not change them, experience does not enlighten them. It only confirms them. They are the same cryptic mother-eyed creatures that have always lived silently behind the scenes and in the dim wings of the world. They do not belong to the stage of action, but to God, and to men and to little children. They have never lived in the sense that people of the world live, but their lives have been preordained and put upon them, like some Order of the Virgin which binds them to Heaven. They do three things with ineffable grace. They pray, bear children, and keep hearthstones like altar places for

purity and brightness. They survive the monotony of their existence without becoming listless, rebellious or depraved, because over and above the capacity for faith common to us all, they possess a power of illusion peculiar to themselves. They do not live according to experience, but according to love, by all their hopes and fears, in particular by the spells they cast upon their own spirits. Some of them have been saints and some have even been Magdalens, but who ever wins past the world to the gates where the spirit of each meets her messengers will find that the Magdalen no less than the saint cherished her illusion, her hope that after all sin was not sin. And once the illusion she casts between her and the dark is destroyed, she is ready to fling herself "anywhere out of the world." For it is the nature of such women, good or bad, not to be able to deal with reality. There is no wit in their wickedness and no ethics in their goodness.

In most women of this great order, love is the strongest illusion. They have a forbearance in love that is neither intelligent nor courageous, but it holds most of the loose ends of the world together. They cherish illusions about marriage that enable them to sacrifice self-respect with a clear conscience, and they can endow the most profligate son with all the virtues. Nothing can come between such a woman and her husband or her child. She has not understood either one, but she knew that she has been called by Heaven to minister unto them, and to believe in them whether she does or not. This is her very serious limitation as a social and moral factor. She will never make a good citizen because she does not know how to *compute humanity*, and she will not learn. If one attempts to teach her, she looks up and proclaims an illusion which renders teaching superfluous. Upon investiga-

tion she will be found to be the mother of nearly all the unruly boys and incorrigible girls. She is good, but she cannot impart it because she lacks moral sense. Her virtue is normal, natural, instinctive, but not intelligent. She would never betray love even to vote for the right measure. And unless suffrage changed her very nature, her ballot would add little to the political stamina of the nation—almost as little as those little feminine freaks who follow their fads and fancies, who play and dress and redress themselves, who grow serious over silly things and do anything to evade the issues of life which require courage to see. Society women would make good politicians, but not wise or conscientious suffragists. Their training has not been moral, but accommodating, tending more to grace than veracity.

If we accept the advanced women and women who are already emancipated in the commercial and professional centers, the one class of women now prepared for suffrage are the commonplace drudge mothers of the world. They are to be found far away in the silent farm houses, unkempt, ugly-faced, earth-women, whose thoughts are ever upon the things that last. They would legislate for the soil and for the children. Their interests are large and peaceful, and belong to the fields. They think of the seeds in the ground far and near, and hope it will rain. But they hope for nothing in themselves. Life is their term of imprisonment, and their thoughts are cast like prayers over the earth outside, and stretch like wings above their children. They see the seasons beforehand and fear the weather further than any prophet. Their ambitions are with the growing corn and with the growing children. Their ignorance of the world is fixt. But given the opportunity they could vote right with an awful simplicity.

NASHVILLE, TENN.

Literature

Life of Bancroft*

"Ah! these children and biographers who cannot leave in the dark what belongs there!"

To this exclamation of Bancroft, preserved in one of his letters, as pointed out by his biographer, the answer is obvious. How can Oblivion be expected to cover with its kindly hand what the journalist calls "copy," when that "copy" has been religiously preserved and docketed and laid high on the banks of the sad-waved river of forgetfulness? Fortunately in this case Mr. Bancroft's docketed "copy" has fallen into good hands. It would be difficult to tell the story of this eventful life justly and yet more discreetly. And he seems to have

With that inheritance, the son went his way—which was at first seriously select, President Kirkland, Andrews Norton and Edward Everett giving him his early send-off. Out of Harvard at seventeen, a Göttingen Doctor of Philosophy at twenty-one, he came home to Cambridge with an American heart, a German diligence of brain, and just that bit of mixed manners of courts and libraries which made him about equally welcome to Alexander von Humboldt and the Princess Borghese. With his more serious accomplishments he had learned to dance and to ride horseback. The dancing clearly came from the mother's side, and he defended it on the

GEORGE BANCROFT.
From Howe's "Life of Bancroft."

left abundant material. He was a piquant letter-writer and a luminous journalizer. With ways of his own in thinking, and with the clean soul of the Puritan, he gives his views as they came to him, content so long as he pleased his friends and satisfied himself. His father, a distinguished minister of the early Unitarians—or, as they preferred to call themselves, Congregationalists—had the same uncompromising habit. "If we find fault with him," said an up-country farmer, "he doesn't mind it at all; and if we praise him, he doesn't mind it, but keeps steadily on his way; we, therefore, have concluded to let him alone."

*THE LIFE AND LETTERS OF GEORGE BANCROFT. By M. A. DeWolf Howe. Illustrated. 2 vols. New York: Chas. Scribner's Sons. \$4.00.

ground that it was conducive to grace; the scholar needed it. His mother defended hers by a reference to nature. "My mother would sometimes tell me in a playful manner," she says, with her choice spelling, "that I should never have more at my heart than I should throw off at my heels. . . . I was the gayest in the ballroom. I never wanted more attention than I received." Bancroft also had his gaities, and on his home-coming, fell on the neck of Prof. Andrews Norton, and, German fashion, kissed him on both cheeks. His success as a tutor, says Mr. Howe, was not perfect; he taught in college only a year. Nor did he make headway in the pulpit. Eleven sermons expanded over

thirty-six "preachings," and then he put them away. Nine years were spent at the Round Hill School, precursor of so many classical academies. The work was not wholly to his mind. He was "absent-minded, dreamy, and often in abstract mood," says one of his pupils. He had criticised the great German scholar, Wolf, for slothfulness, and even Goethe had come in for defects of the sort; but, alas, we all have defects of our own, and Bancroft was guilty, says the same authority, on one occasion, of coming to a prae-prandial exercise with a shoe or slipper on one foot, a boot on the other. "In one short month I cease to be a schoolmaster," he writes to Edward Everett, in 1831. Some time before that, however, he had matriculated in the great university of a pure democracy, so that he could take the hand of an honest grave-digger, and say—"You are my fellow-sovereign; let us talk of liberty and equality." "Ah, yes," says his fellow-sovereign, rolling up the eye of a drunkard, "I often think, as I am *turfing* grass, that all men are about equal. It doesn't take much more turf for one than another, and I charge ninepence a grave."

This early period in the life of Bancroft is treated with considerable fulness, and the fulness is quite justified in the material used. All sides of the historian's mind are abundantly illustrated—evidently without fear; but also with great discretion on the part of the biographer, who distinguishes between true "copy" and that which is merely sensational. Bancroft's own idea of publicity seems to have been borrowed from Andrew Jackson; he remembered what that great Democratic President had said to him: "Truth would in the *eed* . . . be every man's best policy," and so, entering the Cabinet of President Polk, in 1845, he resolved to "act as if the eye of the whole democracy watched every motion and its ear heard every word I shall utter." There is no reason to suppose that he did not, within natural limits, keep his resolve. It is true he pleaded for the annexation of Texas as a glorious extension of "the area of freedom," tho it was as well known in his day as it is in ours that Texas was expected to add to the area of slavery as many Senators as its ample territory

could be cut up to make possible. He was against war with Mexico, and hoped Mexico wouldn't make war necessary by a greedy resistance to the loss of her territory. "Indeed," he writes to a friend, "I hope war is permanently out of fashion in the civilized world." And yet within a month of that letter he puts his hand to the order sent to General Zachary Taylor to take position on the Texan frontier "best adapted to repel invasion and to protect what, in the event of annexation, *will be our western border*." His was the hand; but there is reason to believe that the heart was not his. The heart for that deed was hotter; it had grown to fulness in the Georgia rice fields, and the cotton lands of South Carolina. He was against slavery in the abstract, and undoubtedly hoped the time would come when the abstract would become less academic and merge in the actual. The time did come, and he kept the promise of the heart nobly. Of his grown-up years of diplomatic service and historical activity, and the happy after-years of literary leadership in New York and Washington, Mr. Howe gives us as much "copy" as can be crowded into the second volume. His work is a clean and admirable addition to American biography.

The Cambridge Literature*

It is too bad that a work of this kind should not be made readable. In the nature of things there is no good reason that literary history be dull and repellent even when it is exact and comprehensive. And some idea of the scale of the present undertaking may be gathered from the fact that this first volume, which goes only as far as Chaucer and has therefore comparatively little literature of any importance to deal with, contains something over 500 octavo pages, text and bibliography. At this rate the fourteen volumes projected will be none too many for the purpose. Theoretically, however, with the exception of some such initial disproportion, the general conception of the work seems admirable. There has always been lacking to English just such

*THE CAMBRIDGE HISTORY OF ENGLISH LITERATURE. Edited by A. W. Ward and A. R. Waller. Vol. I, From the Beginnings to the Cycles of Romance. New York: G. P. Putnam's Sons. \$2.50 net.

a history of its literature as the editors propose to supply. The plan is like that of Petit de Julleville's French literature or that of the Cambridge Modern History recently published; perhaps it is not too much to say that the editors have had such a parallel in mind. At all events the subjects are parceled out, in much the same way, among experts, so that every chapter is in reality a special article, if not indeed a thesis.

Of the superior erudition ensured by such a method there is no doubt: perhaps it is the only way in which a large work of imposing authority can be produced, in default of tremendous single genius or in the present state of literary scholarship, by combining a number of limited but accurate studies to a single end. But at the same time it has certain grave and obvious dangers—particularly when the partitioning is so minute and at times so arbitrary as it is in the case of the present volume; for it disguises to some considerable extent the unitary character of the subject as a whole or at least of the broader periods, and still worse, it interrupts the course of literary evolution or development, as in the transition to romance versification, which is nowhere satisfactorily handled, not even mechanically in the rather amateurish chapter on prosody. To synthesize these articles, of which there are nearly a score, would be a serious undertaking in itself and would require just the kind of knowledge which the articles do not furnish. Of this embarrassment the editors themselves seem to have been conscious; for in one or two instances they have attempted to supply a chapter of preparation or transition, which are, however, too slight for the purpose. Nor do the changing point of view, the lack of a uniform critical standard, the variation of manner from that of a review to that of a *Grundriss*, assist the final impression. As a whole, then, tho with proper precaution such a result does not seem inevitable to the method, the first volume is altogether too encyclopedic for a thoroly satisfactory literary history, which ought to be continuous and expansive. At the same time it ought to be remembered that this period is a particularly trying one for such a method. Our knowledge of it is so confused, disjointed and piecemeal, it offers so many

difficulties even to individual presentation, that a treatment by allotment hardly gets a fair show. And it were better, perhaps, to suspend judgment until another volume, which is promised soon, and a more favorable opportunity.

Old Time Wall Papers. By Kate Sanborn. Illustrated. Dutton. \$5.00 net.

E. P. Dutton & Co. have taken over the plates of Kate Sanborn's *Old Time Wall Papers* from the Literary Collector Press of Greenwich, Conn., and have issued an edition of 975 numbered copies. The book appeals very strongly to those interested in antiques, as it presents many examples of old wall papers that are now fast disappearing. The wall papers of the old days differed very greatly from those now used by modern decorators and except for such a book as the one now under consideration, there would be no provision for the preservation of the quaint old wall paper designs that once decorated the rooms of our fathers and forefathers. Wall paper was first used in Europe as a substitute for the tapestry so commonly employed in the Middle Ages. Our grandmothers and great-grandmothers used wall paper with which to cover their bandboxes in which they kept their ancestors of the Merry Widow hats now so popular. These old bandboxes have lately become collecting objects and the present book incidentally includes examples of these as showing one of the uses of the early wall papers. The end papers of the book reproduce the "Devil Paper" in the Gore Mansion in Waltham, Mass. Portions of old wall papers figure as headbands and tail-pieces thruout the volume. Many persons will first learn of the present-day preservation of examples of old wall papers in certain old homesteads thru the medium of the Sanborn book.

Studies in the History of Venice. By Horatio F. Brown. Two vols. New York: E. P. Dutton & Co. \$6.00.

Very little attention is paid, in these two well studied groups of essays, to the art story of the great Venetian republic, whose annals for five hundred years were the annals of the traffic routes of the Eastern Mediterranean. Venice was

a republic, with the definition of that remarkably slippery word so peculiarly drawn as to exclude most of our modern notions of a republican form of government. A ten-headed monstrosity of commerce it was, whose capital extremity was, according to Mr. Brown, ornamented with a Doge dressed out handsomely for the pomp of state processions, and who, when convenient, made a handsome exit into the vaults of the ancient Church of the SS. Giovanni e Paolo. Handsome, if he had been a docile listener to the Ten; but if indocile—as was the case of the famous Doge Marino Falier—then into the vaults he went, “with his head at his feet” and his body “wrapt in matting”—four torches to light up the ghastly procession, and only a priest and an acolyte in attendance. The ten republican heads, like jack-o’-lanterns in a black night, glimmered and dodged, fearfully indestructible, through five centuries of troubled history, until the forceful greed of our English ancestors, in Queen Elizabeth’s day, of blessed Protestant memory, found a way to put out the fitful lantern lights of Venetian commerce. It is in the various darknesses of this jack-o’-lantern period that Mr. Brown has made his studies—twenty in all—using with skill modern searchlight methods. He wastes no time at all, as has been said, on pictorial art or on splendid architecture, little on battles and sieges, and on military campaigns only enough to enable him to trace the threads of policy home to the fitfully visible Ten and out to their ubiquitous agents. How the Ten worked, who their agents were, and how they were rewarded, dispensed with or disposed of, is the subject matter of chapters on Carmagnola, Tiepolo and the Carraresi, on Marcantonio Brigadin, and on the Spanish Conspiracy during the closing century of the Venetian supremacy. The relation of Venice to the head of the Roman Church, and, about Luther’s time, to the reform element in the College of Cardinals, is greatly lighted up in chapters on Cardinal Contarini and on Paolo Sarpi, both men being eminent within Church circles, tho ready both to slip over the boundary line into the enemy’s territory. The relations of the lagoon city to its Italian neighbors

is made unusually clear; but the interrelation of these peninsula powers might have been more happily set forth if it had been the writer’s purpose to give a connected rather than an episodic story of Venice. It is always a work involving the sanity of the reader to attempt a clear picture of that phantasmagorical Italy of the Middle Ages. Dante, in the thirteenth century, is most effective when he consigns most of the heads of state to the first and second divisions of the underworld. The eye of our essayist, however, is generally on the undercurrents of Venetian diplomacy—tracing the submarine forces which work as fatally in a republic as in a tyranny; and it is in the discussion of these un-republican undercurrents that we in America may still find the history of Venice by no means without its lessons for us today. Mr. Brown’s book is to be commended for its various light on our own living problems.

**The English Reformation and Puritanism:
With Other Lectures and Addresses.**

By ERI B. HULBERT, D.D., LL.D. A
MEMORIAL. Edited by A. R. E. WYANT,
Ph.D. The University of Chicago Press.
Pp. viii, 484. \$2.50.

Had Dean Hulbert lived to prepare for the press the lectures which are included in *The English Reformation and Puritanism* it is probable that he would have given them a somewhat more scholarly form and that he would have purged them of some of the errors and imperfections that now detract from their value, especially as regards the more recent history of Nonconformity and Education in England. Dean Hulbert’s lectures do not pretend to offer merely entertainment or easy reading and without an index, the book can be of little real service. The lectures are given in the easy, somewhat colloquial form in which they were delivered in the class room. One can catch something of the vigor, the enthusiasm, the sense of reality and conviction that made Dean Hulbert so successful and so beloved as a teacher; but these very qualities militate against calm historic judgment. “The horrid excesses of Bloody Mary” are described with the fervor of a contemporary. Nor is the Dean any more gentle toward Elizabeth. Ev-

everything that was done against the Separatists is represented as the personal action of the Virgin Queen—"deprivations, confiscations, mutilations, sequestrations, fines, imprisonment, stocks, dungeons, maimings, croppings of ears, slitting of nostrils—everything that diabolical ingenuity could invent to compel the worthiest Christians England then had to act a lie"—these, according to Dean Hulbert, were all to be attributed to the Queen alone and these made up the sum of her activities. This one-sided view of history was still the rule when Dean Hulbert came to deal with recent developments in England, and it is to be hoped that his students did not depend on these lectures alone for their views of English history and politics. The Lectures cover the history of Protestantism in England from Wycliffe to the Stuarts, with additional chapters on the Established Church and Nonconformity and on the Education Act of 1902. The volume also contains lectures on the special sect to which Dean Hulbert belonged—the Baptists, and a memorial address on President Harper, whose death preceded that of Dean Hulbert by scarcely a month.

Horace: Quintus Horatius Flaccus. The Roman Poet Presented to Modern Readers. Edited by Charles Loomis Dana and John Cotton Dana. 8vo, pp. liv, 150. Elm Tree Press, Woodstock, Vt.

The aim of this volume is to present to the reader a fair idea of the charm of Horace, so far as this is possible in English poetical translation. Nearly every versifier has tried his hand at Horace, and in every style. The editors have selected translations in verse of over fifty of the Odes and Epodes, with bits from the Satires and Epistles. There are half a dozen little introductions giving what little is known of Horace, his loves, his religion, his habits, nearly all drawn from his poems. Considering that one of the editors of this volume is a medical professor (the other brother a librarian) it is interesting to read the autopsy:

"Horace died suddenly at the age of fifty-seven. The cause of his death is unknown; but when we consider that he had at times lived somewhat riotously; was never strong, yet kept up occasional dissipations; was choleric and passionate, and to the last fond of his

wine and his Chloe, we may properly infer that he had an arterial sclerosis and a bad heart, and died either from a cardio-renal trouble or from some form of cerebral apoplexy."

Apart from the excellent selection of translations we particularly commend the series of old engravings here reproduced. It is an admirable edition for the general public.

A New Boundary Stone of Nebuchadnezzar I from Nippur. By William J. Hinke. Vol. IV of Series B of The Babylonian Expedition of the University of Pennsylvania. Edited by H. V. Hilprecht. 8vo. Pp. xxviii, 323. \$2.50.

The modest title of this work by a young scholar comes from the fact that the boundary stone alone was the subject of a doctor's thesis; but in the present volume the work has been enlarged so as to give—what was much to be desired—a discussion of all accessible boundary stones from Babylonia and Persia, with a very careful discussion of the meaning of the emblems upon them. These stones were set up to form a public notification of the purchase or grant of a tract of land. They are two or three feet high and have on them emblems of gods and an inscription telling how the land was acquired, and ending with a series of curses from the gods figured on the stone on any one who should remove or destroy this monument. The puzzle is to find out who are the gods figured. It is easy enough to see that the crescent means the moon-god, but not so easy to guess who is the bird on the forked column. This must be learned by comparison of the stones with each other and with the inscriptions, and then it remains to discover what is the relation of these emblems and figures with the constellations. This work, following Hommel, Heuzey, de Morgan and Ward, Dr. Hinke has done with admirable intelligence, so that there are very few emblems yet left unidentified. The book will be very useful to scholars of early mythology, not only for its shrewd investigation, but for the convenience with which so many boundary stones, difficult to find in various volumes, are here brought together and figured under the eye. Dr. Hinke has labored in a field too much neglected by scholars. The text of the special stone

which gives its name to the volume is translated and provided with critical notes. The indexes deserve special commendation.

Literary Notes

....We are glad to see that the New Talmud Publishing Company of this city is again presenting to the public the translation of the Talmud by Dr. Rodkinson, of which a dozen volumes or more have appeared. It is a monumental work, and is of great interest to Christian scholars as well as to Jews. It ought to be in every public library, and in many private ones.

....A third series of Rev. Dr. Alexander Maclaren's *Expositions of Holy Scripture* is issued by Messrs. A. C. Armstrong & Son (six volumes, \$7.50 net). The Gospel of John (three volumes), the books of Chronicles, Ezra, Nehemiah, Esther, Job, Proverbs, Ecclesiastes and a part of II Kings are included in this series. Dr. Maclaren finds something improving and practical to say on every text, and this is much to say for the expositor of Esther and Ecclesiastes. The criticism of the series must be that the purchaser has to make a large outlay for material which might be made available in much smaller compass. Dr. Maclaren is spiritually wise, but he cannot be said to be concise.

....Several years ago Miss Helen Gould offered a series of attractive prizes for the best essays on the Roman Catholic and Protestant versions of the Bible, with the design of securing a truthful and clear presentation of the exact facts concerning the origin and character of the translations in use in the several churches. The essays which gained the rewards were published, and they now appear in a second edition, with lengthy explanatory notes and a careful bibliography of the literature of the entire subject. The history of the translation of the Bible into English is a long story, and the authors of these essays have done well in telling it in clear and concise form. Students will find the bibliography, prepared by Dr. Chapman, of the Case Memorial Library, especially useful.

....A valuable portion of the Everyman's Library is the series of four volumes devoted to the Old Testament entitled *Ancient Hebrew Literature* (New York: E. P. Dutton & Co. 50 cents). The feature which first strikes the reader is that the text is printed without divisions, into chapters and verses. This is of great advantage, in that one is not encouraged to leave off with a chapter, but may be tempted to take a large and edifying dose. A second merit is the inclusion of the apocrypha mingled with the canonical books. Students of Hebrew history and religion will agree that such an arrangement contributes to knowledge and does no harm to piety. The arrangement of the books in sections according to topics is also of use. The editor, Mr. R. Bruce Taylor, has done his work carefully, and his endeavor will doubtless make

the Old Testament a more living book to many readers.

Pebbles

A GOOD story was told at the Seventh National Congress of Zoology about a deer that escaped his pursuers by climbing into his own antlers and remaining there until the enemy went past.

HE HAD THEM.

HAVING been introduced to the venerable chancellor, the beautiful maiden looked at him curiously for a moment and then, just to start the conversation in the right direction, asked: "Don't you find it awfully trying to have to chancel when you don't feel like it?"—*Chicago Record-Herald*.

THREE tired citizens—a lawyer, a doctor, and a newspaper man—sat in a back room recently in the gray light of the early dawn, says the *Boston Record*. On the table were many empty bottles and a couple of packs of cards. As they sat in silence a rat scurried across the hearth into the darkness beyond. The three men shifted their feet and looked at each other uneasily. After a long pause the lawyer spoke.

"I know what you fellows are thinking," he said; "you think I saw a rat, but I didn't."—*Life*.

LEAP YEAR PROPOSAL.

My dear and most respected sir,
I send you this your love to stir.
You have I chosen first of all
On whom to make my maiden call.
I've given you the foremost chance,
So you may freely make advance;
Send me back without delay
Your answer, saying yes or nay.
But if your heart does not incline
In wedlock bonds to join with mine,
Then you must leap year's law obey,
And down to me five thousand pay,
Besides, dear sir, a handsome dress.
I ask no more, I take no less.
Now you may think this letter funny,
But I must have a man or money.
So now, dear sir, send your reply—
Let me be yours until I die.

FATALITIES.

"YES," said the beauteous young thing, "when I asked papa if I might go mountain climbing, he took my head off. But I had my own way, of course, and finally the crowd got started, and you know they made me put on a lot of wraps and things that simply suffocated me. And about halfway up I slipped and fell over a cliff and broke my neck! Indeed, yes. And when they had lifted and pulled me back on the trail I absolutely died from pain. But before long I was able to go on to the top, but by the time we were almost there I collapsed and sat down for I could never breathe again. But they made me pull myself together, and in time we got to the summit, and there it was so cold I froze to death! Oo-ooh! And I was glad, I tell you, when we came down at last, and as soon as they got me home, I went to bed, dead from exhaustion."

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, \$2.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, \$1.75 a year extra; to Canada, \$1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with \$1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

The Japan Treaty

LAST week, Tuesday, there was signed in Washington a general arbitration treaty between the United States and Japan. The treaty, which will continue in force for five years, provides that all disputes of a legal nature or in regard to the interpretation of treaties shall be settled by arbitration, but questions of honor, independence and vital interests are reserved for the arbitrament of war. It is similar to those already negotiated by our State Department with England, France, Norway, Spain, Portugal and Switzerland, but it is much more important because it should put a stop to all this infamous talk of war between Japan and America, which has been so insidiously and mysteriously prevalent of late. We believe this treaty, therefore, marks one of the greatest steps forward in that movement, now fast becoming irresistible, for substituting law for war.

We take pride in the fact that THE INDEPENDENT has repeatedly urged the Government to negotiate this treaty. Not only our solemn protestations at The Hague require this of us, but it was our duty to take the initiative in the matter,

because we first provoked Japan and started the war talk. Secretary Root and Baron Takahira deserve the thanks of civilization for carrying to such a happy conclusion their negotiations.

It is perhaps fitting here to say that in Secretary Root the United States has a constructive peace statesman of the very first rank. As time goes on it is becoming clearer and clearer that he was the power behind our delegation at The Hague, the power which enabled them to lead all the delegations in progressive measures at that memorable Conference. Doubtless his observations during his South American tour two years ago were the inspiration of the Porter Proposition, perhaps the most notable triumph at The Hague, whose passage resulted in practically making the Monroe Doctrine a canon of international law. Beyond question he alone deserves the credit of conceiving the idea of strengthening the present Hague Court by making it a permanent and compact tribunal, founded on the model of the United States Supreme Court; and altho that stupendous idea will not be fully realized until the nations devise a practical method for the selection of the judges, Mr. Root has in the meantime actually got the five Central American States to create such a court for themselves, which is the farthest step yet taken in constructive international jurisprudence. And now he is negotiating obligatory arbitration treaties with all the nations, so that at the next Conference the world will doubtless be educated up to the signing of a general obligatory arbitration treaty. The Nobel Committee could look farther than Secretary Root and fare much worse in selecting the recipient for their next prize.

We would not, however, overstate the importance of this treaty with Japan. As long as "honor" and "vital interests" are excepted from arbitration it will always be easy to find a pretext for going to war, for honor and vital interest cover as great a multitude of sins as of virtues. The time, we fear, has not yet come when it will be safe to refer all disputes to arbitration, for a nation might lay claim to another's territory or independence, and this no spirited people would or should submit to the arbitrament of an outsider. The ideal arbitration treaty is

one which contains a clause requiring each nation to respect the other's territorial integrity and autonomy and submit all other questions to arbitration. If territorial integrity and autonomy are thus mutually respected, they will be the subjects neither of war nor of arbitration, and manifestly no other matters are worth fighting about.

The Japan treaty is another one of the multiplying signs of the coming of the Peace era when, as Victor Hugo prophesied, the only battlefield will be the market opening to commerce and the human mind opening to new ideas. The Senate, we hope, will ratify the treaty speedily.

Transverts

WE need the word *transvert* to designate the two score clergymen and divinity students who have within a few months left the Protestant Episcopal Church to join the Catholic Church, or who are now under instruction to be received. To call them *converts* implies approval; to call them *perverts* expresses disapproval; the term *'vert* is occasionally used, but that is no word. They are transverts, men who pass across the line, whether for good or ill.

Their names are given in the religious press—Henkle, Yost, Hawks, Bourne, Haslam, Kendall, Mason, Wilbur, Ewens, Garvey, Hayward, Cowle, McClellan, Bowles, Fay, Cowan, Cooper, and we have missed some. The number is large enough to prove a present drift, not of the Episcopal Church, but within the Episcopal Church, toward Rome.

This is nothing new; there have been such drifts before in Anglicanism, the most notable of which being that which came with the Oxford Movement, when Cardinals Newman and Manning and many others left the Church of England. Such a movement there is just now in the American Anglican Church. And yet there is quite as active a movement in the other direction in that Church, altho it shows itself in the assertion of fellowship with other Christians and not in withdrawal of a number of transverts. Such a movement of transverts as that did take place some years ago when the Reformed Episcopal Church was organized by those who had withdrawn.

The occasion of this last drift of transverts is the passage by the last General Convention of the rule providing for what has somewhat too loosely been called the "open pulpit." It allowed an Episcopal minister to admit one not an Episcopalian to speak in his pulpit, altho it did not recognize him as an ordained clergyman. He might be allowed as a layman, just as any Episcopal layman might speak within the chancel. But it was the drift toward fraternity which caused the adoption of this new rule, and that is precisely what men of the other drift resent. It is special spiritual right and authority which they claim. Their tendency is away from all the other Protestant sects, which are not true Churches, because they have not the true episcopal succession by the laying on of hands. If that tactual succession is broken there is no longer a true Church of Christ. It perhaps was broken at one time in the history of the Anglican Church—so Pope Leo XIII declared—and that gives great concern; it certainly has been lost by the Presbyterians, Methodists, etc., for they scout it as a Popish doctrine. Accordingly their drift is toward Rome, which beyond question has the true, unbroken succession, which succession gives quasi miraculous power and sanctity to those who have truly inherited it.

We cannot regret the withdrawal of these transverts. The case is better than with the withdrawal of Bishop Cummins and those who followed him to organize the Reformed Episcopal Church. That meant a new sect, and we had sects enough before. It implied that the Protestant Episcopal Church was not large enough, not "roomy" enough, to hold them. That was their mistake. The broadly evangelical wing in that Church has grown stronger even with their absence, and we wish they might return individually or in a body. But these men are true transverts; they pass across the line from one Church to another that suits them better. There is no new division; they are not schismatics; they are trying to unify, not divide.

Like the Cummins withdrawal—this will be temporary and limited. It has not the force of the Oxford Movement. These Nashotah and Philadelphia men have not the stamina of Newman and

Manning. Their movement is ecclesiastical, not spiritual.

And yet it has made some commotion in the Church, judging from the meeting of the Episcopal Convention last week of the Diocese of Pennsylvania. There the high churchmen made the proposal that the bishop should suspend the operation of the "open pulpit" canon by refusing permission to rectors to invite ministers of other bodies. This was defeated by a surprisingly small majority, 92 to 90, among the clerical members, and 62 to 46 of the lay members. If the two or three clergymen now on their way to Rome had attended the minority would have become a majority. Some were evidently frightened by the drift Romeward and wished to stop it by stopping the application of the new permissive rule. Doubtless other State conventions will act on this same proposal.

While we cannot blame these transverts, the fact remains that in insisting on the essential character of form and succession they directly contravene the spiritual teachings of Jesus Christ; and in seeking to narrow the bounds of Christian brotherhood they deny the spirit and letter of our Lord's last prayer with his disciples. The Episcopal Church in this country is not going to be the only one which will refuse the hand of brotherhood to other Christians.

The Currency Question

AFTER much discussion in committee and in party conferences, the Republicans of the House, by a vote of nearly six to one, have approved "recognition of commercial paper thru clearing house associations as a safe and logical asset for emergency currency." A bill providing for emergency issues upon a basis of commercial paper and a cash reserve will probably be past and sent to the Senate.

At the beginning of the present session it was quite well understood at Washington that there could be no legislation at present for a thoro reform of our currency system. But it was possible to impart some elasticity to the rigid volume of our bond-secured circulating notes by providing for emergency issues of taxed currency in times of financial stress. The Senate's Aldrich bill permitted an issue

of \$500,000,000 upon the security of State, county, and city bonds. Railroad bonds had been at first included. To commend this measure to the Senate and the public, Mr. Aldrich asserted that "no bank or banking man" was in favor of it. "The banks thruout the country," said he, "are against it." It did not occur to him that this was like commending some proposed remedy for disease by saying that it was condemned by all the physicians and medical colleges. Some time ago we pointed out the objectionable features of this Aldrich bill.

We have held that there should be a commission to report a plan of currency reform. By their action in last week's conference, the Republicans of the House are committed to the support of legislation for the appointment of such a commission. A promise made some time ago in the Senate probably assures an agreement of the two branches on this proposition, and there will be a commission. We have thought that emergency issues should be made in accord with the recommendations of the American Bankers' Association for several years past or thru the agency of the clearing house associations of banks and upon the basis of their certificates. The Republicans of the House have now exprest their approval of the latter plan, but the merit of the bill to be prepared by their committee will depend largely upon the tax, the manner in which the associations are to be utilized, and other details. To approve the use of commercial paper, by means of the associations, as security for the emergency notes was to take a long step in the right direction.

The loan certificates issued by clearing house associations after the beginning of the recent panic were a kind of emergency currency. They were based mainly upon commercial paper. While the loan certificates of the New York Clearing House Association were outstanding, there past thru the loan committee's hands \$453,000,000 worth of collateral or security for the certificates. Of this collateral, 73 per cent. was commercial paper, the remaining 27 per cent. being stocks and bonds. Of the merchants whose paper was thus accepted, not one defaulted.

The experience of this great associa-

tion shows to what extent commercial paper may safely be used as security even at a time of so great financial disturbance. To use it as a basis for emergency issues of circulating notes is to serve business interests directly and to promote a timely and natural retirement of the notes when they are no longer needed. Prompt retirement is to be desired, as well as prompt issue. There is difficulty now in retiring the additional banknotes that by various devices were issued during the currency famine.

Good legislation for emergency issues is needed, not because there is any danger of another panic in the near future, but for the reason that there should always be a margin for expansion and contraction to meet the changing conditions of every year. If the banks had been empowered to issue additional currency quickly, the panic of October last would not thereby have been prevented, but it would have been less severe, and recovery would have been less difficult. Every autumn there is an exceptional demand for currency. This demand was greater, so far as Eastern banking institutions were affected, in 1906 than in 1907, and it will be recalled that the Treasury Department sought in many ways to supply the additional circulation required. It should be possible for the banks to issue, or to procure from the Government for issue, such additional notes as are needed for moving the crops, and the conditions imposed by law should be such as to cause retirement of these notes when the exceptional demand ceases.

It has been proposed by the Republicans of the House that the law shall permit an additional issue of \$750,000,000. This exceeds by \$100,000,000 the banknote circulation now outstanding. It is too much, altho no one expects that there would be calls for the entire sum. The limit in the Aldrich bill is \$500,000,000, and even this should be reduced. It is assumed that only so much would be issued as might be needed and could be used to advantage, under the tax. But even in the limit the law should guard against undue inflation.

If our currency system is to be reformed thoroly within two or three years the proposed legislation for emergency issues will be merely a temporary expedient.

But those who frame it should strive to facilitate the coming general revision. That would be promoted by the methods which the House prefers; it might be retarded or made more difficult by the enactment of the Aldrich bill.

Quay's Statue

THREE years ago the Pennsylvania Legislature made a substantial appropriation for a statue to Senator Quay, who had just died, and directed that it be set up in the Capitol grounds at Harrisburg. The statue is now finished, and is said to be a very good piece of art; and the question is, Where shall it be put?

Now, who was Matthew S. Quay? We have said he was United States Senator. He was also the Boss of Pennsylvania Republican politics, and represented the worst, the most corrupt variety of politics. He was no statesman like Simon Cameron; he was simply a manipulator of votes, a man to whom politics was a financial business, and who best represented that outrage on moral principle in civic and national affairs which was so severely condemned in Philadelphia a year or so ago, by a wave of indignant reform, which has now flowed back, leaving the old ring masters in control again. Pennsylvania is a strange State; it has sudden spurts of reform, but they do not last long. The leading decent papers of Philadelphia were against Quay, and they are disgusted that his statue should be set up in the Capitol, as if he were the model man whose example is to be raised in permanent bronze for the admiration of the youth of the commonwealth.

So the question now must be settled, Where shall it be put? If there is any hope that the Legislature would reverse its action that would save the honor of the State. It might amend or repeal, but if not, those in authority can interpret the act. Do the "grounds" mean that it must be set up in a public place on a big pedestal in front of the Capitol building; or would it be proper to set it up in some room within the Capitol, or in some other building on the grounds? Are the buildings grounds? We are not sure; but if there is some sequestered spot, within some bosky dell, where visi-

tors seldom go, that would be a possible place for it. Or if there be some museum room of curiosities and freaks, or some chamber of horrors, some place where its presence would not imply approval of his career, there is should be put if the act can be so interpreted. Anything to hide it away. And yet, when the Capitol itself is such an exhibition of fraud and graft, we are not sure but it would fit the building anywhere.

And just in this nick of time, when Pennsylvanians are wondering what they can do with this thing, comes the news of the great defalcation in the Allegheny National Bank, known for years as the "Quay" bank. It was his financial backer, and the favorite resort of leading politicians of the State. The defaulting cashier says he used none of the money for himself, but that it was used to tide along his friends; and it is reported that leading men tried even to persuade the examiner to conceal the defalcation and promised to make everything good. The defaulter was an intimate friend of Quay and of many politicians, and was deep in their confidence in all their financial political deals. So this defalcation of nearly half a million dollars comes at a very unfortunate time for the beatification of Quay.

The Old Age Pension

IN bringing forward an old age pension measure as an item of the budget presented to the House of Commons last week, Premier Asquith set the stamp of Government approval upon a policy which has been under discussion in England for more than twenty years. It was more than half as long ago that one of the sanest investigators who has ever studied the economic and moral condition of the wage-earning classes, Mr. Charles Booth, became convinced of the necessity and the wisdom of the old age pension and began to write in advocacy of it. It has had, of course, from the first the support of radicals and socialists, and latterly of the laborites. It did not happen to be one of those measures for the betterment of "the lower classes" which the Conservatives could use effectively to club the Liberals with, and they have, therefore, opposed it. That it is now, in

the judgment of the Liberal leaders, a measure of good politics from the Liberal point of view is sufficient proof "that the discussions of twenty years rather than any sudden wave of sentimentalism have conceived the judgment of the "upper middle class" that some better provision than the workhouse must be made for the old age of Britain's working class.

The plan, as the Premier has presented it, is one of out-and-out State support. In Germany both employers and wage-earners are made to contribute to the pension fund, and experience has shown that the German wage-earners are able to meet their assessments. It is significant, therefore, that Mr. Asquith is obliged to say that the Government must assume the entire burden in England because investigation has shown that those portions of the wage-earning population chiefly to be benefited by the proposed measure are unable to make any provision for old age or to contribute to a pension fund. Students familiar with the statistics of British incomes know that Mr. Asquith is quite within bounds in this assertion. Great Britain does not pay to her wage earners enough to keep even the prudent and the frugal out of the poorhouse in their declining years.

In its details Mr. Asquith's proposition has pleased nobody but the strict party Liberals. Socialists, Laborites and Radicals declare that the Government's measure does not go nearly far enough. It provides the old age pension only for men and women over seventy years of age and whose income does not exceed \$2,50 a week. The pension is to be \$1.25 a week to the single person, or \$1.80 a week to a married couple living together. The Laborites say that only a small proportion of English workingmen live to be sixty-five years of age. This objection is perhaps sufficiently met for the moment by Mr. Asquith's contention that the pension will be paid to nearly half a million beneficiaries and will require for the year 1909 an appropriation of \$30,000,000.

The Conservatives, counting as they do upon a turn of the political tide which will place them in power, naturally object to a heavy increase of financial responsibilities not of their own making. They go further than Mr. Asquith in viewing

the proposed measure as "only a beginning." If the principle of State responsibility for old age maintenance is once admitted, they contend, there will be no resisting the pressure to lower the age limit and to increase the amount of the pension. American experience with war service pensions is undoubtedly confirmatory of this view. A further criticism, which probably will not carry much weight, is the belief, voiced by the *Daily Mail*, that the new financial obligations incurred will force the abandonment of free trade. Here and there the argument is heard that any pension plan which omits the contributory feature will "promote reckless living and penalize thrift." Most Englishmen, however, have a sufficient acquaintance with the actual economic condition of the wages class, and a sufficient sense of humor, to view this argument lightly.

Mr. Asquith frankly admits that his plan, as far as it goes, is socialistic. In view of the fear and horror which the word "socialism" awakens in the American newspaper intellect, it is rather refreshing, we must confess, to find a politician in office who is willing to call a spade a spade and not run away from the spade in abject fright. Every civilized government on the face of the earth to-day is committed to a certain number of socialistic policies. No people in the world is yet prepared even to discuss seriously as a practical question the adoption of a complete and rounded socialistic program. Sensible men are asking: "Just what socialism and just how much of it do we want now?" Mr. Asquith places himself honestly and courageously in the ranks of the sensible men.

If this measure shall be acted upon favorably by the House of Commons, the action will mean merely that the English people, true to its instincts and traditions, enters once more in a straightforward and open-eyed way upon a large political experiment. It is not the nature of the Englishman to enter into his closet and think out a logical scheme of social reorganization. He meets the new issue when it is presented and meets it experimentally. Whatever socialism Great Britain has at present is of the experimental kind. By the time that the old

age pension question becomes a practical political issue in the United States, we shall perhaps be able to look to British experience for guidance.

Four Minor Wars

EIGHT months ago Russia and Great Britain agreed between themselves not to interfere with each other in the good influence which they respectively desired to exert over weaker Asiatic neighbors. As the treaty naively expresses it, "each of them has, for geographical and economic reasons, a special interest in the maintenance of peace and order in certain provinces of Persia adjoining, or in the neighborhood of, the Russian frontier on the one hand, and the frontiers of Afghanistan and Baluchistan on the other." Who could have foretold that the "peace and order" then prevailing on these frontiers would be so soon disturbed and that both Russia and Great Britain would in less than a year be massing all their available troops on the frontiers in which they took such a special interest? A great many people could, for such a treaty is practically an announcement to the world of the beginning of the process of commercial penetration which usually ends in benevolent assimilation. Four such games are now upon the board, three in Asia and one in Africa. Emperor, Sultan, Shah and Amir are forced to stand idly by and look on smilingly while Japan, France, Russia and England wage war on their subjects who resent having a foreign civilization thus thrust upon them.

Of these four, Japan has in Korea the easiest task. The treaty of Portsmouth, signed October 15th, 1905, gave her a free hand so far as her immediate rival, Russia, was concerned, and all the other Powers acquiesced without objection. The first clause of our treaty with Korea apparently had reference to just such events as have since disturbed the Land of the Morning Calm:

"There shall be perpetually peace and friendship between the President of the United States and the King of Chosen [Emperor of Korea] and the citizens and subjects of their respective governments. If other Powers deal unjustly or oppressively with either Government the other will exert their good offices, on

being informed of the case, to bring about an amicable arrangement, thus showing their friendly feeling."

But the President never had occasion to ask the aid of Korea in freeing the United States from the oppression of a foreign Power, and, since he did not officially receive the envoys of the dethroned monarch, he has doubtless not been "informed of the case." There is, however, no reason to waste sympathy over the lost liberties of the Koreans, for it is doubtful if they have lost any. The administration of the Japanese, even tho it were more selfish and tyrannical than it appears to be, could hardly be worse than what the Koreans have been used to from their own officials, and they have not for centuries made any effort to preserve their national independence. So in spite of the opposition of patriotic guerrillas, Korea can be assimilated by Greater Japan without any danger of an attack of acute indigestion.

France in Morocco has a very different task. She obtained the acquiescence of Great Britain to her projects in this territory by relinquishing in exchange for it her nominal hold on Egypt. Then on the protest of Germany a conference of the Powers was called at Algeciras, which, on March 31st, 1906, placed upon France, in conjunction with Spain, the responsibility for maintaining order in the ports and seeing that Morocco kept its treaty obligations. Since then events have moved rapidly, and now France has two armies there, one on the eastern and one on the western boundary, both kept busy fighting the hydra-headed tribes of the desert. Instead of submissive Koreans, the French have to deal with a people who have never been conquered since they became the followers of Mohammed, but who, on the contrary, once came near conquering Europe, and have not yet forgotten it.

Each tribe has its own private fund of patriotism and makes war, and more rarely peace, on its own account. Divided they stand, united they fall. If Morocco had one capital it could be occupied. If it had one Sultan he could be captured. But new leaders spring up from sand as they are needed. The French own Sultan Abd-el-Aziz, a nice

young man, who knows how to ride a bicycle and take photographs, but is ignorant of the arts which are most needed in his profession. His brother, Mulai Hafid, Sultan of the South, more in accord with the national ideals and possessing a greater following, has now an envoy at the Court of Berlin asking the support of Germany against France. Another fraternal aspirant to the throne, he who bears the proud title of Bu Hamara, or Son of the She Ass, used to be called the Pretender until a pretender of greater pretensions appeared. But it does not matter to whom we apply the term. Any man who calls himself ruler of Morocco is a pretender. Then there is Raisuli, spectacular bandit, kidnaper of the Americanized Hellene, Mr. Ion Perdicaris, and of the Moresque Englishman, Kaid Sir Harry McLean. The wittiest of British playwrights long ago took Morocco as scene of one of his comedies, but the amusing situations in "Captain Brassbound's Conversion" have since been surpassed in real life.

Meanwhile Russia is sending her Caucasian cavalry into Persia, following the old war route across the ancient Araxes, where once Antony fled from the Parthians with the remnant of his legions and where he attempted to gain an Eastern Empire for his son, whose mother was Cleopatra. Of the four nations whose fate is in the balance, Persia appeals most to us, for the country, whose better half is now in the power of Russia, is the first in Western Asia to establish a constitutional government. A ridiculous mess they have made of it, to be sure; every few months a new constitution, another oath of fidelity by the Shah, a change of ministry, more plots and political strikes, and always futility and more wrangle. But the French Republic at first steered as wabbly a course and yet came out all right in the end. So might the Persians if they were let alone, as they are not likely to be.

On the other side of Persia there are Afghanistan and India. Here British soldiers are defending a pass, *the* pass, the key to India, for which England has three times fought the bold mountaineers of the Hindu Kush. This Khyber Pass,

famous in history, story and song, is a deep defile only thirty-three miles long and less than a hundred steps across:

"There is rock to the left, and rock to the right, and the low, lean thorn between, And ye may hear a breech-bolt snick where never a man is seen."

Its history extends from Alexander the Great to "Bobs," Lord Roberts of Kandahar; and its romance may be read in Kipling's tales and in Mason's new novel, "The Broken Road."

Now the Amir, Habibulla Khan, gets a salary of \$60,000 a year from the British Government. How much he has got from the Russians on the other side there is no telling. But the Anglo-Russian convention has reduced his importance. He is no longer needed for the protection of the Indian frontier from Russian aggression. According to the Convention all his diplomatic affairs are in the hands of Great Britain, so Afghanistan is put in substantially the same position as Korea. It is no wonder, therefore, that the Amir with the name that sounds like a Yale song should decline to give his approval to the new arrangement and is perhaps not altogether displeased that his brother, Nasrulla, and his troops should make a little trouble on the border. Whether the English will think it desirable or necessary to undertake the difficult task of conquering the country while they have a scowling and muttering India at their backs remains to be seen.

"The First Gentleman in the Land"

IN Sparks's "Writings of Washington" an incident is preserved which reveals in a pleasing light the breadth and courtesy of the Father of his Country, whom all men honor but not all imitate. It may well be studied for the exquisite lesson in good breeding it conveys, and not less for the illumination it throws on a matter of principle hotly debated in some parts of the land. The *Pennsylvania Magazine* for April, 1776, contains a letter from General Washington quoted by Sparks, which was written during the siege of Boston, when his mind must have been almost overwhelmed by a multitude of concerns of historic moment, to a young African-born slave woman,

Phillis Wheatley, who had sent him a poem by her own pen, in which she eulogized the new Commander-in-Chief as America's star of hope. Her poetry was of a high-flown type current at the time, yet, tho found in school reading-books down to the middle of the last century, it has past out of ordinary remembrance. It served to bring its writer into notice and favor both sides of the ocean, and gave her the friendship of such persons as Whitefield and the Countess of Huntingdon. While it did not win the critical approval of Jefferson, this sample of it evoked the following response from the more generous Virginian:

"CAMBRIDGE, February 28th, 1776.

"Miss Phillis:

"Your favor of the 26th October did not reach my hand till the middle of December. Time enough, you will say, to have given an answer ere this. Granted. But a variety of important occurrences, continually interposing to distract the mind and withdraw the attention, I hope will apologize for the delay, and plead my excuse for the seeming tho not real neglect. I thank you most sincerely for your polite notice of me in the elegant lines you enclosed; and, however undeserving I may be of such encomium and panegyric, the style and manner exhibit a striking proof of your poetical talents, in honor of which and as a tribute partly due to you, I would have published the poem had I not been apprehensive that while I only meant to give the world this new instance of your genius I might have incurred the imputation of vanity. This and nothing else determined me not to give it place in the public prints.

"If you should ever come to Cambridge or near headquarters, I shall be happy to see a person so favored by the Muses, and to whom Nature has been so liberal and beneficent in her dispensations.

"I am with respect your

"Obedient and humble servant,

"GEORGE WASHINGTON."

A few days before the British evacuated Boston, Miss Wheatley visited the Revolutionary camp, as General Washington had so courteously invited her to do, and according to Appleton's "Cyclopedia of American Biography," "was received with marked attention by Washington and his officers." Is it conceivable that the great-minded Virginian, who was indeed the first gentleman in the land, were he living today at Mount Vernon, would join in the criticism of his latest successor in the Presidential chair, and of others less distinguished, which makes it an unpardonable offense that his successor sat at the

same table with another Washington who is regarded by all unprejudiced minds capable of forming a correct judgment upon their fellow men, whatever their land or latitude, as possessing many of the traits and qualities of his great namesake? Race purity purchased at the cost of the chief elements of true manhood, justice, courtesy and Christian charity, would be too dear a bargain.

A Royal Democrat

THE founders of our Republic placed great emphasis on simplicity of manners, and they took pains to get rid of titles and nobility; that is, the nobility which consists in hereditary ranks and wealth. When Benjamin Franklin found that the revolt was at last a success, he warned the people against aping European manners. He wanted everybody in the United States to wear homespun, woven by their own wives. When Jefferson was inaugurated he rode up to the capitol on horseback, and took his official oath as President as simply as he would have taken up affairs at Monticello. We hardly have expected these things of kings. "I am not going to have a coronation at all," said Gustav. "What is the use of it? If I am king it is by virtue of the love and respect of the people of Sweden, not by the spending of a million of dollars out of the people's treasury." How patly that finds a response not only in the hearts of the common people of his own country but in the hearts of Americans. He is one of our own sort, and we believe that that sort of kingliness will send over to us fewer anarchists.

Instead of opening the Swedish Parliament in a magnificent uniform, with an ermine cloak, and a crown set with costly gems, actually on his head, he said, "I will walk over to the statehouse in my ordinary clothes." This is the real meaning of the word *common sense*; that is, the sense of proportions and decency that have become common property thruout the world. Gustav feels the democracy of the age. The world has lost its regard for baubles. It has grown simple. A man counts not a whit for his uniform. It was not so in Napoleon's day, altho he foresaw the change. Democracy, he said, will rule the world, or else autocracy of

the Russian sort. He was right. It has been a battle of sentiment, and since the war that threshed the Czar's absolutism there has been no question where the victory would lie. There is no more stupid blunder made in this little world of ours than that which is made by pretentious effort to ape fading nobility while forgetting the really noble at heart.

A simple man with a clean record counts more with the people than the bluest blooded and bedizened Hapsburg or Bourbon. There is not a monarch in Europe better loved and more influential than old Franz Joseph, the bluntest sort of defender of honor and virtue. He slapped his own son in the face, in public, for insulting the common people, and compelled an apology. The boy king of Spain is loved over here in America almost as much as he is by his own people, because he has brushed aside show and stilted precedent. He insisted upon courting like any other boy, and he won the object of his love, not as a king but as a man. This sort of monarchy is incomparably stronger than the stuff that made the Georges and the Louis—because it is democratic. Alfonso dared to go to Barcelona because he had disarmed anarchists. These raging outlaws do not know what to make of him. Kill me, he says, if you will, but if you do you shall kill a brother of the people.

This King of Sweden is also a leader in the great temperance reform which is sweeping over the world. At a recent dinner he received a toast to himself and his wife in water instead of wine. Why not? The sentiment was one of real respect and honor. It was worthy of water. We do not forget that when President Hayes banished liquors from the White House our undemocratic press hooted at his Puritanism and parsimony. Gustav likes to save. He believes that there is no excuse for increasing his army, and wasting money on a show of military power. He says, "Let us cultivate national power of character." "Our Swedish women are the purest in the world, and our Swedish men are the manliest. Let us see that they remain so, and grow in virtue." His Prime Minister was shocked when told that there should not be a coronation; but the people said, "Hurra for Gustav! He is a real man

and he is one of us. He regards our interests." Bjornsen said, "Now I regret that I ever criticised the Prince." He is not a great talker, but he belongs to the Doer Club. The people of Sweden are very proud today, and it is a grand thing for them to have a fine ideal that they can talk about and glorify. It will make the Swedes very strong, not to fight men, but to fight wickedness.

We imagine that this is simply a victory of that which Ingersoll used to call, with a capital letter, Common sense. Perhaps Thomas Paine ought to be credited with the origin or wider application of the phrase. The bother of the world has been its babyishness; its lothness to get over its childish ways of thinking and doing—and especially of feeling. It has been inclined to worship pretense and superficialities—as Carlyle told them, clothes. It is getting down to realities. We have not been able to get over medievalism until now. We have too long stood by the ghosts that left their purpose a thousand years in the past. All hail the Gustavs of the Twentieth Century. Where should Common Sense be more needed than in the hearts and behavior of rulers? Is it possible that our Republic will have to take lessons in democratic manners and principles of European parliaments and monarchs?

The Methodists in Conference

The Methodist Bishops, in their address to The Quadrennial General Conference meeting in Baltimore, are able to report the immense gain of 278,357 communicants during the past four years, the greatest in the history of the denomination, which has over three million members. The convention will not take off the ban from the forbidden amusements, but the members will play cards and dance and go to the theater just the same, and no one will be disciplined for it. To do the act and forbid it savors of hypocrisy; and there ought to be a distinction made. Whether these amusements are to be avoided by Christian or ethical people depends on their character. There are plays that are as good as sermons, and quite as likely to benefit the hearer; and there are others that no decent man or woman ought to patronize. Just so card playing may be

as innocent as checkers, and there is other card playing that is utter gambling. The same may be said of dancing, which may be perfectly harmless. A general condemnation which lumps together the good and the bad is not conducive to clear thinking or to a clear conscience. The conference ought to revise the rule, but we presume it will make no discrimination or relaxation. The conference has already spoken strongly for prohibition of the sale of liquor. Governor Hoch, of Kansas, is a delegate, and has declared that Kansas, with its well-executed law, is more prosperous than any one of the liquor-selling States.

Colombia's Claim

Soon after Panama declared her independence Colombia made complaints that Panama's success was due to the assistance given by the United States, and asked for arbitration on a claim of \$10,000,000. This our Government refused, on the ground, we suppose, that it is one of the subjects which, under The Hague treaties, are reserved from arbitration, as it is a question of public policy and national honor. To be sure we might consent to arbitrate any question, and that is our journalistic judgment; but we can appreciate the reason why our State Department refused. Beyond all question our Government knew that the Panama secession was planned, and it was quite pleased to have it succeed, and, further, was ready to recognize the new republic as soon as it was fairly in existence and was ready to transfer to us the Canal Zone, as our negotiations with Colombia had not been satisfactory. After we had recognized Panama and taken possession of the Zone Colombia threatened Panama with invasion; but that would have endangered peace in the Zone we had acquired, and we absolutely forbade Colombia to enter Panama's territory. Of course this was hard on Colombia. She did not like to lose her most valuable State, and to lose the Canal. After we had refused to arbitrate on the ground given she withdrew her charges of our ill-faith in not keeping our treaty with her, and simply presented the admitted documents and asked for arbitration as to whether she has suffered any loss by our conduct in the matter. Of course the

question at issue is still just the same, the right of our Government to recognize Panama as an independent nation without waiting to make it likely that she could maintain independence. Beyond all question our action made for quiet conditions, and beyond all question what we did was for the benefit of all the world, except, perhaps, Colombia. Secretary Taft has gone to Panama probably to see if he can unravel this tangle, among other things. We wish our Government might take the position that *any* difference that cannot be settled by diplomacy shall be referred to arbitration.

Gambling in Manila They have a gambling question in Manila, and they need a Hughes as Governor-General. They had a big Carnival there, and the biggest building on the Carnival Grounds was made into a cock-pit, on the notion that the Filipinos love to gamble on cock-fighting, and that it would bring in a great deal of money. There are no laws against cock-fighting in the Philippines, as the Philippine Commission has refused to approve such a law, altho Aguinaldo during his brief rule absolutely forbade it. The sad thing about it is that it was the Americans who ran the Carnival, and they provided the sport. All the religious organizations protested, and we have the printed sermon preached in the Episcopal Cathedral by the Rev. M. G. Johnston. Calling attention to the law, and the union of the religious forces, did not a bit of good, and no more did the protest of the Chief of the Bureau of Education to the Governor-General, nor that of General Wood and a hundred American ladies headed by General Wood's wife. Over six hundred students in the Normal School protested in mass meeting; the Philippine Teachers' Association did the same; and a great public meeting attended by twenty-five hundred Filipinos was held in the Grand Opera House to add their protest. But it all did no good. The Governor-General and the Carnival managers would not listen to them, for it is Americans abroad who exploit and favor vice and leave their conventional virtue behind when they go to the East. But the native people themselves rebuked them.

The cock-pit made no money for its owners. It was patronized mostly by Chinese and whites, and a local paper says:

"Of the whites there was a surprising attendance, and often they were in the pit handling the roosters like adepts."

And this is a paper that said that the cock-pit was demanded by Filipinos.

Sixty Years of Francis Joseph One of the best and most beloved of royal rulers celebrated, last week, the sixtieth anniversary of his accession as Emperor of Austria-Hungary. They have been sad days for him. He has had terrible tragedies in his family, and he suffered defeat and the loss of territory in the war with Prussia, which was the beginning of the creation of the Empire of Germany. Emperor William and the royalties of the many minor States that had been his, but which now render allegiance to Germany, visited him to do him honor, but it must have caused him deep regret that he cannot give to his successor all that came to him. Yet his wisdom in distress has saved him much notwithstanding his losses to Prussia and Italy, and he has gained something by way of reparation. He was able to overcome his resentment and form a strong alliance with Germany and Italy, and he has gained a recognized influence in Servia, Montenegro and Macedonia. But the great advance has been internal, in the wonderful development of Hungary, in the escape from the division of the Dual Empire, and in the democratization of Austria by universal suffrage. The affection and honor with which he is regarded in both Austria and Hungary are full proof of a noble character.

Church Union in China The missionaries in ten provinces of Western China, which really means Central China just as we call Chicago west, have met and about 180 attended, representing ten denominations. What should they talk about but union? And they have been making rapid progress. They agreed that their ideas should be, "One Protestant Christian Church for West China," and they have a strong committee appointed to plan for it. They believe they will have it in a few years.

And that they are in earnest is proved by the resolution past:

"Resolved, That the various missions in West China agree to recognize and receive the Chinese church members of sister missions."

Do our readers see what that means? There are Methodists and Baptists as well as Anglicans and Quakers, and they agree. And why not? To imitate them in a small way, what towns are there in the United States that will unite thus, or what denominations of the country?

Bishop Whitaker is seventy-eight years old. He has been Episcopal Bishop of Pennsylvania for twenty-two years. He was too feeble to attend the diocesan convention last week, because he could not walk up the stairs, but he sent his annual message and had it read. One advice was that churches have an entrance with an inclined plane for rheumatic people, and another was that no young priest should marry until he had been in the ministry for at least five years. That is bad advice. He thought a clergyman, whose primary virtue should be self-denial, should wait till he had a permanent position and an adequate income before he took a wife, instead of finding an excuse for getting married at the beginning of his career. We think he will find sufficient opportunities for self-denial if he marries early; and he generally does have at the beginning of his career an income sufficient to support a wife modestly. St. Paul condemns those who "forbid to marry."

What Secretary Taft said in regretting that some doubtless innocent soldiers were dismissed without honor for the Brownsville affair was this:

"In such a case as this the inconvenience and hardship to those innocent of participation or knowledge, arising from arbitrarily terminating the contract of enlistment in accordance with the right which the Government by statute reserves, must be borne by them in the public interest."

It was cruel and hard-hearted, some critics have said, thus to make the innocent suffer with the guilty, and bid them bear it patiently "in the public interest." But that is done necessarily many times a day. A man is sent to prison for a crime, and his innocent wife and family suffer want and shame, and it must "be

borne by them in the public interest." This is the only comfort they can get out of it. It is hard, but necessary.

Many a landholder has within his acres certain portions that are unproductive and not worth cultivation, swamps, stony ridges, exhausted fields, or washed hill-sides. They might as well be made to produce something, and particularly trees. But the owner does not know how to plant. But the Government Forest Service does; it is just planting some hundreds of thousands of trees in the Adirondacks. Then let our agricultural reader drop a postal to "Forest Service," Washington, and receive the circulars that will tell him what he needs to know.

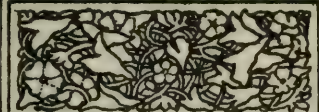

The Supreme Court of Texas has decided that there is no provision in the constitution of that State that forbids the reading of the Bible in the public schools nor the singing of religious songs nor prayer. That may be, and where there are none to object we see no reason why they should not be continued when in use. But where a body of citizens, Jewish or Catholic, protests it is unfair to impose Protestant worship, or any worship, and the Church ought to be ashamed to ask its religious business to be carried on by public taxation.

Perhaps we need a Protestant Pope to give as good advice as that which the Pope has lately sent out to the faithful, and which is now being promulgated in the Catholic churches in this country. He instructs them that those who do not feel inclined to enter the religious celibate life should seek partners with a view to marriage, and pray for such suitable partners, as matrimony is a sacrament that brings blessings with it. This instruction is particularly timely this leap year.

"We live in an evil age," said Cardinal Logue to a great audience in St. Patrick's Cathedral last Sunday. What a strange view of history that language indicates! We live in the best age for humanity the world has ever seen. What possible advantage can be gained by telling such an audience such a tale, when every one who heard it knows that it is not true?

Insurance

Mr. Cleveland on Life Insurance

EX - PRESIDENT CLEVELAND'S recent article on the subject of insurance in *The Spectator* voices the general opinion that the insurance companies are more strongly entrenched in public favor than ever before. Mr. Cleveland forcefully points out that during the recent outcry against insurance companies there has not been a serious impeachment of the basic principles upon which American life insurance rests, nor a single suggestion of doubt as to the ever present ability, and ever present inclination, of all reputable, honestly managed American life insurance companies to make prompt and full payment of all legitimate claims on their policies. Mr. Cleveland says further:

"American life insurance has just been subjected to the most trying tests in its entire history; and as an economic system mathematically sound and of far-reaching beneficence, it stands before the country in a stronger position today than ever before.

"Under present conditions life insurance companies of this country are required to report their transactions and financial condition with a wealth of detail never before dreamed of. As a result of this unprecedented publicity of life insurance information, our people carrying or seeking life insurance are now in a position to know vastly more than heretofore about the operations of the companies upon which the future welfare of themselves and their families may largely depend. And I have no hesitation in saying that the 15,000,000 of our fellow-citizens who carry policies with companies of approved standing may now rely, with greater confidence than ever, upon the security of life insurance protection which they maintain—often at great self-denial—against a rainy day or against the want that may threaten the loved ones who survive them."

Hotel Fires

THE destruction or damage by fire of eighty-four hotel structures in cities and small localities in twenty-six States and Canada since the beginning of the present year, as tabulated by *The Insurance Press*, is of more than passing interest not only to those who travel, but also to their respective friends and relatives. Hotels must be used by travelers, and

they ought to be made safe. They cannot be made too safe. The recent destruction of "The New Aveline Hotel," at Fort Wayne, Ind. (built in 1852), which entailed a loss of \$100,000, was perhaps a typical hotel fire. At any rate several persons perished because of this fire, and the average hotel is well calculated to secure the destruction of some of its guests in case of fire. While the horrors of school fires, theater fires and hotel fires are all comparatively so recent, the suggestion made by the *Press* that hotel fires be made the subject of investigation in every city ought to be heeded. After the investigations have been made remedies should rigidly follow closely afterward.

....The sixth International Congress of Actuaries, according to announcement circulars just issued, will be held in the rooms of the Philharmonic Society in Vienna from the 7th to the 13th of June, 1909. Arthur Hunter, 346 Broadway, is the correspondent in the United States and Canada for the Congress.

THE life insurance rate on lions and tigers is 5 per cent. The rate on deer is 50 per cent. There is no rate on snakes, because no insurance company will write risks on "reptiles." One reason for this is that no man can distinguish one snake of the same species from another, as they all look alike to the human observer.

THE life companies which withdrew from Texas because of its recent legislation regarding deposits and investments have received notification from the insurance department of the Lone Star State that they will be allowed to transact no business whatever without a license. Commissioner Love proposes to collect the full penalty of \$5,000, and a sum in addition to double the tax of 3 per cent. of gross premium receipts in every case, or to know the reason why. The situation in Texas from the standpoint of the life insurance companies grows interesting.

Winter Wheat

THE Government's report upon the growing winter wheat is distinctly favorable, showing that the condition on May 1st was 89 (against only 82.9 one year ago, and an average of 85.8 for the preceding ten years), and that the area now is 29,751,000 acres, against 28,132,000 at the harvest in 1907. Since the seed was sown, last autumn, 1,318,000 acres have been abandoned, owing to the destructive effect of the cold season. This loss may be compared with 3,533,000 abandoned last year. It is the smallest reduction of the kind, one excepted, in the last decade. Last year's crop of winter wheat was 409,442,000 bushels. There is promise of a larger yield this year. If the Produce Exchange's old method of calculation be used, the present condition and acreage point to a crop of 461,000,000; its new method indicates 428,500,000. Last year's results tend to prove that the old method should be preferred.

New York Cotton Exchange

IN response to a House resolution of February, 1907, an inquiry concerning Cotton Exchanges and fluctuations in the price of cotton has been made by the Bureau of Corporations, and the first part of Commissioner Herbert Knox Smith's report was published last week. It severely criticises the New York Cotton Exchange's method of establishing (upon the "middling" grade as a basis) the differences in prices for all grades, with respect to "future" contracts, by the action of a revision committee which meets only twice a year. It prefers the New Orleans Exchange's method of fixing differences daily upon a basis of actual "spot" transactions. Mr. Smith holds that the New York method works against the buying manufacturer and in favor of "a limited class of speculative experts." The New York committee, he remarks, has an extreme degree of arbitrary power, and he continues as follows:

"This committee is usually made up of men who are large operators on the Exchange and who are constantly interested in the future market. It is within their power so to fix these differences as to affect enormously the

value of their own future contracts. In the revision of November, 1906, when the differences fixed by the committee were radically wrong, several members of this committee have admitted that they were at the time heavily interested in future contracts and that they profited by the action of the committee. There is no conclusive proof that they intended this. It is sufficient to point out that this fixed difference system, applied thus arbitrarily by a small body of men, furnished in this case a condition where (1) these men had the power thus to reap enormous profits at the expense of others; (2) they admit that they did reap profits; and (3) the motive for doing so was extremely strong. Comment upon this situation is hardly necessary."

This is a charge of a very serious character. As to the comparative merits of the two methods of fixing differences there is room for argument, but the New York Cotton Exchange must promptly meet as best it can this official attack upon its Revision Committee. If it can show that its method has not served the interests of a few speculative experts, either in 1906 or at other times, it should hasten to do so. If this is a just report, there is need of reform in the Exchange.

....Comptroller Metz estimates the value of the real estate owned by New York City to be about \$2,000,000,000.

....The pig-iron output in April was 1,148,691 tons, against 1,228,204 in March, 1,079,721 in February, and 1,045,250 in January. High water mark in 1907 was 2,336,972 in October. After the beginning of the panic, the output declined, and in January the lowest figures were reached.

....At the 140th annual meeting of the New York Chamber of Commerce last week, J. Edward Simmons was re-elected president, and George Wilson, secretary, both by unanimous vote. James J. Hill, George F. Baer and Cleveland H. Dodge were elected vice-presidents to serve four years. William H. Porter, president of the Chemical Bank, succeeds James G. Cannon as treasurer, the latter becoming chairman of the Committee on Finance and Currency. The chairman of the executive committee is A. Barton Hepburn. On behalf of Mrs. Morris K. Jesup, Joseph H. Choate presented to the Chamber one of Gilbert Stuart's portraits of Washington.

Survey of the World

Conservation of Natural Resources

The Conference of Governors and others at the White House last week, designed to promote co-operation of the Federal and State governments for the conservation of natural resources, was preceded, on the evening of the 12th, by a dinner, at which thirty-seven Governors, the Justices of the Supreme Court, members of the Cabinet and prominent members of Congress were the guests of President Roosevelt. Among those specially invited to the conference were ex-President Cleveland, William J. Bryan, Andrew Carnegie, James J. Hill, Judge George Gray and John Mitchell. Owing to his illness, Mr. Cleveland could not be present. Upon Mr. Bryan's motion, a resolution expressing the conference's sincere wish for his speedy recovery was adopted. At the opening of the first day's session, Mr. Roosevelt made a long address, reviewing the treatment of natural resources thruout the world, and especially the use and waste of them in our own country during the past century. A wise use of them, was, he said, the great material question of the present time. He had called this conference "because the enormous consumption of these resources, and the threat of imminent exhaustion of some of them," called for common effort and action:

"Disregarding for the moment the question of moral purpose, it is safe to say that the prosperity of our people depends directly on the energy and intelligence with which our natural resources are used. It is equally clear that these resources are the final basis of national power and perpetuity. Finally, it is ominously evident that these resources are in the course of rapid exhaustion.

"This nation began with the belief that its

landed possessions were illimitable and capable of supporting all the people who might care to make our country their home; but already the limit of unsettled land is in sight, and indeed but little land fitted for agriculture now remains unoccupied, save what can be reclaimed by irrigation and drainage. We began with an unapproached heritage of forests; more than half of the timber is gone. We began with coal fields more extensive than those of any other nation and with iron ores regarded as inexhaustible, and many experts now declare that the end of both iron and coal is in sight.

"The mere increase in our consumption of coal during 1907 over 1906 exceeded the total consumption in 1876, the Centennial year. The enormous stores of mineral oil and gas are largely gone. Our natural waterways are not gone, but they have been so injured by neglect and by the division of responsibility and utter lack of system in dealing with them that there is less navigation of them now than there was fifty years ago. Finally, we began with soils of unexampled fertility and we have so impoverished them by injudicious use and by failing to check erosion that their crop-producing power is diminishing instead of increasing. In a word, we have thoughtlessly, and to a large degree, unnecessarily, diminished the resources upon which not only our prosperity, but the prosperity of our children must always depend."

Taking up each of the resources mentioned, he showed the condition of the supply and pointed out what the safeguards and remedies should be, such as the official supervision of the cutting of timber, irrigation, the drainage of swamps, the canalization of rivers, the proper care of soils, and scientific economy in the production and consumption of minerals. In the past, he said, we had admitted the right of the individual to injure the future of the republic for his own present profit, but we were now coming to recognize the right of the nation to guard its own future in the essential matter of such resources. He cited a recent opinion of the Maine Supreme

Court setting forth, on a question as to the right of the Legislature to restrict the cutting of timber on private land for the prevention of droughts and floods, the principle that in such a case the property rights of the individual are subordinate to the rights of the community; also similar decisions in New Jersey and by the Supreme Court at Washington.—Mr. Carnegie made a long and very interesting address on the conservation of ore and minerals, showing by a forcible use of statistics and historical records what our supplies of iron, coal and other minerals have been, the waste in producing and using them, the approach of exhaustion and the methods which should be employed for conservation. "In conclusion," said he, "it seems to me our duty is":

"First, conservation of forests, for no forests, no long navigable rivers; no rivers, no cheap transportation.

"Second, to systematize our water transportation, putting the whole work in the hands of the Reclamation Service, which has already proved itself highly capable by its admirable work. Cheap water transportation for heavy freights brings many advantages and means great saving of our ore supplies. Railroads require much steel; water does not.

"Third, conservation of the soil. More than a thousand million tons of our richest soil are swept into the sea every year, clogging the rivers on its way and filling our harbors. Less soil, less crops; less crops, less commerce and less wealth."

John Mitchell opened the discussion which followed, in which Governor Johnson, Dr. Van Heise, John Hays Hammond and others took part. There were calls for Secretary Root, who spoke briefly, pointing out that with the consent of Congress the States could make agreements for an exercise of their powers in the common interest.—An impressive address was made on the second day by James J. Hill, who at the beginning remarked that this was in effect a directors' meeting of the great political and economic corporation known as the United States. While Mr. Hill spoke at some length concerning the supplies and the consumption of minerals, he especially directed attention to soil waste and improper methods of farming, drawing a dark picture of the political evils that would inevitably be caused unless our soil resources should be conserved and these methods be improved. Papers were

read by Prof. Thomas C. Chamberlain and others. R. A. Long, of Kansas City, asserted that waste in the forests and in the lumber industry had been promoted by the Anti-Trust law. Grazing and stock-raising were discussed by several speakers. President Hadley spoke of the work of the Yale forestry department. Several Governors of Rocky Mountain States criticized the regulations of the forest service. One of the speakers on the third and last day was Mr. Bryan, whose remarks were in harmony with the drift of the proceedings. We should not only preserve our resources, he said, but should prevent monopolization of them by a few persons. As to an exercise of power, he had observed that most of the contentions over the line between Nation and State were traceable to predatory corporations which were trying to shield themselves from deserved punishment or to prevent needed restraining legislation.

Declaration of Principles On the final day of the Conference a long declaration of principles was reported by the committee and adopted without dissenting vote. In it the Governors agree in saying that our natural resources, the material basis upon which our civilization must depend, are threatened with exhaustion, and that the conservation of them is a subject of transcendent importance, which should engage unremittingly the attention of the nation, the States and the people in earnest co-operation. They commend the wise forethought of the President in sounding a note of warning, say there should be action by Congress and the several legislatures, and assert that in the use of natural resources the States are interdependent. They advise that from time to time hereafter there shall be other similar conferences, at the call of the President, and that each State shall appoint a commission on conservation, for co-operation with each other and with a national commission. They urge a continuance and extension of approved forest policies; favor the enactment of laws looking to the protection and replacement of privately owned forests; ask for laws to conserve water resources for irrigation, water supply,

power and navigation; and especially urge Congress to adopt without delay "a wise, active and thoro waterway policy." Governor Folk and Governor Glenn at first objected to the calling of future conferences by the President, but did not persist in their objection. The President spoke quite earnestly about his views concerning the use of State or national powers, saying he desired only that action needed should be taken by some authority. He would "employ indifferently either the principle of State rights or the principle of national sovereignty, whichever in a given case will best conserve the needs of the people as a whole." After adjournment a considerable number of the Governors held a meeting and appointed a committee to make arrangements for future conferences. All were convinced that there should be one every year, but some would have them called by agreement rather than by the President. Among the subjects proposed for such meetings are uniform divorce and extradition laws.

Revision of the Tariff

In both branches of Congress, on the 16th, resolutions were adopted which practically commit the Republican party to a revision of the tariff during the session immediately following the Presidential election. The Senate's resolution, offered by Mr. Aldrich and adopted without debate, is as follows:

"Resolved, That the Committee on Finance are authorized in connection with investigations heretofore ordered by the Senate with the view of promptly securing the information necessary for an intelligent revision of the customs laws of the United States to call to their assistance experts in the executive departments of the Government and to employ such other assistance as they shall require, and they are especially directed to report what further legislation is necessary to secure equitable treatment for the agricultural and other products of the United States in foreign countries, and they shall also, in the consideration of changes of rates, secure proof of the relative cost of production in this and in principal competing foreign countries of the various articles affected by the tariff upon which changes in rates of duty are desirable."

By the House resolution the Ways and Means Committee is authorized to sit during the recess for a consideration of the subject. This resolution was adopted by a strict party vote, Democrats assert-

ing that the Republicans did not earnestly desire revision, but were seeking to postpone and avoid it. Mr. Payne, who had charge of the proposition, said there would be no hearings until after the election. It would be unwise, in his opinion, to provoke tariff discussion now and thus increase the disturbance due to the panic and to the political campaign. Assuming that there would be a Republican majority in the next House, he asserted that the new tariff would be a protective one, and he predicted that it would have maximum and minimum rates.

Increase of Railroad Freight Rates

A convention attended by representatives of more than 300 commercial and shippers' organizations, in Chicago, on the 15th, adopted resolutions protesting against the proposed increase of railroad freight rates, but agreeing to submit the question of the justice of the increase to the Interstate Commerce Commission, without appeal to the courts. If the roads, however, reject this proposition for a settlement, the shippers promise to ask the Federal courts for injunctions. The question whether the Federal courts have power to enjoin an advance of rates (pending a hearing before the Commission) is involved in a case now before Judge Kohlsaat, in Chicago. He is asked by certain creamery companies to enjoin an increase of rates upon their products on the Michigan Central and Grand Trunk roads. In a statement laid before the convention by the Illinois Manufacturers' Association it was asserted that the proposed increase would amount to \$140,000,000 a year, or "a tax of \$1.75 per head for every man, woman and child in the country." W. C. Brown, vice-president of the New York Central, addressed the convention. Some increase of rates, he said, must be made. Wages on railroads had recently been increased by \$100,000,000 a year, and labor legislation had added \$25,000,000 more, while the pay of the roads for carrying the mails had been reduced. The burden should be placed upon the whole community by an increase of rates:

"The issue is in the hands of the business men of the country. If the business interests of the nation shall, after mature consideration,

say that railroad rates shall not be advanced, I doubt if it can be done; but it should be understood clearly, definitely, and beyond all question of doubt that in saying this they will say just as clearly and definitely that the wages of the great army of 1,500,000 railroad employees shall be reduced, and they must accept their full measure of responsibility for the results which will follow."

In a published interview, Vice-President Rea, of the Pennsylvania Company, says that the roads must either increase rates or reduce wages.—Several suits to test the commodity (or coal) clause of the new Rate law will be brought by the Government, in Philadelphia, next month, against the anthracite roads. No action has been taken in the Senate upon the bill suspending the exaction of penalties under this clause.—At Rochester the case against the Standard Oil Company for accepting concessions or rebates from the New York Central and Pennsylvania companies is to be tried this week. There are fifty-three indictments.

Secretary Taft's Visit to Panama

Secretary Taft sailed for home on the 12th, and it is understood that he is satisfied with the results of his visit to the isthmus. In conferences with representatives of the governments of Panama and Colombia, the treaties which are desired were discussed and a tentative agreement was reached. The terms are to be considered at Washington by President Roosevelt and Secretary Root. In the meantime Panama will take no action concerning Colombia's seizure of Jurado. It was reported in Costa Rica on the 15th that President Reyes was unexpectedly returning to his capital from the coast (where he had intended to remain for several weeks), and that a plot for his assassination had been discovered. Among the results of the Secretary's visit is the appointment of a Commission of Electoral Inquiry by President Amador, to make investigation concerning the approaching election. Our Government has been invited to assist in this inquiry. The invitation has been accepted, and it is said that in this way provision has been made for a supervision of the election by the United States. Many who expected that the election would be marked by fraud and disorder regard this supervision with much satisfaction.

Railway Strike in Cleveland

Nearly 1,400 street railway employees in Cleveland, Ohio, went on strike at 4.45 a. m. on the 16th, and there has since been much disorder in the city. The strikers were employees of the old company, which was taken over by the Mayor's new corporation a few weeks ago, when a seven years' fight ended with a victory for him and a reduction of the railway fare to 3 cents. When the consolidation took place it was discovered that the old company had signed an agreement with its men, promising to increase their pay by 2 cents an hour if its franchise should be extended, or, in other words, if it should win in the contest with Mayor Johnson. The new corporation, or holding company, declared that it was not bound by this agreement, but offered an increase of 1 cent an hour. At the beginning of the strike, 300 employees of the Mayor's original low-fare company remained on duty and were assisted by strikebreakers brought from other cities. There was much violence on the nights of the 16th and 17th, and the police had great difficulty in restraining the mobs. Mayor Johnson issued a proclamation, saying that he would use the full power of the city to preserve order, and warning all persons that disorder would be "met by force adequate to suppress it." Efforts were made on the 17th to procure a settlement by arbitration.

British Affairs

In the British by-elections the Conservative Unionists continue to cut down the Liberal majorities wherever they do not gain a seat, as they did in the sensational election in Manchester, where Mr. Winston Churchill was defeated, only to recover a safe seat in Scotland. John Morley having gone to the House of Lords, Mr. Robert V. Harcourt, Liberal, a son of the late Sir William V. Harcourt, was elected in his place in the district of Montrose by a vote of 3,083, against 1,937 for a Socialist-Labor candidate and 1,576 for a Conservative, this being a vote of 1,333 less for Mr. Harcourt than that given for Mr. Morley in 1906. There has been another by-election for North Shropshire, when the Unionist candidate received 5,328 votes, against 4,377

for his Liberal opponent. This seat has been held by the Conservatives for twenty-five years, but the Conservative majority at the previous election was 166, against a majority of 951 now. The Unionists insist that in a general election now they would carry the country.—A principal measure in Parliament the past week has been the passing to a second reading of the Government's bill establishing two new universities in Ireland. One of these will be at Dublin, composed of three branches, of which two are existing in Cork and Galway, while the third, New College, will be founded in Dublin. The other university will be created out of the present Queens College, at Belfast, to be called the Northern University. The Dublin University will be under Catholic control and the Northern University under Protestant control. There was no real opposition to the bill, which was past by a vote of 344 to 31. Premier Asquith expressed satisfaction that one measure proposed by the Liberal Government, and particularly by Mr. Birrell, had the approval of Mr. Balfour, the Unionist leader. The only opponents were a few Irish Unionists, who were unwilling that Catholics should have a university, and a few radical Nonconformists, who oppose the State meddling with religion.—In an address at a trade conference in London, John Henniker Heaton, M. P., "the father of imperial penny postage," in advocating a penny telegraph rate between Great Britain and the Continent of Europe, made a statement and prophecy of particular interest to the United States. He said that it was common knowledge that penny postage with the United States would soon be adopted.—American competition in trade has called out complaint in Parliament on two matters. In the House of Lords Unionists, who are now more and more protectionists, called for a duty of \$10 on every hundred weight of American hops, to protect the English hop-growing industry from extinction. Earl Carrington, President of the Board of Agriculture, on behalf of the Government, accepted the resolution urging the Government to give this matter its attention, but declined to approve the suggested tax. The American hop growers,

he said, were no better off with a duty of \$14 than were the British cultivators with free trade. The whole problem could be summed up in the one word, "overproduction." The other question came in the House of Commons, from a Laborite member, who asked whether Mr. Churchill, President of the Board of Trade, proposes to take any steps to prevent the Armour's from carrying out their proposal to open in London and elsewhere retail shops to supply meat direct to consumers, avoiding the Smithfield Market tolls, as this would destroy the business of English butchers, who could not compete with American packers if the latter were allowed to trade on such terms. The Liberals are so positively committed to free trade that they cannot support such a proposition to shut out cheaper food, but the Laborites may, on such a question, join the Conservative protectionists.—Lord Avebury, better known as Sir John Lubbock, who is head of the banking house of Robart, Lubbock & Co., and one of England's famous scientists, has introduced into the House of Lords a bill which attracts considerable attention, to check the wholesale destruction of plumage birds. He says that, during the year 1907, there were auctioned in London 19,742 skins of birds of paradise, the nesting plumes of nearly 115,000 white herons, and immense numbers of the feathers or skins of almost every known species of plumaged bird, including the tails of lyre birds. The bill is framed on the same lines as an act of the State of New York, and will prohibit the importation of plumage except of certain kinds. If such action is not taken, he declares that the extinction of the most beautiful species of bird life is only a question of time.—The Franco-British Exhibition has been opened near London under the management of Imre Kiralfy. There is a stadium, with seats for 70,000 persons, where the Olympic games will be held this year. The beautiful buildings cover 40 acres. The landscape includes an intricate system of canals and lakes, and 20 miles of roads. The exhibition was opened by the Prince and Princess of Wales, and a choir of a thousand voices sang an ode of welcome, composed by

the Duke of Argyll, in the presence of 30,000 visitors. Mr. Kiralfy says he will have at least 25,000,000 visitors. The visitors at the Chicago World's Fair numbered 8,000,000.

Denmark and Iceland Iceland is a large island, having about as many square miles as Kentucky, but having a population of only about 80,000, that is, about that of Des Moines, Ia., or Lynn, Mass.; and yet it has large political ambitions, which are likely to be gratified so as to make it a kingdom, independent, yet not separated from Denmark. In 1871, Iceland was allowed a separate Governor-General, and two houses of its parliament, or Althing, half of the members of the upper house being nominated by the King. In 1903, the Governor-General was withdrawn and replaced by a minister for Iceland residing there at Reykjavik, while the Althing consists of forty members, of whom six are appointed by the Crown. Yet this approach to autonomy does not satisfy the people, and a committee composed of members of the Danish and Icelandic parliaments have agreed on a new plan that is likely to be adopted. Under it Iceland will be a kingdom, as independent as Denmark, but under the same king, just as Austria and Hungary are under one emperor. The bill provides that Iceland shall constitute a free, autonomous and independent country, united to Denmark by a common king and common interests, and forming with Denmark a state federation—the United Danish Empire. If the bill passes, King Frederick will be entitled to call himself King of Denmark and King of Iceland. Various concessions have been granted to Iceland, giving a greater degree of independence. The Icelandic treasury will contribute to the King's civil list, and Icelanders and Danes will enjoy equal rights in both countries. It is provided also that the law may be revised after twenty-five years if either party objects to its continuance, but not so as to affect union with Denmark or a common ministry of foreign affairs. When approved Iceland will be even more independent of Denmark than Canada is of Great Britain, for she will have no Governor-General.

India and the East

While the British are not relaxing their energetic measures against the Mohmand tribesmen, there is relief from the fear that the Ameer of Afghanistan was secretly encouraging them. He has issued a decree that any Afghan joining the Mohmands shall have his feet cut off, and any man preaching a holy war against the British shall have his tongue cut out. At the same time it is not clear how much control he has over his subjects, as his brother is strongly anti-British. In Calcutta the seditious activity takes the form of attempts to blow up the street cars in which the British ride. Warnings have been distributed against natives riding with foreigners, and there have been five attempts within a few months to blow up cars. One attempt was made last week, but a cart drove over the bomb and four natives were injured. The fear is that the malcontents in India will somehow co-operate with the tribesmen on the Afghan frontier. The latter troubles are by no means settled, and the last reports are of a severe fight with the Mohmands, who attacked British pickets, but were repulsed with a loss of two native officers killed and thirty men killed and wounded. But the cholera has broken out among the British forces, and this is dreaded by them even more than the enemy. It is persistently asserted, but not proved, that the bombs and guns used by the Indian malcontents are sent surreptitiously from this country by a band of "patriots" and sympathizers here.—In a statement made at Seoul, Prince Ito, the Japanese Governor-General of Korea, declared that Japan had never thought of removing the Emperor or the court, but would firmly adhere to the policy of preparing Korea for independence, as a strong ally to Japan. He believes this end possible, but declared that it was only delayed by persistent misrepresentation. We have constant reports of the very rapid progress of the Christian movement in Korea, which is helped by political conditions.—In China the Yangste-kiang, called the Misery of China, has destroyed many thousands of Chinese by a monster "bore" or wave, 26 feet high, which moved up the river and wrecked boats and the huts on the bank, and nearly ten

thousand were drowned suddenly at Hankow. The river was strewn with dead for many miles. The river is famous for these "bores."—The negotiations between China and Japan over the railroad lines in Manchuria have reached no result, as Japan refuses to allow the Chinese to build a road parallel to that to Fakumen, under Japanese control.—The elections to the Japanese Diet past off quietly last week, but the result is that the strength of the Government in the Diet is not shaken. The Opposition has gained something in the cities thru the representatives of business interests, but in the country districts the Government has made countervailing gains.

Russian Affairs The Russian Duma still devotes its attention to its own survival, and avoids an open clash with the Government. On one day last week a member of the Constitutional Democratic party attacked the Ministry of the Interior for adhering to the arbitrary methods of Plehve, and even Conservatives joined in the generous applause. On another day the lie was past between the leaders of the majority and the minority, and one of the speakers was about to assault Mr. Milyoukov, leader of the Constitutional Democrats, but was held back by his associates. The outbreak followed the charge that part of the Duma simply wanted to obstruct business. The only violent outbreaks reported are in two prisons. At one a large number of prisoners escaped after killing four officers. At another the attempt was utterly foiled and sixty were killed or wounded. The Grand Duke Nicholas, who is president of the Council of National Defense, has left St. Petersburg for the Caucasus, which gives rise to pessimist fears. There are two frontiers at this present time which present dangers, one the Persian and the other the Turkish frontier. On the Persian side it is pure brigandage that has forced the Russian troops to cross the frontier so as to protect the Russian colonists on the Araxes. On the Turkish frontier the condition is more serious. Russia had, until three years ago, but two army corps about Tiflis, and scattered posts about Kars and Erivan; but in 1905, after the Government trans-

ported a division of infantry to Batum. In February and March of this year the Sultan sent a heavy military force to the region of Van, and this has been taken as a menace, especially in connection with attempts by Turkey to claim certain disputed districts, claimed also by Persia, near Urumia. While Turkey expresses the greatest good will toward Russia, the Russian court fears that the Turkish military strength there surpasses its own, and that, with strong forces at Van and Urumia, the garrisons in the Caucasus would not be able, in case of invasion, to hold their own, particularly as the Moslem population might rise in support of the invaders.

Various Items A new and important change in the criminal procedure of the British courts went into operation last week, by which an appeal could be allowed to a convicted prisoner. This had its origin in a very sad case of a man condemned for malicious mutilation of cattle, who was afterward proved to be quite innocent. The objection to the new appeal was that it would result in the disgraceful delays so common in this country; but the first trial proved that this was not the case. A man convicted on insufficient evidence was acquitted, and other appeals were dismissed with dispatch.—An unusual incident occurred in connection with the Emperor William's visit to the Emperor of Austria on the occasion of his diamond jubilee. In accordance with custom he distributed many decorations, and among them gave the decoration of the third class of the Prussian Crown to Dr. Weiskirchner, president of the Lower House of the Reichsrath. But he has sent it back, saying that it is not compatible with the dignity of the office he holds to accept a decoration of the grade of the decoration commonly accorded to a police commissioner. They say it was an unintentional error to give it; but people believe that a snub was intended in memory of a speech made in the Reichsrath last winter criticising the Prussian bill for the expropriation of the Poles. At the time the German Embassy made complaint, and the Austrian Prime Minister disavowed his attitude.

THE CONFERENCE OF THE GOVERNORS AT THE WHITE HOUSE, MAY 13, 1908.

First row, seated, left to right—Governor Harris, of Ohio; Governor Hughes, of New York; Governor Davidson, of Wisconsin; Andrew Carnegie, William Jennings Bryan, James J. Hill, John Mitchell, President Roosevelt, Vice-President Fairbanks, Mr. Justice Harlan, Mr. Justice Brewer, Mr. Justice White, Mr. Justice McKenna, Mr. Justice Holmes, Mr. Justice Day, Mr. Justice Moody, Secretary Cortelyou, Secretary Bonaparte. Second row, standing, left to right—Governor Post, Porto Rico; Governor Proctor, Vermont; Governor Fort, New Jersey; Governor Blanchard, Louisiana; Governor Butke, North Dakota; Governor Folk, Missouri; Governor Norris, Montana; Governor Hoch, Kansas; Governor Woodruff, Connecticut; Governor Giggins, Rhode Island; Governor Glenn, North Carolina; Governor Deneen, Illinois; Governor Warner, Michigan; Governor Hanly, Indiana; Governor Comer, Alabama; Governor Brooks, Wyoming; Governor Buchtel, Colorado; Governor Gooding, Idaho; Governor Noel, Mississippi; Governor Hoggatt, Alaska. Third row, left to right—General McKenzie (Chief of Engineers), Judge Burton, M. C., Ohio; Senator Bankhead, Dr. Magee (Department Agriculture), Governor Kibbey, Arizona; Governor Ansel, South Carolina; Governor Cutler, Utah; Governor Lea, Delaware; Governor Dawson, West Virginia; Governor Floyd, New Hampshire; Governor Willson, Kentucky; Governor Swanson, Virginia; Governor Crawford, South Dakota; Governor Stewart, Pennsylvania; Ex-Governor Hill, Maine; Governor Freer, Hawaii. Fourth row, left to right—Mr. Shipp, Secretary of Conference; Gifford Pinchot, Chief Forest Service; Herbert Knox Smith, F. H. Newell, Chief U. S. R. Service; Henry T. Clark, Thomas Pence, Governor Currey, New Mexico; Governor Johnson, Minnesota.

The Meaning of the Emmanuel Movement

BY THE REV. SAMUEL McCOMB, D.D.,

ASSOCIATE DIRECTOR OF THE EMMANUEL MOVEMENT

THE second century of our era witnessed a remarkable outburst of spiritual and intellectual life. The old gods and cults lost their attractions and new divinities claimed the homage of the Roman world. Theosophic speculation imported from the East revealed to the prosaic Roman unsuspected psychical energies, and out of this revelation new worships arose. Perhaps one of the most striking results of this spiritual renaissance was the impetus given to the worship of Æsculapius. Says Dr. Samuel Dill in "Roman Society from Nero to Marcus Aurelius":

"His temples arose in every land where Greek or Roman culture prevailed. They were generally built with an eye to beauty or the virtues of some clear, cold ancient spring or other health-giving powers in the site, which might reënforce the more mysterious influences of religion.

. . . . The patients came from all parts of the Græco-Roman world. After certain

offerings and rites the sufferer took his place in the long dormitory, which often contained beds for 200 or 300, with windows open all night long to the winds of the south. The sick man brought his bed coverings and made his gift on the altar. . . . The lights were extinguished, strict silence was enjoined, and the hope for some soothing vision from above was left as a parting gift or salutation by the minister as he retired."

Our own time is witnessing also a spiritual revival. The materialism which

threatened belief in the soul thirty years ago is now dead. The spirit is coming to its rights, and the philosophy that is attracting the best minds is idealistic. Psychology is revealing to us the wonders of personality, is showing us a self within a self, is giving us a vision of potentialities which we may hope, under the new environment that awaits us beyond the grave, will develop into abiding actualities.

It has also demonstrated the profound unity of soul and body, the solidarity of brain and mind; so that every process of consciousness, whether it be a sensation, a feeling, or an idea, has its counterpart in the physical organism.

In the sphere of religion, too, men are conscious of a new atmosphere. The tide of faith is returning. The great critical movement of the nineteenth century has done its work, and Christianity is being reduced to its

simplest and most intelligible form, and everywhere there is the feeling that in the religion of Christ, thus freed from all the accretions that have gathered round it thru its history, there are healing and reconciling forces. Many are convinced that religion is something grander and simpler and more vital than had been suspected. There is a return to the great idea of Christ and of

REV. ELWOOD WORCESTER,
Director of the Emmanuel Movement.

the Apostolic Age, that the whole kingdom of evil, of which disease forms a part, is opposed to the Divine Will, and that God is on the side of health, mental, moral and physical.

One of the most notable manifestations of the new spirit is to be seen in the extraordinary growth of mental healing cults. These cults for the most part rest on a very precarious metaphysic, know little or nothing of the Bible as the trained scholar knows it, and regard medical science as little better than an elaborate illusion. Their essence is a kind of crazy idealism, which defies the obvious facts of experience and conceives of the body as lying plastic at the will of the spirit. In spite, however, of their theological and metaphysical sins, these movements have done great service in recalling both physicians and sufferers to such facts as these: that many persons are sick because they and their friends think that they are sick; that many others are sick because they violate law moral and law physiological; that the idea of sickness has a tendency to realize itself and to create an atmosphere in which the sickness is perpetuated. Nor can any one doubt that these healing cults effect many cures; do, as a matter of fact, dissipate fear, worry, anger; uplift the soul above the things that harass it; and put upon their feet, morally and physically, many who have been a burden to themselves and to their families.

Now the Emmanuel Movement, while having a point of contact with these systems in that it utilizes consciously what

they utilize unconsciously, yet in all essential features stands over against them by way of contrast. The fundamental idea underlying it may be expressed thus: It is an effort to unite in friendly alliance a simple New Testament Christianity as modern Biblical scholarship corroborates it and the proved conclusions of modern medicine, and more especially of modern psychological medicine, in the interests of suffering humanity. It imposes no new dogma, philosophical or theological.

It claims to be the possessor of no new revelation except that which is the product on the one hand of the growing Christian consciousness, and that which on the other hand comes thru the revelation God makes of Himself in the discoveries of science. Its great aim is to give to faith the things of faith and to science the things of science. Because scientific, it distinguishes between those forms or types of nervous suffering which are functional in character and those which are organic. This distinction, it is true, cannot be in the ultimate resort defended, but

for all practical purposes it is valid and well recognized. Hence, one of the fundamental principles of the Emmanuel plan, and one which distinguishes it sharply from all systems of metaphysical healing -- Christian Science, Mental Science, Faith Healing, etc.—is that there is first of all a thoro medical examination of the patient before any psychic treatment is entered upon. This examination is necessary not only in order to rule out any organic disease or distinctly organic complications of a

REV. SAMUEL McCOMB, D. D.,
Associate Director of the Emmanuel Movement.

seemingly pure functional disorder, but also in order to obtain an intelligent comprehension of the functional disorder itself, if functional disorder it be. From another point of view, the same necessity becomes obvious. Patients, for example, have come to us who have been treated by physicians for organic diseases by means of drugs and special diet, and upon examination it has been found that the disorders were purely functional in character. Now, of these functional disorders the nomenclature is constantly changing, but, roughly speaking, we may say that they fall under the following five great groups:

(1) Neurasthenia, or, as it is popularly called, nervous prostration, which has an infinite number of shades from a slight sense of depression or fatigue to the profoundest exhaustion of the nervous system. Generally the patient is depressed, easily tired, suffers from headache and backache, is the victim of ceaseless worry about all things, small and great, suffers from insomnia with all its attendant miseries. The curse of neurasthenia is its unsocial or anti-social character. It cuts off the sufferer from his social relationships and turns life into a bundle of impracticalities. As a rule, too, in neurasthenia the religious life suffers. Faith grows weak or appears to die out. Religion ceases to be a joy or an uplift, and, if retained at all, only becomes a subject of fear and doubt.

(2) Hysteria. This is an abnormal disposition of the nervous system, in which the sufferer is peculiarly amenable to suggestion and self-suggestion. As Forel remarks:

"It is a two-edged sword—it engenders an untold amount of evil and many misunderstandings, and yet delivers from many sufferings—and is misunderstood by very many physicians. Hysterical persons, misled or otherwise badly molded, can become devils; but if they are well led or of noble nature, they are often angels or heroes, like the Maid of Orleans."

The darker side of hysteria shows itself in paralysis, cramps, loss of sensibility, or in other cases over-sensibility, fits of rage, extreme irritability of temper, and many other morbid phenomena. At the root of much family unhappiness and of not a few divorces lies this nervous derangement.

(3) Hypochondria. The main feature of this disorder is fear of disease. The attention of the patient for the most part is concentrated on his intestines, and out of this concentration spring all manner of impurities. He reads medical books and finds himself portrayed therein with singular accuracy. He is the victim of bad auto-suggestions.

(4) Psychasthenia. This word is only two years old and is used to cover the large group of nervous troubles in which the psychical element is predominant. The sufferer has strange sensations of incompleteness, a disturbance of the feelings of reality. The world seems to him strange and unfamiliar. Or, again, he is possessed with some imperative idea, which he cannot shake off. Systematized fears take hold of his mind and turn life into a hell. One patient fears to move hand or leg, to look at an object, or even to sit down; because, tho all his bodily organs are perfectly sound, the movements evoke great pain. Another is conscious of pain on the perception of some given object. He fears a dog, or a cat, or a sharp knife, or the touch of microbes; and these fears are not under the control of his will. Still another fears open places (agoraphobia), in which he feels himself physically and morally helpless. But it is impossible to enumerate these fears. They may attach themselves to almost any object, and many of them give rise to the most intolerable misery.

(5) Drug addictions. Here we have those moral slaveries, such as alcoholism, cocaineism, morphinism, which, while they affect profoundly physiological processes, are now recognized as rooted in psychical and moral tendencies.

It may be asked, admitting the reality of these evils and that they are curable by psychical means, What has the Church to do with these things? Why not leave them in the hands of the physician? I answer, in the first place, these functional disorders are affections of personality, diseases of character. This is one of the marks that differentiate them from organic disorders. A man may be attacked by typhoid or diphtheria without suffering any deterioration of character, but he cannot sink into neurasthenia or suffer the horrors of psychasthenia or become a victim to the alcohol habit without pro-

found moral, spiritual and intellectual perversion. Now, whatever else the Church may be, it is at least a school of character, and exists for the moral training and uplift of humanity. Has the Church, then, no healing and reconciling word for these children of despair?

In the second place, the physician knows the limitations of his art, and often feels that he has not the kind of education that fits him for dealing with moral and religious problems. His one aim is to bring to his patient a more abundant life, and he welcomes every honest and disinterested attempt to aid him in this work.

In the third place, the unity of human nature is a fundamental dogma of modern psychology. This means that to hand over the body to the physician and the soul to the minister is as unscientific as it is often injurious to the patient. The Emmanuel Movement believes that minister and doctor should unite their forces, should come to a common understanding, and should thus solve the difficulty presented by so many semi-moral and semi-nervous disorders by attacking them simultaneously from the spiritual as well as from the physical side. Hence, the remedies applied in the Emmanuel clinic are mainly psychological, moral and religious, but not without regard to any physical needs that may be evident. The psychic remedies are those which have been used for some time past with singular success in the great psycho-therapeutic clinics of Europe and to a much less extent in some of the hospitals of this country. We have taken advantage of the fruitful union which has been consummated between medicine and psychology.

Now, among the ideas which psychology has given to medicine, perhaps the most significant is that of the "subconscious." The older notion of mind regarded it as practically coterminous with consciousness. The newer views consciousness as only one of the manifestations of mind. In other words, there is an element of mind that lies below or outside the sphere of consciousness. As to the reality of this element, there is a growing consensus of learned opinion, tho there is a wide diversity of view as to how the fact is to be interpreted. Ordinary people, however, may believe in

the fact and in its theoretic significance when they are vouched for by such authorities as Galton, Ribot, Dubois, Freud, Janet, Forel, Liébeault, Jastrow, Morton, Prince, Boris Sidis, James and many other not less illustrious men.

Now, the healing power of the subconscious was first made clear by means of hypnotic suggestion, for in hypnotism the dissociation of the subconscious from the conscious is most readily secured. There is abundant proof that some types of skin disease, hystero-epilepsy, insomnia, hysteria, neurasthenia, moral obsessions of various kinds—all these and many others have been cured by hypnotic suggestion, and the reason why suggestion has this power seems to be that it is an appeal to the subconscious mind, which in turn acts thru the instrumentality of the whole nervous system, both cerebrospinal and sympathetic, and that thru this marvelously complex organism it effects changes in the functional activities of the body. Its operation on the brain is seen by its power to modify states of consciousness. Its action on the sympathetic nerve system is seen in the stimulation of the intestines and other phenomena. We thus see that the subconscious mind is most amenable to suggestion, and the more dissociated it is from the conscious, the more suggestible it becomes.

Now, suggestion has various forms: It may be applied in a hypnotic state, or in a semi-sleeping state, or in a waking state. For certain perversions, such as alcoholism, fixt ideas and phobias, hypnotism is a valuable therapeutic agent. Dr. Bramwell, the distinguished English expert, writes that out of seventy-six cases of chronic alcoholism and dipsomania treated by him sixty-four were either cured or improved. Our experience in the Emmanuel clinic confirms the observation of this physician; but I hasten to add that in some instances hypnotism is valueless unless supplemented by a change of moral environment and by a strengthening of the ethical forces of character.

It has been discovered that the good results of hypnotism can be equally well secured in perhaps the majority of functional troubles by suggestion administered in a waking state. In this method,

the patient is placed on a comfortable sofa or in a reclining chair. He is induced to relax himself, mentally and physically. His eyes are closed, the room is shaded. This procedure is necessary in order to shut up his consciousness to the suggestions about to be made, and to minimize the possibility of counter-suggestions. The operator then, in a kind but firm voice, addresses to him suggestions; that is, words of reassurance, of encouragement, and of hope. This method should, of course, be supplemented by conscious conversation.

Another psychic remedy is re-education. The physiologic basis of psychic re-education lies in the fact that the substance of the nervous system is not dead but living matter, and is therefore plastic in character. The more frequently a stimulus is repeated, the deeper is the impression made on the plastic nerve substance, and thus the accumulation of stimuli gives a set or tendency to the nervous organism. Hence it comes about that constant suggestions, given with skill and system, can gradually affect in a favorable way the plastic nervous system. The process by which the brain and nervous system are enabled to get rid of the results of faulty thinking is called "psychic re-education." In nervous troubles, the attention is fixt on wrong ideas, and requires to be re-educated. For example, the victim of insomnia perpetuates his misery by cultivating the habit of expecting not to sleep. What he needs is to re-educate his attention to refuse to permit the thought of his not sleeping to possess his mind, and to assert again and again to himself, *I will sleep*; so that, his attention being removed from the mischievous idea and being concentrated on a healthy idea, sleep must follow. Then, too, the will needs re-education. One of the symptoms of nervous trouble is the lack of will power. Yet the only way by which the will can be trained is by willing. For this purpose, the patient is recommended to begin with simple exercises, gradually increasing in complexity. Almost any physical or mental exercise can be utilized as a method of will gymnastic. Bathing, deep breathing, manual work, "Arts and Crafts," bicycling—all these are admirable methods of getting the will to work.

Finally, the emotions must be re-educated. Sham emotions—emotions, that is to say, that lead to nothing—only waste and weaken the inner life. They must be rigorously opposed. Good health-provoking constructive emotions, such as love, joy, peace, must be cultivated so as to drive out the destructive forces of jealousy, hate, worry and anger.

But in the vast majority of these semi-moral and semi-nervous troubles, the prime need is moral and religious re-education. The essence of religion is the consciousness of a Higher Power, and this consciousness is essential to our normal life and health. Let it be unsettled, as in the present age of religious transition it often is unsettled, and gradually in its place arise fears and misgivings and forebodings and all those mental miseries that turn life into a bundle of impracticalities. Many who are by nature and instinct religious but who have been trained, it may be, in a one-sided and cramping form of religious thought, have lost the joy and the inspiration which religion ought to bring to life. Their religion, instead of helping them, is rather a burden and a hindrance. It becomes implicated in their morbid state, creates a sense of over-scrupulosity about small points, anxiety about the future, or bitter and poignant grief for merely venial offenses. Religion does not carry these sufferers beyond themselves or the vicissitudes of their spiritual fortunes.

Prayer, which is the sword of the spirit, can be wielded with aim and purpose only by souls that are in a normal state and therefore have a consciousness of energy; but it is this consciousness which these unhappy sufferers have lost. Hence, very often they cease to pray. Their ideas of God, of the meaning of life, of human destiny, require reconstruction. They need to have faith evoked, so as to overthrow the anxiety and fear and worry that make their life a death in life. They must, as it were, go back to school again to learn the secret of Christ, to realize that His religion is the greatest enemy to worry and to fear; and that it is this because the God whom it reveals is not an impersonal force nor a tyrannic despot but the Everlasting Father, whose arms are underneath and around every creature He has made; and

that the righteousness which it demands is self-sacrificing love, which ever goes forth in a passion of service for others.

Now this faith calms the mind, puts to rest all the turmoil of the soul, opens a healthy outlet for action, and thus indirectly constrains the nervous system to peace and poise.

The dissociation produced by the hidden memory of some blunder or sin of,

it may be, a long-distant past; the terrible emotions created by spiritual despair; the dislocation of the inner life which the loss of religious peace often involves—can be met alone by the re-educative power of a living faith, of a rational and intelligible Christianity; and for such work as this, who can be better fitted than the minister of Christ?

BOSTON, MASS.

The Animals—My Friends

BY E. P. POWELL

AUTHOR OF "THE COUNTRY HOME," ETC.

DARWIN says: "The more one lives with an animal the more he is inclined to attribute to thought and reason, and the less to thoughtless instinct." So feel I, this blessed morning, waked by mocking-birds, who sang not only as sweetly, but as much to a purpose as any church choir I ever heard. I went out and sat under the pines, and a beautiful shrike came close to me, and, sitting on a willow oak, looked me in the face without fear. What was he thinking about? Something more, I was sure, than the bugs and the grubs—but, all the same, he shot down again and again, bringing up his prey, eating it and wiping his bill, while he fluttered his feathers and still kept me sharply but gently under watch. One big borer he did not care to eat, but, breakfast-full, stuck him on a thorn for future use. I imagined that, had he my vocal organs, he would have said: "You and I, old man, are a team; we are pulling together. Knowing this, I am not afraid of you." Eating one of my Northern apples, I flung down the core. Immediately a mocking-bird dropped out of the limbs, and, close by my feet, began to eat it. He also looked me in the eye; and I thought he said: "Yes, yes, we also co-operate. I take a little of your fruit, but I pay for it with music and catching grasshoppers."

A bluejay was more shy and more saucy. I thought he said: "I know what John Burroughs says about us, and I have my opinions, too. Of all the crea-

tures I have ever seen man is the biggest fool. He cannot live without a costly carpenter's shed over his head, and as for his clothes, he has nothing half as fine as mine, but they make him a lot more bother and expense. As for migrating, very few of them can escape the frigid winters, and those who do come in Pullmans, while we come on our own wings and feed out of the gardens and orchards. Say what you please, our social economy also beats yours out and out. I do not feel about it as the robin does, for I won't work for you, and I will steal all I can get. When near your houses I only holler and squeal, but I can sing—just hear that," and he poured out a delicious volume of richest music. I hasten to say that the birds did not *really* say these things—"sentimentalisms"—but I felt sure they were not far from their actual sentiments. I leaned back in my chair and let them have the debate all to themselves. I liked it better than any essay that ever undertook to demonstrate that the birds were only automatons. The mocking-birds sung a whole orchestra of sounds, and one of them, lighting on the henhouse, cackled better than the Plymouth Rock who had just then laid an egg. The air was full of joy, of duty and of fun—just my ideal of life—which I have not reached quite as surely as the birds. Then I thought, what is there in my goings and gettings that more surely demonstrates reasoning power than is found in these winged confederacies? Yes, Mr. Darwin! "The

more one lives with an animal the more one is inclined to attribute to thought and reason, and the less to thoughtless instinct." If, with Mr. Burroughs, I believed that we alone have the faculty of reasoning, I should have to believe that we fell in Adam so seriously that we lost not only holiness, but common sense. This is precisely what all the sciences are insisting, that we must ally ourselves with the birds in order to succeed as agriculturists. I read in history that man was a miserable savage until he had sought and acquired the aid of the dog, the reindeer and the camel, and that all along he has never been able to walk alone.

I cheerfully accept the advice of my antagonist to "see straight," but there are two ways of seeing straight—one of them along a rifle barrel and the other along a hoe handle. I prefer the hoe, and when I pull out worms my pet hens run along with me and utilize them. Robins drop down from the apple limbs, and with a twittered "Thank you," get their share. I remember that my father always stopt his horse when a robin was in the furrow. "Not so much loss, my boy," he said, "a little time; but we have more happiness, and the world is finer as a home." Birds and hens and horses soon find out this sort of folk, and grow trusting, and companionable, and wiser, and more honorable. They help us to see straight and to be straight, and we help them. Sympathy (love) is a wonderful saving power. A lack of it locks up the best part of Nature. It is not a case of seeing so much as of feeling. That man is badly qualified for social work in the trenches of humanity who cannot see beyond the squalor and brutality; who cannot see sons of God in the slums. The power of Christianity is not seeing straight so much as seeing deep. I think it is quite so in our relations to our animal friends. I can also understand that some people never call out any rare reasonableness from the creatures about them. I love my dogs, horses, birds and cows, and I help them all I can to break over the limitations of mere animalism, and I think that they have helped me along the same lines.

Wishing to buy a horse, I requested a good friend of animals to accompany me

to the stables and look her over. The groom led her out and started her on a pacing course. "Shut up that," said my friend, "I do not care about her heels; I want to see her head. Lead her up here." Then he patted her neck, looked her in the eyes and said, "See here, old lady, who are you, any way? Have you got good horse sense?" After a little he turned to me and said, "Buy her. She knows too much to play the fool or try tricks on you." As we started down the street he added: "See here, Powell, in this difficulty between horses and men the trouble is almost always with the man. He shows lack of reason ten times to the horse's one. Instead of reasoning with his horse he pounds it. The end of a horse to appeal to is not the rump, but the head. A horse that cannot be argued with you should not buy or own. I pity horses; the biggest brutes and smallest brained men are set to work in stables. Reason; good Lord! what chance has your horse to reason with such brutes?" It was a noble talk, and it is to me a wonder that my friend Burroughs can spend his old years writing, writing, writing to make sure that he persuades the people that animals are only automatons.

I do not care very much when, with Mr. Long and Mr. Hornaday, I am called a fool or a fake or a liar. The point of more importance is that this excuse for the gun and the whip shall not find lodgment in the popular apprehension; that our stables and our farms shall not be the resorts of inhumanity. We must believe more in our animals' reason; appeal to reason; give reason a chance. I bought a horse with this recommendation from a banker. He said, "When I owned her there was just one word to describe her character—sweet." A drunkard had owned her after the banker, and I found her just like him—robbed of decency and crazy as bedlam. Was it instinct? I had at one time a helper who was half Indian and half negro, a stalwart fellow, who was as famous for butchering as he was for chopping and mowing. I told him one morning that he would have to kill a calf. "See here, Mr. Powell," he said. "I just can't. Your animals are all so humanized, I can't knock one on the

head nohow. It would haunt me." And it made a different man of Old Freeman. With us he grew gentle and kindly. My plea is therefore not for the brute creation only, but for ourselves. The Bible says charmingly that we go up and we go down together; that "the whole creation waits together for man's redemption"—redemption into reasonableness, justice and good will. My old age would be to me a barren affair if I had not learned to see and feel with all the world, and could not say my Lord's Prayer together with my collies and Jerseys, "Give us this day our daily bread; lead us not into temptation"—the temptation to retort abuse for abuse. Well, I will see that the mangers are full, and will plant twice as many cherry trees as I need for myself.

I am interested in Mr. Burroughs's struggle to interpret reason, instinct, habit, consciousness, as manifestations of Infinite Reason. In this we shall start together; but has he ever thought this thing thru? Is he quite satisfied; for at times he denies reason to animals and at times tells us that the Universal Reason is exprest in all things. In *THE INDEPENDENT* we are told that "up to a certain point, or under certain conditions, man is an automaton also. He is a bundle of instincts and of inherited traits, supplemented by self-knowledge and the gift of reason." Here he is careful to assert that reason is a gift, not an evolution. To make this doubly sure, he tells us that it is as if Nature had said: "Here is unerring instinct and here is erring reason; which will you choose? Man chose the latter, and the prize of the universe is his." I should like to have this dethronement of Darwin and this exposition of the universe indorsed by some reputable scientist. I had supposed the united voice of modern science defined instinct as a resultant, not as a specific gift. The lowest forms of life manifest sentience. A more complex animal structure compels a comparison of sensations, establishing elemental consciousness and conscience. These, in turn, in higher organic states, become self-consciousness, and in man become consciousness of a Self-higher-than-ourselves. All along this climbing of life, determinative action was con-

stantly passing into unconscious action. Summing up the latter we have the instinctive and habitual, which characterizes man quite as much as it does the beast. President David Starr Jordan, of Leland Stanford University, is certainly as good an authority as the scientific world can furnish us. He tells us that:

"Most animals have little self-consciousness, and their reasoning powers at best are of a low order; but, in kind at least, the powers are not different from reason in man. A horse reaches over the fence to be company for another. This is instinct; but when it lets down the bars with its teeth, that is reason. When a dog finds its way home at night by the sense of smell, this may be instinct; but when he drags a stranger to his wounded master, that is reason."

That any one can repeat a lot of silly things done by animals I do not question; but recently I have been compelled to attend a social gathering of a high collegiate sort, supposed to be expressive of the supremest reasonableness of human beings. When I take into account the horrible smudge of tobacco smoke; the utterly forlorn struggle after small stories and jokes; the lack of common sense in the piggish way of cramming down seven courses of food—well, I simply will not run down the birds. The story told of the coon who tried to wash his food without water, what does this and a dozen more stories of the sort go to show? No one has ever, as far as I know, denied animal instinct. What we are discussing is whether this can and does at times climb to reason, and under favorable conditions. Mr. Long has never inferred that reason was invariably exercised by animals. Instinct, by which we mean the result of antecedent reasoning (that is, the finished up habit), first suggested by logic, this does not debar additional reasoning, which in turn will become instinctive. Mr. Burroughs himself stumbles upon this conclusion, for, while repeating the story of the coon, he adds: "This habit" (that of washing food) "doubtless had its origin in some past need or condition of the life of the race of coons." So it seems that the coons did reason in the past, and they reasoned very reasonably that it was safer to wash a potato before eating it. This reasoning process, so far as food is concerned, seems to have become instinctive and habitual. The hoarding

stories told of squirrels and mice do not prove these creatures to be any *more* irrational than those highly rational creatures who stuff all they can into banks that break, into stocks that depreciate, and then carry big wads of stinking, infested bank bills in their pockets—never enough; deposits everywhere. Is J. P. Morgan, after all, the king of idiots?

Disagreeing with Mr. Burroughs at this point, totally and absolutely, I am glad that our views diverge even more widely concerning the use of the gun and the slaughter of our allies. He asserts that if he held my views he would become a vegetarian, "and would never become party to the murder of beings possessed of the faculty of reason," leaving us to infer that with his views he is not disturbed by such slaughter. He can kill and eat anything that cannot work out Aristotle's "Categories." Let him. Gunning is never allowed on my property, either in New York or in Florida. I detest hunting for sport, and never found pleasure in the death of a single creature. Some of us are gifted with a bit of sympathy with all life; with God in Nature. We do not deny to Mr. Burroughs the gift of investigation, but he surely lacks that sympathy without which Nature is a mere atheistic machine. Wondering over his hardly courteous attack on Mr. Long, I some time ago took down "Wake Robin," "Pepacton," and other of those delightful books which made him the charm of the literature of thirty years ago, thinking out of these to confute his old-agedness. But, to my amazement, there was not a kindly word to be found in all these charming books for beast or fowl.

However, let me leave Mr. Burroughs to the mercy of that merciless book—one of the finest productions of American literature—by Rev. Wm. J. Long, entitled "Briar Patch Philosophy." I do not like controversy, only wishing to let all the life about me come to its best, for so I will climb by helpfulness to Him "in whom I live and move and have my being"; will learn that divine wisdom that loves, and in loving, lifts. At Clinton I have two collies, and while one of them has something of his wolfish ancestors playing in his instincts, the other is nearly human. It is not the tricks that he

plays, but the logic that he uses that surprises me. When I leave my house I say in the quietest possible tones where I am going, and Togo acts exactly in accordance with my words—knowing from what I say whether he can go with me or not. When he comes to me in my rustic seat his eyes are as eloquent as those of my boys. In the morning, if he can possibly reach my chamber, he bounds onto my bed, puts his arms around my neck, and looks a love which only needs articulating organs to make its expression a poem. These two dogs together have invented quite as complex games as those played by schoolboys, and they play them with unfailing delight.

My first careful observation of barn fowls was when (it was about 1855) I drove two hens out of my Clinton garden. One was a short-legged, yellow biddy, who deliberately went lower down the street, and, slipping under the hedge, was soon in the garden again. Some time after she was in the pig trough, and the sow, resenting her meddling with the dinner of her pigs, bit her head off, as a warning to all naughty hens. The other, a black topknot, crossed the street and indulged in a queer soliloquy picking at her feathers in a vexed way, and apparently scolding herself. This was continued so long that I set it down to a case of conscience. It was at least very funny, and wholly out of the instinctive actions of hens. I noticed that Blacky did not re-enter that garden for many months. At another time my little mother called me into the big pantry and said: "See that hen under the window. I think she wants something. Hear her talk and see how she calls." I went to the door, and it was Blacky with a lame foot. She made no objection to my taking her up, when I found a thorn in her foot. I relieved her and set her down. She could not talk English, but in the language that she could talk she gave me thanks, and went back to the barn. Coming home one autumn for a brief vacation I asked George—George was my boy in charge, and no boy ever better understood animals—for Blacky. Everything on the place became a pet with him and he stimulated every sign of novel intelligence. He told me that Blacky was under the old sleigh, under

the high barn, and had been there ever since her feathers began to come out. I found her, and she responded with evident delight to my call, but come out she would not, and did not until her new dress was grown.

Along the hillsides where my home is placed crows assemble in vast numbers. Is it only instinct that leads them to set a sentinel on guard when they pull corn or maraud the birds' nests? Blackbirds do the same, and they have kept me on a merry chase—merry for them—just at church time, to get them out of my corn. But in Florida these same birds do not set a guard while hopping all over our gardens. Why? I *think* because they are catching bugs, and know they will not offend us. Crows roost at a distance from their nests. Why? I think the reason is that they are afraid of endangering the limbs where the nests are placed. Co-operative moral order sends the kingbird today to join the crow in fighting the deadly hawk; but another day I find him fighting the same crow that is stealing a young robin for his dinner. Why do the English sparrows not invade my acres at Clinton? They are all about me in vast numbers, just across the street, and they jabber in crowds quite within my hearing; yet hardly once or twice a year does a single sparrow show himself inside my line. If this is instinct, it is very recently acquired instinct, for I had a serious task in teaching them that it was unsafe to intrude. Why do the robins prefer to build under the shelter of my eaves, for I had last summer in my vines and on my pipes not less than five nests. I think that *they* think that it is safer to be near me.

Why did swifts leave the woods for our chimneys, and why are they now going back again? If instinctively, at least it was logically based on defensible data. Why do my bees refuse to allow one of

my hired men to approach the hives? It cannot be instinct, altho I confess I cannot trace out the logic involved. Why do two of my hens follow a cow hour after hour about the pasture? Not instinct, I am certain; but these two have discovered, what the others have not, that the cow's motions stir up grasshoppers and crickets. After my father's death his dog led strangers into the house, holding their hands in his teeth, and he watched to see if harm was meant. Was that good logic, or was it mere instinct?

During a warm summer shower I saw an angleworm try to draw a stick into its hole, holding it by the middle. After a vain effort of this sort, it deliberately felt its way to the end of the stick, and then drew it easily into the ground. Its dinner of soft bark was secure. Was this incipient reason? What instinct could have taught that logical process? *Science* published my notes on the subject at the time, with approval. Personally, I do not believe that there is an entire absence of these logical processes from any part of living Nature—not even from the ovoid cell in which life first appears. I am convinced that the universe is charged with reason, and that instinct is only a by-product of universal thought.

The fact that these things are uncommon or unobserved by even good investigators does not either disprove them as facts, nor does it disallow that reason is involved. William Finley tells us some queer things concerning the birds, yet he is one of our best observers. I get very impatient at any abuse of my friends in feathers and fur, as well as those in tailor-made suits. We all alike have brains, and the brain is the organ of reason. I cannot think that God made a blunder, or that Nature had a superfluity of protoplasm and did not know what to do with it.

SORRENTO, FLA.

A Lesson in Extravagance

[This article, by an Unhappy Husband, contains a suggestion in High Finance for the benefit of those contemplating matrimony. Of course, the details are changed to prevent the author's identification, but the story, as a whole, is true. We expect this will call out some interesting letters from our readers.—EDITOR.]

IF some one other than myself should tell the story which here follows, I fear I should be among the incredulous, because I know it seems unnatural and unreal. But it is both horribly real and overwhelmingly natural in the lives of the two people I know best. Since these two are normal people in other respects, no doubt this story is typical of the lives of many, the only difference being that in most cases the facts have not been told.

My chief reason for telling these facts is that these pages may serve in some degree as a warning to other couples equally well started on life's pathway, so that being advised they may be able to find the happiness which should come in wedded life.

It is natural for me to search for the moral lesson underlying the events of life, for I am an ordained minister of the Gospel, although no church at present calls me its pastor. At present I am a member of the force of one of the largest business concerns in the country.

The road between these two positions is marked by my wrecked domestic happiness. Of course, my salary now is many times what I was earning in the ministry, but for no monetary consideration would I have made the change. Nothing but the details of the story I have to tell could have impelled me to leave the profession which I had chosen for my life's work.

My boyhood was similar to that of any

other New England boy of my time whose Puritan parents were in just comfortable circumstances. Desiring a college education, which my parents could not provide, I earned it myself and later my seminary course also. There winning a traveling fellowship I took an additional degree in Europe.

I am in no sense a recluse, and I am happy to say that the days when my hands and feet bothered me to know what to do with them are in the past. I know also how to wear my clothes, and Nature has been reasonably kind to me in the matter of appearance.

So that when I wooed and won the daughter of one of my college professors the winds of gossip brought back to me the comment "that it is a good match, but that they never dreamed of Bessie G—— marrying a minister."

For Bessie G—— (of course that is not her real name) was the college belle, pretty stylish, funloving, musical, and, withal, serious at times. Yet, as I look back now, I see that even then she was possessed with the *wanderlust*. But at that time I supposed her merry nature merely eager with a love for adventure which belongs usually to healthy youth. We were married among the good wishes of most of the college town and started on an extended wedding trip. The wedding journey had been mostly planned by the bride-elect, with whom, of course, I had cheerfully concurred, only interpolating once in a while to apparently unheeding

ears that I feared we could not afford this or that luxury. I dearly loved my little bride and I wanted to make her happy and I disliked to thwart her in any respect, least of all to restrict her in this wedding trip of a lifetime, by compelling her to understand our circumstances, which she so cheerfully chose to misunderstand.

The result of this first mistake on my part was that we came home from that wedding trip four hundred dollars in debt, and then started for our home, which awaited us in my missionary field in the West.

To a young man burning to be of use in the world that was a most encouraging field for operations. Wickedness and license ran riot, awaiting a reign of law and order.

To a young luxury-loving bride just from the East this town seemed to be a veritable hotbed of iniquity invented for her especial torture. She was not broad minded enough to see the real good which is to be found in every human being, neither was she humorous enough to enjoy the eccentricities of the natives. No doubt, she suffered much in her changed environment. The wedding trip debt hanging over our heads prevented us from having many of the luxuries for our home which we had planned for, and she chafed very much under this lack of money.

My theory of the financial side of married life has always been that both husband and wife should have equal access to the funds, but after a few months' trial I saw that in order to maintain my credit in the town, and pay the necessary living bills, my wife must be held to an allowance for her personal expenses, for otherwise she spent so lavishly that I had no money to pay the necessary bills. She resented this restriction greatly, and, of course, I grieved over it very much, for I felt that if only I had more money I could make her happier.

Just at this time, the editor of the local paper falling ill, I was asked to take up the work, and I gladly availed myself of the opportunity to make more money. But this proved a mistake. This extra work undertaken for her sake took me from home more, and in consequence my little bride grew more lonesome and one

day surprised me by saying that the next week she was going to San Francisco to take violin lessons of the great —.

We could ill afford the expense, but she went and stayed three months. She came home and remained two months, and then said that she was going to her mother's home for a year and that when I should get through with that church in that God-forsaken place she would live with me.

Perhaps here is as good a place as any to say that one of my ideals of home life has always been children, limited enough in number so as to be perfectly welcome, for I think home life vacant without them or their memory. On our income wisely expended we could easily have maintained a small family. But my wife objected. She said she would never consent to having a family on less than five thousand dollars a year, that she was not willing to make any sacrifice for a family. "It is no use trying any longer to be happy here, and I am going home, where my talents are appreciated." And home she went.

Of course, I was terribly lonesome and dissatisfied without her. She was a merry, affectionate little wife when she was in the mood, and if I was not too tired or worried over business affairs I could easily keep her in a merry mood. Yet it did not seem to occur to her to make the effort to cheer me in my oft-times discouraging work.

The end of this chapter was that I gave up this missionary post and accepted a call to a church further East, where I thought my wife would be better contented. Together we went to this new charge and remained together more happy than we had been for a long time since our marriage, but only for a few months. Her former music teacher wrote her that he would like to engage her to tour in a number of recitals. The *wanderlust* came back with a bound.

"I have never had such a chance as this," she said, and it is cruel of you to try to keep me with you." And so she went. I knew then that the beginning of the end had come, although several years have elapsed since that time.

After her departure my church work did not, of course, go very well. My wife was always so attractive and charin-

ing, socially, even when she did not feel that way, that people idolized her. And in consequence people thought there must be something wrong with a reserved man who could not conduct himself so that such a woman would want to stay with him. But I kept still, for I wouldn't say one word in disparagement of her to anyone.

She came home occasionally between recital engagements and then there would be whispered objections in the parish because their minister's wife was a "stage lady." These home trips of hers were usually for the purpose of working upon me for all the money she could get, for her natural love of dress was enhanced by the necessities of her public work, and the money she herself earned was incommensurate with her wishes.

My parish, with justice, objected to this manner of life on the part of their pastor and his wife, so that I decided that under the circumstances I could not be of the use in the ministry which I had long planned.

I pass over the hours of anguish I spent in determining to relinquish the work which had been the goal of my ambitions. But I had a faint hope that in some other occupation I could be of some use to humanity and yet be faithful to my wife and cause her to be faithful to me.

My first success in business was, of course, poor, but by a fortunate combination of circumstances, the business experience of my boyhood in a country town stood me in good stead, and by gradual advancement I have become an almost indispensable factor in this large business enterprise.

But my wife has returned to me only at fleeting intervals, for the breach once started has widened and she comes now only when she wants money or has nothing else more lively to do.

She is the beloved idol of the wealthy in a distant city, who load her with gifts and laud her talents.

I am a deserted husband in another city, with no acquaintances outside of my business associates, for I have few relatives; and as neither a divorced man or a widower, with my wife continually absent, I am looked at askance by the

respectable people whose society I crave, and to whose table I could take both wit and wisdom. I am reserved. I cannot explain my private affairs to comparative strangers. And besides, at heart I am loyal to the wife whom I took "for better or worse."

I hear that to her friends she accuses me of non-support. But as proof that she does not believe that, in fact, even tho she gives that impression to outsiders, I quote from one of her recent letters in answer to mine saying that I wanted to see her and if she did not come to me I should go to her:

" . . . I have some problems to work out and I would prefer not to see you until I have worked them out. I know that neither you nor I have had the happiness we hoped for in our married life. I am very sorry, but it seems impossible to stand still in this world. I have grieved over the situation sorely, but your life seems so narrow and constrained to me. I have grieved very much for you, for I know you have always loved me, and I have worried myself in solving certain situations. But I suppose that it is natural that, under such a new environment, coming into contact with so much broader thought and many minds with larger work and ideals, that my own taste and mind and character should change too, and those things which I would accept a few years ago I question now.

"You have always been true and faithful to me, but I do not now love you, for you have not grown mentally and spiritually as I have done. My past life with you seems so narrow, with the larger and freer ideals of my present. You can deal with me as you choose. At law I know I have no reasonable grounds of release from you. I never expect to marry again, but I hope you will give me my freedom. Home life is not my talent. Yet I would be glad to have you married to some good, affectionate woman, who would make the home for you and give you the children you deserve. I shall always be glad to hear of your welfare and success, and I beg of you that you will in no way try to change my mind or my movements, for I now intend to alter them in no way at your request. The law will grant you release from me on the ground of desertion, while even though you have not supported me as I wished you to do, you have given me what would amply support many another woman.

"And now, good-bye.

BESSIE."

And now practically without a wife and without kith or kin I am alone, misunderstood by those with whom I come in contact, and my object in writing this is to warn any young man contemplating matrimony that unless he and his betrothed understand each other thoroughly on the financial question before mar-

riage that there is not much likelihood of their coming to an agreeable understanding later.

And then I want to sound a word of warning to fathers and mothers in the training of their daughters that they be trained in their girlhood to live within the family means and to appreciate the purchasing power of money, for their chances of married happiness will thereby be much increased.

For even in the earlier days of our married life my income was \$1,800 a year, while Bessie had been one of a large family living on a professor's salary of \$2,500, so that if she had really known the value of money our \$1,800 could have made us comfortable and happy.

Our tastes were similar enough to have united us more and more as the years went on, if there had not always been between us this money question and consequent distrust of each other; her attitude toward me in that respect being that I was not a financial success and mine toward her being that she was recklessly extravagant.

And then, lastly, for my sermonizing

habit is still strong upon me at times, I want to say that in the course of my pastoral life and intimacy in the homes of my people I have seen many girls being brought up with the idea that children are not a heritage of the Lord, but an unmitigated nuisance. And thus the girls are getting wrong ideals and are likely to lose one of the greatest privileges of life.

I have frequently heard it said that in every woman's heart is the desire for children, but, be that as it may, the extravagance and luxury of our modern life are stifling that impulse to the great detriment of our individual and national life.

And thus I think that I have made it plain that upon the rock of extravagance for desired luxuries our marriage ship has gone to her woe.

And if this simple confession of the underlying cause of our unhappiness shall save the fire of another hearthstone from going out it will have done something toward making the world a happier and better place in which to live, for even one happy home has an incalculable influence for good.

“His Own Burden”

BY CHARLES P. CLEAVES

THERE is a pleasure in an unshared pain,
Solace in hidden sorrow, silent grief,
Knowing the sympathy that brings relief
Might steal from others more than I could gain.
Let me but find it possible to say:

“This is my burden, which I bear alone;
Secret with self and God, to men unknown;
This is a pain no physic can allay;
Therefore I need none, neither nurse nor friend
To multiply it by dividing.” Let me go
Along accustomed ways with cheerful face,
Glad that no soul need share it; and its end
May sooner come if others do not know,
And sadly bear what I may bear with grace.

WINTHROP, ME.

Child Labor in the Schools

BY CHARLOTTE PERKINS GILMAN

AUTHOR OF "THE HOME," "WOMEN AND ECONOMICS," ETC.

THIS country is being slowly roused to see the evils of child labor, in mill and mine, in street and store and sweatshop. It would be hard to overstate those evils.

There is the direct personal suffering involved, the loss of childhood's pleasures, the weight of premature care, the pain of exhaustion, and the danger of accident due to the natural carelessness of childhood and its quick wearying of any task. Quite apart from the direct injury from bad conditions, or from the exactions of the specific work, is this main fact—that childhood is physiologically incapable of prolonged concentration, and that to require it is to destroy childhood.

So follows the second class of evil in child labor—the injury to the race thru the premature development of those who should be children, and who are forced to be men and women before their time.

This attacks that basic advantage of all the higher forms of animal life, and humanity's especial prerogative—the prolongation of the period of immaturity. The higher the race, the longer this period. To shorten it is to lower the race standard. The precocious development forced by child labor brings a sickly and stunted maturity, premature marriage and imperfect descendants. It is worse than race suicide; it is to torture, cripple and slowly deteriorate the race thru the persons of those we live to love and care for—those on whose advancement depends the progress of the world—our children.

With this line of argument we are tolerably familiar, and may add to it one not quite so patent—the effect on the immature mind of working for payment. Any healthy child has a large capacity for exertion, loves to do things, is eagerly desirous of helping in any process he sees going on. This race instinct for working is as vital as the play instinct, as normal, largely of the same nature. But when to the natural expression of

energy is added the pressure of our wage system we pervert the process. It is hard enough for the adult to combat the degrading effects of our commercialism, however strong, however well educated, however stoutly buttressed with noble ideals and honest habits, and to thrust our children under its influence, years before they are grown, is to weaken and contaminate our moral heredity as well as the physical.

While all the healthy agitation is going on against this recognized evil of child labor, let us call attention to a less recognized form of the same evil—the child labor in our schools.

Our educational system we believe to be the best in the world. Good as it is we admit some shortcomings, and are continually altering and bettering from year to year.

But granting all this good, there remains one general evil, that of overwork. We do not demand as much mental labor as did Dr. Blimber, of atrocious memory, but the effects produced by that exacting educator are too frequently repeated among us to this day.

Our school day in the higher grades is six hours. To this we add in studies to be prepared at home from two to six hours more. Where a boy in high school has, say, twenty study periods in a week, and each of these represents two hours' preparatory work at home, that is forty hours, which, in five school days, calls for eight hours' work a day at home. If he studies Saturday and Sunday, too, it would still be five and five-sevenths hours' work.

Fortunately few boys will do the work that is expected. Their natural instincts are stronger than the school requirements, but the pressure is there, a weight of care, a sense of guilt, or the habit of carelessly refusing duty.

In a series of papers prepared recently to bring out certain facts about the work of high-school boys, it is shown that in a hundred cases the actual time of study

(not the time required, but the time given) ranges from one happy-go-lucky youth who said he studied from ten minutes to fifty-five minutes, to one who spent five hours and a half at it; two spent five hours, one four and a half hours, four four hours, five three and a half hours, sixteen three hours, fourteen two and a half hours, and twenty-three two hours. Of these, forty-five studied at night, twenty-six afternoons, seventeen both. One poor little slow suicide said "Nights and on cars." Good work for the eyes!

As to play, their answers tally neatly with the other list. One played all the time after school, six none at all, four on Saturdays only, four half an hour, and in between about the same average, twenty-five having two hours and fifteen three.

Here is the exact record, the average day's work in one case, the boy in question chancing to be extremely conscientious and really doing all that his teachers require:

WORKING DAY OF A BOY OF FIFTEEN.

| | |
|----------------------------------|-------------|
| Wakened | 7.00 a. m. |
| Breakfast | 7.30 a. m. |
| Takes street car for school..... | 8.10 a. m. |
| Arrives | 8.40 a. m. |
| School begins | 9.00 a. m. |
| Lunch | 12.00 m. |
| School out | 2.30 p. m. |
| Gets home | 3.00 p. m. |
| Home study | 5.30 p. m. |
| Dinner | 6.30 p. m. |
| Home study | 7.30 p. m. |
| Sent to bed..... | 11.30 p. m. |
| Gets to sleep..... | 12.00 m. |

Recreation 0 hours
 Outdoor exercise 0 hours
 Physical work 0 hours
 Free time, 3 to 5.30 p. m., 2½ hours, mostly spent in reading.

Mental work, 10 hours; Saturday, 5 hours.
 Number of studies, 6.

The teachers, each anxious to have his specific branch of work well prepared, and not knowing what the other teachers may be requiring in the same day, give out a large amount of copying, map drawing and other mechanical work, all of which takes time.

Out of twenty-four hours take ten for sleep and two for meals. For school, with going and coming, seven. This leaves five hours, two of which at least are in the evening.

Three hours of daylight should be for play, for physical exercise, for rest, for

freedom from responsibility and care. In the evenings no one should work, especially not a child. Where, then, is the proper time for this extra work to be done?

In our primary grades the exaction is less, of course, by the limitations of the infant mind, but up to those limits we closely push, till in the high-school years a boy or girl of twelve to sixteen is expected to add to the exercises in the school building these heavy self-driven solitary tasks at home.

These high-school years are of life-long importance to the child from a physiological standpoint. They are years of vital change and growth, of nervous strain, of varied manifestation in character. They are years in which both boy and girl need physical health more than any other one thing.

Physical health requires at this age plenty of wholesome, slowly eaten, well-digested food; plenty of merry outdoor exercise; plenty of calm, care-free sleep. These are the barest commonplaces. Anybody who knows enough to be sure on which side lies his liver—some who are uncertain about that—do know this much: that rapidly growing young people need for mind, as well as body, free exercise, food and rest. A wise system of education should fully understand the powers and limits, the needs and desires of the period of life with which it deals, and in that rapid development of educational processes, which is so healthy a sign of the times, we do see marked progress in such understanding.

This, so far, has applied to the younger children more than the older, and these adolescents, who need such wise provision, are precisely the ones least benefited. Some protest has been made in behalf of our growing girls, but the growing boys need some consideration as well. Both are required to work harder in proportion to their powers than they did as children, than they will do as youths in college.

The result of this enforced labor of the mind is precisely analogous to that of the body. First, there is the direct personal suffering involved, the loss of pleasure, the weight of care, the pain of exhaustion, the danger of injury, weakened eyesight, overtaxed brain, the nar-

row chest and stooping shoulders, the deprivation of such physical exercise as should have been allowed.

Then the identical evil of the other forms of child labor—an enforced concentration. Take an average adult and read to him an hour on some scientific subject in which he is not specially interested. He tires of it—tires of the attitude of attention required even to listen. Set him to study such a subject, require him to fix his mind continuously on a theme for which he has no appetite, and you weary the indifferent mind.

This is precisely what we require of our school children, the tax varying directly in proportion to their interest in the subject, and inversely to the time of application. Unless the boy or girl has a mind of phenomenal vigor, or a passionate interest in every study in the curriculum, every one of them is overtaxed, some, of course, far more seriously than others.

Every step toward an elective system eases this burden, and every advance in methods of education, in which the teacher teaches instead of the pupils doing all the work and the teacher merely acting as an odometer, recording his progress.

But advance as we may there remains at present this bulk of study to be done at home, this hard, long labor for the immature mind. The evil results continue to run parallel to those of the physical "child labor." First, a premature mental development, as objectionable and dangerous as the physical, and then the transmittal of the same to the race.

Any one who deals in any way with what we call "the popular mind" must wonder at times why all our splendid educational system produces so few thinkers.

It is largely because the thinking power, the free, voluntary use of the mind, is impaired by premature overwork. We force the young brain to apply itself to an arbitrary set of subjects, to acquire and retain an arbitrary amount of information—to work, not as it would naturally like to work, but in rigid lines of compulsory toil. When the pressure is removed the exhausted brain falls back, flaccid and indifferent.

Read? "No, thank you; I've had enough of books for one while!" Study? "Not if I know myself!" Think? "Oh, don't ask me to think—I want to be amused!"

This gives our public its weak, irrational mind, subservient to tradition, acceptant of wild theories and assertions, incapable, or at least undesirous, of mental exertion, feeding on the peppered froth of sensational journalism and more sensational entertainments, swayed by any exhorter, be it a religious revivalist, a political spellbinder, or some self-interested pleader for a specific cause.

When we see what the public will believe, how easy it is to excite and persuade it, how hard to make it use its reason and decide from honest thinking, then we cry out for more education for the masses.

It is not more, but different, education, wiser methods in education, that we need; a system that will not be content to offset an eight-hour injury by a patent scheme of ventilation and some compulsory gymnastics.

True mental development is further hampered by the theory of reward and punishment by which we govern study. Just as working for wages is an injury to the child by forcing economic cares upon it, when the very advantage of childhood is that it has none, so studying for marks similarly injures the young mind.

Instead of free exercise of natural faculties, the pursuit of knowledge for the love of it, the reverence for truth, the delight in feats of mental skill, and in all the daily wonders of an unfolding world of fact and law, we require arbitrary exercise of the same faculties in all pupils, with as arbitrary rewards and punishments. Our whole system of marking, crediting, examining, promoting, degrading and punishing is foreign to the real interests of education. Under it the young mind is driven far from the natural channels of acquiring knowledge, and the habit of doing things for pay—in hope of reward and fear of penalty—is forcibly engendered. In our schools, where every best influence should surround the young citizen, we voluntarily and violently commercialize the growing mind. The result of this

upon the people is but painfully apparent.

This arduous method of keeping tally upon what the child has learned, of forcing him to regurgitate in recurrent examinations what he should rather have assimilated long since and past beyond, is what so fills the teacher's time that he has little left for the act of teaching. To the child it adds to the labor of learning this wholly unnatural and hated task of having to drag back again what was so painfully forced down—skill in which feat bears no relation either to the amount really understood or to the general mental power of the student. Unless information is supplied to the brain for the purpose of being reproduced in bulk at the drop of the hat, the power to pass examinations is a wasted power, yet it forms a huge addition to the heavy burdens of our children.

Most of us who have children in school will appreciate that more is required of them in home work than is right, but few of us have realized how wrong it is, how deeply and irreparably wrong to the child.

"What can I do?" says the parent. "I know my daughter is thin and nervous, has a poor appetite, doesn't sleep enough. But she must keep up with her studies."

Or: "My boy can stand it, I guess. The others do—somehow."

Of course they do; not all of them immediately and dramatically die. They do not all become nervous wrecks and invalids. Some seem to thrive even—these mostly not hard students, but those wise children, mainly boys, who will have a good time—and wriggle thru school and college as best they may. They make fully as successful citizens as the "grinds," be it said.

But even if the parent does see the harm of a system under which a conscientious boy rises at six, studies before breakfast, fills all requirements of school hours, and then studies evenings from eight to twelve—what can the parent do?

"I cannot alter the school system!" says the anxious mother, the perplexed father; "my child must keep up with his studies."

There are some things that the parent can do, quite within present limits. See-

ing that the whole life of the coming man or woman depends largely on the treatment of these crucial years, and not only in personal health, but in mental power, and in the sanity and balance of the moral nature, the parent can at least insist on the mere A B C of hygienic living.

Time for meals, peaceful and care-free, thoro mastication and cheerfulness. Time for exercise, for play, being out-of-doors, having a good time, under no sort of pressure. Time for sleep, ten hours as a minimum. If a child is in bed at nine and out of it at seven it is none too long for the sleep needed in youth.

A comfortable breakfast and no work at all till school is reached. From nine to three, with an hour for lunch and rest, is a five-hour working day; and five hours of real labor is enough for a child. There should remain two hours of playtime before dark, more in summer, and then a pleasant short evening, and so to bed.

"No work in the evening?"

How do *you* like to work evenings? It is not good for the adult to work overtime; it is worse for a child.

"When is the child to study?"

In school, of course—what is a school for?

The parents cannot at once reform the school, but if they presented a solid front, if they stood on their rights and duties as parents, saying, "Whatever happens it is my business to protect my child from injury," the school would have to conform to the new conditions.

The trouble lies, not with the defenseless children, who are forced thru whatever mill the age they live in may decree; nor wholly with the teachers, who are too overburdened and ignored to be of much use in initiating improvements, but most of all with the parents themselves—*who are the public!*

Our trouble, of course, lies in our shortsightedness. Not the myopia brought by over-use of books (another evil we may by and by escape!), but the narrow vision of our self-centered and home-centered lives. We are so wrapt up in our personal concerns that we are weak and blind in our general responsibility. Yet here, in this particular case, even the personal duty ought to spur us on. Is not the individual father and

mother to be held largely responsible if this fine young man breaks down from over-study? He has been over-studying since he was a little child. He is exhausted from premature application. It is merely another case of child labor.

Here is a girl, thin, anemic, spectacled, engaged in a ceaseless desperate struggle to "keep up with her studies." If she were forced to the same pace to keep up with the flying shuttle in the mill we should see the harm of it clearly enough—that is, if she were our own child. This one is well dressed, well loved, well doctored, but she is persistently and continuously overworked; and when in later years motherhood is de-

manded of her she is inadequate to that great task.

Then we cry out against education for women! It is not education that hurts them. If we were all better educated, especially our women, we should know better than to subject any child to a strain like this. The trouble with them is weakened constitutions, simply from overwork in tender years; hard, remorseless, enforced labor, exacted at a period when the energies of life should all be spent in natural growth. When we do understand how to educate, it will be a part, a proud and joyous part, of that great process.

NEW YORK CITY.

Co-Operative Apartment Houses in New York

BY FLORENCE FINCH KELLY

[Our readers will remember previous articles in our columns from Mrs. Kelly's pen. She has written much on social questions and has published a novel, "With Hoops of Steel."—EDITOR.]

THE poverty-stricken East Siders are not the only residents of New York who grow restive under the burden of rent. It weighs heavily upon the shoulders of apartment house dwellers of every sort, and it grows heavier with every year. For rents, always high in New York in comparison with other cities, have steadily mounted higher. Under present economic and social conditions this rising movement is inevitable. With the enormous growth in urban population real estate values are bound to rise, and, in consequence, rents must increase. There is an old economic rule which sets down one-fifth of the sum set aside for living expenses as the highest amount which can, with prudence, be paid for house rent. And it is a sound, good rule, if people are to live thriftily and save a reasonable percentage of their incomes. But it is no longer possible in New York for the average salaried man, if he wishes his family to enjoy the ordinary comforts of life and to live in a quiet, reputable quarter.

An apartment of average quality, with-

out an elevator, but having steam heat and hot water supply, costs anywhere from \$300 a year for a tiny, three or four room box to \$800 for one having seven or eight so-called "rooms." The prices of elevator apartments, varying from five or six to a dozen or fifteen rooms, rise from about \$800 to \$3,000 or \$4,000 per year, according to locality, size and the degree of luxury in appointments and ostentation in appearance. In all except the highest priced of these two classes of apartments the space is so restricted that there is almost no privacy, and, in the sense of room to move about in, little comfort. The furniture maker and the housewife are constantly busy contriving new space-saving stunts. But with their best efforts they cannot disguise the fact, and the resulting discomfort, that even a goodly sized apartment of from six to eight rooms encloses no more floor space than did two rooms in the old-time city dwelling. And if it is in one of the recently built houses not of the best grade—the houses put up by slap-dash methods for quick returns—its

occupant must watch the floors sag until the furniture threatens to topple over, and the baseboard is irrevocably divorced, while the walls break into yawning chasms, and must learn to be calmly philosophical when the ceiling falls. And whatever the amount he pays for the right to occupy this section of floor space, it is estimated that in five years' time he discharges in rent its entire cost, and thereafter goes on paying its cost, over and over again, as long as he pays rent.

It was inevitable that somebody should revolt against this burden and endeavor, at least, to make it lighter. And, in fact, a little group of somebodies did revolt, a half dozen years ago, and evolved the idea of the co-operative studio apartment house. The first of these, three in number, in West Sixty-seventh street, in the first block west of Central Park, have now been in operation over five years, and have proved so successful that their fame has spread to other cities, while in New York they have started a significant movement in urban architecture. There are now completed and occupied a round dozen of these co-operative apartment houses, as many more are under way, and plans have been filed for a number of others upon which work will begin in the spring, while three large companies have been formed solely for the purpose of financing and building these structures.

The plan of co-operative building was tried in New York some twenty-five years ago, when two such houses were erected. But there was inefficient business management and consequent failure. And after that every one was afraid to touch the co-operative idea until a few artists, with the courage born of desperation over the twin problems of rent and congenial housing, dared—and succeeded. The artists, by the way, are pluming themselves with much satisfaction over the fact that they, usually supposed to be the least practical of men, have been the ones to perceive that present conditions are ripe for the co-operative idea, to give it sound financial basis, and to work it out so successfully that the co-operative apartment house has become the most important development of recent years in the city's domestic architecture.

Briefly, this co-operative plan, as it is now being applied to the housing problem, provides for the building of an apartment house by a small group of men—ten, or a dozen or fifteen—who organize a company and hold all of the stock themselves. If each one takes one block of stock he is entitled to the ownership in perpetuity of one apartment and to a *pro rata* share in the rental of all the apartments that are not occupied by the co-operators in the scheme. Ordinarily the members of the company reserve for their own use half the apartments and rent the other half to outsiders under the usual conditions. If any member wishes he can buy the ownership of two or more apartments, according as he wishes to invest in two or more blocks of stock. These apartments then belong to him as absolutely as if they were so many private dwellings, except that if he wishes to sell them his buyers must be acceptable to the other members of the company, and if he wishes to rent them to outsiders his would-be tenants must meet the requirements imposed upon the other renters in the building. Each owner of an apartment has what amounts almost to a private dwelling, with no annoyance of tax bills, water bills or insurance. From being a tenant he has become a landlord, and instead of paying rent himself collects it from others. The income from the rented apartments is applied first to the payment of interest, taxes and operating expenses. The remainder is either divided *pro rata* among the owners of the stock, or put into a sinking fund for the extinguishing of the mortgage, if the house was built upon borrowed capital. As the rental value of an apartment covers its cost in five years, after the end of that time the owner has his habitation free of all cost save that of interest upon his investment. And if the house is well managed, so that the rentable apartments are kept full, his share in them of the income from them will cover that interest as well as the fixed charges against the building and the cost of maintenance, and will yield him some surplus besides.

In some of the buildings now being erected a bond and realty company has guaranteed, for a payment of $1\frac{1}{2}$ per cent. upon the par value of the stock, that the rentable portion of the houses

shall be fully occupied. In non-guaranteed enterprises the stock is made assessable at 40 per cent. of its value, in case the income from rentable apartments should fall below the schedule. In only one instance, and that early in the history of the scheme, has an assessment been necessary in any of the houses. The management of the completed building is usually delegated by the owning company of co-operators to a committee of their number.

In those buildings in which the plan has been tested by operation of from two to five years it has proved economically sound and socially desirable. Their rentable space has been fully occupied almost all the time, while the value of their stock has increased so much that it has proved a remarkably good investment. Nearly all of the original investors in the West Sixty-seventh street buildings—the only ones that have been in operation long enough to give the plan thoro trial—still hold their stock. Every sale that has been made has been at a decided and steady advance. In one instance a block of stock which had cost its owner \$15,000 was sold for \$21,500, an advance of more than 40 per cent.

The original house plans of these co-operative apartments were evolved by artists for the use of artists, and, therefore, in every apartment was provided a large and lofty studio. This feature proved so popular as a drawing room among renters who were not artists that it has been retained in many of the houses, and they are all popularly known as "co-operative studio apartment houses," whether or not they are built with studios. In most of them the apartments are duplexed—that is, arranged with the rooms on two floors, with private stairway connection, instead of all on one floor. Occasionally, when the apartment contains a good many rooms, they are triplexed—divided upon three floors. But each co-operator has the liberty of designing his own apartment exactly as he wants it. And that is one of the reasons that have won such quick popularity for the co-operative plan.

Those who developed this co-operative scheme and built the first houses—all of them artists—were moved solely by the desire of evolving some plan of living

which would afford comfortable and congenial homes and would not entail upon their purses a constant and heavy drain for rent. But the houses have paid so well from the start that many have taken stock in more than one building as an investment. Robert Vonnoh, well known as a successful painter of portraits, who was one of the original group, has been so successful in organizing owning companies and carrying the buildings thru to completion that he is now a prominent member of one of the large co-operative building companies and gives up to that work a great deal of his time. From Boston, Philadelphia, Chicago, Washington, and even from Paris, he has had urgent calls to come and help get the co-operative movement started. Walter Russell, also well known for his portraits, especially of children, is at the head of another large co-operative building company, and is so much absorbed by its business that he has practically given up painting, at least for the present. Henry W. Ranger, Childe Hassam, Frank Dumond, Karl Bitter, Francis and Bolton Jones, Charles C. Curran, Kenyon Cox, Albert L. Groll, Irving Wiles, are a few of the prominent artists who own apartments in co-operative houses. William Dean Howells has taken stock in one house for an apartment for himself and in another for his son. Mr. Buel, of the Century Company; Pitts Duffield, of the publishing house of Duffield & Co.; Homer St. Gaudens and A. Blair Thaw are stockholders in a co-operative building at Lexington avenue and East Sixty-seventh street.

All of the co-operative apartments that have been erected so far are expensive buildings. They are well and carefully built, have elevators and rooms of goodly size, and are equipped with all the labor-saving and comfort-providing devices known to apartment house builders. In addition, some are luxurious and artistic in the decoration of their entrance halls. Therefore, only the man with a few thousand dollars to invest has been able to make use of this particular solution of the urban housing problem.

The scheme has met with such instant success and seems to be so well adapted to present needs and desires that it may well be the beginning of a revolution in

urban economics. For it offers a steady and growing opposition to the tendency toward the concentration of property, and should the movement continue, as now seems not the least doubtful, it is bound to result in a much wider division of the ownership of land and buildings in large cities. The idea does not do away of course, with the evil of rent exploitation, but it is a step in that direction.

If there must be landlord exploitation, is it not better that twelve men should share in the results than that they should be concentrated in the hands of one man? Indeed, the success of these apartment houses is as striking an object lesson in the economic value of the co-operative idea as one could find in the whole country.

NEW YORK CITY.

A Substitute for the Campaign Fund

BY JAMES MACKAYE

AUTHOR OF "THE ECONOMY OF HAPPINESS," ETC.

IN his message to Congress of December 3d, 1907, President Roosevelt says:

"It is well to provide that corporations shall not contribute to presidential or national campaigns, and furthermore to provide for the publication of both contributions and expenditures. There is, however, always danger in laws of this kind, which from their very nature are difficult of enforcement; the danger being lest they be obeyed only by the honest, and disobeyed by the unscrupulous, so as to act only as a penalty upon honest men. Moreover, no such law would hamper an unscrupulous man of unlimited means from buying his own way into office. There is a very radical measure which would, I believe, work a substantial improvement in our system of conducting a campaign, altho I am well aware that it will take some time for people so to familiarize themselves with such a proposal as to be willing to consider its adoption. The need for collecting large campaign funds would vanish if Congress provided an appropriation for the proper and legitimate expenses of each of the great national parties, an appropriation ample enough to meet the necessity for thoro organization and machinery, which require a large expenditure of money. Then the stipulation should be made that no party receiving campaign funds from the Treasury should accept more than a fixed amount from any individual subscriber or donor; and the necessary publicity for receipts and expenditures could without difficulty be provided."

This is one of the most novel suggestions advanced in a Presidential message in recent years, but it contains the germ of a policy which will go far to rescue the Government from the dominion of predacious classes, and to restore real democracy.

Successful democracy requires, not only that the people shall exercise a free choice in selecting the officials who are

to constitute their Government, but that it shall be an intelligent choice, and an intelligent choice requires that a channel of communication be provided thru which the character and purposes of the various candidates for office can be ascertained; not a biased and privately directed channel, but an unbiased and publicly directed one, not a channel for an arbitrarily selected portion of the candidates, but a channel for all of them. Now the failure of the people in this country to make an intelligent choice of officials is due primarily to the fact that they have left all channels of communication between themselves and their candidates in private hands. The power that controls these channels controls the means of information accessible to the public, and hence determines what candidates shall and what candidates shall not have the opportunity to present their views to the people and solicit their votes.

Political parties and party machines exist for the purpose of selecting the candidates for whom the people are to vote, and for directing that vote to said candidates. The first of these functions they fulfil in nominating conventions—the second they fulfil at election time, and their "legitimate election expenses" raised by campaign contributions comprise those required to secure the use of the available channels of communication as a means of influencing the choice of the people. In a political campaign the people are reached thru public speeches, printed circulars and the newspapers, and the candidate who cannot command these

channels of communication cannot be selected, because he has no means of obtaining the ear of the public. These channels can be commanded only by those who have wealth, or who are backed by wealth; these are the only ones who can "make a campaign," as the saying is; and thus while the people are free to choose from among the candidates of whom they have adequate information, the power to select those from among whom they must choose is left in the hands of the wealthy classes and is used in their interests. All candidates to whom they are opposed are excluded by the simple expedient of denying them adequate means of communication with the people.

The remedy for this evil is to supply a public channel of communication between the people and the candidates for their suffrages, and such a remedy the President has foreshadowed in his message. He proposes that the Government shall definitely recognize that campaign funds fulfil an essential function under present political conditions and shall provide for them. Would it not be better to propose that the Government shall definitely recognize the essential function which campaign funds fulfil under present political conditions, and provide an improved substitute for them? This certainly appears to be the wiser alternative and hence I venture to suggest a slight alteration of the President's program, which, for the sake of definiteness, is presented as applied to the election of State officers.

Three or four weeks before election the State should begin the publication of a daily Official Bulletin to be distributed free to every registered voter in the State, and should continue its publication up to election day. All candidates for office, whether nominated by party conventions or on nomination papers, should have access to this bulletin, either free or on payment of a nominal fee. The amount of space open to each should be limited to a reasonable maximum per diem, and should be equal for all candidates for the same office. Thru the direct channel of communication thus afforded each candidate could present his views and arguments to the voters whose suffrages he sought, and each voter would have an opportunity to examine calmly

and candidly the pleas and counterpleas thus officially presented. All sides would thus get a fair and equal hearing just as they would in a courtroom, and when, on election day, the case went to the jury of the people it could be decided on its merits.

The same method of disseminating the political information essential to intelligent voting could be applied equally well to municipal and national elections.

In this way wealth, or the backing of wealth, would cease in great measure to be the determining factor in elections. The candidate who desired to represent public interests would have something like as fair a chance as he who desired to represent vested interests, and the present power of the latter interests to select municipal, State and national officials would be abolished. Under such a system the collection and expenditure of great corruption funds could be absolutely prohibited, because the present plea that they are necessary in order to carry on the campaign would be put out of court. Under such a system a really effective corrupt practices act could be put into operation, because the pretexts thru which the provisions of the present acts are evaded could no longer be used. As President Roosevelt intimates, the present corrupt practices acts in this country are notorious failures. They merely provide that candidates shall make a sworn statement as to the amount they have expended on election expenses, the supposition being that publicity alone will prevent the use of corruption funds. This supposition has proved erroneous. Whether false returns are often made we do not know, but we do know that candidates have no hesitation in admitting the expenditure of vast sums, claiming the practice to be legitimate.

The plan proposed may be objected to on the ground of expense to the public, an objection equally applicable to the plan of the President, but such an objection in either case is very shortsighted. The American people have surely had experience enough to teach them the costliness of electing inefficient and corrupt officials. If it is worth while to use the ballot at all it is worth while to use it intelligently. The people can well afford to bear the trifling expense involved in providing such a means of communi-

cation. Few more effective weapons against the party boss and the money power behind the boss can be suggested. Moreover such a device would save far more money to the public than it would cost, since it would save the expenditure of present campaign funds, which, like all other funds, must in the final analysis come from the people.

It may be further objected that the people enjoy the excitement of a campaign too much to be willing to cut off the rallies, brass bands and processions which campaign funds pay for. This is a more cogent objection than the first, but a slight modification of our plan will meet it. Wherever the people are so fond of this form of entertainment as to be willing to give the money power the odds which it involves, they can permit the use of campaign funds for these special purposes. In such a case an Official Bulletin would simply be an addition to, not a substitute for, the present channels of communication. Those in power would still control the majority of the press and dominate the public meetings they paid for. It is probable, however, that the people would not be long in

learning where the really vital discussion of issues was to be found. No candidate of the vested interests would dare to leave the field open to his opponents in the official organ of communication. Despite their control of the present channels they would realize that they could no longer vanquish their opponents by denying them access to the ear of the people and would be forced to discuss the issues openly and in the face of objections which, under present conditions of campaigning, can easily be suppressed. At present the great interests simply use the people's money to corrupt the people's Government. To prevent this no weapon should be left unemployed. Much less a weapon which will give the poor candidate a means of communication with the people almost, if not quite, as effective as that enjoyed by the rich one. If the people wish to be ruled by a plutocracy they may continue to leave the possibility of aspiring to elective office to those alone who have the means to make a campaign. If they would rule themselves they will provide means for giving all candidates a fair field and no favor.

BOSTON, MASS.

Inland Waterways

BY W. K. KAVANAUGH

[Mr. Kavanaugh is president of the Lakes-to-the-Gulf Deep Watersways Association, which began the agitation of the deep waterway project, and upon whose request and recommendation President Roosevelt appointed the Inland Waterways Commission, which is to report to Congress. The conference of the Governors at the White House last week gives special timeliness to the article.—EDITOR.]

CONGRESSMAN BARTHOLDT has introduced in the House a bill for a bond issue of \$500,000,000 to carry out the improvement of the waterways system of the United States. This, we believe, is the only effectual way of really accomplishing anything, and we are very hopeful that in some form or other the bill will be past. It sounds like a large sum of money, but we believe that in the long run the application of a large amount will prove more economical than small sums spread out over long periods. Hitherto a little has been done here and a little there, and with the necessity of continued appropriations a great deal of the work has

been wasted just because it would not be carried on to completion before it was too late.

In this connection we desire a new Cabinet Officer to be called the Secretary of the Department of Public Works, who shall have charge of all inland waterway improvements. We do not mean to put the Federal engineers out of business, but what we wish is to stop this way of working by little bits. One man makes a plan here, another there; then this or that one is transferred to some other point; his successor comes and makes another plan. Things have been going in this way for years. The work of a whole year, sometimes of two or three years, done by our

Federal engineers, making channels in the lower rivers, is destroyed by a week's flood or a spring thaw. Let it be remembered that this is waste water that is destructive of inland river navigation, sweeping into the lower rivers millions of tons of sand, acres of forests, erosions of clay, silt and rock that clog the channels, raising sand bars, filling the rivers with snags, deflecting natural courses of streams, and ultimately defeating the gigantic efforts of the Government to keep pace with nature. There must be a conservation of our resources; the waters conserved at the sources of our rivers would be of great benefit to the lower stretches at the proper time. If the waste of our mountain waters were an advantage to the lowlands of the Missouri and Mississippi Valleys, there might be a basis of argument against conservation of water resources and the regulation of river flows, but their loss is our destruction. These waste waters have made the Missouri River unnavigable, caused many floods in the Mississippi, and at this time there are great bars between St. Louis and New Orleans that have been raised up from the silt washed from the headwaters of the Mississippi.

We want a Department of Public Works, so that the Secretary may make plans for improvement and carry them thru without change or delay, just as the Government is building the Panama Canal. If we get a Department of Public Works, and get the \$500,000,000 bond issue, we can put our plans into execution, including the Lakes-to-the-Gulf Waterway, and carry them out within ten years.

We, of the Lakes-to-the-Gulf Association, will do our best to reinforce the work of the Inland Waterways Commission, which was appointed by the President upon our recommendation. We are going to make the President's convention for the conservation of our natural resources a success, because that includes river improvements as well as the preservation of forests.

At the last session of Congress we secured an appropriation for the survey by United States engineers of the route from St. Louis to the Gulf. This survey is now going on, but they cannot yet report conclusions nor give anything more

than a report of progress to the present Congress. We cannot reasonably ask for an appropriation to build a deep waterway from St. Louis to the Gulf until that survey and report have been completed, unless Chairman Burton and the Rivers and Harbors Committee can be convinced that a fourteen feet waterway is entirely feasible by a report of a special board of civil engineers appointed by Governor Deneen, backed up by an appropriation from the State of Illinois. In this special board are such men as Lyman E. Cooley and Isham Randall, and it is reported that they are prepared to show Congress that a fourteen feet waterway is not only feasible but that even a twenty-four feet waterway would be feasible. If this is so, we may be able to get a liberal appropriation from Congress at this session which will start the great project linking the salt waters of the Gulf with the fresh waters of the Great Lakes. In any event, we will insist upon appropriations for maintaining the present navigability of the river and the work of dredging and bank protection which is now going on. We have now an appropriation of \$250,000 a year to maintain these works and protect the channel between St. Louis and Cairo. In the meantime we are not going to be selfish. We are going to help the Missouri River and the Ohio River and the upper Mississippi, and, indeed, all other meritorious inland waterways projects.

Lyman E. Cooley, of Chicago, an experienced engineer, has estimated that if the streams of the Mississippi Valley were improved as thoroly as those of France or Germany, our 16,000 miles of navigable waters would be extended to 45,000. Figures which cannot be doubted are those in connection with the opening of the Eads Jetties at the mouth of the Mississippi in 1879. The improvement of navigation thus accomplished added \$180,000,000 a year to the value of the crops raised in the Mississippi Valley. The wide extent of country embraced in the Mississippi Valley cannot prosper alone, but its prosperity affects the whole nation. An immediate reduction in railroad rates to the Atlantic came because of the competition of water navigation which the opening of the Eads Jetties caused.

Literature

Three American Statesmen

It is with appreciation and gratitude that we record the receipt of Allen Johnson's life of Stephen A. Douglas.¹ The successful statesman has his biographers by the score, but the career of the man who fails to reach the highest place may go long unnoticed save as a milestone in the course of his more successful competitor. So it has been with Douglas, who championed the Mid-Western Democracy until he became its avowed leader and then, defeated at the last, held the hat of his rival at the inaugural address. But he held it with dignity. The closing days of his career, like all the rest, reveal a man of strength and leadership scarcely equaled among his contemporaries.

Douglas was essentially a product of the westward movement. Born in Vermont, he migrated by stages across New York and Ohio to take up law in a raw Illinois town before he reached his majority. He saw and felt the Middle West growing around him. In his own State he saw North and South living together. Into his own household a Southern wife brought an appreciation of a type of life foreign to the Vermont from which he started. Environment, which shaped the frontier life around him, shaped him as relentlessly into the natural spokesman of the conservative slaveholding Democracy, while at the same time it filled him with the ideas of material expansion and local control out of which popular sovereignty was to grow.

Professor Johnson knows the West in which Douglas moved. He has made careful and fruitful study of all the printed sources, the newspapers, and some few manuscripts. And he has given us a brilliant and well-balanced biography. To a notable degree he has succeeded in portraying a man moving in his environment.

Alexander H. Stephens was in many

respects as significant a figure as Douglas. Both failed to receive the highest rewards of service, and both were driven by conviction to variance with their parties at critical times. Stephens, however, managed to remain within his party, tho differing, until the end. In the two leaders we may see represented two distinct shades of Democracy, both of them differing from that which was triumphant in the South.

Mr. Pendleton's life of Stephens² is less partisan and better informed than some of the Southern biographies that have recently appeared. To a great extent the writer has been indebted to Stephens's own historical work, his "War Between the States" being the foundation of many of the views and details recited here. But Mr. Pendleton has made considerable study of the "Rebellion Records" and the local newspapers. He has used the Confederate documents remaining unprinted in Washington. He has thus been able to state the events of the life of his subject in clear detail. But we find little that is new in the volume. The life of Stephens as here told is the history of the Confederate Government in most of its details, and with that history we are already familiar. There is little of consequence narrated that is not to be found in the prolific memoirs of the chief characters of the movement. Benjamin was alone among them in burning his papers to foil the historian. Mr. Pendleton is well read in the legal history of the old struggle over State rights,³ telling clearly, as many others have already told, that threats of nullification were the constant resource of disgruntled sections from the beginning until 1850. He has not, however, any unusual knowledge of the local economic conditions which were of quite as much consequence in determining secession as the legal facts.

The late John Sherman, whose earlier services overlapped those of both Doug-

¹STEPHEN A. DOUGLAS: A STUDY IN AMERICAN POLITICS. By Allen Johnson. New York: The Macmillan Company. \$2.50.

²ALEXANDER H. STEPHENS. By Louis Pendleton. In American Crisis Biographies, edited by Ellis Paxson Oberholtzer. Philadelphia: George W. Jacobs & Co. \$1.25.

las and Stephens, provided by will for an impartial biography of himself. Mr. Kerr, who seems to have performed this task, gives no evidence of historical training in producing his two large volumes without either footnotes or index.³ Dr. Oberholtzer, in his recent biography of Jay Cooke, has shown us what can be done in this sort of biography-writing. But Mr. Kerr has none of the equipment necessary for such work. His style is uninteresting. His industry has gathered Mr. Sherman's speeches from the *Congressional Record* and the scrapbook, but his volumes are not the contribution to the history of our own times that they ought to be.

The Supreme Gift. By Grace Denio Litchfield. Boston: Little, Brown & Co. \$1.50.

Sometimes the reviewer chances upon a well-intended book with a wrong-headed thesis. Such a book is Grace Denio Litchfield's novel, *The Supreme Gift*, and its central idea is the nobility of the self-sacrificing heroine. She would be a better woman with an infusion of Nietzschean ethics. Sympathy may degenerate into a vice, at least it needs a good, strong, alloy of common sense, or it bends and breaks in vigorous hands like a bit of pure silver, and is unfit for practical purposes. The old-fashioned heroine exchanges herself for the money to meet her father's debts, as if there were no such thing in the world as personal right and dignity in a woman. She commits a greater sin to undo a lesser one not of her own committing, with all the nonchalance of a philanthropic baby, until the reader has longed to shake her into some proper self-respect and sturdy righteousness. We had hoped this invertebrate saint had gone out of fashion, but in *The Supreme Gift* Miss Litchfield has revived her, and has made her, as always, as sweet-natured and exquisitely refined as she is insanely self-sacrificing and unreasonable. Her tenderness of heart makes her willing to render three people thoroly miserable, herself, the man she loves, but jilts, the man who loves her and wishes to buy her for two

million dollars, in order to pay her father's debts. The ugly fact of the sale is "drest up poetically" to look like the most beautiful of self-sacrifices, because it is done "for the poor," but we cannot justify the astigmatic ethics of this Monna Vanna of Washington. Poverty, even hunger and direst want, are not so bad, as a woman's sale of herself, and the wrong to the buyer is always overlooked in such stories; he inconsistently expects more than he ever gets of any sort of affection which alone makes the bargain tolerable; and to let him bribe himself into misery is not honorable commerce. *The Supreme Gift* ends consistently and makes out a specious case for the beautiful sentimentalist who "cannot bear to see people suffer," yet makes those she most loves suffer horribly in the process of her own martyrdom.

Quaker and Courtier: The Life and Work of William Penn. By Mrs. Colquhoun Grant. With illustrations. New York: E. P. Dutton & Co. \$3.50.

It is curious to find, in the famous diary of that fussy courtier and backstairs statesman, Samuel Pepys, a note of the date Jan. 25th, 1662, as follows:

"Sir W. Pen came to me and did break a business to me about removing his son from Oxford to Cambridge to some private college." That son, about to be removed from Oxford, because he was in what his father considered the evil company of Quakers, was to "break" a good deal of "business" dear to the heart of the old admiral, his father, and to found the great State of Pennsylvania. By his Quaker principles and by the peaceful habit of turning first one cheek and then the other to the buffets of fortune, he has left an imperishable memory; but to the historian there is left a somewhat difficult task, necessitated by the incorrigible habit he had of getting a seat like one of Milton's fallen angels, "close at the ear of Eve." He was the dear friend of the profligate Charles II, and again of the pig-headed Jacksonian monarch, James II. Of the latter he says—and it is to be supposed, with his hat on, in the royal presence of William of England—"I have loved him in prosperity, and I cannot hate him in adversity. I loved him for the favors he conferred on me, and would re-

³JOHN SHERMAN, HIS LIFE AND PUBLIC SERVICES. By Winfield S. Kerr. Boston: Sherman, French & Co. 2 vols. \$4.00.

ward his kindness by any private office in my power, but," he adds cautiously, "only as far as my duty to the Government permits, which is incumbent on all subjects." This, because he had been in correspondence with the exiled king. The new king forgave the courtier, as he readily forgave many. The father, too, forgave the Quaker son. But history is still interested in the son's relations with both father and kings. In Mrs. Grant's book the reader will find much not altogether new, but freshly pieced out with new material—that will help him understand the character of the handsome, courtly, ingenious, long-headed, gracefully obstinate upholder of the new sect. Penn's life, for a man of peace, was varied enough. Weary months in prison alternated with unwearied months of attendance in court circles, where he found sympathy and plenty of political influence. Rich he was at one moment, but too poor the next to pay his taxes. Indeed, at one time he was so troubled by the bailiff and by creditors that he had a peep-hole made in his front door.

"Will not your master see me?" says a creditor, who had waited long with his hand on the knocker.

"Friend, he *has* seen thee, and does not like the looks of thee."

"Oh, Pennsylvania!" he cries at another of those indescribably anxious moments, when the ship from his royal province did not faithfully serve his needs—"Oh, Pennsylvania! What hast thou not cost me? Thirty thousand pounds more than I ever got!"

Emerson: Sa Vie et Son Œuvre. Par M. Dugard. Paris: Librairie Armand Colin.

This is a close and piquant study of Ralph Waldo Emerson, derived mainly from American sources in biography, but gracefully touched with the fine spirit of artistic France. Sixty or more pages are devoted to the early life of his subject and the New England atmosphere of the first quarter of the nineteenth century; as many more to a delineation of the character and spirit of the "Sage of Concord"; the rest to his works and their general influence. The writer sums up the intellectual creed-lovers of New Eng-

land pretty fairly when he says that while there had been a lack of intellectual suppleness in the Puritans, there was now a certain intellectual rigidity in their dissident descendants—a neat differentiation between the two sides of the generation on the stage when Emerson was a boy. The new Unitarianism had its back on Calvinistic theology, while in front, with its busy hands, it was philosophically welding the Trinity to make it of one piece. In another field of culture, John Adams was saying that he wouldn't give sixpence for a picture by Raphael or a statue by Phidias, his great-grandson being then almost on the stage, who said his thoughts were first directed against the old classical education by the fact that at a dinner party in Mexico he found himself in company of twenty-four gentlemen, and was himself the only one who could not speak French. Both Adamses were up against the practical. Andrews Norton and Emerson, steeped in a more spiritual element, had both, independently, seen visions, and so parted company, as soon as the latter was old enough to see his way—somewhat blindly, to be sure—but alone. All this tangle of mind was in the situation, and it is in this that the French writer ingeniously trips along—very lightly, and with French sureness as to the touch of the foot. With Emerson he is evidently sympathetic, but quite as evidently he wishes Emerson had been a Frenchman. While he declines to answer the question whether his philosopher will have a growing, world-wide audience in the future, or whether he will decline, like Plato, on a dozen a generation, he reaches a conclusion which ought to satisfy the most ardent lover of the Concord Sage when he says: "No one equally with Emerson gives us fresh reasons for loving life, and making it better" ("*Nul ne donne comme lui nouvelles raisons d'aimer la vie et de la rendre meilleure*").

In Greece with the Classics. By William Amory Gardner, Master at Groton School. Boston: Little, Brown & Co. \$1.50.

It is not given to every chance traveler in Greece to weave his impressions into such a web that the pattern fascinates. Even when one has worked into the life

and heart of the land and the people he may not comprehend it all. But with time one feels a sympathy with the mountains and rivers, almost as if they were alive. Perhaps only in Greece can this feeling become real, and one becomes a part of all that he sees. A casual visitor might fail to see much of interest in Olympia or Delphi; but our author, having come with a thirst, has drunk his draft to the full, not at Dirce's or Arethusa's fount, but at that well undefiled, the Greek spirit. Besides an appendix of seventy-one pages composed of Greek excerpts, he gives excellent translations of them in text. Tho rarely making a mistake, he has transposed Cyllene and "Chelmos" (Aroania). The bodies found by Schliemann at Mycenae cannot be those of Agamemnon and his party returned from Troy. What he actually found was a burial vault used for successive interments during a period of at least twenty-five years. How well does the author select the august Apollo of the west gable of the great temple at Olympia for his praise!

The Book of the Trees of the Northern States and Canada East of the Rocky Mountains. Photo-descriptives. By Romeyn Beck Hough, B. A., author of "American Woods." 8vo, pp. x, 470. New York: Harper & Brothers. \$10.00.

One will hardly need any more to possess Michaux's "Sylva" in order to know and distinguish the trees of the forest. This astonishingly illustrated volume gives abundant pictorial illustrations, perfect except in color, of nearly all our trees. Nothing equal to it and so reasonably within the reach of the student has ever appeared. That is the advantage of photography and the half-tone process. Mr. Hough is an enthusiast. His father, Dr. Franklin B. Hough, was the pioneer Commissioner of Forestry. He has devoted years to this study in various parts of the country. Wherever you open the book you find the two opposite pages given to pictures and a limited text about a single tree. On one page will be a branch in full leaf, photographed to scale, with flower and fruit, and usually a leafless winter twig. On the other page the trunk of the tree is photographed, a little map indicates its range, and often is shown a section of the wood.

To find 208 trees thus admirably pictured in a generous page warms the heart of any botanist or forester, and ought to delight any lover of wild nature. The artistic skill with which this work is done is a real surprise.

Our Trees and How to Know Them. Photographs from nature by Arthur T. Emerson. With a guide to their recognition at any season of the year, and notes on their characteristics, distribution and culture. By Clarence N. Weed. Small quarto, pp. ix, 295. Philadelphia: J. B. Lippincott & Co. \$3.00.

This attractive volume gives us 138 of our American trees, well selected, and two pages given to each. Thus it includes eight pines, two of them foreign, and thirteen oaks. To each tree is given a square page, of the twig, with leaves, flowers and fruit, and a small picture of the tree in its native soil. The opposite page gives a description of the conditions of growth and uses. The illustrations are most satisfactory, and we commend the volume heartily to the amateur and the student.

Architectural Composition. By John Beverley Robinson. New York: D. Van Nostrand Co. \$2.50.

This is very different from the ordinary book on architecture. Instead of attempting to impose upon the reader the dogmatic decrees of his personal taste, he endeavors to discover the fundamental reasons why certain lines and proportions are harmonious and pleasing and others the reverse. There is a curious absence of the artistic vituperation that we are accustomed to in writings on this subject. The author does not decide all questions by an appeal to classical styles, but takes up each structural element in turn and illustrates the correct and incorrect usage by abundant examples. We mean really "illustrates." Instead of complimenting the reader as usual by referring casually to "the familiar façade of the Chateau de Josselyn," he puts in a picture of it. There are several hundred of these little half-tones and sketches stuck in just where they are wanted. The principles of esthetics he deduces may not be so universal and rigid as he thinks, but he teaches the reader how to think about

these things for himself. The book would be especially valuable to building committees of laymen who are called upon to decide between plans submitted by architects.

Literary Notes

....*Love's Logic*. By Anthony Hope. New York: The McClure Co. \$1.50. *Love's Logic* is a collection of short stories unusually well told in the musing, gently reminiscent manner of the old friend of the family. Clever, a trifle cynical, but not unsympathetic, they are agreeable reading for an unoccupied hour. "The Gray Frock" is the best of the fifteen stories.

....*Windsor*. Painted by George M. Henton. Described by Sir Richard R. Holmes. Published by A. & C. Black. (New York: The Macmillan Co. \$2.50.) As the title-page suggests, the pictures are the main thing. "The proud Keep of Windsor, with its double belt of kindred and coeval towers," with its St. George's Chapel, its park and its village, is a picturesque object which has allured many painters. Mr. Henton shows himself alive to its picturesqueness and capable of reproducing it, and his painting is in turn well reproduced in the color-printing. Such plates as "St. George's at Evensong" and the view of the castle from the station, over the red "crowd of humbler roofs," are pleasant to look at and worth owning. And the modest subordinate text is quite what it ought to be for elucidation, historical, architectural and social.

....Two reference works of great value to those interested in the progress of education and religion are the *Journal of Proceedings and Addresses* of the forty-fifth annual meeting of the National Education Association (Winona, Minn.: Published by the Association), and the volume entitled *Freedom and Fellowship*, the report of the Fourth Internal Council of Religious Liberals, held at Boston last September (Boston: The International Council). The former consists of over 1,100 pages, but a careful index renders available the large amount of useful information and opinion which it contains. The report of the Religious Liberals, containing addresses by delegates from a large number of religious societies from all parts of the world, is a striking witness to the spread of advanced ideas on religious subjects, and contains much information as to theological conditions in European countries.

....*A Treatise on the Law of Naturalization of the United States*, by Frederick Van Dyne, of Washington, D. C., quite adequately deals with its subject. Mr. Van Dyne is his own publisher. Primarily the work is a law book and guide for clerks and courts. It treats the subject historically, citing the leading cases that have come before the courts and discussing incidental questions. The statutes and conventions with other nations, of course, are given. In fact, the book is essentially complete as a textbook, and, if its 500 pages are slightly padded, it is with interesting matter. Such a work is timely, for the

present administration has paid some necessary attention to our laws and their execution in this matter, and it is important, for each year our citizenship is increased about 1 per cent by naturalization. (\$5.00.)

Pebbles

SHE KNEW.

MRS. NEWRICH—And who is this by?

Picture Dealer—This is a chromo, madam.

Mrs. Newrich—Oh, yes, of course it is. Now that you mention it, I recognize his style.—*Philadelphia Record*.

THE LOVE SONNETS OF A CAR CONDUCTOR.

Stop the Car!! Are you on? Then we're off!

Do you remember that cluster of Real Refined Music, *The Love Sonnets of a Hoodlum?*

Do you remember how it batted such a Line of Yellow Language into the Family Circle of Higher Literature that Professors of English and Professors of Pugilism rubbered at the Hole in the Sky till their Lamps began to Smoke? And do you remember how, when Wallace Irwin, the Boy Author, saw the sales sky-hooting upward to the extent of about 100,000 copies he got scared and promised Never to do it again?

Well, that Irwin Boy is sure a welcher! When he heard that barrel-organ Muse tuning up in his head it was Him for the Inkstand, and before he realized the full extent of the crime, he had finished another Passionate Pamphlet, and this time it was called *The Love Sonnets of a Car Conductor*. Say, it's the Tuneful Trolley, all right, all right! It rings up the First fare at Unrequited Love, Switches at Jealousy Curve, transfers to Hope Corners, takes a long run down St. Valentine's Street till it reaches the car barns at Paradise Park. And there it's all out to hear the Merry Bells, while Charley, the handsome Car Conductor, swings tight to Pansy the Peach and the Gospel Referee ties a holdfast knot in the Marriage License.

But the course of True Love isn't any Gondola Ride for Charley the Car Conductor. Nix, nix, Claudia! Gilly the Grip, the cagiest home-breaker that ever came over the rails, almost gets Charley's goat on the Girl Proposition. When Gill invites Charley's Queenerette to the Car-Barn Dance, the Trolley Boy has a brain-storm and tapers off thus:

"If this keeps up I think I'll finish swell

Among the jabbers in a padded cell."

Why didn't Charley drag his Dearie to the Barn Dance himself? Ask me! If you really want to know, blow yourself to a copy of the book. It only costs 50 cents to try it. If you don't like the language send your copy to Germany, where they don't care.

The slang is up-to-date, the Sonnets are up-to-snuff—the Car Conductor is up-to-everything till Cupid rings off, and it's all over but paying the rent.

The Love Sonnets of a Car Conductor ought to make a big hit. If it does, the State Militia can't stop the sales.—*Literary Note sent out by Paul Elder & Co., Publishers.*

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, \$2.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, \$1.75 a year extra; to Canada, \$1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with \$1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

The Conference of Governors

PRESIDENT ROOSEVELT does new things, and usually good things, with an audacity that commends and only occasionally condemns him; and one of the most remarkable, even unparalleled, is that by which he invited the Governors of all the States and Territories in the Union to come to Washington to consult as to the preservation of the natural resources of the country. Not a Governor seemed to suspect that this was the act of a Persian Darius summoning his satraps; for the very invitation itself was an acknowledgment that there is a constitutional limit beyond which Federal centralization should not go; and that what the States were asked thru their Governors to consider was something that neither Congress nor the President could do. And yet there is a lurking warning to the defenders of legitimate State rights that the interests concerned may and do affect more States than one, and that there may come yet to be judicial decisions that will find authority in the Constitution for Federal action on interstate matters hitherto regarded as wholly within the authority of the several

commonwealths. If, for example, the deforesting of the head-waters of the Ohio in New York causes disastrous floods in Wheeling or Cincinnati might not West Virginia and Ohio one of these days find that Congress can do something to prevent the evil? Or if the citizens of Corning and Elmira, N. Y., were being poisoned by the water that comes from Fall Brook, in Pennsylvania, might they not begin to seek some Federal protection against typhoid?

But no fear of dictation from the White House disturbed the peace of this conference, and the hearty enthusiasm and loyalty to the elected President of our common country were most pleasing. Yet this new plan of conference may have more results than even Mr. Roosevelt and his advisers could have imagined, just as our war with Spain did vastly more than to give Cuba its independence. It is probable that other conferences of Governors will follow as a regular institution, and be of great advantage, whether for strengthening the authority of the States as against Federal assumption, or in unifying the policies of the States within their own functions. One casual meeting of the nations at The Hague, called by the Czar, has grown into a septennial Congress of the World.

This meeting of Governors in a somewhat spectacular way calls attention to interests that are of tremendous importance, but have been too much overlooked. They will grow in serious attention and will require subsequent meetings. Every spring our great river valleys are the scene of terrible floods which destroy many millions of wealth and hundreds of lives. They come suddenly, because the land denuded of forests does not hold the rains and allow the water to be gradually dissipated. It washes down all at once and from thousands of hillsides flows all together into one concentrated torrent. There were no such floods in the old times. Then it is quite possible often to gather the superfluous waters in vast reservoirs where they will be stored for use when needed, whether for irrigation or for mechanical power, worth millions of dollars. There are no floods in the lower St. Lawrence, for the Lakes are for the river what the great fly-wheel is to machinery. Already Congress has so

far entered the province of the States that it is providing such reservoirs in certain Western States, and reclaiming waste lands, and no complaint is made of the centralization of political power at Washington.

The mighty Mississippi River, one of the great rivers of the world, matched only by the Amazon, drains twenty-five States and Territories. Its service, its commerce, its control, are of interest, nay, of imperial and imperative importance to every one of these States, and in fact to every other State. Cheap water transportation on the Mississippi River means wealth and comfort to all our people. Congress can do something in building jetties or levees to open a current or protect against floods, but the States can do much more by a mutual understanding and legislation. We dredge a river just to have it filled up again with silt, and all because the river valleys a thousand miles off are not covered with forest. Billions of tons of fertile soil are thus yearly washed into the Gulf to the injury of navigation. The States are independent, and no one State has a protection against another. One State can use up all the water for irrigation and leave the bed dry when the river reaches the next State. Disease can breed in one State, and the next State drink the poison.

Combined action is necessary for these and similar reasons, and will one of these days be achieved; by Federal control, if the States do not awake to their opportunity and duty. We need uniform marriage laws, and it is only the agreement between States to secure them that saves us from a Constitutional amendment. Awakening as we are to the danger from the exhaustion of natural resources, of which the President and other speakers have so fittingly spoken, of forests for lumber and paper as well as for protection against floods; of coal, natural oil and gas, and even of iron ore, we must have co-operative action by the States to accomplish what individual enterprise cannot achieve. And these tasks will be profitable. Take a single one, the control of rivers by the establishment of reservoirs against floods. The sale of power would pay the interest on the bonds and provide an ample sinking fund,

not to speak of the millions of tons thus saved in coal. The rain from the sky falling on the hills ought to light our towns and move the factory wheels and supply force for our trolleys. Already this is done in Switzerland; and the electric power from Niagara is only the beginning of what we can do in thousands of places.

All this cannot be planned or done by Congress. It would be well if we might have a yearly Conference of Governors, aided by special experts. Many other matters of legislation might also be considered; but here is enough for the present, and enough to occupy thought for many years to come. Such a Conference of Governors would have tremendous influence on legislatures, and might be a valuable check on Congress. We are glad the President has done so statesmanlike an act in calling this conference, and we are glad that the Governors of Missouri, Kentucky, Michigan and New Jersey presented the plan for subsequent regular meetings. It is a healthy sign of progress, and will be welcomed by both people and President.

The Treasure of the Sand

THE "frantic lover" who, Shakespeare tells us,

"Sees Helen's beauty in a brow of Egypt," is matched by the enthusiasm of the classical scholars who have found in these last years more than a Greek Helen in the dry sands of Egypt; for not simply have many fragments of Homer, after earlier recensions, been disinterred, but a vast mass of Greek literature supposed to be irretrievably lost. We have given our readers frequent accounts, at times with much fulness, and even in the original Greek, of these discoveries; but it may be well to give, if possible, a more general view, guided by a long article by F. G. Kenyon, on "Greek Papyri," in the April *Quarterly Review*. Of other Aramean papyri, and the correspondence about the Jewish temple at Elephantine, we have lately spoken.

Without taking space to tell in what dust-heaps these papyri were found or by whom, we call attention to the fact that never since the Renaissance sought the

monkish libraries of the East has so great an addition been made to our knowledge of Greek literature as in these last years. The first fruits began in 1847, when three of the lost orations of Hyperides, the great contemporary of Demosthenes, were recovered; but it was not till 1891 that the real harvest began to appear, when portions of the lost "Antiope" of Euripides appeared, and the even more important "Constitution of Athens," by Aristotle, with the poems of Herondas, and a portion of another oration of Hyperides.

Of these Aristotle was the most sensational. His work covers a most important period, that from Draco to the restoration of the democracy after the rule of the Thirty Tyrants. Its great value consists in its giving us information of the civil organizations of Athens in the fourth century B. C., its magistrates and law courts, and the account how they were elected and conducted their business. His differences from Thucydides give abundant material for the guesses of scholars.

In 1897, another great year, were published the odes of Bacchylides, and an important fragment of Menander. In 1903 a poem by Timotheus appeared, and was followed by attractive fragments of Sappho; and in 1907 a good part of four plays of Menander was given to the learned world, and then came "Pæans" of Pindar, and a historical continuation of Thucydides attributed by some to Theopompus and by others to Cratippus. These, with the shorter "Sayings of Our Lord," are the most remarkable of the discoveries, which include some 600 literary papyri, many of them copies of works previously known, and many fragments unknown, and of various value.

Of these perhaps the most important are Menander and Hyperides. It is extraordinary that the writings of these most famous Greek authors had been entirely lost. Menander was the most popular of the writers of the New Comedy, fairly reckoned with Aristophanes of the Old Comedy. We knew him only by his plots worked into Latin by Terence. Now we have almost the whole of his "Arbitration," and a good part of his "The Demigod," "The Shorn Lady" and "The Samian Woman." The plots are

not remarkable, chance amours, children of hidden parentage, projects of matrimony between youth who do not know each other's origin, and the web unraveled so that the right people marry at last. Menander's praise is for having followed nature so naturally that it was a question which was the original.

Six orations of Hyperides have been recovered in whole or in part, and they are of his most famous speeches. He has not the emphasis and force of Demosthenes, but as an advocate he excelled in simplicity and easy directness, and is to be compared with Lysias or Isocrates. These orations are a most valuable addition to Greek literature.

But to go back to poetry and the drama. We have one ode of Sappho which justifies her reputation. Then we have our first introduction to Timotheus, whose fame as a musician was equal to that as a poet; but it must be confessed that his Persian ode is strained with forced metaphors and exaggerations which give us a new view of what literary extravagance could reach, just as we find in the "Laocoon" a less restrained art than in that of Phidias. More important is the recovery of the twenty odes of Bacchylides. Nothing could be more limpidly clear, in contrast with the transitions and obscurities which make Pindar the most difficult of classical poets. He gives us pure Hellenic grace, altho he belongs to the same great period with Pindar, who was a somewhat older contemporary. We yet miss what we so much want to find, the poems of his more famous uncle Simonides. But we do have 280 lines from nine "Pæans" of Pindar. The papyrus of Herondas is of particular interest, as its eight short poems, in good preservation, are studies in realistic *genre*, which widen the border of Greek genius, giving us the most amusing account of common or low life, colloquial, lively and vigorous.

We have mentioned the most important of the new works. But there are hundreds of papyri of Homer, much of Hesiod, Thucydides, Xenophon, Plato, Isocrates, Demosthenes, all of which prove how good are the texts that we already had. Of the non-literary documents there are thousands, official orders, census rolls, petitions, tax-receipts, con-

tracts, diplomas, school-boys' exercises, and the whole mass of great value as giving us an intimate knowledge of the conditions of life for the centuries immediately before and after our era. And what may we not further hope to find? Mr. Kenyon says:

"If a casual scratching in a paltry village can give us back Menander, and a search for an ancient Egyptian interment can, as a by-product, reveal a Greek soldier buried with a roll of Timotheus, why should not similar chances give us Sappho, Simonides, Stesichorus, Archilochus, Cratinus, Agathon, and others for whom our mouths water, or, like Herondas, almost unknown writers of unsuspected interest?"

There are many more rubbish-heaps, other mummified crocodiles to be found, stuffed and wrapt around with papyrus rolls, or pots containing manuscripts like that from which came Menander, or burials with a favorite manuscript laid on the dead man's body, like those that gave us Timotheus and Hyperides. America must seek its share in these treasures; and, indeed, it has already done so in the great Freer biblical manuscript from Egypt.

The Mistletoe

MR. BURLERSON, of Texas, wants all the mistletoe destroyed by act of Congress. He claims to be interested only in preserving the trees from a harmful parasite, but this was not the association of ideas he provoked in the House which accounted for the defeat of his bill. The man who adventures against the sense of humor and certain early forms of sentimentality in his fellow men is doomed to derision and defeat no matter how just his cause is. For humor is wittily irresponsible and there is something primitively faithful in most men to young sentimentality. So it was this whimsical fidelity to youth that controlled the members of the House who had received long ago precious bribes against such harsh legislation beneath the pretty green emblem of love. And good nature played its part as well, for there is nothing so humorous to remember as the kiss that has been kist. No matter how seriously it was given and taken at the time, middle-aged experience casts a smile over it. And it was this smile, no less than the sentiment that defeated Mr. Burler's bill. They

voted to concede the sweet folly of youth. Besides, they may have reflected upon the natural demands which the mistletoe fills in the romantic scheme of things. For while the young people in the cities and the more sophisticated circles of society usually learn love-kissing from seeing it practised upon the stage, far away in the country places where the best people grow there is no such sacrilegious exhibitions to set unclean examples to young love. But love is the very fig-leaf of the awakened heart, that which estranges youth from youth, an emotion stricken dumb by self-consciousness. It is an unexpected thing for which the happy victims have cultivated no language. And so the swinging bough of mistletoe at a Christmas frolic is a naively transparent excuse for these elemental young people who are ready to kiss, but who are too right-minded to begin on the sly. It is only a parody of a kiss under such circumstances, of course, but they belong to a class unskilled in romantic expression and do not suspect the difference, which is as much a credit to their morality as it is a reflection upon their wit.

Kissing is a curiously unintelligent manner of expression anyhow. It is a sort of tender, mutual grimace which people have an instinct for indulging. And it is an expression of intimacy rather than of affection. If we except the mother's kiss, no one takes it seriously besides those directly concerned in the act. There is something ludicrous, if not very nearly repulsive, in seeing other people kiss, provided the observer puts his mind upon the performance. This is why kissing in public places is so offensive; it is a proclamation of intimacy that should be private, and that becomes an affront to a kind of universal sense of delicacy to be found even in the coarsest ranks of society.

The rise and fall of the kissing instinct is an interesting phenomenon. We all learn to do it before we learn to speak. And there is no difference between boy and girl children in this particular at first. But the time comes when the boy becomes bearish and refuses to be kissed by his woman kind. It is nature's preparation in him for chastity. But from the time a female babe becomes a little

girl till she is well past middle age as a single woman, her relation to kissing is enigmatical. One must experiment to find out what it is. For she is inclined by nature to make the question sufficiently problematical to insure the defeat of any man who tries it. And this is only fair when we consider that with many a man kissing is a form of romantic forgery. He will grow eloquent and pledge his life in exchange with a kind of humorous lightness which women do not understand. In any case, the bargain between them is rarely fair, for the kiss he takes does not mean so much to him as it does to her who gives it. When she parts with her kiss, the woman has parted with a portion of her territory, so to speak. She is not so much as she was before, and when it is too late both are liable to feel the tragedy of the loss. And yet there is something essentially unscrupulous and marauding in masculine nature at this point which makes the average young man willing to cheat again and again at kissing, no matter how honest he is in all his other dealings, and no matter how often he realizes the tragedy of it for the woman. This is why about the only safe place for her to give kisses is under the mistletoe, in the presence of the whole company, after the wedding gifts have been received and the minister engaged for the marriage ceremony. In that case we should not see so many women with that impoverished look about the eyes which sometimes hints that they have lost too many kisses without winning the marriage ring.

Still it is a pity never to kiss or be kissed at all. The tight, vinegar expression about the mouths of some people may be accounted for by the fact that their kisses soured there, or faded into the saddest of all wrinkles. And there are others, women in particular, who wear a dim unloved look, as if a nun's veil separated them from the carnal lips of the world.

But when all is told most of us have had more experience along this line than our features indicate. It is a thing we do not confess for ourselves, nor approve in others. But the reason there is so much advice against kissing is largely

due to the fact that so much of it has been done. The primmest woman, who is most horrified at even the suspicions of it, in the younger generation either was or might have been kissed forty years ago under the mistletoe. The sternest dignitary of your acquaintance, who looks as if he might have been made of the dust blown off the granite cliffs of Eternity, has kissed in his other days. It is an aside expression of life and nature which the grandest of men and the best of women seldom avoid all their lives. And it is not because they are, or ever have been, weak or wrong minded, but the primmest woman and the gravest man have nearly always kissed somewhere years ago for the same reason that the rose blooms and the oak puts forth its green beard of bloom in the spring.

The trouble is we do not keep up the practice of kissing long enough. The lover, who traveled a thousand miles to get the kiss his sweetheart promised, goes to his office every morning after their marriage without a thought of the tender farewell. But the wife thinks of it, and puts herself in the way of receiving it, which is more pathetic than it looks when one considers what it means to the woman to have her kisses so depreciated in value. What we need then is not less kissing, but more of it in the last right hand division of life, where there is no possibility of romantic fraud, as there so often is before marriage.

A New Methodist Creed

A PRINCIPAL matter—at least, a very important question—before the Methodist General Conference now in session at Baltimore is the answer to be given to the proposal of the Methodist Church South, that the Methodist Churches of the world should unite to formulate a statement of faith which should be adequate for the present times. The resolution adopted by the Methodist Church South was as follows:

“Resolved, That the College of Bishops be requested to appoint a commission of five members, one of whom shall be a bishop, and all of whom shall be members of the next Ecumenical Methodist Conference, which shall invite other branches of Methodism to unite with us in the preparation of such a statement of our

faith and such an expression of our doctrinal system as is called for in our day, and this commission shall represent our Church in the preparation of the same."

This is the invitation which will come to the General Conference in Baltimore, and which we venture to think will be declined, notwithstanding its excellent purpose.

At present the Methodist Churches of America are practically under no creed whatever, and this is a chief reason why they have so grown, and why they should formulate no expression of the Arminian faith for future use. The Methodist faith is expressed in what are called the Twenty-five Articles and in Wesley's Sermons and Notes. Those Articles are not an Arminian Creed at all. They are selected from the Thirty-nine Articles of the Anglican Church, out of which Wesley came. They are directed against the Roman Catholic Church. John Wesley omitted the Calvinistic Articles and left the rest. Practically they are non-existent; they are not read and have no effect. The omission of one of the Anglican Articles is very significant; it is that which gave approval of the Apostles', the Nicene and the Athanasian Creed. It was by a remarkable wisdom and foresight that Wesley omitted those creeds. If the Apostles' Creed and the Nicene Creed were not to be made permanently obligatory, what other creed could then have been anticipated?

The remaining statement of faith accepted, in a way, by Methodists, and often spoken of as their doctrinal basis, consists of Wesley's Sermons and Notes. But they are so voluminous that nobody feels obliged to read them and few Methodists possess them. Like the Twenty-five Articles, they are non-existent for practical purposes any longer. They did their work in the early history of Wesleyanism. They entered into the thought and preaching of the Church, and made it Arminian. But the old fight between Arminianism and Calvinism has ended. Nobody is interested in it any more. We have other theological questions to solve. Calvinism has been reduced to semi-Calvinism, and that is identical with semi-Arminianism, and only profest theologians know the differ-

ence between the two. Our questions have to do with the authority of Scripture and the basis of religion.

The Methodist Churches have grown up without any effective creed. The Twenty-five Articles are not a Methodist Creed. The fifty sermons of John Wesley and the Notes on the New Testament are an impossible creed. The tremendous growth of the Methodist Churches over the world, like the tremendous growth of the various Baptist bodies, has been achieved by creedless Churches. Creeds create divisions, not unity. Creeds forbid the fellowship of believers. They obstruct the development of fresh views of truth and the emission of more light out of God's holy Word. That Christians, and Methodists at that, are not agreed on questions that would come into a creed is shown by a remarkable article in opposition to the formulation of a creed which we see in the last issue of *The Christian Advocate*, in which Dr. Buckley says:

"In the Methodist Episcopal Church there are several subjects on which minorities in various numbers exist. These are: the resurrection of the body; the eternity of future punishment; the probationary character of life; entire sanctification; and the philosophy of the atonement. We believe the great majority of the Church are sound in the faith. There are some who believe in the eternity of future punishment, but think that there will be a certain degree of probation after death. The number who do not believe that the body that is raised is the body that was buried is probably increasing, but most of these persons agree with the traditional Methodist faith on the other subjects. The doctrine of entire sanctification has been a sign of controversy through the whole lifetime of the most aged member of the body. Some have practically denied all the different views attributed to Wesley; others, believing themselves Wesleyan, differ from still others who believe themselves Wesleyan.

"Concerning the atonement, some seem to others as having cut away every foundation of the fathers, and some who hold themselves to be immovably orthodox seem to others to out-Wesley Wesley himself. That vigorous affirmative statements on these subjects could be made that would satisfy the whole Church, much less all Methodism, as well as it is satisfied now is extremely doubtful.

"Besides these germs of differences there is the vexed subject of biblical criticism, and the question of converting sinners and arousing dead souls by the revival method."

We believe most earnestly in creeds. They are the necessity of exact thinking. But they should be those which every

thinker makes every year, if need be, for himself. He will modify his views much between the seminary and the grave. He should be left free to do so. The creed will then be a personal matter—a real credo and not a credendum.

“The Land of Tomorrow”

LAST week Monday, at Washington, D. C., in the presence of a distinguished throng, including the President of the United States and the Diplomatic Corps, the cornerstone was laid of the new building of the Bureau of the International Union of the American Republics. Said Secretary Root:

“Many noble and beautiful public buildings record the achievement and illustrate the impulses of modern civilization. Temples of religion, patriotism, of learning, of art, of justice abound, but this structure will stand alone, the first of its kind—a temple dedicated to international friendship.”

The building is to cost \$1,000,000, of which Mr. Carnegie has contributed \$750,000 and the American republics the remaining \$250,000. The bureau, which was founded in 1889 to promote commerce and friendship between the twenty-one republics of the New World, is really the executive committee of the Pan-American Conferences, which are now periodical, and therefore in a sense the Parliament of the Western Hemisphere, just as the Hague Conferences are the Parliament of the World.

The bureau issues an excellent monthly *Bulletin*, and in more ways than we have space here to recount is constantly promoting closer relations between the nations supporting it. Mr. John Barrett, the director, is a diplomat and statesman of experience and vision, under whose guidance the prosperity of the bureau may confidently be predicted.

We have been accustomed, in our provincialism—and the United States is still provincial, internationally speaking—to picture the peoples of Latin America as the miscegenated descendants of Spanish hidalgos, negroes and Indians, a motley aggregation of vindictive, cigaret-smoking half-breeds, dominated by a corrupt Church in a corrupt State, and perpetually engaged in revolutions over nothing in particular. There may be some faint

semblance of truth in this North American impression as far as some of the citizens of the Equatorial republics are concerned. But the vast majority of Latin-Americans are a civilized people.

We should not forget, as President Roosevelt pointed out, that a flourishing civilization existed in the tropics and the south temperate zone while all America north of the Rio Grande was still an unknown wilderness. And today Latin-America is upbuilding a material prosperity and developing a class of leaders fit in intellectual and moral fiber to rank with the flower of the Anglo-Saxon world. At the Hague Conference last summer perhaps the one thing that most impressed Europe was the quality of the South American delegates. It was universally admitted that no abler representatives of any country took part in that memorable gathering than Barbosa, of Brazil, Drago, of Argentina, and Triana, of Colombia. Moreover, Brazil is the only nation in the world to reach that stage of civilization where she has forbidden her Congress to declare war without first proposing arbitration; Chile and Argentina afford the only instance in modern times of two nations actually disarming and swearing eternal peace, as the bronze statue of Christ, on the summit of the Andes, so eloquently testifies; and, thanks to our great Peace Secretary, Mr. Root, the five turbulent little republics of Central America have established an international tribunal which will have jurisdiction over *all* disputes that may arise between them. This is perhaps the most encouraging step yet taken in the new internationalism—it promises to lead to an organic union of these five nations.

In material advancement the Latin-American nations are equally deserving of our respect and emulation. Of the five billion dollars' worth of foreign trade imported and exported by the nations of the Western Hemisphere, Latin-America's share is two billion. Of the 150 million people in the New World, sixty million are Latin-Americans. The average Latin-American consumes in imports about five times as much as the average Japanese, and yet we are ten times as eager to extend our Oriental as our South American trade. Brazil is as large as the

United States with Germany thrown in; Bolivia, Peru and Ecuador have territory about one-third of the United States, and Argentina is as large as all the United States east of the Mississippi, which discharges a one-third less volume of water into the sea than the Amazon.

Buenos Ayres, the largest Latin-American city, is about the size of Philadelphia, and is growing faster than any American city except New York. Mr. Barrett says it has a finer system of docks and wharves, a more costly and beautiful opera house, a larger club and a more extensive newspaper plant than any city in our own progressive land. Rio de Janeiro is half again as large as Boston; Montevideo has a population equal to that of New Orleans; and if Santiago were in the United States it would be our eighth largest city. In fact, South America covers nearly all habitable latitudes; and, taking into account its mines, plains, mountains, rivers, climate and soil, it is undoubtedly the richest continent of the world.

In view of all this, is there not something radically wrong with our people when scarcely any United States tourists visit South America, and when we purchase only one-sixth of her foreign exports? Our merchants should wake up to their opportunities; our universities should establish hundreds of scholarships for promising South American students seeking education here; our papers should enlighten our people about the marvelous progress going on under our very eyes; and, most important of all, our statesmen should turn their gaze to the South.

The passage of the Porter proposition at the recent Hague Conference, which practically makes the Monroe Doctrine a canon of international law, leaves the Western Hemisphere to work out its destiny free from the burdens of armaments that are impoverishing the peoples of Europe. This advantage, if properly appreciated, seized and acted upon, is enough to insure the future of the New World. Europe is the land of yesterday. We are unquestionably the land of today. South America has been called the "land of tomorrow." Let us do our part in bringing her into her heritage.

Popular Government in Oregon

A DOCUMENT unique in American political literature has just been issued by the Secretary of State of the Commonwealth of Oregon, and distributed to every voter in the State. It is entitled, "A Pamphlet Containing a Copy of All Measures 'Referred to the People by the Legislative Assembly,' 'Referendum Ordered by Petition of the People,' and 'Proposed by Initiative Petition,' to be submitted to the legal voters of the State of Oregon for their approval or rejection at the regular general election to be held on the first day of June, 1908, together with the arguments filed, favoring and opposing certain of said measures."

The first fact that arrests the reader's attention, upon looking over this pamphlet, is the magnitude of the demand which it makes upon the interest, thought and time of the voters to whom it is addressed. No less than ten constitutional amendments are proposed, and nine acts. These are supported or opposed by nineteen arguments. The range of subjects is wide—from proportional representation in public offices, number of judges in the Supreme Court, exemption of property from taxation, and woman suffrage, down to the building of armories, the custody and board of prisoners, and the regulation of salmon fishing in the Columbia River.

Four of these measures are referred to the people by the Legislative Assembly. Seven go to the people because the referendum has been ordered in these cases by petition of the people. The remainder are proposed by initiative petition. All are printed in full. The form in which they are to be set forth on the official ballot is given in all cases, and the instruction to vote "yes" or "no." Arguments in support or objection are in all cases admirably brief and pointed. Some of them are from individuals, speaking as citizens merely. Some are offered by business interests, and some are presented by associations, clubs and societies.

All in all, so remarkable a body of propositions proceeding from and addressed to a democratic electorate, has never before been seen in America. The pamphlet as a whole is in essentials like

the printed "Warrant," setting forth to the voters of a New England town the subjects upon which they will be expected to render decision at the annual town meeting. If the Oregon experiment works, it will be in effect the establishment of the substantial reality and almost the form of the town meeting plan of democratic government in State affairs by and within an entire commonwealth.

It would be absurd to make any prediction as to whether the scheme will in fact succeed or not. As we have said, this warrant is a large order. It makes a big demand upon popular interest, intelligence and effort. At the same time it is well calculated to awaken the interest, to tempt the citizen to expend the necessary time, and to quicken his intelligence. We cannot imagine anything more likely to prove of high educative value than the circulation and the inevitable discussion of the propositions of such a pamphlet, followed by the actual voting.

If the plan does succeed, it will certainly be the beginning of momentous political changes in the United States. It will be the assurance that this country will ultimately be a true democracy, and not a plutocratic republic. If the people of Oregon show themselves to be equal to the task which they have imposed upon themselves, they will create the reality of government of, for and by the people. And if that reality is created in Oregon, it will at no distant day be created in a large number of the other commonwealths.

The Proposed Increase of Freight Rates

IN the month of April the number of idle freight cars in this country was increased by 106,359, or by nearly 35 per cent., the total rising to 413,338. At a time when declining demand for transportation is indicated by such figures, the railroad companies propose to increase their freight rates by at least 10 per cent. Panic depression has compelled merchants and a large majority of the manufacturers to reduce prices; but the railroads think it expedient to add one-tenth to the prices of what they have to sell. It is estimated that this addition, if it could be collected on the present volume

of freight, would yield more than \$100,000,000 of revenue in a year. In the end, consumers would be required to pay it. A vigorous protest has been made by a convention in which more than 300 commercial or shippers' associations were represented.

Consideration should be given to the arguments of the railroad officers who are in favor of the increase. They were set forth at the convention of shippers by Vice-President Brown, of the New York Central. In substance they are that in the last eighteen months railroad wages have been increased by \$100,000,000 per annum; that laws restricting the hours of labor have added about \$25,000,000; that the pay for carrying the mails has been reduced by \$10,000,000, and that the Employers' Liability act has "removed the last vestige of protection against the personal injury claims of employees." Rates must be increased, Mr. Brown says, or wages must be cut down. With this may be read the following remarks by Henry Fink, the veteran chairman of the Norfolk & Western, a railway officer of large experience who has served in many positions of great responsibility:

"The way to get more traffic is certainly not to raise freight rates at a time like this. A general increase could have been made during the boom times without any injurious effects, but now it cannot be made until business revives. In former periods of depression it has been the habit of the roads to lower rates rather than to raise them, but it has also been their habit to reduce wages, in response to economic law. Such a development is yet likely to come before we are through with the present conditions, although not in the near future."

To reduce wages would be to invite a general strike. It is not clear to us that a rate increase of 10 per cent. would add anything like 10 per cent. to the revenue. It would tend still more to discourage traffic. Exporters in New York say that many idle cars would come into use if grain rates should be lowered. They assert that the present rates drive export grain traffic to Canadian lines and ports. Surely, an increase would not recall this lost trade; it would tend to make the loss greater. And so the increase on other products (estimated by the Illinois Manufacturers' Association to be equivalent to a tax of \$1.75 for each inhabitant of the country), would tend to restrict con-

sumption, reduce traffic and retard recovery from panic depression, while adding something to the gross receipts of the roads. In the long run, more might be gained by a temporary reduction of rates.

Restrictive legislation would be invited by the proposed increase. At present there is a general inclination to avoid such legislation. It would be unwise for the roads to excite public hostility. Whatever may be the truth, a great many people believe that the present freight rates are too high, and that they have been maintained to meet the requirements of overcapitalization. Our railroad officers should remember, also, that by many the offenses of certain railway companies and railway capitalists are regarded as causes of the panic. There are rebate suits and other suits pending which tend to keep public hostility alive, and it is not softened by such official reports as the one recently sent to Congress, asserting that great railway companies have monopolized the coal supply of the Rocky Mountain States by means of controlled corporations which obtained coal lands by fraud.

Manufacturers and other shippers who are suffering by reason of reduced prices and restricted sales ask why the railroads should not bear what they believe to be their just share of the general burden. It is quite reasonable that they should complain when the roads plan to shift this share to the weary shoulders of shippers and the consuming public. "We must all economize," says one railroad officer who argues that rates must be raised. Shippers say that his "all" does not appear to include the stockholders of the roads.

We do not hold that there is no weight whatever in the arguments of the railroad men for an increase of rates, but we do think it would be unwise for them to order the increase before striving in all possible ways to convince the public that it ought to be made. The shippers in their convention suggested a kind of arbitration. They proposed that the carriers should submit the project to the Interstate Commerce Commission, which should hear both sides, and that the rates should remain as they are until the announcement of the Commission's decision, which, as we understand it, they promise to accept. This is a fair proposition, and

the companies should not reject it. Their men will strike if they cut wages; the public will strike if they raise rates. Much trouble may be avoided if the whole matter is left to the Commission.

The Socialist Convention The convention of the Socialist party met in Chicago last week and nominated Eugene B. Debs for the third time for President, and Ben Hanford, of this city, for Vice-President. Mr. Hayward withdrew his name. There were the usual debates on the floor between the "Impossibilists" and the "Opportunists," but whenever a practical measure came to the vote the practical delegates were in the majority and registered an attitude of mind which puts the Socialist party more than ever before in line with the European parties. The convention decided to carry on a propaganda among the farmers, the implication being that it was necessary to show the farmer that his small holdings were not to be taken from him since they were his means of production, and to make it clear to him that he belongs to the producing class and should therefore stand with the industrial workers. The essential "demands" in the platform are the following:

"1. The national ownership of railroads, telegraphs, telephones, steamship and all other means of transportation and communication.

"2. The national ownership of all industries which are organized on a national scale and in which competition has virtually ceased to exist.

"3. The extension of the public domain to include mines, quarries, oil wells, forests and water power.

"4. The scientific reforestation of timber lands and reclamation of swamp lands.

"5. The absolute freedom of press, speech and assemblage.

"6. That religion be treated as a private matter—a question of individual conscience. No toleration of clericalism as a political power, and no discrimination as to taxes in favor of religious bodies.

"7. The improvement of the industrial conditions of the workers:

"(a) By shortening the workday in keeping with the increased productiveness of machinery.

"(b) By securing to every worker a rest period of not less than a day and a half in each week, including Sunday when practicable.

"(c) By securing a more vigorous inspection of workshops and factories.

"(d) By forbidding the employment of women in all industries harmful to their morals or health.

"(e) By forbidding the employment of children under sixteen years of age.

"(f) By forbidding the interstate transportation of the products of child labor, of convict labor, and of all uninspected factories.

"(g) By abolishing public charity and substituting in its place compulsory insurance against unemployment, illness, and accidents, invalidism, old age and death."

Governor Hughes

There is now much probability that Mr. Taft will be nominated for President on the first ballot. This makes the question more immediately interesting whether Governor Hughes, who has definitely and most positively declared that he will not accept the nomination as Vice-President, and would not serve if elected, would accept renomination as Governor of New York. He has made no such emphatic declaration on this subject, altho he did weeks ago say that he would retire to private life to practise his profession. But things have occurred since then. The Legislature has been called together in extra session, but owing to the sickness of a Senator it is doubtful whether the anti-racing bill can be enacted. If not we may be sure Governor Hughes will consent to run again. He has said he is in this fight to win; and at whatever financial loss to himself he is under a moral obligation which no one could recognize better than himself to serve the people. One's private interests must give way before public welfare, just as in war we draft men from their work and their families to serve the State at the risk of even life.

Spurious Art An art-dealer in this city has been arrested on the charge of selling spurious paintings, knowing them to be such. That there is a great deal of such falsification is generally admitted in the art world. A dealer claims to have a work by some old artist. He refuses to tell his client its history. It has been long in the possession of an old family which is unwilling to have it known that they have been obliged to sell it. Or the Italian law forbids its being exported, and it would never do to have the knowledge of its sale become known in Italy. Or some such story is concocted as to a painting assigned to an American artist deceased. There are several dealers who in private

report are guilty of such frauds. When every year, on some pretext or other, they have an auction sale of paintings by deceased artists which they have failed to sell to private customers, one wonders where so many old masters come from, or how they can be sold at prices far below what the acknowledged genuine works of the same master would fetch at private sale. It is greatly to be desired that such frauds should be exposed.

English Enunciation

A German professor of English says it is safe to allow Americans to teach English, as their English pronunciation is quite as good as that of Englishmen. He condemns the cockney pronunciation he has heard in London schools. We knew it all before. There is much less provincial variation in American pronunciation than there is in England, and not near so many dialects. Of course, there is some nasal twang yet left, and some high and sharp tones, but for accuracy and nicety of enunciation, for careful utterance of unaccented vowels, American pronunciation is markedly more exact than the English. Accepted English orthoepists actually declare for the omission of the *r* sound in many cases in which we insist that it should be heard; and they think it perfectly correct to blur different unaccented vowels with the same indistinct neutral sound. Of course there is much of the same carelessness in this country, but it has not yet become defended and accepted. If one will test his careful enunciation let him see if he makes a clear distinction in pronunciation between *idle*, *idol* and *idyl*.

Municipal Ownership

There is published in this city a monthly journal called *Concerning Municipal Ownership*, the object of which is in every possible way to discredit municipal ownership and management of public utilities, such as street lighting, water supplies, street cars, etc. Of course, this is published and paid for in the interest of corporations that are afraid their profits will be reduced by cities taking up their work and profit. Every blunder or failure from lack of experience or honesty that appears under municipal ownership is made the most of. But we should not have expected such an attack as that

which appears in the May number, on the extravagance of the Post Office Department, which always shows a deficit to be paid. That deficit comes from the great amount of free matter sent by Government departments; but allowing some extravagance, the conclusion to be expected from the criticism ought to be that the post office should be farmed out to a big private corporation, which would do the work better and cheaper. The experience of the world shows that the post office is a matter for public ownership, and that its duties ought to be extended in this country, as they have been in Europe. If you want to send money abroad, it is cheaper to buy a postal order than to get a private banker's draft. The argument which would give the post office to a private corporation would bid us give over all other public services, such as the roads, the police, the collection of taxes and the public schools, all of which have their blunders and graft. We heard the case the other day of a schoolhouse where a washer was needed on a bolt, which the janitor could have put in, had he not been forbidden. So he sent to the plumber, who sent a first class man to examine; he went back to get the washer, found he had to have an assistant, and the two did the work and sent in a bill, which was paid, for seven dollars' labor and time. Nevertheless we prefer to have the public run the public schools.

We gave last week an account of the exodus of about twenty Episcopal clergymen and theological students to Rome. The Rev. Sigournay W. Fay, Jr., "Canon of St. Paul Cathedral, Fond du Lac, and at present professor of dogmatic and moral theology at the Episcopal Seminary at Nashotah, Wis.," is thus quoted as to this movement:

"One of two things is bound to happen. Canon 19 must be replaced or its true interpretation must be fixed by the Bishops, or there will be a disruption in the very midst of the Episcopal Church and a secession to the Church of Rome larger than any since 1845, when Cardinal Newman and a number of distinguished clergymen of the Anglican Church were received into the Catholic Church in England. All thru the Episcopal Church in the West, from where I have just come, as well as in the East, there is widespread dissatisfaction and unrest which is increasing every day."

When asked if he thought the crisis would take place soon, he answered:

"I should say within a year or six months, as no man can live in such a state of uncertainty."

We do not believe that any such "disruption" is likely.

By an old and bad rule which cannot easily be revoked, the Democratic convention must give a two-thirds vote to a successful candidate; a majority will not nominate. If, then, 335 votes should persistently be cast against Bryan he could not be nominated. Already over 302 votes are pledged to Johnson, Gray, and other candidates. The strength of Bryan has been in the absence of competition; but now men are appearing to compete with him, particularly Governor Johnson, of Minnesota. It will not help the good feeling toward Mr. Bryan that his friends have tried hard to draw delegates away from Governor Johnson in Johnson's own State; and the fine impression Governor Johnson has made in Washington is making Bryan's chances less, for the support given him has been wide but not enthusiastic and may fall away.

We are coming nearer to practical aerostation. The brief day of dirigible balloons, necessarily a failure because of their subjection to the winds, is past, and such work as that of the Wright brothers or Mr. Bell has the future; and already miles of successful flight have been achieved. Within five years we ought to have airships for sale, as we now have automobiles.

We have found a use for American-born duchesses and countesses—they can return and enter politics as Socialist spellbindresses. We are glad that Mrs. Longworth has withdrawn from the feminine scrap. Such a contest of speakers would have been without dignity or even seriousness.

The Senate has past the bill creating the forest reserve in the White Mountains, but it remains to be seen whether Speaker Cannon will allow it to pass in the House. The influence of the Conference of Governors ought to assure so important a measure.

The Sin of Omission

THE street lamps had been lighted, but the interior of the Old Ladies' Home was dim with the sudden winter twilight, says a recent writer in *The New York Insurance Journal*. I was scarcely able to see my way along the hall, although I was conscious that the bent and sorrowful shapes of old women were moving about thru the gloom.

"You will find Mrs. S. in her room; go right up," said the matron at the door.

"But," I hesitated, "may I not send up my card?" I had been used to doing so in the old days when I had called at the stately mansion over which she had presided like a gentle queen.

"It will not be necessary." The matron smiled the institutional smile, and I past her and stumbled on the first step. "It's rather dark, isn't it?" I mumbled, confusedly. But no one paid any attention to me, and I groped along, with my hand on the wall, making slow progress upward.

Suddenly from below the stairs, where the singer had gone to press her face against the window to catch the last, grudging gleam of day, came the quavering notes of a song:

"Abide with me, fast falls the eventide,
The darkness deepens, Lord with me abide."

A sob caught my throat as the trembling, broken old voice went on. "The darkness deepens"—dear God, the lonely darkness! Strange emotions rushed upon me. Rage at the hands which govern institutions surged to my temples. Had I been a man I should have sworn pirate oaths and eased my spirit. As it was, I turned where I stood and shouted:

"Turn on the lights, won't you?" But again I had no attention paid either to my request or me. Just then some one touched my arm and I started. But a caressing voice said:

"Tain't time, dearie. They're waitin' for half past six. Can't you see? Your voice don't sound as if you was old enough to be afraid of the dark!"

"Are you afraid of the dark?" I asked. And she answered:

"Oh, yes. All old folks are, I guess. Father and I always had plenty of light after we got along in years. It comforts me to feel that he's gone where there ain't any dark hours to sit and cry thru. And I hope he don't know I'm here. He could not be real happy in heaven if he realized how he'd left me, I'm sure."

I patted her hand, having no answer but tears, and made my way up to the landing. Groups of old ladies were huddled here and there along the hall. I could hear snatches of their gossip as I went along. After two or three journeys up and down without being able to find the door I sought, I went back to one of the groups to ask my way.

"I'll go wid ye to the dure," volunteered a cheerful voice. There was a scraping of a crutch, a gallantly smothered groan as the rheumatic old limbs were straightened for the walk, and we set out together a dozen yards to the door. Then I waited to make my thanks to my conductor:

"Don't say a wo-ord," she returned with fine courtesy. "It was a grand journey in plisint company."

And "tap, tap" went the crutch, retreating, on the uncarpeted floor.

Mrs. S. opened the door at my knock. I had seen her last receiving in her own drawing-room the Governor of her State. But in this tiny white walled room she was the same gentle lady.

"You have heard," she asked, "that our fortune had been swept away in a business failure?"

I had heard.

"And then," she added softly, "the great sorrow came. My husband died."

There was a long silence.

"Are you—comfortable here?" I asked, awkwardly, remembering other scenes.

"Oh, ye-es. I should be content. Many are less fortunate, even. You know my dear husband, who lavished so much upon me while he lived, died uninsured. That is really the cause which brings most old ladies into institutions to spend their last days. But, oh, I wish hus-

(Continued on page 1164.)

Legal Value of Life and Limb

THE economic value the law places on life and limb has recently been made the subject of statistics that have been compiled by a writer in *Bench and Bar*. A member of any household who contributes to its support has a certain ascertainable value. If he is injured or killed his working powers are lessened in the first place or they entirely cease and determine in the other. At age ten, according to the statistics under consideration, which are based on actual legal decisions, a male of the laboring class is worth a trifle over \$250. At age fifteen his value has risen to over \$4,000. At age twenty-five he is worth \$5,488.03. The decisions examined show that juries do not value as highly the lives of those killed after the last-named age, but the assessed value on a man's life thereafter proceeds on a downward sliding scale until the life of a man of seventy is rated at only a fraction over \$17. The average valuation for certain injuries which has also entered into the *Bench and Bar* calculations is likewise full of interest to the general reader. Some of the items are as follows: Loss of one eye, \$5,000; loss of one leg, \$15,000; loss of both legs, \$25,000; loss of one arm, \$10,000; loss of one hand, \$6,000; loss of one finger, \$1,500; permanent disability, \$25,000. The increase in the amount allowed for injuries not resulting in death over that allowed in fatal cases is notable and at first glance appears surprising. When this phase of the subject is carefully considered, however, it will be observed that the wisdom of the court in such procedure is based on common sense, because one who has been seriously maimed is not only hampered in or prevented entirely from supporting his family, but in many such cases he becomes an actual drag upon those dependent upon him, and the breadwinning relations are frequently entirely reversed, and the husband and father too often becomes the helpless dependent. The courts righteously assess the employer heavily in such cases, in order to compensate, as far as possible, for

the injury done to others as well as to the one primarily suffering the injury. Conservative employers should therefore see at once the value of liability insurance, which provides indemnity in cases where the assured is legally liable. A judgment of \$5,000 and over against even a going concern, whose capital is limited, added to the cost of defense, will divert much of its profit, if, indeed, it fails to bankrupt the establishment.

....Upon the books of the United States Steel Corporation are now carried the names of nearly 96,000 shareholders.

....Chili has appropriated \$15,500,000 to be expended this year in the construction of railroad lines by the Government.

....Among Mexico's purchases and imports from this country in 1907 were the following: Boots and shoes, \$3,325,684; sewing machines, \$1,475,262; automobiles, \$1,259,614; agricultural implements, \$1,039,658; typewriting machines, \$721,000.

....A recent report shows that about 3,600 miles of the Pan-American railway are yet to be constructed. The distance from New York to Buenos Ayres is 10,400 miles; there is a continuous line from New York to the southern boundary of Mexico, 3,770 miles; trains are running for 2,500 of the remaining 6,630 miles, and 400 miles of road are under construction.

....In Berlin, 600,896 persons are subject to the income tax, and 542,288 of these have taxable incomes ranging from \$214 to \$714. Incomes from \$23,800 to \$119,000 are reported for 470 persons; 39 have from \$119,000 to \$238,000; 4 are taxed on from \$238,000 to \$476,000; two pay on incomes between \$476,000 to \$714,000, and only two have incomes exceeding \$714,000.

(Continued from page 1163.)

bands and fathers could know that an institution, no matter how well it is conducted, is not so good a place to live and die in as the smallest, humblest place that one can call her home."

Survey of the World

National Politics

It is now generally admitted that Secretary Taft has delegates enough to nominate him at Chicago on the first ballot. The managers of his canvass say he has 584 (or 93 more than a majority), and that 700 votes will be cast for him. Estimates made by prominent Republican journals differ but little from these figures. On the other side, Mr. Bryan's friends predict that he will surely have the two-thirds vote of 668 required for a nomination in the Democratic convention. One independent journal gives him 801. But Democrats who oppose his nomination do not yet admit that it cannot be prevented. Governor Johnson, who was in the South last week, has made a very favorable impression, but many who would like to see him nominated say that he entered the field too late. In Alabama last week, at the primaries, he carried seven counties, but the State is for Mr. Bryan by three to one. In the Pennsylvania Democratic convention a resolution instructing the delegates to vote for Mr. Bryan was defeated, 123 to 187, and no instructions were given. Commenting upon the results in these States, Mr. Bryan says that his friends were opposed in Alabama by the Steel Trust, and in Pennsylvania by the same Trust and other combinations. At the primaries in Pennsylvania, he continues, two-thirds of the Denver delegates were instructed for him, but in the convention the delegates elected at the same primaries "joined in with a political boss to defeat instructions." He refers to Col. James M. Guffy.—In a public address at Kenosha, Wis., on the 23d, Mr. Bryan remarked that Senator La Follette was the

only Republican candidate who really could be regarded as a representative of the reforms demanded by the people. A Republican, he said, had asked him whether he didn't think Mr. Roosevelt talked too much and acted too little.

"I answered by asking him what a person could do whose hands were tied behind his back by a lot of highwaymen, and who had nothing left except his voice. Would you not give him credit for making a noise?"

—Leslie M. Shaw, formerly Secretary of the Treasury, speaking in Chicago, on the 22d, before the National Electric Light Association, said that there was now no conservative leadership in either party. He also made the following remarks, which have excited much comment:

"A few months ago the largest capitalized corporation on the globe sent its representative to the Chief Executive of the United States asking permission to take over its principal competitor. It is currently reported that permission was granted, and, so far as I know, the American people approve. I have no hesitancy in saying that this is the only first-class country in the world where such permission could have been obtained from the Executive Department of the Government. Anywhere else such a request would have been answered, 'Go consult your lawyer.' I am expressing no opinion as to the wisdom or want of wisdom of such procedure. I am simply citing instances to illustrate the operation of the law of evolution which carries us onward, and, undoubtedly, in the main, toward better things.

"I am an optimist, but I want to emphasize the fact that a designing and ambitious Executive, clothed with authority to fix rates, to determine the life tenure of corporations and business combinations, and to grant or withhold franchises, would be in a position to perpetuate himself and his friends in office as long as he was willing to accept political support as the price of immunity."

Mr. Shaw here referred to the acquisi-

tion of the Tennessee Coal, Iron & Railroad Company by the United States Steel Corporation in November last, an account of which was given in our issue of November 14th. It was reported at the time that the transfer was preceded by inquiries made at Washington by E. H. Gary (chairman of the Steel Corporation) and Henry C. Frick.

The Dismissed Negro Soldiers

It is understood that Senator Foraker will take into the Republican convention the question of the dismissed negro soldiers. In response to inquiries as to his reasons for consenting to the postponement until next December of a vote in the Senate upon his bill for the restoration of these soldiers to the army, he has written a letter in which he says:

"With the President active in his opposition personally importuning Senators, I was unable to get a vote, even if I succeeded in getting the bill before the Senate, and unable to pass the bill if I did get a vote. At most, I could get assurances of only thirty-five votes, and some of those were wavering. It was necessary to have forty-seven. A vote at this time, therefore, meant defeat and the end of all hope of restoring the soldiers. Postponement was better, because, in the first place, it could not be worse; and, in the second place, it keeps the subject alive and in a practical form for consideration during the present campaign. The whole country knows that the Brownsville subject has been narrowed down to a question of my bill, which means complete restoration, or the Warner bill, which means whatever the whim of the President may see fit to allow, and that, I am satisfied, would be very little, if anything.

"As late as April 24 he wrote to Senator William Alden Smith, of Michigan, that he thought many, if not all, the soldiers guilty, and that there was no more excuse for sympathy for them than there would be for sympathy with Czolgosz or Guiteau, and that my bill meant only to force a lot of murderers and perjurers back into the army, and that he would feel it his duty, if we passed the bill, to veto it, and if we passed it over his veto, he would refuse to enforce it. I have no doubt of passing the bill in December because enough Republicans have promised me that if I would allow the bill to go over until then they would at that time vote with me to pass it.

"If the bill had been voted upon and defeated at this session the colored voters of the country would not have had any means of showing their displeasure except by voting against the party in a spirit of revenge. Now, with the bill postponed, they have at least a living issue, and they have a right to demand of Republican candidates for office, including our candidates for President and Vice-Presi-

dent and all other candidates for re-election to the Senate and to the House of Representatives, that they will pledge themselves to support the Foraker bill.

"I am a firm believer in the intervention of Divine Providence in the affairs of men. While postponement was to me a bitter and reluctant conclusion, yet I feel that after all it was of God's ordering, and that in due time we shall all see and appreciate that what now appears to be so disappointing and discouraging is for the best."

In the Senate, on the 23d, Mr. Foraker spoke of the letter said to have been sent to Mr. Smith by the President, saying it should be printed in the *Record*. It was not produced, and official inquiry concerning it was discouraged.

Suit Against the New Haven Road

The Government brought suit against the New York, New Haven & Hartford Railroad Company on the 22d, when District-Attorney French filed in the Circuit Court at Boston a bill in equity to prevent the company from exercising any control over the Boston & Maine road and to separate it from the extensive trolley system it has acquired. It is charged by the Government that a combination or monopoly exists, or is about to be formed, in restraint of trade and in violation of the Sherman act. It is alleged that the company has acquired possession of about 500 of the 600 miles of trolley road in Connecticut, 400 of the 500 miles in Rhode Island, and 600 miles in Massachusetts, all of which were, before the acquisition, in active competition with its lines; also that by the purchase of 35 per cent. of the stock of the Boston & Maine it has practically secured control of that company. Reference is also made to the defendant company's acquisition of several coastwise New England steamship lines. In these ways, it is asserted, the company has practically established an interstate monopoly in New England and suppressed competition in land transportation between New England and other parts of the country. It is said that the hearings in court cannot begin until August.—

When the announcement was made, it was asserted in several journals that there had been a quarrel about the case between the President and Attorney-General Bonaparte, that the President op-

posed the suit, that Mr. Bonaparte threatened to resign, and that then the President yielded. With this story were published assertions that officers of the company had recently been assured by the President that there would be no suit, and that permission had been given some time ago for the acquisition of the steamboat lines. An explicit denial of the stories was given out at the White House, where it was said that they were "a mere invention"; that there had been no difference whatever between the President and the Attorney-General; that there had been no division of opinion, nor "the slightest friction," at the Cabinet meeting, and that the suit had been determined upon three weeks ago. It was explained that publication of the news had been delayed for a short time, on the 22d, in order that the Cabinet might consider the question whether a recent opinion of the Massachusetts Supreme Court would not affect the course of procedure and make it advisable to bring suit in another State; and that it was promptly decided that this opinion did not require any change to be made. The president of the defendant company, Mr. Mellen, has frequently been consulted by Mr. Roosevelt, and was regarded, a year or two ago, as a supporter of his policy.—Vice-President Brown, of the New York Central, says he is willing to submit the proposed general increase of freight rates to the Commission for an opinion as to the justice and reasonableness of it. There will be a joint conference of shippers and the railroads on the subject. Rates from New Orleans to Chicago on coffee, sugar, molasses and rice are to be increased at once.—In the Senate, Mr. Foraker's proposition that the commodity (or coal) clause of the Rate law be made applicable only to coal lands or other property acquired by the roads since June 29th, 1906 (the date of the law), was rejected by a vote of 23 to 32. Among those voting for it were Senators Aldrich, Knox, Hale and Crane.

No Publicity for Campaign Funds

For some time the Democrats in the House have been urging the Republican majority to take up and pass the bill (introduced by Mr. Mc-

Call) requiring full publicity for campaign fund contributions. On the 22d Mr. Crumpacker, of Indiana, asked for the consideration of the McCall bill, but it soon became known that to the original measure had been added provisions quite offensive to Democrats from the South, and not intimately related to any project for publishing campaign fund receipts and expenditures. These additions were designed to open the way for a reduction of representation in the Southern States where by statute or otherwise a large majority of negroes are prevented from voting. One of them provided for Federal supervision of elections. But the added section most objectionable to the minority was that which required the Director of the Census to report the number of male citizens of voting age in each State, the number of those to which the right to vote at any election for the choice of Presidential electors or members of Congress has been denied or in any way abridged except for participation in crime, and other statistics which might be needed in making an apportionment which should take into account any elimination of the negro vote. It was admitted by Mr. Dalzell and other Republicans that the information was sought in order that it might be used in reducing representation. The additions were sharply attacked and denounced by Southern Democrats. The bill was past by a vote of 160 to 125, but the Republicans did not expect it would become a law, for it was known that such a measure could be past in the Senate only after a very long and bitter debate. When the bill was received in the Senate it was referred, without discussion, to the Elections Committee, in whose custody it will remain. The action taken by the Republicans of the House appears to have prevented any legislation at this session for campaign fund publicity.—The ocean mail subsidy bill has been laid aside. After it was past in the Senate, some time ago, it was disapproved in the House Committee. Whereupon the Senate attached it to the Post Office appropriation bill sent over from the House. On the report of the conference committee the amendment was rejected in the House by a vote of 145 to 156. Another trial was made on the following

day, the 23d, when the vote was substantially the same, about thirty Republicans standing with the Democrats in the negative.

The San Francisco Bribery Cases

At the end of the trial of Abraham Ruef, for bribing the San Francisco supervisors to vote for a trolley franchise sought by the Parkside Realty Company, the jury disagreed, on the 21st, after being out forty-eight hours. There was an even division, six holding that the testimony of the supervisors against Ruef ought not to be accepted because they had been his accomplices. This testimony, given by ex-Supervisor Gallagher and others, was in accord with the published history of the corrupt transactions. Gallagher is the witness whose house was recently wrecked in the night by dynamite. It is alleged that the defendants in the bribery cases sought thus to get rid of him. There are 117 more indictments against Ruef, who represented corporate interests in their dealings with the supervisors. Some time ago the proprietor and the editor of the *Bulletin* were tried for criminal libel (and acquitted) upon complaint of a millionaire named Tevis, the newspaper having asserted that there had been corrupt negotiations with the supervisors looking to the purchase of a water supply controlled by him. In that trial the defendants had the support of Prosecutor Heney, Detective Burns and others engaged in the movement against corruption. They are now to be tried again upon charges based upon the published matter cited in the first trial. In public addresses, Prosecutor Heney has recently denounced by name the proprietors of several prominent San Francisco journals, asserting that they are in league with the indicted men now awaiting trial.

The new Philippine
Philippine Islands Assembly adjourned on the 22d, after having been in session 180 days. An attempt of the Radicals to pass a resolution favoring immediate independence was unsuccessful, owing to the opposition of the Conservatives, led by President

Osmena. Less than three-quarters of the sum for which the Governor-General asked, to meet the expenses of the Government, was appropriated, and the salaries of bureau employees were reduced by one-third. It is said that the Commission may consent to such a reduction, provided that it shall apply only to the successors of the men now in the service. A reduction of the amount given for the constabulary requires the discharge of seventy-five American officers. There was an attempt to reduce the Commissioners' salaries by 40 per cent. Immediately after adjournment the Governor-General called a special session for further action upon appropriations.

The discouragement of
British Politics the Liberals on account of their recent losses in the elections of England has been to some extent alleviated by the result of the by-election in the Stirling district of Scotland, where Arthur Ponsonby, secretary to Sir Henry Campbell-Bannerman, was elected to the seat of the late Premier by a greatly increased majority of 1,361. —Premier Asquith has announced that the Cabinet will bring forward within two years a comprehensive measure of electoral reform on democratic principles. This may include a proviso granting full suffrage to women on the same terms with men. Mr. Asquith admitted that he was not convinced himself of the desirability of woman suffrage, but he recognized that the movement had gained great impetus in recent years, and it only remained to see if the women of the country as well as the electors favored it. The Suffragettes regarded the promise of the Premier as indefinite and unreliable, and on the following day twenty of them besieged his residence in Downing street with a demand for immediate action. The police arrested six of the leaders, three of whom refused to give peace bonds, and were sent to prison for one or more weeks. —The Education Bill past its second reading in the House of Commons on May 20th after a debate of three days by a vote of 370 to 306. The Nationalists voted with the Unionists against the measure. —A very radical bill intended to encourage

foresight and system in the building of cities is in the House of Commons. Mr. Burns in presenting it for second reading called attention to the fact that in twenty-five years half a million houses had been built in greater London, a great number of new streets laid out, and all upon no orderly plan. The acreage taken from the agricultural area of the country in fifteen years for houses, factories and railways equaled that of the total potato crop. British cities could be transformed and made artistic and convenient, as Paris and Vienna had been. The bill gives the local authorities power to regulate the construction of houses to avoid overcrowding and to provide for methodical extension. The Local Government Board may authorize the council of any borough, urban or rural district to prepare a town planning scheme, and, failing local action, the Department may order the authorities to act. The Public Works Loan Commissioners are to be empowered to grant loans to rural authorities for the purpose of the bill for eighty years. The land needed for the suitable development of towns may be acquired compulsorily by the local authorities.

French Affairs

The visit of President Fallières to London is made the occasion of the display of great enthusiasm over the cordial relations which have been established since the accession of Edward VII between the two countries. The President of the French Republic arrived on May 25th on the French cruiser "Leon Gambetta," and was met at Dover with the largest naval fleet ever brought together in the Channel, fifty-three battleships under the command of Lord Charles Beresford. The four days' series of entertainments will be of a splendor unequalled save by the visit of the German Emperor last year, and the heartiness of the reception on the part of the people is very much greater than on that occasion. Beside the dinners and formal receptions there will be a gala performance at Covent Garden, at which Madame Melba will sing the part of Marguerite in Gounod's "Faust" and Madame Tetrassini as Leila in Bizet's *Les Pêcheurs des Perles*. The President and the King will together visit the Franco-British Exhibition at London,

which was opened on May 15th. A meeting has also been arranged for June 9th between the King of England and the Emperor of Russia at Reval, to which the King will be taken by the Royal yacht "Victoria and Albert" escorted by two cruisers.—The Pope has refused to accept the clause in the Church devolution law which provides for the creation of mutual aid societies of aged priests. The Catholics of France who were in favor of compromising with the Government on the question of the Church property, believed that in this measure a way had been found to save from confiscation part of the funds which have been donated for the pensioning of priests and the endowment of masses. The law recently past by the French Government provided for the formation of associations of infirm and indigent priests, who would derive their support from these funds and carry out the wishes of the donors in regard to the celebration of masses. The funds which the Pope refused to accept under this arrangement amount to many millions of dollars, which will now be turned over to public charities. The Pope in his letter to the French Episcopate explains that the proposed associations are not safeguarded by ecclesiastical authority, and the Church cannot authorize a system which is in opposition to the intentions of the deceased donors, and in violation of the unchangeable rules regarding the celebration of masses. He says further

"While the authors of the law seek to avoid the odium of having taken away the bread of poor, aged and infirm priests, they offer to return to the Church a small part of the sequestrated property. What they hand back with one hand they lessen the value of with the other by imposing restrictions and exceptions."

The Pope has set aside a sum of money to pay for 2,000 masses a year in behalf of those who instituted the pious foundation.—The budget presented by M. Calliaux, Minister of Finance, estimates the revenue for 1909 at \$785,800,000 and the expenditures at \$794,600,000. The deficit he proposes to make up by the restriction of collections of dues on stocks and bonds transferred, and the strict enforcement of the existing regulations against the evasion of duties in the transfer of realty. The licenses of all saloons where absinthe is sold are to be

doubled. The municipal elections have strengthened the Government of M. Clemenceau, for the Radical Socialists have lost ground and the anti-military movement of M. Hervé has been repudiated by the people.

The South Manchurian Railway

The action of Japan in prohibiting the extension of the Chinese railroad from Hsin-min-tun to Fakumen has aroused the displeasure both of the Chinese, because it prevents the development of this rich region, and of the English, who are interested in the commerce of the Far East, and railroad building in particular. The Chamber of Commerce at Niuchwang protested against this arbitrary restriction of railroad construction, and the Shanghai Chamber of Commerce has taken a similar stand. Japan vetoed the project on the ground that the agreement of December 22d, 1905, with China gave her the right to prevent the construction of railroads like that now under consideration, which would parallel her South Manchurian line and interfere with its interests. It is possible that a compromise may be arranged by which China will be allowed to continue the railroad on the condition that it be connected with the South Manchurian line at some point, probably Kaiyuen, by a branch from Fakumen.—The South Manchurian line has not been in a prosperous condition since the war, and there have been many complaints of bad management and unfair treatment of foreigners, but of late the profits have shown a tendency to increase. The gross earnings of the road for March amounted to \$555,000, whereas the gross earnings of the preceding year averaged only \$405,000 a month. The line as built by the Russians has a gauge of five feet, but for military purposes during the war the Japanese reduced it to their narrow gauge of one meter. After the war it was decided to bring it to the standard gauge of 4 feet 8½ inches, which prevails in Europe and America, and has been adopted by the Chinese and Korean railroads. The third rail has been laid, and trains of standard gauge are running over the whole length of the line from Kirin, formerly Dalny, the commercial

city of Port Arthur, to Chang-chun, where the road joins the Russian railroad. The new cars are of the corridor type, steam-heated, and provided with sleeping and dining accommodations. The journey from Kirin to Chang-chun, a distance of 488 miles, will be made in twenty hours. At Chang-chun a commodious station will be erected, the South Manchurian or Japanese trains running into one platform and the Chinese Eastern or Russian trains into another platform of the joint building.

Korea The question of who should get the right to cut the timber on the Yalu River, on the boundary of Korea and Manchuria, was the immediate cause of the Russo-Japanese War, and has ever since been a bone of contention between the Chinese and Japanese Governments. China has regarded the timber projects of Japan in that region as interfering with her rights, and a prolonged conference has been held at Peking between Baron Hayashi, the Japanese Minister, and Tang Shao-yi, the Governor of Mukden, which resulted in an agreement on May 14th. The lumbering will be carried on by a joint stock company of Japanese and Chinese, and Japan has agreed to give full protection to the interests of the Chinese investors and the revenues of the Government.—The Japanese troops in Korea are still kept busy fighting the insurgents, who collect in bands of a few hundred in various parts of the country, and often offer considerable resistance before they are dispersed. Since these insurgents are without means of support, it is proposed to establish a system of compulsory labor for the unemployed, and it is argued that a large number of the Koreans could be profitably brought under such a *régime* to correct their natural vice of indolence. Insurgents to the number of 2,600 have taken advantage of the Imperial proclamation promising amnesty to all who surrender, but some of these, for lack of other employment or because of threats, have again joined the predatory bands.—The Japanese Residency-General has found it necessary to enforce a stringent censorship of the press in Korea. The new law empowers the Administration to for-

bid the circulation of any journal published in Korea by natives or foreigners in any language, whether intended for circulation at home or abroad, if the journal is considered to contain matter prejudicial to public peace and good order. The *Chosen Times* of Chemulpo has been suspended on account of its attacks on Japanese officials, and the editor of a Japanese paper in Taku has been deported by administrative order. A mass meeting of a thousand Japanese was held in Seoul for the purpose of denouncing the Government for its infringements of the right of freedom of speech.—The Japanese legal authority, Professor Ume, has completed the work of the codification of the criminal law of Korea. His plan for the organization of the courts will go into effect next month. The civil code will require a longer study of Korean practice and will not be finished for two years. There have hitherto been no organized courts in Korea with the exception of the Supreme Court in Seoul. The administration of justice by local officials has been irregular, arbitrary and corrupt. The new penal code is modeled on the same lines as the Japanese, but in Korea punishment by flogging will be retained for minor offenses. Korea is still without decent prisons, and if they were much improved they would not act as deterrents to crime.

Foreign Notes General Willcock's expedition against the Mohmands on the north-western frontier of India is engaged in destroying the native forts and villages, but so far the insurgent tribes have shown no signs of submission. The disorder, however, is not spreading, and the Amir of Afghanistan appears to be exercising some restraint over his subjects. Offers of military aid have been sent to the Government by fifteen of the native states of India.—General Snarski, who is in charge of the Russian military movement on the Persian border, issued an ultimatum demanding from the tribesmen the immediate payment of an indemnity for their attacks upon the Russian outposts. The tribesmen, instead of complying with the demand, sent a letter to the parlia-

ment at Teheran proposing a holy war against the invaders. The Persian Government asked that the time limit of the ultimatum be extended a fortnight in order to afford an opportunity to arrange the difficulty peaceably.—Mulai Hafid on May 16th entered Mekinez, and was given an enthusiastic reception by the populace. He now has possession of the three capitals of Morocco, and can with considerable reason claim to be the only true and accepted Sultan. Efforts made by the other Sultan, Abd-el-Aziz, to retake Fez have apparently failed, for the advance of his army toward that capital has been checked by the Beni Hassen tribesmen, and part of his troops are reported to have deserted to the Sultan of the South. The two envoys sent to Berlin to secure the recognition of the Powers for the claims of Mulai Hafid were given an unofficial reception at the German Foreign Office. Their visit is being made the most of for political purposes in Germany, where a series of public meetings and receptions are arranged for them thruout the country. Four envoys of Mulai Hafid are also in Paris, where they have received no recognition, since the interests of France are identified with the rival Sultan, Abd-el-Aziz. They presented themselves at the American Embassy at Paris, but Ambassador White declined to receive them. He accepted, however, a sealed letter for transmission to President Roosevelt.—The Belgian election resulted in a reduction of the Government majority, which may affect the action of the Kongo Treaty.—Professor Milyoukov, leader of the Constitutional Democrats and editor of the *Rech*, was assaulted in his office by two editors of the Liberal organ, *Russ*, who struck him in his face and knocked him down. The *Rech* had accused the *Russ* of blackmailing the banks and making improper use of public money.—A fist fight occurred in the Portuguese Chamber of Deputies between former Minister of Finance Martinez Cavalho and Alfonso Costa, one of the Republican leaders of the Chamber. Costa had attacked Cavalho and other Francoist ministers in a recent speech, and had refused to accept his challenge to a duel.

IRRIGATION How the Federal Government is reclaiming arid land and almost giving it away to the homeless man
by **WILLIAM R. DRAPER**

EVERY American citizen is born with a desire for a home. And yet in the cities 90 per cent. are tenants; in smaller towns, 30 per cent. pay tribute to landlords, while on the farms of the nation 40 per cent. lease or rent.

A few years ago there was a series of free land rushes in the great West. These attracted hundreds of thousands of homeseekers, who found a farm in Uncle Sam's broad domain. But only too soon land rushes became no longer possible, because the large tracts of desirable land had all passed into private ownership.

Following the Oklahoma and other Western land rushes, the Government announced in 1904 that title to about 480,000,000 acres of land which was vested in the Federal authority was open to private settlement. This land was about half available for immediate entry. The remainder had to be reclaimed.

The amount of appropriated land held at that time was 795,000,000 acres. In 1907 the appropriated land amounted to 843,000,000 acres, or during that time 48,000,000 acres had passed from public to private ownership. About 300,000 heads of families had taken this land for their own under the Federal land laws.

The area now subject to public land entry should be classified and valued. Altho the Government places no valuation per acre on its holdings, were this land in private ownership the 432,000,000 acres would be worth \$7,450,000,000, as follows:

| | Acres. | Value. |
|-----------------------------|-------------|-----------------|
| Irrigable land.... | 150,000,000 | \$4,500,000,000 |
| Timber land..... | 120,000,000 | 2,400,000,000 |
| Ranch or grazing land | 100,000,000 | 500,000,000 |
| Wild land..... | 62,000,000 | 50,000,000 |

While there are over 200,000,000 acres of grazing and timber lands subject to entry under the homestead laws, the most available and desirable lands to be had from the Government are its irrigated land, which may be taken under the reclamation and homestead laws and the Carey act. The surest way to get a profit-paying farm from Uncle Sam is to go into some of the newer irrigable districts and take up a 40, 80 or 160 acre tract. While there are 150,000,000 acres of irrigable land held by the Government subject to irrigation, only 4,000,000 acres are now being reclaimed.

The Carey act was originally passed in 1877 and provided for the sale of desert lands. It was amended in 1891 to provide for the conducting of water upon desert lands and otherwise to reclaim soil known to be valuable if watered. Money was, of course, necessary to undertake the irrigation of dry land, so it was provided that funds derived from the sale of Government lands in certain districts should go into the "reclamation fund." This fund was established with \$160,000 in 1901, and since that time receipts have amounted to \$37,000,000.

Twenty-four irrigation projects are now in progress and 4,000,000 acres of desert land are being redeemed from the

arid region. When these projects are completed homes for 100,000 families will have been made. Not all of the 4,000,000 acres of land under the projects named in the accompanying table is open to public entry. Much of it is held by private ownership—men and women who in the last five years have gone into the desert and filed upon what seemed to be dry and worthless land. Much of this land is now worth \$100 to \$500 an acre.

The irrigable lands open to public entry are in reality the most valuable gift of Uncle Sam to his citizens. The cost of taking up an irrigable farm under a Government irrigation project is 50 cents an acre for the land and \$20 to \$30 an acre for a perpetual water right, after which the canals and reservoirs built by the Government or by private companies become the joint property of the settlers, to be used forever. The 50 cents an acre is payable one-half when filing is made and one-half within three years. Payment for the water right is divided into ten equal payments. The first instalment is due with the original filing, and the second falls due one year after water has been delivered, so that all that is required is \$3.25 an acre for first payment, and the balance can be made out of the crops that

are certain to follow with the advent of water. Irrigation is correctly said to be crop insurance, and an acre of irrigated land never grows less in value.

The Government has the land to give to its citizens, but it has no advertising appropriation to tell them about the advantages of taking this land; the land agent derives no income from the settlement of such land, and few of the Western States which would benefit by increased population have funds to be used in bringing soil-tillers to these lands. Hence very little outside of the dry Government reports has appeared regarding the wonderful opportunities of the poor man taking up an irrigated farm. For the benefit of those who would have such desirable homes, I have compiled a brief summary of some of the projects where Government lands are thus obtainable.

The Truckee-Carson project is the largest irrigation enterprise in point of acres to be irrigated. When completed, this system provides ample water for 350,000 acres in Western Nevada. The first work of actual construction began September, 1903, on a canal 31 miles long, to divert water from Truckee River and convey it to the channel of Carson River, where a storage reservoir is to be

OKANOGAN, WASHINGTON, IRRIGATION WORK.

erected. This canal, with several hundred miles of lateral ditches, is finished, and June 17th, 1905, occurred the formal opening of this enterprise. Thirty thou-

10,000 acres. An additional 15,000 acres are watered by pumpings from the Snake River. About 200,000 acres are now available under the homestead law, which

A CANAL FOR WATER THRU THE MOUNTAINS. OKANOGAN, WASHINGTON.

sand acres of public lands have been entered; the remainder is waiting the touch of the soil tiller. Water is charged for at the rate of \$26 an acre, payable in ten years. The soil is fertile and adapted to crops grown in the north temperate zone. The climate is equable and healthful. The markets are the nearby mining camps, and home-grown crops are insufficient to meet public demand.

The Payette-Boise project, in Idaho, is another huge irrigation enterprise, involving the reclamation of 350,000 acres. This requires the expenditure by the Government of \$7,000,000, which, with the work already done by private concerns, means an investment of \$11,000,000 in the project. Preliminary investigation was made by the United States reclamation service in 1903, and in March, 1904, the project was formally approved by the Secretary of the Interior. The waters of the Payette River will be diverted by a dam at Black Rock Canyon, and from this source 95,000 acres are irrigated by gravity canals. In order to insure unquestioned water supply, reservoirs are being built at the Payette Lakes to conserve the water for dry seasons. Another great reservoir is being completed in Deer Flat, to water

means the payment of \$1.25 an acre for the land and \$25 an acre for water, the latter in ten annual instalments. There are a number of lively towns established on the tract, and farms have already been cultivated and produce five to seven tons of alfalfa per season, four to six tons of clover, fifty bushels of wheat and seventy-five bushels of oats. Twelve bushels of clover seed have been threshed from a single acre of irrigated land in this valley.

Yakima Valley, Washington, contains 500,000 acres, with a storage capacity for water sufficient to irrigate 340,000 acres. This includes 100,000 acres in the Yakima Indian Reservation. A letter from the publicity committee at North Yakima states this land will not be subject to homestead entry until 1909, when water is ready for delivery. Here are restrictions more rigid than found in other enterprises. The settler can only take up 40 acres, and he must pay \$60 an acre for his water right, payable in ten instalments. There are in this district some lands owned by the State that may be had on somewhat more favorable terms. Private lands in the district sell for \$25 to \$75 an acre for the land without water right, so it would seem the settler will be getting a bargain if he gets the land

at \$1.25 an acre under the homestead laws. This is a fruit district, and the soil is known as "volcanic ash"—very rich and productive and susceptible to irrigation. Twenty acres of this land will provide a handsome income for a family. Two transcontinental railroads traverse the tract. The climate is mild. There are twenty town sites on the tract. Yakima fruits have taken a number of international prizes.

The Sun River Valley project in Montana involves the reclamation of 256,000 acres, a large percentage of which is public domain. The irrigable tract has a length east and west of 70 miles and north and south of 30 miles. Good grazing land surrounds the project. While

acres of land to be irrigated. Since September, 1905, the great dam creating an immense reservoir across the canyon of the North Platte River has been under construction. Its capacity is greater than the famous Assouan Dam of Egypt, while the cost is about one-fifth. This dam will be one of the greatest in the world, being 210 feet high, 80 feet long at the base, and 250 feet long at the crest. It will be of unique pattern, a solid granite and concrete mass wedged into a narrow box canyon, with the granite walls furnishing the substantial abutments. The wasteways will be over the granite ridge of either side of the dam, and capable of carrying the record flow of water. The name was given the reservoir in memory

DAM UNDER CONSTRUCTION ON BOISE RIVER. PAYETTE-BOISE PROJECT.

public entry may be made upon no more than 80 acres, there are some portions of the land that may be entered in 160-acre tracts. Water is to be delivered in the latter part of this year.

In the North Platte Valley, of Wyoming and Nebraska, lies about 500,000

of John Fremont, whose explorations in the North Platte have been numerous. The reservoir is near the great overland trail traversed by gold seekers. The construction of the dam requires three years, and should be completed the latter part of this year. The lands will then be subject

to entry under the homestead law. In the Klamath project of Oregon and California the Government plans to reclaim about 200,000 acres of land by the drainage of the lower Klamath and Tule lakes, lands which are now either swamp or lake bottom. When these lands are restored to good condition, homesteaders may file application for entry under the homestead law. Construction work was begun on the main canal system in March, 1906, and about 15,000 acres of the land have already been put in a high state of cultivation. These lands produce

about 180,000 acres of land open for settlement under the Rio Grande irrigation project. This involves the construction of a storage dam 250 feet high opposite Engle, N. M., across the Rio Grande River, and forms a reservoir 175 feet deep at its lower end and 40 miles long.

One of the most desirable irrigation projects in the West is that of the Salt River Valley, of Arizona. This valley comprises about 400,000 acres of land, of which 125,000 acres are now in cultivation. The Government saw the possibility of making homes for hundreds of

MINIDOKA DAM.

barley, oats and forage crops, while the potatoes, cabbage, beets and onions are known far and wide for their excellence. The Klamath district is one of the finest fishing sections in the West. The hot springs at Klamath Falls have attracted health-seekers, and a great sanitarium is being constructed there.

Those who wish to take a home along the Rio Grande River, in the southwestern part of the United States, will find

thousands of farmers in this valley, so it began the construction of the Roosevelt Dam and reservoir, which will supply water for about 200,000 acres of land. This dam is being built of huge blocks of stone laid in cement, and will be 250 feet above the foundation on bed rock, 30 feet below the low-water mark. The construction of the dam will cost \$4,000,000. It is estimated that sufficient water flows down the Salt River during three months

of the year to fill the reservoir twice. The reservoir itself will be 25 miles long and with an average width of 2 miles, which is the largest body of artificial water in the world. The cost of irrigating this land will be assessed against it by the Government and will be about \$20 per acre. This will make the land cost the settler about \$21.25 an acre, payable in ten years. The Salt River Valley is famous for its melons and cantaloupes, oranges, dates and olives. One of the principal industries for the Salt River Valley, which does not require irrigation, is ostrich farming. On one of the largest ostrich farms in the valley there are over 1,000 birds, yielding an income of \$30,000 annually. The birds live on alfalfa and graze like cattle. A number of persons have come into the Salt River Valley from New York and other Eastern

Colorado contemplates diversion of the water of the Gunnison River by means of a tunnel 30,589 feet in length. About 150,000 acres of land in Montrose and Delta counties will be irrigated. Construction of the tunnel was begun in 1904. Only 20 per cent. of the land in this district is subject to homestead entry, and no more than 80 acres can be taken. This is primarily a fruit country.

The Shoshone Valley project, in Wyoming, will provide the reclamation of land in the northwestern portion of the Big Horn country to the extent of 150,000 acres, all of which are open to public entry. The soil is productive, and alfalfa, hay, wheat, oats and the hardier vegetables can be produced abundantly. Water will be available for a portion of this land during the coming season. The land is being rapidly taken up by settlers.

IRRIGATING APPLE ORCHARD NEAR MAGERMAN, N. M.

States and taken up the raising of ostriches, and are getting rich.

The Uncompahgre Valley project in

There are a number of other irrigation enterprises open for public entry, all of which appear in the following table:

3,455,250

Information regarding these lands can be had by writing the Land Commissioner of the State in which the project is located.

In addition to the Government enter-

prises, about 10,000,000 acres of land are being irrigated in various Western States by private enterprises. Much of this land also belongs to the State and Government, and may be entered upon the same terms as the other Federal irrigation enterprises.

For instance, in the Eden Valley, of Wyoming, the Eden Irrigation and Land Company are spending a million dollars in bringing water on to 150,000 acres of dry land. This land belongs to the Government and may be entered under the Carey act at 50 cents per acre, but it is necessary that a water right should be purchased from the irrigation company at \$30 per acre, payable in ten years. About 10,000 acres of this land have already been taken up by settlers, and water is to be delivered in May of this year.

Surely, with the 4,000,000 acres of land now being reclaimed by the Government, and offered to the settler upon such liberal terms and prices, there is no reason why any man should be homeless.

KANSAS CITY, MO.

Alpha and Omega

BY HENRY AUSTIN

Love is the flower of youth, a growing jewel!
 Love is a crucifix, sublimely cruel;
 Love is a crucible where life's alloy
 Becomes pure gold, if self be used for fuel.

Love is a lamp that gaineth day and night,
 Nor waneth in the noon's too garish light.
 Love is the star that harbingers the sun,
 Putting dim doubts like shadowy bats to flight.

Love is the fadeless crown on brows grown
 hoary,
 The nimbus of the saint, the sinner's glory.
 Love is the rhythm of every poem true—
 The never-ending, still-beginning story.

Love is the music and the song above
 All else. For love the spheres concordant
 move.

Ay, to that heaven whereof all lovers dream,
 Death must be—just a gate divine for love.

PASSAIC, N. J.

Seeing Switzerland

BY HEDLEY P. SOMNER

[The Swiss Government has established a bureau in New York to give help and advice to Americans contemplating a trip to the pleasure ground of Europe; and Mr. Somner, who contributes the following informing article, is its general agent.—EDITOR.]

IT is in Switzerland that catering for the tourist has developed into a science. One of the best institutions in this little republic is the "General Inquiry Office" that is to be found at all the most frequented resorts. Under official control and serving no particular

Government, thru the Publicity Service of its Railroad Department, has opened simliar offices in foreign countries, at present having offices in New York, London, Paris and Berlin.

The railroad officials seem to possess the same liberal views. Owing to the

LUCERNE.

Showing Railroad Station, with the War and Peace Museum to the left and Pilatus to the rear.

interest, the most reliable information is to be obtained, whether relating to hotels, boarding houses, roads for walking, cycling or automobiling. Every form of inquiry is dealt with, even extending to commercial subjects, and the tourist will find it to his profit to make use of these offices, no charge being made. Finding these bureaus so successful, the

majority being under Government control, there appears to be no competition, the tickets being often available by different routes, and wherever there is a lake service the passenger has the option of traveling by rail or steamer. The separate class system is in operation, the trains having accommodation for first, second and third class passengers. Most

KERSTELNBACH BRIDGE, NEAR AMSTEG, GOTHARD RAILROAD.

of the local express trains carry all three classes, while the international expresses usually only first and second, and the trains resembling our own "limited" ex-

presses, first class only. The construction of the cars is on the American principle, with lavatory and heating facilities. Many of the express trains have restau-

rant cars, the food being good and well served at a moderate cost.

Of interest and use to the tourist are the charts exhibited at all the important

ist who wishes to see Switzerland thoroly is the so-called "season ticket," which allows unlimited travel over 2,730 miles of rail and lakes during a period of fif-

SWISS TOURISTS AT GORNERGRAT.

stations giving a general weather report and allowing one to ascertain the exact state of the weather before setting out for an excursion.

The language question presents little or no difficulty and is most easily overcome. By nature a linguist, the Swiss has developed a talent for learning languages that is sometimes a little surprising to the American. The peculiar constitution of his country compels him to learn both French and German and he has added English as a matter of business. In all the hotels where the tourist is accustomed to stay, English is spoken by all the servants, while in touring thru the country, whether by rail, steamer or road, he will find the same condition of things prevailing. Off the beaten track a little French or German will be found useful.

Unquestionably the ticket for the tour-

teen days for the modest sum of \$16.32; second and third class tickets are also issued, and if a longer stay is intended, these tickets may be obtained for periods extending to a year. With such a ticket the tourist is free to travel where he will, whether by rail or steamer; the only exception being the mountain railroads, which are not included in this system.

There are two ways of making a walking tour, a right and a wrong. The Swiss roads being mostly of a mountainous nature, it is advisable to find out on which side the long climb is, and then take the other. For instance, the Grimsel should always be taken from the Rhone Glacier to Meiringen and the Brunig from Meiringen to Lucerne. The same observation applies to the cyclist. For a walking tour, as little luggage as possible should be taken, the heavier things being sent on by post. A tramping kit,

easily purchased in Switzerland, is the best way to carry one's things. It is made to hang from the shoulders, and when strapped in position rests firmly on the back. An Alpine stick of a good quality, strong enough to bear the weight of the carrier, is a useful article. Boots should be high and waterproof. The rocky particles encountered on all the roads are very irritating if allowed to enter the boots, and the need of waterproof boots will often be experienced. Before starting across a pass where snow and ice are likely to be encountered the boots should be shod with special nails at the village shoemaker's. It is never advisable to do too much the first day. If starting out from Lucerne for the Furka from Andermatt, a good practice can be obtained by walking along the Axenstrasse, $8\frac{1}{2}$ miles long, using the

ence if they were to revisit this land of scenic wonders. From the tourist point of view the change is really an improvement, for where one formerly had to depend on carriages as a means of transit, or even were obliged to walk, now runs the modern railroad. This even extends to the high Alps, and since 1871, when the first mountain railroad—up the Rigi—was opened, peak after peak has fallen to the onslaught of the engineer, until now it is possible to ascend the Jungfrau to a height of over 10,000 feet, without any exertion beyond the purchase of a ticket and taking one's seat in the car. On every side new hotels have risen and every modern convenience is being brought into the service of catering to the stranger.

A hasty glimpse can be obtained of the marvels of this country in a visit of

THE FOUNTAIN. SCHAFFHAUSEN.

railroad from Fluelen to Goschenen and then finishing the first day with the walk along the Schollenen to Andermatt.

Those who may have visited Switzerland some years ago would find a differ-

seven to ten days, but a much longer stay will repay one. Should the tourist be visiting Switzerland for the first time it is advisable not to attempt too much, but rather plan out his tour in such a man-

ner as to embrace several distinct parts. Thus, for example, he should decide between a visit to Zermatt and Chamonix, and if time be too short to visit both places, taking Zermatt with the Matterhorn as the finer of the two. Again, the Alps should be taken with regard to their proportions, and the tourist visiting Lucerne and the Bernese Oberland should so arrange his journey as to view the Rigi and Pilatus before the giants—the Eiger, Mönch and Jungfrau. Such an arrangement will materially add to his enjoyment. Even for a short visit, an endeavor should be made to make the tour so comprehensive as to include a sail on

following districts: The Jura, with its quiet charm and picturesque scenes; Lac Lemane—beloved by Byron—upon whose shores are to be found such delightful places as Montreux, with Vevey nestling by its side, the Castle of Chillon, Lausanne and its famous cathedral, and other interesting buildings, including Gibbon's house, where this celebrated writer composed most of his noted history, "The Decline and Fall of the Roman Empire," and Geneva, renowned for its beauty and equally for its literary associations. The Rhone Valley, with Zermatt and the Matterhorn; the Italian Lakes, with their tropical vegetation; the Engadine and

AN ALPINE VILLAGE.

one of the lakes, a coaching tour over one of the passes, an ascension of one of the mountains by railroad, a visit to one of the numerous ravines or gorges, and a walk thru both an old and a commercial town. In this manner the tourist is able to gain an impression that will long remain a pleasant memory. To facilitate the arranging of the tour, Switzerland may roughly be divided into the

the Grisons, famous for the wildness of the scenery; the Glarnerland and its giant, the Todi; Schaffhausen and the Falls of the Rhine; Lake Constance, where many charming places abound; Zurich, the largest city, that reminds one forcibly of America by its imposing buildings, an additional attraction being the lake, with the view of the Eastern Alps; Lucerne, and the lake, with a rare

MATTERHORN AND CHALET AT ZERMATT.

beauty of its own and the center for many delightful excursions; the Bernese Oberland, with its mighty giants, the Eiger, Mönch and Jungfrau. The most frequented passes are: The Brunig, from Lucerne to Meiringen; the Furka, from Andermatt to Brigue; the Grimsel, from Meiringen to the Rhone Glacier; the Gemmi, from Leukerbad to Kandersteg; the Klausen, from Linthal to Altdorf; the Splügen, from Thusis to Chiavenna; the Maloja, from St. Moritz to Chiavenna. In addition, there are many

others, equally beautiful, but not so generally used by the tourist.

The cost of the tour will depend entirely on the requirements of the tourist. A most enjoyable holiday can be spent on an allowance of \$2 to \$3 daily, putting up at the more moderate hotels, which are extremely comfortable, and traveling second class on the railroads. On the other hand, the wealthy tourist will find his every want satisfied, the larger hotels making a special feature of entertaining such visitors.

NEW YORK CITY.

THE HOUSE IN SESSION.

(According to the Minority Point of View.) Cartoon by Beryman in the Evening Star, Washington.

Men We Are Watching

BY A WASHINGTON JOURNALIST

The Big Four of the House of Representatives

"THE BIG FOUR" is becoming a fireside companion. It has been increasing in significance for many moons, but more rapidly during the progress of the Sixtieth Congress. It bloomed right out under the forced culture of the national filibuster conducted by the Hon. John Sharp Williams, leader, and his honorable cohorts of the Democratic minority.

The Big Four consists of Sereno Elisha Payne, of New York, the forefinger of Papa Cannon's hand, as floor leader of the Republican majority and

chairman of the omnipotent Committee on Ways and Means; John Dalzell, of Pennsylvania, and James Schoolcraft Sherman, of New York, the next two fingers, on Cannon's own Committee on Rules, and James A. Tawney, of Minnesota, the little but all-important finger which wears the seal, as chairman of the mighty Committee on Appropriations.

Obviously it must always lie within the power of these committees to control the House and national legislation. The successful operation is only a question of unity and skilful manipulation. The real secret of the present excellence of devel-

CARTOON BY CUNNINGHAM IN THE WASHINGTON HERALD.

opment lies in a little poker club, where Papa Cannon sits at the head of the table, smoking his big cigars, while about him are gathered those from whom he picks for the all-powerful appointments. For that reason we sometimes see it called the Big Five—which is all a mistake, for it is a Big Four and a Bigger ONE! The Big Four can run the House, but to do it there must be a Big One capable of running the four.

During the play of filibuster, cartoonists have made many efforts to express the situation. Three of the most recent have hit very near the mark. The first represents the House in session, with a large Papa Cannon at the Speaker's desk, cigar and gavel going it overtime, while every member of the House is a little Papa Cannon, in some characteristic at-

CARTOON BY CUNNINGHAM IN THE WASHINGTON HERALD.

titude. The Speaker is saying—"The gentleman from Illinois is recognized." This is altogether in accord with Representative Hale's reply to a constituent who asked him to send on, at once, a complete copy of the rules and regulations of the House. Hale sent him a photograph of Uncle Joe. Nor is it very far from Uncle Joe's own idea, if one may judge from his reply to Judge Zenor, a Democratic member from Indiana, who gained the floor and asked the Speaker if a certain bill in which he was interested could not be passed, at once, should some suggested amendments then and there be accepted. "Ah!" Cannon replied, most affably. "This House could pass an elephant, if the gentleman in charge of it could catch the Speaker's eye." Then he shut both eyes and called for the next order of business.

The second of the near-right cartoons represents Congress as a huge hand, with Cannon for the thumb and one of the Big Four for each finger. But neither of them hit so close as the third, which makes the G. O. P. elephant carrying a huge hamper of legislation at the howdah. have the head of Uncle Joe, carrying the gavel in the trunk, while each leg is one of the Big Four. That is the whole thing in a nutshell. The elephant was standing upon John Sharp Williams at the moment when the cartoon was taken, but it is quite as capable of standing on anything else, till it has crushed the life out of it, as more than one Republican, as well as Democrat, has discovered to his deep disgust. With Joe Cannon for the head and Payne, Dalzell, Sherman and Tawney for the legs which guide and carry the G. O. P. with the hamper of legislation, we have a powerful and interesting combination, realizing pretty well to the full all that the term "Big Four" is ever likely to imply.

Some weeks ago these pages presented a sketch of John Dalzell, the talking member—the one who flings bombs bursting with adjectives at John Sharp, Champ Clark and the rest, and who lays down the law and the gospel according to the committees on Rules and Ways and Means, on each of which he sits at the right hand of the chairman.

Hon. Sereno Elisha Payne

Of the remaining three—Payne, Sherman and Tawney—Payne is the prophet and the priest. He looks it, every inch of it, and acts it. He is a large man—large as Dalzell is small—large and portly, with a head which is still rather large for its pedestal. The broad, bulging forehead stretches back into a thick and unflinching mass of snow-white hair and the face is fronted by a sturdy white moustache and bushy white brows, emphasizing a nose of the Jim Blaine order, and full, large eyes which look quietly

SERENO E. PAYNE.

Copyright by Clinedinst, Washington, D. C.

and smilingly about upon his subjects. Always, in public or private, he is a most comfortable kind of man. He is not an ostentatious dictator, tho leader of the Republican legion. He is too fatherly. Even when he feels called upon to administer a rebuke, his deep, solemn voice is still fatherly, and always seems to say, "It hurts me more than it hurts you, son; only in another place." At the beginning of the filibuster, before Dalzell began handing out to the democrats all the bad names he could find in the dic-

tionary, Payne admonished John Sharp that he considered his course puerile. Referring to it afterward he said to me: "I did not dream that Williams would take exception to the word. Indeed, I hesitated, at the time, between that word and another rather more expressive, and chose the former because the latter reflected upon the dignity of the Democratic emblem."

Albeit, Sereno Payne thoroughly understands the powers and possibilities of his immediate surroundings, and develops them beautifully. John Sharp Williams has realized this so emphatically, during the past few weeks, that it is hinted he has fallen into an involuntary way, when mentioning the chairman of the Committee on Ways and Means, of whispering the "Seren(e)" and thundering "O Payne!"

Payne has his limitations and wisely keeps within them, as a rule. He is not so calm a fighter as he used to be. He has dictated for so long—and besides he suffers from rheumatism—that he sometimes loses his temper, now, when he is thwarted. His face flushes easily and his white hair and mustache and heavy white eyebrows make it more emphatic. His stronghold is at the head of the long table in his committee room, where the revenue bills originate. He knows just what to do there and just how to do it. And more and more he is leaving the cutting and slashing, on the floor, to others who have been properly set up for the work in the stronghold. More and more he sits back, comfortably, in his armchair, while the House is in session, his gentle eyes drifting dreamily about, often a smile that has pity in it showing at the corners and creeping along the edge of his mustache as some hungry wolf snarls and gnashes his teeth at the Big Four—otherwise known as the Carnation Club, because they always wear carnations in their button-holes, when they can get them. More and more he restricts himself, so far as the floor is concerned, to his two great specialties—"I object!" and "Mr. Speaker, I move that this House do now adjourn." And even that he does for all the world as though he was pronouncing a benediction. He is so fatherly. But what he does after adjournment, so far

as affects legislation, the House usually learns through Dalzell, the next morning, when it invariably discovers that in his sphere Sereno Payne knows about all that is worth knowing.

He has his limitations, but given the direction he is as expert in the art of leading as his party is in the art of following. Both his powers and his limitations are the natural result of his upbringing. For forty years—less only two inadvertently dropped from somewhere along in the middle—he has been in public service. He was born in '43, admitted to the bar in '66 and in '68 began, as city clerk of Auburn, New York, a career in government service which has continued to this day, but for those two years. He has been in Congress for twenty-three years and is as loyal a Cannon Republican as ever drew breath.

Hon. James Schoolcraft Sherman

James Sherman is altogether a different proposition, except in loyalty to the carnation. He is another New Yorker, born in '55 and admitted to the bar in '80. He devoted himself vigorously and successfully to the practice of law and also branched out into other affairs—president of the Utica Trust and Deposit Company, president of the New Hartford Canning Company, etc., which gave him a broad, keen, shrewd insight into things in general, outside of legislative specialties, but of important accessorial value. He has been a member of the House for eighteen years and is doing some very effective work as chairman of the Committee on Indian Affairs. But his carnation comes from his position on the Committee on Rules, with Cannon and Dalzell. It is Dalzell who proclaims each new device as it emanates from the committee, but it is whispered that Sherman is the great originator. He is not only wise in world affairs, but one of the best parliamentarians and presiding officers in the House. Cannon feels perfectly safe in slipping away to his room for a quiet smoke if Sherman holds the gavel.

Sherman is tall and broad and strong. He is robust, mentally and physically. He has a full English face which carries the color of vigorous circulation, and a broad, high forehead, about which the

JAMES S. SHERMAN,
Copyright, 1908, by Harris & Ewing.

dark hair is just touched with gray. He can be stern and cold-blooded to the limit, in holding to points of vantage or order, on the floor, but away from the frantic House he is a delightful man to meet. Outside of public life, Mr. Sherman is a cordial, democratic, charming gentleman. Inside it is better to have him as a friend than an opponent. He has not attained his position and influence thru any oratorical efforts on the floor. He never made but one real speech in the House. It was many years ago. Referring to it in conversation with him, the other day, I found that he had wholly forgotten ever having made it. From the beginning of his career he has left others to talk while he sawed wood. It is not through lack of vocal power. In public or private his voice is strong and effective. It is through no inability to manipulate good English. Occasional moments on his feet demonstrate that few know better the meaning, the power and the proper place for words. It is simply the consciousness of strength in quiet manipulation, and being a faithful follower of

Cannon he is inclined to "stand pat"; begging his pardon for using a term which he has told me that he especially dislikes.

Hon. James A. Tawney

Completing the quartet—the term is used thoughtfully, for he completes the Big Four to perfection—is Tawney of Minnesota, chairman of the Committee on Appropriations. Legislation which can develop and pass the House unaided or opposed by Rules, and Ways and Means, and Appropriations is in little danger of creating a sensation in the country; and as all legislation affecting

JAMES A. TAWNEY,
Copyright, 1908, Harris & Ewing.

revenues must originate in the House, Tawney holds a big whip by the handle. He is a good combination and all-round man. He is tall, athletic—*sub rosa* he is rather handsome—with thick, dark hair and mustache and heavy, overhanging brows. He has a broad forehead, a strong face and a deep, strong voice. It is cold and dictatorial on the floor, but in private it is particularly magnetic. Tawney is a pleasant man to meet—pleasanter than one would think who only watches him from the gallery. He is a good speaker; not afraid to think or to say what he thinks, and able to say it so that he can be easily understood.

Tawney's specialty is figures. He has an unlimited supply at his tongue's end, and he needs them, as chairman of the Appropriations Committee. He has little time or need to step outside his sphere. It carries his influence to the remotest corners of the country. It makes him, *per se*, one of the Big Four. He grasps the situation better with each new experience. At first he spent too much strength fighting over non-essentials. He is learning to let them drift and save his blows till they will tell. Cannon, in the same position, years back, was *facile princeps* in the art of catching crises. But it is no easy task being chairman of that committee. It carries more kicks than compliments, day in and out. Partisans and opponents alike are fighting for appropriations and all of the departments are fighting for them, and even the Big Stick has been hammering hard for more.

Every one knows that the colossal

accumulations in the treasury make billion dollar sessions almost possible, while no one but Tawney has to realize that, colossal as they are, the administrative departments alone wanted more money this year than the entire estimated revenue; that financially this great, rich country has been overdoing things at such a rate recently that for the time it is no better off than the fellow who thought a twenty-five cent dinner expensive, because he had but twenty cents to his name. Chairman Tawney, the autocrat of Uncle Sam's pocketbook, has to bear the blows for every cut in appropriations at the time, and then the censure when the books are balanced at the end and it is found that the country faces a deficit in the treasury. As he put it to me the other day: "Everyone is mad, all through the session, because they do not get more; then they are all mad at the end, because altogether they get so much." Who says that Tawney does not earn his carnation?

His coming up was apparently wide of the mark, but in its way it went to make him the man for the place he occupies. His father was a blacksmith and he began life at the same business. Later he learned the trade of machinist and while at it studied law and was admitted to the bar in 1882. He is fifty-three years old, but he shows it less than anyone I know. He has been in Congress some fifteen years—and shows that less than most, when away from the smoke of battle. He is an instinctively strong man who needs only to understand his strength to dominate, whether on the Big Four or not.

Spring's Heyday

BY ROMAINE MERKEL JACOBS

'Tis bloom-time—the flowers are springing,

'Tis wing-time—the birds are singing,

'Tis love-time—the doves are cooing,

'Tis mate-time—the world's a-wooing,

'Tis May!

May!

May!

HARRISBURG, PA.

The Initiative and Referendum in Oregon

BY GEORGE A. THACHER

[We discussed in our editorial pages last week the initiative and referendum in Oregon and the nineteen laws that are to be passed upon under it at the June election. This week we print a full description of the law from a citizen of the State, a lawyer by profession, and a member of the American Political Science Association.—EDITOR.]

THE significant words of the amendment to the Constitution of Oregon, which permits the voters to legislate at the polls, are as follows:

"The legislative authority of the State shall be vested in a legislative assembly, consisting of a Senate and House of Representatives, but the people reserve to themselves power to propose laws and amendments to the Constitution, and to enact or reject the same at the polls, independent of the legislative assembly, and also reserve power at their own option to approve or reject at the polls any act of the legislative assembly."

At the June election in 1904 two laws were adopted at the polls under the Initiative. The first was a local option law providing in detail for regulating the liquor traffic. The nominating election law, generally known as the primary law, was also adopted at this election. The act is a lengthy one, and I can only indicate its provisions. Its object was to overthrow the caucus and convention system of nominations and to make all nominees truly representative. The primary election thus becomes a general election within each party to secure the election of nominees. The law recognizes as a political party any organization which polled 25 per cent. of the vote of

the State at the preceding election. Every such party shall nominate its candidates under this law and in no other way. Every political party shall have the right to be protected from interference, and to secure that result every voter who registers shall be asked what party he belongs

to and his answer shall be entered with his registry if he is to be permitted to vote at the primary election. At that election he shall be given the ballot of his party and no other. The primary election shall be held on the forty-fifth day preceding the regular election.

In regard to the candidates at the primary election, each one shall have his name printed on the official ballot of his party, who shall have filed a petition for that purpose with the signatures of 2 per cent. of the party vote attached. The candidate must

promise not to withdraw and that he will qualify if he is elected. He may advocate any measure or principle on his petition within the limit of one hundred words, and he shall be allowed a printed statement on the official ballot of twelve words concerning such measure or principle.

In the case of a candidate for the

GEORGE A. THACHER.

GOVERNOR GEORGE E. CHAMBERLAIN,
Of Oregon. An advocate of the Initiative and
Referendum.

Legislature, he may include in his petition one of the following statements, but if he does not his petition shall not be refused on that account.

STATEMENT NO. 1.

I further state to the people of Oregon, as well as to the people of my legislative district, that during my term of office I will always vote for that candidate for United States Senator in Congress who has received the highest number of the people's votes for that position at the general election next preceding the election of a Senator in Congress, without regard to my individual preference.

STATEMENT NO. 2.

During my term of office I shall consider the vote for United States Senator in Congress as nothing more than a recommendation, which I shall be at liberty to wholly disregard if the reason for doing so seems to me to be sufficient.

At the general election of 1906 the voters passed upon five amendments to the Constitution, five general laws and one Referendum petition. The woman suffrage amendment (defeated) called out 84 per cent. of the whole vote. The average vote on legislation was 75 per cent. of total.

The campaign in Oregon for legislation at the polls began about fifteen years ago. The grange and trade unions were behind the movement, which never lacked

the efficient guidance of some of the best men in the State. The movement secured the aid of many of Oregon's first citizens by its promise to eliminate the political boss, who resembled, in some respects, the medieval freebooter, tho he had better manners.

The office of United States Senator was the chief prize, as it has been in other States. In Oregon's historical documents will be found accounts of legislative sessions monopolized by Senatorial contests. A few years ago a Legislature did not succeed in organizing, because certain Republicans were determined that the Republican candidate for the Senate should not be elected. That rather settled the claim that party rule is the rule of the majority, but the idea that party rule is necessary in a democracy is the only religion that some politicians possess. However, the conditions in Oregon made people forget parties in the name of common decency. The fund of patience of party men gets exhausted at times. A recent illustration in the national matter of a parcels post was offered by the Portland *Oregonian* in referring to the Speaker of the House of Representatives. The closing words of a pungent editorial, headed "A Little More Folding of the Hands to Sleep," were, "There are other men and other parties."

Under the law passed to put the Initiative and Referendum into effect, the Secretary of State is required to furnish county clerks copies of names of candidates and the ballot titles of bills with numbers in the order of filing. The county clerks are required to print on ballots titles and numbers as furnished and to designate measures under the different heads:

"Referred to the people by Legislative Assembly."

"Referendum ordered by Petition of People."

"Proposed by Initiative Petition."

Three months before election the Secretary of State shall print in pamphlet form a true copy of title and text of measure with ballot number, and shall print and bind with such pamphlet any arguments for or against such measure which have been furnished him. Only the organization filing petition may furnish affirmative arguments, but any person may furnish opposing arguments. The persons offering arguments shall pay

the cost of printing for one copy for each voter in the State. Not later than the fifty-fifth day before election, the Secretary shall mail, postage prepaid, a pamphlet to every voter whose address he may have.

The law also provides that where two conflicting measures receive an affirmative majority, that one shall be in effect which has the larger number of affirmative votes, regardless of the size of the majority. That is simple and conclusive.

The final important provision of the law in regard to State elections is that within thirty days after election the Secretary of State shall canvass, in the presence of the Governor, the votes for each measure, and the Governor shall issue a proclamation stating votes cast for and against, and declaring those approved by a majority to be the law of the State from the date of the proclamation.

The provisions of the primary election law have been accepted without any particular friction. There was some objection on the part of individuals at the time of registration, before the election of 1906, to stating to what political party they belonged, but it was not serious enough to disturb the working of the law. It seems a little inquisitorial, but there is probably no other method of securing representative party nominations at the polls.

The chief interest in the law centers in the election of United States Senators. The crucial question in the campaign resolves itself into the election of members of the Legislature who have (or have not) signed Statement No. 1. In the June election of 1906 there were seventy-five members of the Legislature elected. Of that number forty-eight signed Statement No. 1. Eight more signed that statement in a modified form and promised to vote for their parties' choice. At the election in the Legislature of 1907 the candidates receiving majority votes at the June election were members of the dominant party in the Legislature. As a matter of fact, however, members of the Legislature, regardless of party, voted for the people's choice, even where they had not signed Statement No. 1. It is true that partisan leaders of the old school don't approve, but if the precedent set by the Legislature of 1907 is

followed the election of United States Senators will be reserved to the people, and the Legislature will act in the capacity of the Electoral College. Of course, the National Electoral College was designed as a check on democracy, but public opinion made it merely the instrument for recording a democratic choice.

In the Oregon experiment, if public opinion persistently and unqualifiedly demands that the Legislature ratify the people's choice for United States Senator, there need be no fear that it will refuse to do so.

The primary law has not actually become a bone of contention, but it has been criticised so constantly that there are many intelligent people who feel that there is something wrong with it. There seem to be two causes for irritation, but I am inclined to believe that the root of the trouble is not recognized. It is asserted in the preamble of the Oregon

DR. HARRY LANE,
Mayor of Portland.

primary law that it is intended to assure to the people that political parties, which are regarded as necessary, shall be fairly, freely and honestly conducted, but I believe that the real effect of the law is to make parties temporary affairs with loose organizations, and to make proposed measures and the personalities of candidates the live issues. The protests and criticisms of old party leaders seem to confirm that view, while the enthusiastic defenders of the law cling to the name of party rule while working for independence of party dictation. Things are in a transition stage in Oregon. The other cause for irritation affects the plain people. It is, briefly, the fact that a wealthy man can advertise himself and conduct a more aggressive campaign than a poor man can possibly do.

In the matter of legislation by the voters at the polls at the June election of 1906, there were two measures adopted which are of immediate and great importance. One was a law laying gross earnings taxes on certain public service corporations, and the other was an amendment to the Constitution giving municipalities complete independence or home rule. The taxes laid are claimed to be excessive, but it is clear that at the time of the laying of the taxes that depended upon the valuations upon which these corporations were taxed by general laws.

It is interesting to note that the later report of the Tax Commission shows, beyond any doubt, that the public service corporations of Oregon have succeeded for years in escaping paying from one-half to two-thirds of their share of taxes, principally by the means of exceedingly low valuation of real and personal property, and no mention at all of franchises. As the move to tax franchises is a result of the popular wave, it is clear that it won't do to condemn too sharply the legislation at the polls laying gross earnings taxes. The Legislature of 1907, in common with many other legislatures in many other States, showed a certain compliance with the wishes of large corporations, both in the matter of taxes and in confirming perpetual franchises.

If a State were to be offered the choice between radical legislation at the polls and a Legislature too compliant to the

wishes of corporations and vested interests, it might well hesitate. In Oregon, however, the two working together promises to be corrective. Each may amend or repeal the act of the other, while the last word rests with the people who elect the members of the Legislature. An instance in point has been furnished in the past year and a half. The voters enacted an anti-pass law at the polls in 1906. Its provisions barred every State and municipal officer from accepting free service from quasi public corporations. The Legislature of 1907 past a law (which repealed all laws or parts of laws conflicting with it) requiring railroads to furnish free transportation to all State, district and county officers. The next move was a Referendum petition asking that the act of the Legislature be referred to the voters at the polls next June. It requires no prophet to foretell the fate of the free pass system in Oregon.

The amendment to the Constitution granting cities home rule was adopted at the polls in this terse fashion: "The Legislative Assembly shall not enact, amend or repeal any charter or act of incorporation for any municipality, city or town." The power is given unreservedly to the voters, subject to the Constitution and criminal laws. It is undoubtedly the first time in the history of the United States that any city or municipality has been made entirely independent.

Whatever valid objections there may be to legislation by the voters at the polls the experience of Oregon, so far as it has gone, goes to show that in directness and efficiency the action of the people compares remarkably well with the work of the Legislature. It is not unreasonable to assume that any organization that wishes to get a measure referred to the people under the Initiative will take rather more pains to have it well drawn and as clear and simple as possible than a member of the Legislature would do in proposing a bill to that body, to say nothing of the chances of having his bill mutilated in the committees of two houses and emasculated by amendments on the floor. I am aware that the latter form of procedure is supposed to make for prudence and care, but I doubt if any careful student of legislation by Congress

or State bodies will seriously maintain that practice confirms the theory.

The City of Portland held an election in June of 1907 under the new conditions created by the amendment. No one can claim that it created particular interest or was a remarkable success. The interest centered in the election of Mayor, tho the Council is even more important to the welfare of the city than the Mayor. The Mayor, however, is supposed to be the responsible head, and as he had made a good record by vetoing free gifts of franchises to public service corporations and had attempted to check the sale of dissipation in a city where saloons are as plentiful, proportionally, as they are in Chicago, he had come to represent a policy. He is a Democrat and Portland is a Republican city by two to one, but he was elected by some 700 majority.

There were twenty-one measures submitted to the voters, but with one exception they were not submitted in legal fashion (which was due to a partisan City Council), and so the court has declared the legislation void. The Council overreached itself, which is a matter of congratulation, especially in the effort to

give a monopoly of the saloon business to the present proprietors.

The movement toward the Referendum is quite remarkable. W. E. H. Lecky urges its adoption in England in his "Democracy and Liberty." In the United States, prior to 1907, Oregon, Utah, Illinois, Texas, Nevada, Montana and South Dakota had adopted it in some form. Oklahoma has adopted it, and Delaware has adopted the advisory form, which has also been considered in Massachusetts. Missouri, Maine and North Dakota have submitted it to the voters and the question is pending in Michigan, Minnesota, New Jersey, Ohio, Washington, Wisconsin and Pennsylvania. Arkansas and Virginia are considering it. Oregon has the most complete system that has had any vindication in practice.

As for Oregon's part in devising an ideal society, the results are entirely tentative so far. The few years of experience have shown that more democracy works well. The people are interested in public questions and that will lead to working knowledge. It is their own State, their own business, their own future that is the subject of thought. Why shouldn't they be interested?

PORTLAND, ORE.

Injuries the Old Testament Has Inflicted Upon Christianity

BY THE REV. JOHN M. THOMAS

[The present article by the president-elect of Middlebury College, Vermont, presents the silver side of the shield, the golden side of which was presented in our issue of March 19th.

—EDITOR.]

WHILE it is unquestionably true that Christianity has received inestimable advantages from her possession of the Old Testament, it is equally certain that much that has wrought great harm has come from the same source. It is not honest to recognize the good which the Old Testament has wrought in Christianity's behalf without at the same time confessing in equal candor that the Jewish portion of the Bible has been at many points a stumbling-block to full acceptance of the Christian

gospel, an obstacle in the way of its comprehension, and a hindrance to its largest and most beneficent power.

The early Christians made the Old Testament in its entirety a Christian book. They did not select here and there a Christian text, a bit of a Psalm or prophecy, as one is inclined to do today, but they adopted the entire volume as description and enforcement of that which had occurred in Galilee and Jerusalem. They read the life of Jesus, and every truth which they had received thru Jesus,

on each page, from Genesis to Malachi. As Paul transformed the humane precept of Deuteronomy, "Thou shalt not muzzle the ox when he treadeth out the corn" into a prescription for the adequate payment of pastors and teachers in Christian churches, denying that it had any other reference, so every law and institution was made to bear a Christian sense. "For us God saith it," they declared, not merely applying to their situation that which had been said to them of old time, but claiming it as primarily and exclusively their own.

For example, they read in the book of Zechariah the prophet's vision of the high priest of Israel standing before the Lord, and Satan standing at his right hand to be his adversary. The priest was clothed with filthy garments, but the order came, "Take the filthy garments from off him, for behold, I have caused thine iniquity to pass from thee, and I will clothe thee with rich apparel" (Zech. 3:1 ff.). It was an earnest man's encouragement in righteousness to the people of his own time, but the Church Fathers made it a declaration exclusively of the humiliation and subsequent glory of Jesus of Nazareth (Tertullian adv. Marcion III:7). Similarly the two goats spoken of in the rubric for the day of atonement were made to declare before the time the divine and human natures of Christ.

A few examples, however, give no adequate conception of the completeness in which every verse was made to bear a Christian sense. The Fathers found no narrative so simple, no text so tied to particular circumstances, no chapter apparently so far removed from all possible reference to Jesus, that it was not made to refer to some portion of the Christian message. "Christ always spoke in the prophets," Tertullian declared. Augustine even said, "God so accounted of the patriarchs, and at that time made them such heralds of His Son, that not only in what they said, but in what they did, or what happened to them, Christ is sought, Christ is found."

One can but admire the enthusiasm and strength of Christian conviction which enabled these early servants of Jesus to find their truth in the most unlikely places, and to wring from the stubbornest language testimony to the life

which was their joy and strength. A new and mighty power had reached into their lives, and they were so transformed and uplifted by it that the dullest page put into their hands was suffused with the truth and the glory their souls had caught from Jesus Christ.

There were many, however, who could not follow this method of scriptural interpretation. Marcion was one of these, and it was because he could not allegorize the Old Testament that he determined to discard it. The Manichæans won St. Augustine, in part at least, by asking him hard questions from the Old Testament. After being stirred to "an incredibly burning desire for an immortality of wisdom" by perusal of Cicero's "Hortensius," the Scriptures appeared to him "unworthy to be compared with the stateliness of Tully," since his "sharp wit could pierce to the interior thereof," i. e., could not discern the figurative sense. Augustine was persuaded later of the truth of the allegorical method of interpretation and was thereby reconciled to Moses and the Prophets, but no man knows how many refused to let their imaginations run wild in the fantasies of allegory, and who were therefore lost to the Church thru the Old Testament. Almost as serious were the consequences to those who adopted the allegorical method and were loyal to the Church. Their imaginations were encouraged to all manner of eccentricities, and they corrupted their minds by learning to extract petty pious lessons from the six wings of the seraphim and the frogs that fouled the waters of Egypt. The zeal of the prophets was largely lost upon them, for they were persuaded, in the words of Origen, "that those prophecies which were delivered either concerning Egypt or the Egyptians, or Babylonia and the Babylonians, and Sidon and the Sidonians, are not to be understood as spoken of that Egypt which is situated on the earth, or of the earthly Babylon, Tyre or Sidon." Thus the great acts of God in the days of their fathers, and the exalted and heroic truth of mighty men who threw all their soul into the terrible battles of their time, were utterly unnoticed, and the prophets' burning words dissolved into patterns and shadows. They lost Isaiah for the sake of a flimsy argument for the Trinity.

They lost also the ethical force of many commandments, and the spiritual impetus from many of the sublimest passages of the New Testament as well as of the Old. Whatever was not found true or useful in its natural sense, in either Testament, was effeminated into a spiritual sense. Jesus said, "Salute no man by the way." "There are simple individuals," exclaims Origen, "who think that our Saviour gave this command to his apostles!" The learned Father continues that the Master cannot have intended the order to have neither two coats nor shoes, since there are countries of rigorous winter, where such a commandment would be cruel; and likewise he explains away all force from the precept to turn the left cheek also by the observation that one is naturally struck on the left cheek first, since the other fellow is pretty apt to be right-handed. As to offense thru the right eye, he declares it impossible that, when there are two eyes that see, the responsibility for the offense should be transferred to one eye, and that the right one. Thus the dangerous practice of deriving from texts that which may edify, despite their real meaning, resulted in blindness to large elements of the truth and spirit of the founder of the Christian faith.

It was a tragedy when the early Church forsook the strictly literal interpretation of the records of the heroes of faith, and for the plain, historical picture of their lives and testimonies exchanged a puzzle of miraculous prediction and of history before the time. To this day minds naturally alert and penetrating are befogged and confused by their endeavors to read the whole New Testament into the Old and then out of it. Men's reasoning faculties are perverted by the imagination that the grace which God created new and glorious in the soul of Jesus Christ, that the truth which the Nazarene struggled for with demons, and which he drew in from the nestling love of little babes—that this grace which was vitally achieved by the Son of God can be worked out thru the fringes and colors of the curtains, and the silver and gold of the ornaments, of a Hebrew priest's prescription for a shrine. For nearly twenty centuries the Church has been trying to make a book

mean what it does not mean, and to turn the law which was a schoolmaster to lead to Christ into the very portrait of his glory. The damage from the endeavor has been great. When one considers how much has been wrought in the name of the Nazarene which was utterly foreign to His spirit—the persecutions, the liturgies, the relics, the images, the philosophies—who shall say what measure of the responsibility lies at the door of the allegorical method of the interpretation of Scripture, which the adoption of the Old Testament introduced into the Christian Church?

Christianity has also suffered ethically all thru its history, and receives moral injury today, from the inclusion of the Old Testament in its rule of faith. Allegorical interpretation made possible the tenet that both Old and New, and all portions of both, were on the same level of authority. The result has been that much in the Old, which is decidedly on a lower plane than the parables and Logia of Jesus, has been received as Christian teaching, and carried out in life as though it were the good and acceptable and perfect will of God. Many the men who have descended to acts unworthy of their faith in loyalty to what they had received from the Old Testament!

The most serious blot on the character of Martin Luther was his consent to the bigamy of Philipp, the Landgrave of Hesse. Philipp the Magnanimous, a man of courage and power, invaluable to the Reformation in matters of state, had contracted in early life a marriage which proved unhappy. After sixteen years of distress, in which, notwithstanding his wife bore him seven children, he resolved to take to himself another consort. As a measure of defense against popular disapproval, he sought from Luther a public statement that his act was justifiable, or, in case that were impossible, a personal letter, as of a father confessor, which might be used in case the storm of popular anger rose too high. Luther had no joy over the matter; the whole business was distasteful to him. But, encouraged by Philipp, he thus reasoned: The patriarchs were bigamists; they took their plural wives, according to the record, with the consent of God; nowhere in the Bible is there disapproval of their

conduct; the precedent, therefore, is established that in special cases a man useful to God may have more than one wife. So with his sound heart protesting, but held to the deed by a false view of Old Testament Scripture, he put the name of a Christian prophet to consent to a prince's lust. A man must, of course, be judged by the standards of his time, and it is doubtless true that the question in the minds both of Philipp and Luther was not between bigamy and monogamy, but between bigamy and something very much worse. A second lawful wife in an age when loathsome disease ran like an epidemic among the princes of the Church is comparatively venial. But despite all extenuation, the blot remains, a witness to the moral injury received by a noble soul thru a mistaken notion of the authority of the Old Testament.

All that we might wish otherwise in the character of Oliver Cromwell is described and defended, in the Protector's own words, by texts from the Hebrew Scriptures. In the name of him who did not strive, nor cry, nor cause his voice to be heard in the streets, he pursued his enemies relentlessly, giving no quarter, sparing neither soldier, priest nor citizen, and the bigotry of Ireland and the religious partisanship of England to this day feed and fatten on his name.

The gallows in Salem were erected by a text from Exodus, "Thou shalt not suffer a witch to live." What Christian king going out to war, to settle a matter of right by the murder of men, has not appealed to Gideon's sword of the Lord? What stronger nation crushing a weaker people has not salved its conscience by mention of Joshua and the Canaanites? Black men writhe under the lash today in the name of the curse of Ham. Women of enlightened countries are forbidden respite from anesthetics in their hour of agony because of the doom of Eve. Parents excuse angry beatings of their children by a text from Solomon.

But a better understanding of the Hebrew writings and their relation to the Christian faith has come about in recent times, and we are now in position to avoid the evils which the fathers have suffered from the Old Testament, while not forfeiting our hold upon the good it is calculated to bestow. The Old Testa-

ment is a report of progress, a faithful register of the upward strivings of an earnest folk from a very crude faith and a very rude ethic to views concerning God and moral obligation which the world still reckons among its chiefest treasures. It is not correct to speak of the Old Testament as if it were a unified system of religious truth, or a consistent collection of moral precepts. All manner of religious notions and all grades of ethical teaching are included in its pages. Once the eyes are open to this diversity and unevenness in the perception of truth and right, the power of the Old Testament for evil is undermined. The crimes and blunders committed by appeal to its authority are no longer justifiable to a Christian conscience. Support of evils of which humanity would well be free is removed by critical and historical study of the ancient records, and thus the injuries, which have been received hitherto thru improper methods of interpretation, will be avoided in the future in proportion as the modern view of the Old Testament prevails.

On the other hand, whatever of good has been gathered from the Hebrew Scriptures is entirely accessible to the modern man. "Thou shalt not steal" is not less authoritative because Moses did not write it. "The Lord is my shepherd" is not less persuasive of gentle comfort for that David's piety was of a much ruder sort. Both the commandments and the consolations have a force of their own, independent of all questions of authorship and time of composition. Their compelling power is due to the eternal truth and right embodied in them, and as long as men live who need them they will speak with authority.

The Old Testament is no longer the master of Christian men. The religion of faith and freedom for which Jesus gave his life is no longer hampered by the legalism and the petty ritualistic precepts of Jewish Scriptures. The Galilean liberty of the children of God stands out at last untrammelled of the incumbrances from which for centuries it could not deliver itself, and the truth of the Nazarene is more free for conquest and service than it has been for many generations.

MIDDLEBURY, VT.

Literature

A Yellow Journalist

MR. WILLIAM SALISBURY calls the book in which he sums up the conclusions that he has drawn from nine years' experience as a reporter on the staff of different Western daily papers, *The Career of a Journalist*,* and the title is misleading in that it omits the qualifying adjective "yellow," which is all-important in this case. It is apt in that the author, firmly believing to the end that he has written an exposure of all American journalism, has in reality chiefly exposed himself, his ethical, civic, educational and cultural limitations and shortcomings. He talks much, if vaguely, of his aspiration to serve great causes, of his unselfish ambition to do battle for right and justice, but nowhere in his biography is there a trace of a serious, systematic effort, a conscientious determination even, to fit himself for so useful and exalted a career. The successful newspaper man's equipment embraces the two kinds of knowledge—knowing things, and knowing how to find out about them. Mr. Salisbury apparently acquired neither. If he studied the political, economic and social history of his own country, for instance, he omits to say so; rather does he glory in his ability to "fake." As to his knowledge of how to find out about things, the knowledge where to find authorities and how to use them, he confesses most explicitly that that was restricted to the office encyclopedia, to "Who's Who," and his paper's "morgue." His supreme faith in the efficiency of spontaneous ability without the leaven of knowledge crops out in his confession apropos of his occasional dramatic "work" on busy first nights, that he considered his "stuff" fully as good as that of the trained dramatic critics of the country's great papers. No doubt he would have "tackled" music, art and literature with the same confidence.

By his own confession he is but one of the untold many who would succeed without paying the price of success, and therefore fail. He never got out of the reporter's rut, the round of sensational news "stories" and perfunctory interviews of the kind that are "boiled down" to a few paragraphs by the copy reader, because the interviewer, lacking the knowledge that will suggest the proper questions, cannot lead the personage interviewed to talk interestingly. "Faking" was Mr. Salisbury's specialty—"faking" news and interviews, and even the persons interviewed. It is interesting to know that not only the proposition to form an international alliance for the extermination of rats, which was ascribed to a Japanese physician, and which was seriously discussed the world over, was invented by a group of Chicago yellow journalists, but that the physician himself was invented as well as a peg to hang the "fake" on. He never visited Chicago, he never existed at all. Unfortunately Mr. Salisbury believed that "faking" would lead to promotion, whereas in reality it sharply confined his utility to a certain field on a certain class of newspapers. He was of no value whatever. In New York he could not even succeed in getting a "job." Add to this slender equipment a Bohemianism that took Bohemia seriously until a pose had hardened into a habit, a resultant flippant cynicism that mistakes itself for humor, and a sneering hostility toward all who have succeeded—the superficial "smartness" of the man who believes that he has looked behind the scenes, and seen thru the trappings and attitudinizing of success—and the causes of Mr. Salisbury's limitations as a journalist are fully explained: they were intrinsic, not extrinsic.

That he tells some truths about present-day American journalism cannot be denied, but unfortunately he forgets to place them in the proper perspective. He makes sweeping statements where

*THE CAREER OF A JOURNALIST. By William Salisbury. New York: B. W. Dodge & Co. \$1.50.

qualifications are absolutely necessary. He compares the American newspaper to the American department store, and carries out the comparison rather ingeniously, and, no doubt, to the layman, quite convincingly. But he omits to point out that there are honest and dishonest merchants, and honest and dishonest newspapers. Some there be in which the counting-room controls the editorial sanctum, others in which it has no influence where questions of principle and policy are concerned. More dark secrets of the business office and the editorial room are discussed and denounced at the reporters' table, or over the table of some convenient barroom, than ever trouble the busy mind of business manager or editor-in-chief. It is the camp-follower who grumbles loudest. To newspaper men his book will be flippantly amusing, however, if much oftener than occasionally unpleasant on account of its lack of good taste. The layman will probably find it quite revealing, corroborative of a certain current opinion of a certain kind of journalism, which indiscriminately is coming to include the profession as a whole. To him several grains of salt to the page are earnestly recommended.

London Parks and Gardens. By the Hon. Mrs. Evelyn Cecil (Alicia Amherst), citizen and gardener of London. With illustrations by Lady Victoria Manners. 8vo, pp. 384. E. P. Dutton & Co. \$6.00.

The author of this handsome volume is a daughter of Lord Amherst, of Hackney, and is herself the author of "A History of Gardening in England" and other valuable books on a subject which she has made her own, and it is interesting that she describes herself as "Citizen and Gardener of London." The family is noted for its interest in literary and scholarly subjects—Lord Amherst has gathered a fine private museum of Egyptian archeology, and his large collection of Caxtons and other early printers was lately offered for sale. The present work is illustrated with twenty-five colored prints of London gardens, and the descriptions, if sometimes diffuse, are full of valuable historical information, and carry us back to a period when the roads were detestable and the public grounds

vile, even altho some gardens were formally beautiful. But one cannot but see how vastly more beautiful are the gardens, the churchyards and the surroundings of London than they were a hundred or two years ago, before the days of Telford and Macadam, and the naturalistic treatment of flowers and fields that prevails today. Altho written for English readers there is a fascination in the perusal of the volume for us who have but the rare chance of seeing the famous places here described.

The Cambridge Modern History, Vol. V. The Age of Louis XIV. New York: The Macmillan Co. \$4.00.

Altho by a sort of academic determinism, the fifth volume of the monumental Cambridge Modern History bears the title of *The Age of Louis XIV*, its able editors have not allowed the Grand Monarch's wars, diplomacy and administrative affairs to give a false perspective to their treatment of the period. The government of Louis, his foreign policy, the Gallican Church, Molière and his contemporaries in letters, and the war of the Spanish succession are here, but they have been taught their place in the scheme of things. The Revolution in England, the affairs of the small but mighty United Provinces, the Anglo-Dutch rivalries, and Peter the Great, Charles XII, the Great Elector and their respective enterprises are justly estimated and printer's space meted out to them accordingly. The colonies and India have a chapter, but it seems too brief to have come from the school from which Seeley taught us the commercial inwardness of European wars. Nevertheless it must be admitted that our volume leaves us under no delusions as to the reasons why England and Holland became so perturbed over the prospects of the poor Duke of Anjou's getting the Crown of Spain and its world empire. It is a pleasure, too, to record that the editors have discovered that history has to do with other things besides diplomatic notes (which are usually formal and false enough, as everybody knows) and the maintaining of thrones squarely on four legs. French and English literature of the period has two chapters; the granting of rights of worship to Dissenters is treated in ten

pages under the ancient and honorable but entirely misleading title of Religious Toleration in England; the Latitudinarians and Pietists, Anglican and continental, have their day in court; and the advancement of science is not overlooked. Finally, whoever would fain spend a lifetime on the *Age of Louis XIV* will find secure guidance in the elaborate bibliographies appended to the volume.

Profit Making in Shop and Factory Management. By Charles U. Carpenter, president of the Herring-Hall-Marvin Safe Co. New York.

This well written and concise volume is full of sound and practical advice that can scarcely fail to be of great value to all manufacturers and students of industrial economics. The conclusions reached are based on the author's experiences in conducting large and successful manufacturing plants, and they should be pondered by every shop superintendent and foreman in the land. The author takes up in detail the material and human elements in production and shows what are the most modern and effective methods to get the best results out of each. His treatment of the labor problem appears to be sane and progressive, tho it is here that some will be disposed to quarrel with his viewpoint. If Mr. Carpenter's methods of shop management and production are not those that are likely to prevail in the millennium, at least it is certain that his progressive and well worked out reforms, if adapted and adopted by the majority of our manufacturers at the present moment, will tend to make our methods of production more just, more efficient and more profitable.

The Religion of the Veda. By Prof. Maurice Bloomfield. New York: G. P. Putnam's Sons. \$1.50.

This forms the latest course (given in 1906-1907) in the "American Lectures on the History of Religions," and is a worthy successor to the similar volume on the religion of Japan published last year. The six lectures contain an excellent popular presentation of the subject. Beginning with the first Veda, the author gives an account of the more popular gods worshiped and shows that they were cultivated chiefly for baksheesh, the re-

ligion having none of that idyllic quality that used to be ascribed to it. Possibly the author's own exclusively Atharvan studies, in regard to the rites for averting disease and the worship of devils, may have been responsible for his tendency to see always the lower side of a higher form of religion, but he presents his case as well as it could be presented, and a little exaggeration only shows his deep sense of the truth of his contention. Certainly no one will dispute that the Rig-Veda is not all that Max Müller thought it was, altho it does not follow that the poets were all Pharisees and worked their religion "for all there was in it" (the expression is the author's). In several points Professor Bloomfield differs from late authorities in such matters as the interpretation of the nature of the gods and the value of comparative mythology. He gives various translations of hymns and philosophical works, sometimes only a striking passage, and has not hesitated to criticize the translations and views of others in a breezy manner, which tends to slang but is altogether effective and must have made his audiences "sit up." Thus we learn that the Vedic poets never "come nearer biting off more than they can chew than when engaged in lauding Indra." We thought the correct form was "chaw" and that it implied the use of tobacco! After the discussion of the hymns, Professor Bloomfield turns to the Upanishads, or philosophical writings, of the seventh century B. C. and later, and gives a vivid description of the early search for truth in the development of the monistic idea, the germ of which, in his opinion, is as old as the Rig-Veda, which is ascribed to any time between 2000 B. C. and the beginning of the next millennium, dates being uncertain before Buddha. The lectures, on the whole, while offering little that is new to the scholar, will prove a readable book to any one desiring to know the latest opinions on several points connected with the history of Hindu religion, and references are sufficiently frequent to enable the reader to find out for himself in what particulars Professor Bloomfield's views differ from those of other scholars. The special points likely to attract attention from those who have not followed recent

discussions in this field are the suggestion that the monotheistic tinge in the worship of Varuna in the Rig-Veda is not Semitic but native, Varuna being originally identical with the Greek Ouranos; the belief that the Brahmans are the authors of the scheme of salvation expounded in the Upanishads, and the defense of comparative mythology.

The Comments of Bagshot. By J. A. Spender. New York: Henry Holt & Co. \$1.25.

The witty editor of the *Westminster Gazette* has put into the mouth of a supposititious friend, one Bagshot, a number of aphorisms on a variety of topics, and annotated them in his own person. The following are representative:

There are very few friends with whom you can be equally intimate on all subjects. Discover the range of your intimacy with each friend, and never go beyond it.

Bores are dreadfully intolerant of each other. Never ask two to meet, or you will have both on your hands.

The misfortune of the "artistic temperament" is that so many people have the temperament and so few the art. We should never excuse the temperament, unless we are sure of the art.

When men say they have rights they generally mean that they are suffering wrongs.

Never display a wound—except to a physician.

Over-Sea Britain. By E. F. Knight. The Nearer Empire, the Mediterranean, British Africa and British America. With maps. New York: E. P. Dutton & Co. Pp. 324. \$2.00.

Descriptive geographies of the British Empire are already numerous, and Mr. E. F. Knight's present volume can hardly be said to equal, either in completeness or interest, the excellent series issued under the editorship of Mr. C. P. Lucas. It has, however, the merit of greater condensation and brevity. Mr. Knight makes too large a claim for a volume of modest size, that it gives "a descriptive record of the geography, the historical, ethnological and the political development, and the economic resources" of Canada, Newfoundland, the British West Indies, and the British colonies in Central and South America; of the South African colonies and the British possessions in East and West Africa, as well as Egypt, Gibraltar and the Mediterranean Islands of Cyprus and Malta. Nevertheless, it must be freely conceded that,

within the limitations of his space, Mr. Knight has done an excellent piece of work. The fact that Mr. Knight has a personal acquaintance with a large part of the ground covered also gives animation and actuality even to the brief descriptions which are all that his space permits. Geographies which give statistics of population, productions, manufactures and commerce are essentially evanescent. The years 1905 and 1906 are the dates taken for most of Mr. Knight's figures, and until these figures become too antiquated for the ordinary needs of the reader or student, Mr. Knight's volume will be well worth a place among the books of ready reference which one likes to keep on the most accessible shelf of the library.

Literary Notes

....Eden N. Delphey, M. D., has revised and enlarged *An Aid to Materia Medica*, by Robert H. M. Dawbarn, M. D., and the revision is now published by the Macmillan Company as a fourth edition. This book gives a concise list of all the official drugs in the last edition of the U. S. Pharmacopœia, their preparations, with strength; the older maximum and minimum, and the newer "average" dose; and in footnotes the New York State laws regarding the dispensing of cocaine and morphine by pharmacists. There are also chapters on Prescription Writing, including an easy method of writing prescriptions in the metric system; Incompatibility; Some Dangerous Abbreviations; lists of changes in the last Pharmacopœia; a table showing the strength of the more important pharmacopœial preparations; a table of solubilities of official chemicals in water and in alcohol; and a very complete list of the newer drugs and remedial agents, including radiant heat, high-frequency current, light, opsonins, organotherapy, and radioactivity. Dr. Delphey has been engaged for nineteen years in the practice of medicine, preceded by eight years in that of pharmacy, and has been a close student of the action and use of remedial agents, both old and new; but is conservative, and believes that the physician should make haste slowly. He has made a careful study of radiotherapeutics, and while he was one of the first to predict its limitations, yet believes that it has an important field of usefulness. The present energetic crusade against the use of secret and semi-secret preparations by the medical profession is having a beneficial effect. The eyes of physicians all over the country have been opened to the various and nefarious schemes of the exploiters of the so-called ethical proprietaries, whose main and sometimes only purpose has been to make money regardless of the welfare of a trustful patient. By their misstatements and exaggerations, these exploiters have even mis-

led many physicians. The first duty of one who offers himself as a healer of the sick is to know what he is doing—to know what is wrong with the patient and to know what remedial agent, if any, and in what dosage will produce relief. The book is intended to refresh his memory and keep him up to date concerning materia medica. Its possession is of the utmost importance to young physicians; and it will be of great assistance to students.

....A book entitled *Mattapoissett and Old Rochester, Massachusetts*, published by the Grafton Press, New York, is a new instance of good historical work resulting from a town or church celebration. Old Rochester has been the mother of towns. It included within its boundary not only Mattapoissett, but Marion and part of Wareham. The first eight chapters of the book, that portion of the history that precedes the separation of Mattapoissett from Rochester, was written by Mary Hall Leonard, favorably known as a careful local historian living in Rochester. Of the remaining chapters, devoted to the town of Mattapoissett after the separation, one treating of the Church in the Second Precinct, by Lemuel Le Baron Dexter, is delightful reading. More than fifty pages at the close of the book are filled with extracts from town and church records. Books of this sort and work like that of the Society of Mayflower Descendants, that copies and preserves the early vital statistics of old colonial towns, cannot be too highly commended.

....Prof. Hugo Munsterberg, whose latest book, *On the Witness Stand*, has just been issued by the McClure Company, has been the head of the Harvard Laboratory of Experimental Psychology since its organization. Born and educated in Germany, he lectured on psychology at the University of Freiburg, whence he was called to Harvard in 1892. Since his residence in this country he has shown an intense and critical interest in all forms of American life, and in his well known book, "The Americans," which was published some years ago, he embodied the results of his observations. *On the Witness Stand* is a collection of eight essays dealing with the psychology of the witness and the questions of evidence. The several essays have attracted unusual attention as they have appeared from time to time in *McClure's Magazine* and in other periodicals.

....Senator Alfred J. Beveridge is the author of a new book under the title of *The Meaning of the Times*. The book contains the principal addresses made by Indiana's senior Senator during the past ten years. They are the speeches which gave him his national reputation as an orator and public man. While the title of the book, *The Meaning of the Times*, is taken from a single address—one which Mr. Beveridge recently made at Yale University—yet this title also aptly describes the entire series of speeches included in the volume. For each speech is in itself an interpretation of some phase of the life of our times in the United States. The book may be fittingly described as "A voice from now." A reading of it is a tonic of citizenship. (The Bobbs-Merrill Co., Indianapolis.)

Pebblés

BLANK VERSE.

THERE was a young man from New York,
Who ate lobster salad at night;
He awoke with a pain,
But politely remarked,
"Will you kindly hand me a pill?"

—*Princeton Tiger*.

DASENT, when acting for Delane, of the *Times*, once received a letter sent for publication by a Mr. Wieass. The signature, almost illegible, was printed as Wiseass. The correspondent was indignant, and to cool his wrath Dasent inserted the following editorial note: "After a careful study of the original, we came to the conclusion that tho a doubt might exist as to the orthography of the first syllable of the signature, there could be no possible mistake as to the second."—*The Christian Advocate*.

HE MET HIS MATCH.

HE was engaging a new stenographer and he bit off his words and hurled them at her in a way to frighten an ordinary girl out of her wits.

"Chew gum?" he asked.

"No, sir."

"Talk slang?"

"No, sir."

"Make goo-goo eyes at the fellows when you're not busy?"

"No, sir."

"Know how to spell 'cat' and 'dog' correctly?"

"Yes, sir."

"Chin thru the telephone half a dozen times a day?"

"No, sir."

"Usually tell the office force how much the firm owes and all the rest of its private business you learn?"

"No, sir."

He was thinking of something to ask her when she took a hand in the matter and put a few queries.

"Smoke cheap cigars when you're dictating?" she asked.

"Why—er—no," he gasped in astonishment.

"Take it out of the stenographer's hide when you've had a scrap at home and got the worst of it?"

"Cer-tainly not!"

"Slam things around and swear when business is bad?"

"N-never."

"Lay for your employees with a club when they get caught in a block some morning?"

"No, indeed."

"Think you know enough about grammar and punctuation to appreciate a good stenographer when you get one?"

"I—I think so."

"Want me to go to work, or is your time worth so little that—"

"You bet!" he broke in enthusiastically. "Kindly hang up your things and let's get at these letters."—*Judge*.

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, \$2.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, \$1.75 a year extra; to Canada, \$1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with \$1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

Raise the "Maine"

WE have "remembered the 'Maine'" long enough; it is time to dismember it, if we cannot raise and restore it.

It has been too long a menace and an insult. It has been all these ten years a danger to navigation and a bitter charge of bad faith against Spain. It has been more than that, a proclamation of cowardice, that we did not dare to test the truth of the charge of bad faith that we made against a country with which we are at peace.

When the "Maine" was blown up in Havana Harbor it was the general belief that some Spaniard miscreants, presumably military men, had planted a mine under it and destroyed with it the lives of 254 men. "Remember the Maine" was the angry cry; and while it did not cause the war with Spain—for that was inevitable—it did hasten it. Spain would not have yielded, nor would we. Spain had no fear of the result of war, nor had we. But the blowing up of the "Maine" unified our people and hastened the result. The war followed quick, and quickly was the Spanish fleet swept off the seas, and the United States made sure haste to di-

vest Spain of all her colonies. It was a good thing for Spain; whether it was also a good thing for the United States has been a question with many. It was certainly a good thing for Cuba and Porto Rico and the Philippines.

The hulk of the "Maine" remained in the entrance of the harbor of Havana, visible to all. Congress appropriated \$200,000 to raise and remove it, but the money was not expended. Why not?

We fear the reason was a lurking suspicion that we were in error when we charged her destruction on Spanish malice. Since then several vessels belonging to different navies have been blown up by spontaneous explosion of the new powder. After awhile it decomposes, with heat, and explodes. Many believe, and some of our own officers, that the destruction of the "Maine" was an accident for which no Spaniard was in the least to blame. It looks very much as if some people were unwilling that the truth should be settled beyond doubt. It seemed as if some would prefer that the accusation should stand, and continue to stand, whether justified or not.

But that is cowardly. We have now no ill-will against Spain; she is a friendly country. We are at peace with her, and we ought to wish her well. Further than that, if we have, perchance, done her wrong these ten years we ought to know it and own it. That we should delay and still refuse is neither decent nor brave. We can afford to know and admit the truth. It is a great wrong to hold a long grudge against a nation, and that for no evil done by the nation itself, but at worst by some of its hothead citizens. It is an even worse wrong to maintain that grudge when it may be that no offense whatever had been committed. Raise the wreck and forget the "Maine"!

World Plagues

TOWARD the end of April the United States Consul at La Guayra, in Venezuela, announced that a series of deaths were taking place in the town from some not well understood disease. A number of people fell ill during the weeks preceding April 15th, when the first report from there came, and a number of deaths

had taken place before April 22d, when his second report was sent and was given publication in the Public Health reports. He called it a suspicious disease and suggested that it might possibly be plague. That, of course, would be the immediate thought of all the quarantine authorities of the world. The Venezuelan Government at first refused to consider such a possibility, but have come to realize that to ignore the situation would surely ruin the commerce from that port, since all the sanitary authorities of the world would blacklist vessels coming from there, and tho all the precautions necessary to suppress the disease have not been taken, the situation has become more hopeful and probably all serious danger of the further dissemination of the plague from La Guayra is at an end.

It may be a source of surprise to most people to be told that plague still constitutes serious danger for the world. We have heard much of how epidemic diseases called plagues devastated the civilized world every few hundred years during the last twenty-five centuries. The disease probably existed even before that time but of its ravages we have no record. During the sixth century B. C. there seems to be good evidence for its having more than decimated the towns of Asia Minor. Five hundred years have not past since without a plague having occurred that spread thruout the commercial world of the time, for it is commerce rather than civilization that facilitates its spread. Nearly always the disease has been what we now know as bubonic plague, because of certain swellings of glands in the arm-pits, along the neck and in the groins which occur in connection with it. The disease in the olden times was very fatal, carrying off, as a rule, nearly three out of four of those who came down with it, and in spite of all our improvements in therapeutics we have not succeeded in finding any remedy that is of much avail against it, since at the present time the death rate continues to be more than one out of two of those who are stricken by the disease.

Ordinarily it might be presumed that there would be very little danger of such a disease spreading over the world in the modern time. Those who think so, however, have no proper idea of the present

situation. It is nearly fifteen years ago now since true bubonic plague appeared in India, and began to count its victims first by the hundreds and then by the thousands. Since then, in spite of all that the British Government has tried to do, the disease has continued to rage among the teeming populations of India and has carried away literally millions of the inhabitants. It has been conquered in various places only to break out apparently with renewed vehemence somewhere else, and over and over again it has gone back over its tracks and has claimed new victims where it had once been eradicated. The native population have suffered much more than the whites, but the foreign element has had its share of victims and has suffered noteworthy losses in many years. There is, even now, no serious hope of eradicating the disease in the near future, and tho many vaccination methods and preventive measures have been tried success so far has not waited on these efforts with any encouragement.

Almost necessarily the dread disease got into the track of commerce and was carried here and there. It reached Hong Kong and found its way into various portions of China. From Hong Kong it went to Manilla for a time and claimed its victims there. It reached many ports of South Africa and only the most careful quarantine kept it from spreading farther. As was to be expected it reached Alexandria and for the last five years numerous cases of the disease have occurred and the end is not yet in sight. At the other end of the Mediterranean it got into Lisbon and claimed hundreds of victims, and Lisbon does not feel herself free from danger of the disease even at the present time. For a long time it was hoped that we would be spared visitation from it on the Western Continent. Two cases got as far as Quarantine, in New York, some years ago, but the disease was rigidly excluded. In South America they were less fortunate or less exacting in their quarantine regulations. Cases began to occur at various cities in Brazil and for several years the disease has been known to exist at Para, at Rio Janiero, at Bahia, at Santos and at Corumba. It reached the other side of the South American Continent and cases occurred

at Arica, Iquique and Valparaiso, and, indeed, quarantine authorities of the world are still guarding their people against these towns. It succeeded in finding its way into over twenty-two cities of Peru and some six hundred deaths from the disease have occurred in these during the past six months. Most of these cities at the end of March were still reporting the disease present and active. At Trujillo 229 deaths from the disease are reported in the last number of the United States Public Health reports. In Ecuador about 150 deaths have been reported during the present year.

It is easy to understand, then, why our quarantine authorities should at once be aroused to action when a suspicious disease occurred in La Guayra, for there is always danger of the further spread of the disease unless proper precautions are taken. Lest it should be thought that the supposedly more cleanly habits of our people might be expected to protect us from the disease it is well to recall that 121 cases of the disease occurred in San Francisco with 77 deaths, that the last case occurred January 30th and that the last infected rat was reported April 30th. The disease is carried by rats and it is probable that there are others of them still in the neighborhood of San Francisco, as also in other ports where the disease has existed, and that consequently we are not out of the danger of having another world plague in spite of the triumph of quarantine regulations which have thus far kept the disease in check for the commercial world. A chain is no stronger than each of its links, however, and there must be no break in the quarantine regulations of the world. We can be proud of the fact that modern science has enabled us to overcome one of the worst dangers to which mankind is liable, but the price of our safety is eternal vigilance that must be enforced on all sides.

Professor Koch, in discussing the origin of the plague some years ago, suggested that there were probably three places in the world where bubonic plague was endemic, that is, where it existed constantly and was transmitted from person to person for hundreds of years, perhaps, until finally it took on epidemic virulence once again and spread thruout the world. One of these

places is in the hill country of India, another is in Arabia, probably not far from Mecca, and a third is in German South Africa. From these foci, where the infectious material is kept constantly burning, the conflagration spreads every now and then. It is possible that we shall be able to eradicate the disease in its three homes. That possibility will not become actual for some time, however, owing to the political conditions. In the meantime quarantine will save the commercial world if its regulations can be properly and universally enforced and there is only one thing that constitutes a source of danger—that is over-confidence in anything but constant watchfulness to protect our people.

Political Folderol

LAST Friday was a hot day in the Lower House of Congress—hot air and noise to match. Excitement ran high. The Democrats had been taunting the Republicans with their unwillingness to pass a bill making public the contributions for political elections, as recommended by President Roosevelt and demanded by Mr. Bryan. But the Republicans have had the wealth since the Civil War, and prefer the contributions they make shall be kept secret. They cannot afford, they think, to trust the people; and they are right, for not a little of the money is used illegitimately. Both parties do it.

But the refusal to allow a vote on the proposition was hurting the Republican managers, and they concocted a bright scheme to save their face and yet kill the measure. So on Friday they presented their bill. It gave all the publicity the Democrats had been howling for, but it added other provisions the Southern Democrats could not vote for, and created a bill which was sure, tho past in the House, to be killed in the Senate. It was shrewd, at least tricky, and the Republican leaders thrust it in their opponents' faces, saying, "Here you have what you asked for; vote for it if you dare."

The bill gave more publicity than the Democrats wanted. It provided for an investigation of the votes cast for members of Congress, such as would show

that one Representative from Pennsylvania had more ballots cast for him than were cast for eight Representatives from Mississippi. The bill also called for the number of qualified voters, white and black, literate and illiterate, with a view to a subsequent apportionment and reduction of the Southern representation. All these facts it is well to have; but we have them already, quite enough of them; and everybody knows that reduction of Southern representation in accordance with the suppression of negro suffrage is perfectly impracticable.

On both sides it is claptrap and humbug. It is not superior political purity that makes the Democrats so eager for publicity of political contributions and expenditure. It is simply because the Republicans have the most money. Where Democrats have the money they do not want it. Tammany publishes no balance sheet. It sounds well to talk so—that is all. And the Republicans will vote for the bill not because they want it to pass, but in a form to prevent its being enacted. And the Republicans put in the additional provisions looking for reduction of representation just to put the Democrats in a hole. There is no honest consideration of public interests on either side. The pretense is that they would reduce the number of Representatives in the South where the negroes are prevented from voting. But if they really cared for the rights of the negroes they would be the last to offer the proposal, for it would justify the denial of suffrage, on the ground that negroes were not to be represented. There is hope for a better day while the moral and legal right to vote is allowed, and it is only by evasion of the law and the unfairness of registrars that they are excluded—better that present injustice should continue for a while than that Congress put it into law and declare that their exclusion from the ballot shall be recognized as if it were legal and so made regular and permanent.

The talk and scheming of Messrs. Crumpacker and Dalzell and Williams, Democrats and Republicans alike, is not statesmanship, is not patriotism. It is low partisan trickery, and the people see thru it.

Two Peace Conferences

Two great Peace Conferences have occurred since our last issue—the first from May 16th to 19th, at Philadelphia, under the auspices of the Pennsylvania Arbitration and Peace Congress, and the second from May 20th to 22d at Lake Mohonk, where for the fourteenth year Mr. Albert K. Smiley has gathered as his personal guests eminent men and women to promote the cause of arbitration and peace.

The Pennsylvania Congress is the second State Peace Conference that has occurred since the Hague Conference adjourned. The first was the Texas Congress, which was held last November, thru the initiative of Dr. Samuel P. Brooks, the progressive president of Baylor University. Similar congresses will undoubtedly from now on, in increasing numbers, be held in every State of the Union, so that each year we shall either have a National Peace Conference, as we did in New York last spring and as is proposed in Chicago next year, or else several State conferences.

The Philadelphia Conference was local only in its audience; the speakers came from all over the nation and included such eminent men as Justice Brewer, Senator Cullom, Mr. Bryan, Rev. Walter Walsh, of Scotland, and Congressman Bartholdt. The platform was refreshingly progressive, and, while it fully recognized the great work done at The Hague and the leadership of the American delegation there, it took a positive stand for the things yet to be done, demanding that our Senate ratify the Hague Convention establishing the International Prize Court, the only convention not yet ratified; that the International Court of Arbitral Justice be established as soon as three or more nations can be got to agree upon the method of selecting the judges; and, most important of all, that the United States take the initiative in the matter of the limitation of armaments. We do not see how these three most important “next steps” could be improved upon unless the platform had also requested our Congress to follow the example of Denmark, which has just appropriated, in addition to her war budget, a peace budget of \$2,000 for the propagation of peace.

Dr. J. H. DeForest, for many years the Japanese correspondent of *THE INDEPENDENT*, who is now in this country on leave of absence, and who is rendering such an enduring service in explaining to America the moral greatness of Japan, introduced a notable resolution, which was unanimously past, expressing the gratification of the Conference at our Government's signing the recent arbitration treaty with Japan. Mr. Ralston read what was probably the most brilliant and advanced paper of the Conference on the extent that arbitration is compatible with justice; and Mr. Bryan showed again that were he President of the United States he would be the greatest peace advocate of our Chief Executives, every one of whom can be quoted in favor of peace. Could Charles Sumner himself have said anything finer than this of Mr. Bryan?

"They tell us that they must promote peace by preparedness for war. I remind you that the Christian religion has been growing along different lines. I remind you that when the Author of our religion was tempted to use a sword, He said that those who drew the sword shall perish by the sword. I remind you that Christ said, 'I have not come to destroy, but to save.'

"We are spending a hundred million a year on our armies and another hundred million a year on our navies. Two hundred millions a year on armies and navies. One-tenth of this sum spent in the establishment of schools and colleges to which we would invite people from other lands that they might hear and learn of our institutions and be convinced of our good will; one-tenth of this expenditure so expended and in bringing people from all over the world and sending them back as friends and teachers of our civilization would do more to preserve the peace of the world than all the navies we will ever put upon the waters."

The Mohonk Conference in its platform went scarcely farther than felicitating the world on the progress made at the recent Hague Conference. But in the range and vigor of the papers read and in the representative character of its delegates, it surpassed its Pennsylvania prototype. Indeed, not since the adjournment of the Hague Conference has so important an announcement been given to the world as when Dr. James Brown Scott, technical delegate at The Hague and now solicitor of the Department of State, declared that the Permanent Court of Arbitral Justice would be

created very shortly and certainly before the Third Hague Conference assembles in 1915.

It will be remembered that the final act of the Hague Conference recommends to the signatory Powers the adoption of a convention of thirty-five articles providing for the organization, jurisdiction and procedure of a permanent Court of Arbitration, composed of permanent judges, versed in the existing systems of law of the modern civilized world. As the Conference was unable to agree upon the precise method of appointing the judges, the court was not to be constituted until the Powers by diplomacy or otherwise should determine how the judges should be selected. But the number of Powers necessary is not specified, hence any number may agree to establish the Court. Just as soon, therefore, as Mr. Root gets the arbitration treaties he is negotiating with all the nations out of the way, he will invite a few of the most progressive nations to create the Court, and then, as the other nations come in, they must do so on the basis of the Court as already established. In other words a better Court can be established now thru diplomacy by a few enlightened nations to which finally all the nations can adhere, than by waiting for the Third Conference, when all the more backward nations will have a finger in the pie. Unquestionably this highly sensational and satisfying announcement would not have been made without the consent of Dr. Scott's chief, Mr. Root, and hence another proof is given that in the present Secretary of State our country has a constructive peace statesman of the very highest rank.

The other papers read at Mohonk deserving especial mention include Prof. John B. Clark's plea for co-operation with the labor unions and socialists, Prof. George W. Kirchwey's masterly analysis of law as a substitute for war, Rollo Ogden's manly criticism of the press in its treatment of the peace question, Professor Shepherd's account of the forthcoming "First Pan-American Scientific Congress," which will be opened in Santiago, Chile, next Christmas Day, and Mr. Fulk's interesting account of the peace movement among American col-

lege students. During the present academic year seventy-five of our colleges and universities have held public meetings in behalf of peace, thirty have held public debates and eight maintain prizes for the best essays on the subject.

Out of these fourteen Lake Mohonk Conferences have come most that is good in the peace movement in the United States. The Society of International Law, with its scholarly journal, the Peace Society of New York, and the Intercollegiate Peace Society, to mention only a few, were born on Mohonk's mountain top. But more important yet, the three days spent together in as close an intimacy as on shipboard has engendered a spirit among the delegates, which, year by year, has radiated throughout the country and which has had a profound effect on the nation. Mr. Smiley is now eighty years old. He should be crowned with the Nobel Prize. The younger men can wait.

The Tree, the House and the Wood Pulp Press

THE complexity of modern life is as well shown in little things as in big. It is sometimes beautifully shown in the relationship of big things to little. The flashy American newspaper in mere material bulk is vast. Its contribution to misinformation and bad taste cannot be measured by finite standards. Its influence upon public policy, and upon the political decisions of the people, has become very nearly infinitesimal. To maintain this ratio of mass and sensationalism to intellectual worth we are grinding forests into wood pulp.

Forests have various other uses besides those to which the makers of newspapers devote them. They still furnish a certain amount of good timber, planking, clapboarding, shingles and so on for building purposes. They are drawn upon for railroad ties, telegraph poles, bed slats, golf sticks, toothpicks and matches. They are pleasant to wander in, restful to camp out in, useful to store up rain in, thereby conserving water power and preventing destructive freshets, and, to minds not wholly disintegrated by the habit of read-

ing wood pulp newspapers, they are still inspiring and uplifting as the original temples of Almighty God.

Naturally, the demands upon the forests have grown with the advance of "civilization," which no philosopher or statesman has yet discovered how to stop. Of late the public—even the newspaper reading part of it—has begun to grasp the idea that "civilization" threatens to become the whole thing and to destroy the forests utterly. A statistical minded person has figured it out that in the United States more than 100,000 acres of timber are cut over every working day. We have left now only 450,000,000 acres bearing commercial timber. To this supply the railroads look for 100,000,000 ties a year, the telegraph lines for 3,526,875 poles over 20 feet in length, and the newspapers and other printers for 2,327,844 tons of pulp. Our entire supply of standing timber is otherwise estimated at between fourteen hundred and two thousand billion feet, and our consumption at forty billion feet or more. At this rate the forests may last thirty or thirty-five years more, but the rate is increasing. Obviously, some of the uses of wood will have to cease before long.

Such minor retrenchments as might be accomplished by the abatement of the toothpick habit, or the success of an anti-tobacco crusade, which would diminish the conflagration of matches, will not put off the evil day for long. No satisfactory substitute has yet been found for the wooden railroad tie. Concrete is a possibility, but it is still in the experimental stage. This is hardly true, however, of the concrete house, and in the substitution of concrete for wood in house building, not only in towns, but also in the rural districts, we see more possibilities than have yet been pointed out by the professional forest conservators.

Most of the dwelling houses, barns, pig pens, "henneries" and fence posts in the United States are made of wood, and all of them could be made of concrete not only just as well but a great deal better. The houses, for instance, made of concrete would be more enduring, and the annual fire loss, especially, would be enormously reduced. They would be

more substantial. Well-made wooden houses have not been unknown in this country. Some of the old Colonial types were of excellent and enduring workmanship, but it is undeniable that a large part of the wooden houses, barns and outhouses in America are shocking examples of that fundamental immorality which consists in passing off claptrap for honest production. The building of such houses and the habit of living in them has undoubtedly helped to destroy whatever remnants of esthetic feeling were left in the blood of the American people after their ancestors had smashed the graven images and whitewashed the idolatrous frescoes of the European cathedrals.

Morally and esthetically, as well as economically, it might be a good thing for the American people if they could no longer rebuild their balloon-framed, clapboard-skinned, shingle-thatched, white-painted boxes, or their Queen Anne "cottages" when a well meaning Providence removes them by fire, flood or tornado. Lifelong association with substantial gray walls of concrete in simple lines and proportions would inculcate moral sense, ameliorate the national taste, and greatly relieve the prevailing affliction known as "eye strain." Add to all of which, it would in a measure spare the forests.

But this is not quite all. The reconstruction of the American mind and character, which would inevitably follow upon the substitution of concrete for wood in house construction, would necessarily affect the public demand for reading matter. It is inconceivable that a family brought up in a well-constructed and fairly decent looking house would desire to see one of our Sunday newspapers, or permit any creature to live who maliciously or carelessly threw it inside the door. This means that the substitution of concrete for wood in house-building would also indirectly exterminate the demand for a major part of the two and a quarter million tons of wood pulp.

In view of all these considerations—which, we submit, are not open to dispute—is it extravagant to hope that some remnants of our remaining forests may yet be conserved?

The Latest Railroad Trust Suit

QUESTIONS unlike those presented in the Northern Securities case or in the proceedings against the Harriman lines are involved in the Government's suit against the New York, New Haven & Hartford Railroad Company, altho violation of one and the same statute (the Sherman Anti-Trust law) has been alleged in all of these actions. In the Northern Securities merger, control of parallel steam railway lines stretching across half the continent was sought. Similar control of long parallel lines is attacked in the Harriman case. In this New England suit, the court is asked to dissolve the alliance of a steam railway with numerous local trolley systems, and to prevent a consolidation of this steam railway with another which does not compete with it, except in a small part of the territory served by one or the other.

A few years ago the New Haven Company began to buy trolley roads, moved partly by fear that its main lines between Boston and New York would be paralleled by a succession of these local roads, partly by sharp competition in certain limited areas, and partly by a desire to use and develop the electric lines as feeders. It now owns about 1,500 miles of these suburban and interurban roads, including sixteen distinct systems (565 miles) in Massachusetts, five-sixths of the trolley mileage in Connecticut, and four-fifths of the mileage in Rhode Island. About a year ago it also obtained possession of 35 per cent. of the stock of the Boston & Maine Railroad Company, whose lines are in northern New England. The Boston & Albany road (leased by the New York Central) may be regarded as a kind of boundary line between the territories of the two systems. Massachusetts protested against the approaching consolidation, and her Legislature enacted a law forbidding the New Haven road to vote upon its Boston & Maine stock before July 1st of this year. No further steps toward consolidation were taken.

What the national Government now sets out to do has already been done, so far as the Massachusetts trolleys and the Boston & Maine are concerned, by the Massachusetts Supreme Court, which

decided on the 8th inst., in response to a complaint from the State's Attorney-General, that the New Haven Company held its Massachusetts trolleys in violation of law. It is admitted by the company's counsel that this decision is also effective with respect to the Boston & Maine stock. It is expected that the company will in some way dispose of both these holdings, unless it can procure legislation at Boston permitting it to keep them. It does not appear that such legislation can be obtained, altho a majority of the five members of the Special Commission on Commerce reported in March last that a consolidation of the two steam railway systems would serve the public interest, if it should be made under certain restrictions concerning rates and official regulation.

The Government seeks, of course, not only to prevent such a consolidation, but also to compel the company to give up all its trolley mileage in the three States, which includes the urban and suburban systems of Hartford, New Haven and Providence.

It is not clear that a consolidation of the two steam railway systems would involve such a suppression of competition as the Sherman act was designed to prevent. As we have said, the two are not parallel or competing systems, but they touch each other at certain points. Such an alliance as already exists appears to serve the public interest, for on the 10th inst. the New Haven Company, by means of the Boston & Maine, opened a new route to the West "thru the northern gateway," and filed at Washington tariffs showing a reduction of from 40 cents to one dollar a ton for freight on this route from southern New England.

As for the trolleys, nearly all of them are distinct local systems, confined to one State, and the question whether they are subject to rules for interstate traffic may be a difficult one. We do not hear that passenger rates on them have been increased or that service on parts of them has been discontinued since they passed under the control of the steam railway company. On the other hand, some of the lines have been extended. It should be said, however, that testimony concerning the effect of trolley and steam alliance upon rates and service is lacking.

If it shall appear that this alliance has been followed by no increase of rates or deterioration of service, it will be difficult to prove that it has been oppressive or otherwise injurious to the public, altho, like the alliance of the two steam railway systems, it may be forbidden by the sweeping prohibition of the Sherman act. This law, as Mr. Roosevelt has repeatedly pointed out, is objectionable because it condemns harmless or beneficial combinations as well as those which are unjust and oppressive.

It has seemed to us that the evil most to be feared as a result of a consolidation of substantially all the railways in New England is the possible misuse of the enormous power of the consolidated interests in politics and legislation. Railways have already exercised great influence for political and legislative purposes in certain parts of New England, and not for the general good.

On the same day at
Two Lovers the Methodist Protestant General Conference last week President Mackenzie was to present the action of the Congregational National Council on union of the three denominations, including the United Brethren, and on that same day there appeared an unexpected and imposing delegation from the Methodist Episcopal Church, consisting of Bishop Warren, Senator Dolliver and Dr. Goucher, and asked them to consider negotiations for return to the Church from which they went out, or were driven out, in 1830. This was the first time that the two Churches have had any communication with each other; and the visitors declared that the wrongs complained of in 1830 had been corrected, and that no reason existed for further separation. But they did not propose, of course, a change in the Episcopal system, which the Methodist Protestants reject. Of course they were received with great enthusiasm. President Mackenzie afterward presented the action taken by the Congregationalists asking for further negotiations, and showed that a long step forward was taken at Cleveland, but he made it plain that if they preferred union with the Methodists it was their right to withdraw. The Methodist Protestants

are placed in a difficult position, as a new lover has appeared before they are off with the old, and they do not know at all what the new lover has to offer as inducement to unite their fortunes. The Conference appointed a commission to confer with the Methodists, and voted not to consider a restatement of the Act of Union with the Congregationalists. This puts the matter up to both the Congregationalists and the Methodists.

Prison Schools

We have recently called attention to the fine work being done in Michigan by her reform school; that one in Adrian for girls being nothing more than a superbly conducted educational establishment. The girls graduate from it well prepared for an industrial position in society. This sort of work is spreading with great rapidity, and we are likely at last to get rid of the crime-breeding prisons which have done more than any one thing to check the progress of civilization and breed a criminal class. Sing Sing reports a thoro organization on the educational basis. It has 408 enrolled pupils, while at least one hundred more are only waiting to be admitted as soon as room can be made for them. The State should see to it that room is made at once. The course of studies goes all the way from elementary English to history, civics and natural sciences. The principles of ethics are, of course, not excluded. Sing Sing has already graduated one thousand men, much better prepared for good citizenship. Foreigners are particularly educated in American principles of government and social ideas. Many of the teachers are themselves convicts, but they are reported as entering into the work in the most unselfish spirit, and seem to forget that they are criminals. Warden Frost tells us that when the school was started 30 per cent. of the prisoners were absolutely illiterate, but that this has been reduced to 10 per cent., while the circulation of the prison library has increased 50 per cent. We look upon this as not only a great opening for private beneficence, in the way of furnishing books and stimulating the movement, but as a great social revelation requiring of our State governments prompt and thoro action.

Preventable Disease

The New York State Board of Health, in its Annual Report, gives us a conception of public and private recklessness that is hard to credit. We are told that not less than twenty thousand cases of typhoid fever are due annually to the pollution of our streams by sewage. Of course all this pollution does not come from systematic village and town sewage, but from the improper methods of carrying off the waste and filth of scattered homesteads. One of the worst outbreaks of this fever ever known in this country was from the recklessness of a homestead high up one of the Pennsylvania valleys. The sanitary conditions of summer resorts has been investigated, and it is found that not a few hotels, where typhoid fever is not the only pest likely to be scattered, sustain such conditions as are a menace to the public. It is also true that, not only in New York State but in other States, there are hundreds of villages that systematically pour their sewage into creeks and rivers. This state of affairs should be put an end to without the slightest consideration of the expense. A Health Board is failing in its prime duty that allows this method of drainage to be continued for a single month. The pecuniary loss from typhoid fever alone runs up into the millions annually—seven millions for New York State alone. The deaths from typhoid fever show an annual increase, so also the deaths from diphtheria and scarlet fever; and yet all these diseases are preventable. It is criminal if they are not prevented.

Dynamite Outrages

Whether the strikers have the right of it in the question involved or the company is not a matter of special interest to us in the case of the Cleveland car-strike. That question should go, and has gone, to arbitrators, and that should be the end of it. For arbitration should mean peace and good will between contestants in industrial as well as international war. But it is not the end of it in this Cleveland conflict, for bushwhackers on one side, the irregular fighters have, meanwhile, during the continuance of negotiations for peace, again and again blown up cars with dynamite, indifferent what innocent people they might wound or kill.

There was a little crippled boy sitting on the porch of his home, and he was knocked down and will probably die. There should be absolutely no patience with such violence, no apologies for it, no sneaking or silent sympathy. There have been two or three cases lately in which, during a difference followed by a strike, a bridge has been blown up by dynamite. These outrages appear to be all on one side. We do not notice any accounts during a strike that the houses of the men who have refused to work have been blown up with dynamite or they have been otherwise injured. The attacks have been by presumed striking workmen on their late employers or on other workmen. Where damage is done to bridges or buildings in course of construction the presumed loss to contractors may be supposed to explain the vengeance, but even so it gives more work to the non-striking workmen. We have come to a condition the world over when it is the duty of every government to limit and guard strictly the sale or possession of dynamite and all similar high explosives. They are quite too convenient an instrument of vengeance or malice.

A Test Case Settled We congratulate Mr. Bibb, a colored citizen of Alton, Ill., on his patience, persistence and courage in insisting on the right of his children to attend a convenient public school, without being forced to attend a segregated negro school. After twelve years of litigation, during which he has given his children private instruction, the Supreme Court has decided that under the State constitution they have just the same right as white children, and henceforth Ambrose and Minnie Bibb will attend the high school, defended by the highest judiciary of the commonwealth. Alton is in Southern Illinois, close to the Missouri border, and this probably explains the provincial position which its school board has taken in refusing to colored children equal school privileges. In most of the country all children are admitted to the same schools. Here in this city there are no separate negro schools. White, black, red and yellow need the same sort of education, and children have to be taught race or caste or wealth prejudice by their silly

elders. Even where separate schools are kept up white and black boys play marbles together, hunt and camp together, and, as they grow up, too often make lawless love together, and grown white and black idlers hang about the same saloons. Separate schools mean more expense for the State and poorer schools for both races.

The act making appropriations for the legislative, executive and judicial expenses of the Government for the year ending June 30th, 1909, which includes the appropriations for the United States Bureau of Education, provides for an increase of only \$1,250 over the amount for the current year. The additional amount includes an increase of \$1,000 in the salary of the Commissioner of Education, making it \$4,500 per annum; also an increase of \$250 in the appropriation for books for the library, current educational periodicals, other current publications, and completing valuable sets of periodicals, making the amount available for such purposes \$500. No appropriation whatsoever was made for the investigation by the Bureau of Education of special educational problems, for which purpose the Secretary of the Interior strongly requested an appropriation of \$40,000. Economy might have been better exercised elsewhere. German and French budgets include large appropriations for the increase of knowledge; our Government does practically nothing.

In an article on coaching, *The Spectator* tells this of a famous "whip":

"The Duke of Beaufort was a very fast driver, and had painted on the 'Quicksilver' coach the motto: *Nemo me impune lacessit*. Being asked one day what it meant, he answered: 'Nobody ever gives me the go-by;' and apparently nobody ever did."

Gen. Benjamin F. Butler was not a "whip," but he did not like to have any one give him the go-by. When he was running for Governor of Massachusetts, a Democrat against the Republican candidate, he had a series of discussions with his rival. He rode the State with a magnificent span of horses. One day, on the platform, the Republican candidate complained that Butler's team kept ahead of his, stirring up the dust. Butler airily

replied: "I take no man's dust." The people liked his bluff and they elected him.

There are too many stray dogs, and more pet dogs than are needed. Three men were bitten by a mad dog in Brooklyn last week, on the very day that William H. Marsh died of rabies contracted in washing the wound of a pet dog that had been bitten in the street. He learned too late that he had been inoculated with the poison, and he went to the Research Laboratory for treatment only to learn that it was too late, and that he had hardly four days to live. Such a life was too valuable to be destroyed by a dog. Such a case as this, where the infection is caught in this secondary way, is extremely rare, but it illustrates the danger from dogs that may lurk where least expected. Two members of Mr. Marsh's family are being treated with serum in fear that they have been infected by the same pet dog, which had to be killed when it showed signs of the disease.

We wish to say that if the Methodist General Conference should refuse to elect Dr. Goodell as bishop for the sole reason that he was so unfortunate as to have to divorce his wife it will do a most unjust act. There are conditions in which divorce is right and a duty, and is biblically approved. This was one of the cases. Dr. Goodell might without fault have married soon afterward, but he waited until his divorced wife was dead before marrying again. If he is the right kind of a man for bishop—and he came within a very few votes of election before this divorce was raised—the fact that it was so unjustly raised against him ought to ensure his election.

The post-office bill which will pass Congress this week contains a clause which forbids matter to be conveyed in the mails "tending to incite arson, murder or assassination." That is a good provision. If we can, and do, forbid the use of the mails to carry "indecent" matter, we certainly ought also to exclude murderous matter. Life must be protected as well as social morals. The provision is aimed at anarchists of the vio-

lent sort, not against a mere theory of lawlessness.

The trial of ex-Boss Ruef, of San Francisco, is a sad case of apparent failure of justice. The jury disagrees, standing six to six. Every one knows he is guilty; he has been convicted once; but we are told the jury failed to convict on the claim that they—or half of them—would not believe his pals on oath. But it is on the testimony of accomplices that all conspiracy has to be proved.

Once more at Cornell University a woman coed, Miss Alice Berham, has taken a first prize, the much coveted literary prize, from all the men coeds. It is well the women should have their share of honors, and their success is a strong argument for coeducation, and only jealousy would make it an argument against it. The men coeds at Cornell ought to be very proud of their women coeds.

"There are two things I never worry about—those things I can't help and those I can." This is too good to have been uttered for the first time only a few days ago by Rear-Admiral Evans. Nevertheless we do not recollect to have heard it exprest before so tersely. It should insure him more immortality than bringing the fleet safely to the Pacific.

Our fifteenth annual Vacation Number will appear next week. This will be the largest issue of the year, and will contain vacation experiences and photographs submitted by our readers. Owing to the extra large edition our subscribers may not receive their copies quite as early as ordinarily.

When a gay Senatorial Lothario gets bitten and has to pay \$10,000 hush money to the woman, and then finds himself after all the victim of a blackmailing lawsuit, the public laughs and gives no sympathy—glad as they are that the woman is locked up for perjury.

A couple of college students in this city just for fun broke into a candy store, were detected, and one of them shot. They had better go for a few months to jail just for fun.

President Ide's Address at Cornell

IN his address on Governmental Investigation and Regulation at Cornell University on May 16th George E. Ide, president of the Home Life Insurance Company, exposed the incompleteness of the investigations of two years ago, which became the basis of legislation. He also had something to say regarding the crudeness, inexpedience and in some cases absolute injustice of the legislation itself. He said in part as follows:

"The present law, which is the result of this investigation, can be only understood and appreciated if we firmly establish in our minds the fact that the investigation was incomplete and necessarily cursory by reason of the short space of time devoted to it, and that it did not undertake a comprehensive investigation of the life insurance of the country. No time whatever was devoted by the committee to the investigation of life insurance methods in other countries. The committee did not consist of experts in life insurance affairs; and its members, prior to the investigations, did not claim to have a knowledge of the intricacies of the life insurance system. The committee had, as its expert adviser, one consulting actuary, but no practical life insurance manager. Remember especially that the entire period covered by the investigation was only three months and one-half, and that less than two months were subsequently given to a careful review of the information gained and the codification of the new law. If we bear these facts in mind, we can easily understand the crudeness of the present law, and can readily excuse its inconsistencies and can see the reason why, in many particulars, it is so ill suited to the practical requirements of our business. The proposed law was introduced in the Legislature on February 22. In April the law was passed; eight months was, therefore, the total length of time consumed in the investigation of life insurance companies, in the framing of a proper revised statute, and in its final adoption. When we consider the revolutionary character of the present insurance law, the scope of its application, and the amount of detail which is covered in it, one can hardly believe that it is possible that such a vast subject could have been thoroughly and properly covered in so brief a period."

President Ide referred in passing specifically to the sections having to do with the *Limitation of Expenses*, the *Limitation of the Surplus*, the *Distribution of the Surplus*, *Investments*, *Valua-*

tion of Securities, standard *Forms of Policies* and *Internal Management*. He pointed out some of the results thus far accomplished by the so-called reforms brought about under the present law and called attention to the tremendous shrinkage in new business that has been one resultant. He also called attention to the fact that the laws of New York as now on the statutes have given a strong impetus to the formation of new companies all over the country. Many of these new companies are now reaping rich harvests because of their ability to pay commissions far in excess of those which New York companies can pay under the law. These new companies are not all of them conservatively managed and what their history will be during the next five years no one can predict. Mr. Ide was wise in making his appeal to college men on the principle that the young are the hope of the country. THE INDEPENDENT approves of his remarks on the unwisdom of the present tendency of minute business regulation and considers that they deserve the most careful attention.

✱

WITH the near approach of the excursion season there has been considerable local activity on the part of the inspectors of the steamboat inspection service. Particular attention has been paid to boat and fire drills.

✱

DISPATCHES from London under date of May 20th report a decision in the King's Bench Division in favor of the insurance companies on their contention that the fire which destroyed a large part of the city of Kingston, Jamaica, in January, 1907, broke out because of the earthquake. Most of the policies written by the English companies contain an earthquake exemption clause, and they are thus protected from claims for damages under such policies. The decision in question is the result of a test case brought by a Manchester firm against the London and Lancashire Fire Insurance Company.

Safe Deposit by Mail

A GENERATION ago the only place a business man or capitalist had to keep his valuables was in a safe in his own office. Many persons, however, who were not in business and did not own safes had securities and valuable papers which they wished locked up in a fire-proof and burglar-proof vault. Safe deposit companies, therefore, sprang up in large cities thruout the country, where a person might rent a box for \$5 a year and upward. You had your own box in a safe deposit vault and could go to it whenever you wished. The security and privacy of the safe deposit vault were recognized, and the growth of the business during the past thirty or forty years has been enormous.

But many who would like to go to a box and deposit personally their insurance policies, wills, stocks, mortgages and other valuable papers cannot do so, because they may live in the country or at a distance from a safe deposit company. Therefore the business of conducting safe deposit by mail has been inaugurated. Altho it is a new idea the business has already grown to be a success. Safe deposit by mail has quite naturally followed banking by mail and the development of an enormous business in general merchandise by mail orders. We learn that the safe deposit company which has been doing a safe deposit business by mail now has depositors in nearly every State in the Union. The business, therefore, is national in character. The method is a simple one. The depositor forwards his valuables by registered mail to the safe deposit company. At the beginning he has a receipt from the United States Government, and to this there are promptly added the safe deposit company's acknowledgment (by postal card) and the company's formal receipt. While the envelope is in the company's custody its seal is never broken, except in obedience to written instructions from the depositor. If the latter asks that it be sent to him, it is

forwarded at once by registered mail. It may thus be returned to him as many times during the year as he may desire, and without additional cost. The reason the business has grown is because the cost of an envelope to the subscriber for a single year is nominal. As we have taken some pains to inquire into this novel method of conducting a safe deposit business which interests people of small means as well as the large capitalist, we have found that the vault used for storing the envelopes above referred to is the largest and strongest vault in the world. It is built of harveyized nickel and steel armor plate, just like that used on the newest battleships in the United States Navy.

....General Brayton Ives, president of the Metropolitan Trust Company, is the new president of the reorganized Williamsburg Trust Company, which will resume business on or before June 1st, and for the next two years, at least, will be virtually a branch of the Metropolitan. The reorganization plan provides for a voting trust for two years, and the voting trustees are General Ives, J. Edward Simmons (president of the Fourth National Bank) and William N. Dykman, who has been counsel for the Williamsburg Company.

....The directors of the First National Bank have declared a special dividend of 100 per cent., or \$10,000,000, to be used by the stockholders in subscribing to the capital stock (\$10,000,000) of the new First Security Company, recently organized in the interest of this bank's shareholders "to transact certain lines of profitable business which, tho often transacted by bankers, are not expressly included within the corporate powers of national banks." To this new company has been transferred the bulk of the bank's holdings of bonds, stocks and mortgages, which amounted, in February last, to \$60,696,000. This new departure in New York banking practice excites much interest.

Survey of the World

Close of the Session of Congress

Final adjournment ended the session of Congress at 11:50 p. m. on the 30th, the Emergency Currency bill having been past in the Senate seven hours earlier after a memorable attempt to prevent action upon it by continuous talk. It will be recalled that some time after the passage of the Aldrich bill in the Senate, the House past an essentially different measure, known as the Vreeland bill. In conference a new bill was prepared, combining the leading features of both. This conference bill was accepted in the House, on the 27th, by a vote of 166 to 140. Thirteen Republicans voted with the Democrats against it, one of them being Mr. Fowler, chairman of the Banking Committee. When this conference bill was taken up in the Senate, Mr. La Follette undertook, with the aid of Mr. Stone and Mr. Gore, to kill it by talk. The Wisconsin Senator began his speech at 12:40 p. m. on the 29th and held the floor for nearly eighteen and a half hours, or until 7 o'clock on the following morning, thus making a new record. In 1893, Senator Allen held the floor for fourteen hours and ten minutes. Mr. Stone was at hand to succeed Mr. La Follette, and he spoke, or read, for six and three-quarter hours. Then Mr. Gore, the blind Senator from Oklahoma, came to their aid. When he had spoken for two hours, he closed his remarks and turned toward Mr. Stone's place, expecting that Senator to take the floor and carry on the fight. He could not see that Mr. Stone was absent. Mr. Aldrich promptly grasped the opportunity and called for a vote. The Vice-President was in sym-

pathy with him, and the clerk at once began to call the roll. Mr. La Follette came in, but it was too late to prevent the final action. The bill was past, a little before 5 p. m., by a vote of 43 to 22, five Republicans (Messrs. Borah, Bourne, Brown, Heyburn and La Follette) being counted with seventeen Democrats in opposition. The Senators were very weary. It is said that Mr. Aldrich had been on guard for nearly thirty hours. At 10 o'clock the bill was signed by Mr. Roosevelt.—After the currency question had been settled, no important business was transacted except the passage of a liability bill for Government employees and of the Public Buildings bill. The conference report upon the latter bill had been held back by Mr. Bartholdt as a kind of club to keep members in the city and insure a vote upon the currency bill. For the better part of two days the House had been killing time. Its proceedings just before adjournment were of a very jolly character.—In a final statement concerning the appropriations of the session (which exceeded \$1,000,000,000) Chairman Tawney complained that the Democratic filibustering tactics had prevented that freedom of discussion which might have enabled the House to reduce the huge total. He also said:

"The demand for enormous increases in war expenditures did not originate with the representatives of the people. It originated elsewhere and was supported largely by a misdirected public sentiment, to such an extent that a majority of this House and a majority in the other branch of Congress, including representatives of both political parties, supported the increases because they did not dare oppose them."

For the Democrats, Mr. Fitzgerald re-

viewed the appropriations, asserting that the session had been the most profligate in our history. The Republicans were responsible for so squandering the public money that it would soon be necessary to issue bonds:

"In the plethora of messages from the Chief Executive there has not been a single warning to safeguard the interests of the people by resolutely repelling all attempts to raid the Treasury. Indeed, when the history of this session is impartially and truthfully written, the wielder of the big stick will be pictured in heroic size at the head of those who, openly encouraged or secretly abetted by him, have successfully rifled the people's strong box."

In the Senate, Mr. Hale deplored the alarming total of appropriations, and gave notice that he was about to prepare a statement concerning them. The official estimate of receipts for the coming year is only \$878,123,000.

The New Currency Law

The new currency act is a very long one. It provides for the formation of incorporated National Currency Associations, of not less than ten banks each. A bank in such an association, having outstanding bond-secured circulation amounting to not less than 40 per cent. of its capital, and having a surplus of 20 per cent., may, thru the association, deposit for emergency circulation "any securities, including commercial paper, held by a national bank," and the circulation issued is not to exceed 75 per cent. of the cash value of the securities so deposited. If, however, bonds of States, cities, counties or towns are deposited, the issue may be 90 per cent. of their market value; and any national bank (qualified as above) desiring to take out circulation on such bonds may apply directly to the Comptroller without the intervention of a Currency Association. No bank is permitted to have notes based upon commercial paper in excess of 30 per cent. of its unimpaired capital and surplus. Commercial paper must bear two responsible names, and its term must not exceed four months. The tax is 5 per cent. a year for the first month, with an addition of 1 per cent. a year for each succeeding month, up to 10 per cent. There are provisions for redemption and for geo-

graphical apportionment of issues. The act creates a National Monetary Commission of nine Senators and nine Representatives, to inquire and to report "what changes are necessary or desirable in the monetary system of the United States or in the laws relating to banking and currency." In the Senate, the Vice-President has appointed Messrs. Aldrich, Allison, Burrows, Hale and Knox (Republicans), and Messrs. Daniel, Teller, Money and Bailey (Democrats). Those appointed in the House by the Speaker are (Republicans) Messrs. Vreeland, Overstreet, Burton, Weeks, Bonyng and Smith, and (Democrats) Messrs. Padgett, Burgess and Pujo. It will be noticed that Mr. Fowler, chairman of the Banking Committee, was left out.

Campaign Fund Publicity

No action was taken in the Senate upon the House bill requiring publicity for campaign funds. This bill, with the Crumpacker amendment relating to the votes of negroes in the South and to a reduction of representation, could have been past in the Senate only after a long and bitter debate. On the 26th ult., Mr. Bryan sent to Secretary Taft the following telegram:

"I beg to suggest that as leading candidates in our respective parties we join in asking Congress to pass a bill requiring publication of campaign contributions prior to election. If you think best we can ask other candidates to unite with us in the request."

Before he received this dispatch the Secretary was told by newspaper reporters that it had been forwarded. Upon receipt of it he sent the following reply.

"Hon. William J. Bryan, Lincoln, Neb.:—Your telegram received. On April 30 last I sent the following letter to Senator Burrows, the chairman of the Committee on Privileges and Elections of the Senate:

"My Dear Mr. Burrows: I sincerely believe that it would greatly tend to the absence of corruption in politics if the expenditures for nomination and election of all candidates and all contributions received and expenditures made by political committees could be made public both in respect to State and national politics. For that reason I am strongly in favor of the passage of the bill which is now pending in the Senate and House bringing about this result so far as national politics are concerned. I mark this letter personal because I am anxious to avoid assuming an attitude in the campaign which it is quite possible I shall

never have the right to assume, but so far as my personal influence is concerned I am anxious to give it for the passage of the bill.

"WILLIAM H. TAFT."

"Since writing the above, in answer to inquiry, I have said publicly that I hoped such a bill would pass."

"W. H. TAFT."

Mr. Bryan replied that he was much gratified to receive this answer and that he trusted the publication of the Secretary's letter would add the weight necessary to turn the scales in favor of the measure. "Elections," he added, "are public affairs, and publicity will help to purify politics." He also asked Senator Culberson and Representative Williams to obtain copies of this telegraphic correspondence for use in support of the bill, referring, of course, to the original McCall bill, and not to the additional sections attached to it in the House. Perry Belmont, president of the organization which seeks publicity for campaign funds, remarked that the correspondence pointed to a public sentiment which would require both parties, if no law should be enacted, to disclose the amounts contributed in this year's campaign and the sources of them.—In the Senate, on the 28th, Senators Culberson and Bacon asked that the House bill be reported without the Crumpacker amendment, saying that all the Democrats would vote for it. But Mr. Foraker insisted that the amendment should be retained, asserting that all the Republican members of the committee supported it. He was confirmed in this by the committee's chairman, Mr. Burrows.—The *New York World*, a Democratic paper, asserted on the 30th ult that after the nomination of Judge Parker, in 1904, \$20,000 was contributed by Thomas F. Ryan for use in Nebraska, where Mr. Bryan was regarded as a candidate for the Senate, and that this money was received by Mr. Bryan's brother-in-law, T. S. Allen, then chairman of the Nebraska Democratic Committee. Mr. Allen says Mr. Bryan was not a candidate for the Senate. He admits that the National Committee gave money, but not so much as \$20,000, for the campaign in Nebraska. This he turned over to the local member of the National Committee. He denies that he had any conference with Thomas F. Ryan or with William

F. Sheehan, who, it was said, paid the money to him.

Railroad Questions

Action relating to the questions involved in the Government's suit against the New York, New Haven & Hartford Railroad Company is about to be taken by the Massachusetts Legislature. Last week, by unanimous vote of the Railroad committees, a bill was reported which authorizes the company to hold its Boston & Maine stock until July 1st, 1910, "unless otherwise ordered by some Federal court of competent jurisdiction," but also provides that the stock so held shall be voted by the Railroad Commission of the State. It is expected that the bill will pass, and that final action by the State will thus be deferred for two years. A prominent Boston & Maine stockholder who has opposed the projected merger asserts that the bill condones and ratifies acts of the New Haven Company which have been held to be unlawful, and that it proposes a partnership of the State with the company in hostility to the Federal suit. Others say it involves no interference with that suit. There are persistent rumors that negotiations are in progress for a sale of the New Haven Company's Boston & Maine shares to E. H. Harriman and the Delaware & Hudson Railroad Company.—Upon appeal, the conviction of the Omaha road in the grain rebate cases last year has been confirmed. The company was required to pay a fine of \$20,000, and a fine of \$2,000 was exacted from its general freight agent, H. M. Pearce.—The Texas Railroad Commission declines to permit any increase of freight rates on the roads in that State. The companies pointed to a decrease of revenue and to heavy losses caused by recent floods. In reply the commission pointed to the greater losses of farmers and other producers and to the general depression of business.

The San Francisco Cases

Following the failure to convict Abraham Ruef, an interesting civil suit has been brought in San Francisco, with Ruef as defendant. Joseph L. Sullivan, owner of stock of the street railway company, sues to re-

cover (in behalf of the company) from Ruef \$200,000, the sum alleged in the confessions to have been paid to him out of the street railway company's treasury, and then to have been parceled out to the supervisors, Mayor Schmitz and himself. James L. Gallagher, formerly president of the board of supervisors, will be one of the witnesses, and the testimony of President Calhoun and other indicted men will be sought. Gallagher, an important witness in all the cases, because he was Ruef's agent in dealings with the supervisors, is still pursued by persons believed to be in sympathy with the defendants. On the 27th ult. three dwelling houses recently erected by him were wrecked by dynamite. Fortunately they were unoccupied. In April, the front of the house in which he was living was torn off by dynamite, and he and his wife narrowly escaped injury. The *Bulletin* has been offering a reward for the detection of those who caused this explosion. Its editor, Fremont Older, has been warned in letters that his life will be taken if he does not withdraw this offer.

Central America's Peace Court

The new Central American Court of Justice, established as one of the results of the peace conference held in Washington last year, was opened on the 25th ult. in Cartago, Costa Rica, Jose Astua Aguilas, the Costa Rican member of the tribunal, presiding at the inauguration ceremonies. In all of the five Central American Republics the day was observed as a national holiday. The United States and Mexico were represented by High Commissioners William I. Buchanan and Enrique C. Creel, respectively, the latter being Mexico's Ambassador at Washington. Both made addresses, applauding this movement for the orderly and judicial adjustment of international questions and expressing the confidence of the Presidents of their respective countries in the patriotic purposes of the five governments that united in creating the court. At the conclusion of his address, Commissioner Buchanan said he had received a cablegram from Secretary Root instructing him to announce that he (the Secretary) had been authorized by Andrew Carnegie to offer

\$100,000 for the erection in Cartago of a Temple of Peace, for the exclusive use of the tribunal, "as an expression of his sympathy, of his desire for the peace and progress of Central America, and of his confidence in the success of the great humanitarian work that has its foundation at this court, and which constitutes a new and great example of civilization, of peace, and of fraternity between the peoples here represented." There was prolonged applause, and President Viquez, of Costa Rica, in thanking Mr. Carnegie for his "splendid contribution," spoke of him as "a man whose name will hereafter be constantly associated with the work for the attainment of peace in Central America." The court, according to the treaty establishing it, "represents the national conscience of Central America." To it the five Republics have agreed to submit "all controversies or questions which may arise among them, of whatsoever nature and no matter what their origin may be, in case the respective Departments of Foreign Affairs should not have been able to reach an understanding." And all bind themselves to obey and enforce the court's orders.

Street Railway Strikes

Riots followed the withdrawal, on the 25th ult., of the mounted police from Chester, Pa., where they had been guarding the cars of the street railway company. Two non-union conductors were shot, but not seriously wounded, several cars were wrecked and one was burned. On the 30th the strikers voted not to resume work, altho the company had offered an increase of wages. This strike began nearly eight weeks ago, when wages were reduced. It has been accompanied by much violence and by a severe boycott. Owing to the attitude of the police three companies of State constabulary were sent to the city on April 17th. When cars have been running they have carried very few passengers, for the boycott has been applied in local trade to all who entered the cars. They have even been unable to buy groceries. Two elderly women who had been teachers in the public schools for many years ventured to take passage in a car from one of the school buildings to their home because

it was raining and one of them was ill. On the following day nearly all of the 300 pupils in the public school where these women were employed as teachers went on strike and were encouraged by their parents to demand the removal of the offending women. The school directors, it is stated, approved this demand, and the teachers retained their places only by a written apology for their conduct.—The strike in Cleveland, which followed Mayor Johnson's victory and the reduction of the fare to 3 cents, is still in progress. On the 24th ult., the strikers decided by a vote of 640 to 611 to resume work, pending arbitration, but a controversy afterward arose as to claims of seniority, and on the 26th there was another vote that the strike should be continued. Many of the strikers, however, have accepted the terms of the company, which now has about 1,400 men at work. The police have in custody two striking conductors who have confessed that they exploded dynamite under cars, and two more who admit that they cut feed wires and burned railroad property.

Print Paper and Wood Pulp

Two days before the final adjournment of Congress, majority and minority reports were submitted in the House by the special committee which has taken testimony concerning the prices of wood pulp and print paper, upon the complaint of the American Newspaper Publishers' Association, and in response to demands for a repeal of the tariff on these products. The majority (four of the six members) recommend that no action be taken, pending further inquiry. They assert that the evidence failed to prove the existence of a combination of manufacturers to advance prices, altho it tended to excite suspicion that such a combination had been made. They oppose repeal of the tariff because repeal might ruin the American paper mills by giving an advantage to mills in Canada. This might eventually make prices higher than they are now. They also say that the upward movement in prices has ceased and that the tendency at present is downward. On the other hand, the minority say that the duties on wood pulp and paper should be removed, because

these duties give the manufacturers a shelter behind which they can organize combinations which are unlawful, and because the tariff plus the tariff-engendered combinations account for all the advance in prices. They find evidence of concert of action in making the increase of prices, which was not justified. This increase was so great that Canadian manufacturers were able to undersell our manufacturers in this country after paying the duty of \$6 a ton.—It is asserted that Mr. Roosevelt expressed a desire that Congress should pass over his veto the bill extending the time for completing a dam across the Rainey River, in Minnesota, because he had learned, after sending in the veto, that the project involved an investment of \$7,000,000 for the manufacture of print paper in opposition to the combination. A very large majority made the bill a law.

Philippine Islands

Cholera is reported in four cities of Pangasinan province, one of these being Dagupan, 120 miles north of Manila. The disease is also found in other parts of Luzon. Since January there have been 231 cases in Rizal and Zambales.—The Commission has rejected the Assembly's bill for a jury system. It provided for the appointment of twenty-five permanent jurors in each province, to serve in the trial of cases.—There is a movement to procure the capital needed for the proposed agricultural bank by obtaining permission for subscriptions from provinces, municipalities and individuals to the amount of 1,000,000 pesos.—Jokanon, who has been the most powerful datto, or chief, in the Sulu Archipelago, died last week. He was told by Congressman Longworth, in 1903, that his name was the same as that of the Speaker of the House of Representatives. This gave him much pleasure, and a photograph of Mr. Cannon was one of his most valued possessions.

Approaching Elections in Cuba

Governor Magoon has ordered that the provincial and municipal elections shall take place on August 1st. Each province will elect a Governor and eight Councilmen; each municipality a Mayor and a specified number of Coun-

cilmen. The Governors will hold office until February 24th, 1913; the Mayors' terms will end on August 1st, 1912. It is not expected that national party lines will be strictly drawn at these elections, and therefore the results will not clearly indicate the comparative strength of the national political organizations.—Owing to rumors that the Spanish laborers on the Panama Canal were badly treated, the Spanish Club in Havana sent commissioners to the isthmus. They have returned, and they say in their report that in no other part of the world are Spanish workmen treated so well while in good health or so carefully nursed while they are sick.—Governor Magoon has directed the Advisory Commission to prepare a law for the regulation of natural supplies of water in the interest of irrigation projects.—Our consul-general at Havana reports that the sugar crop now coming to market falls much below last year's. Lack of rain discourages the agriculturist, and business is much depressed.

President Fallières in London

The opening of the Franco-British Exhibition has been the occasion of a great popular demonstration in honor of the President of the French Republic. A visit of King Edward to the Exhibition very shortly before showed the work to be very far behind, and the King was greatly displeased and declared he would not take the French President to any portion that was not in good order, whereupon an army of workmen was put to the task. President Fallières reached Dover on a French cruiser soon after noon Monday, May 25th. They were met by fifty British warships in great state. Lord Charles Beresford and other admirals and captains paid their respects to him, and on landing he was welcomed by the Prince of Connaught. When his train reached London, King Edward, the Prince of Wales, Premier Asquith and other dignitaries met him at the station, and he was taken to St. James Palace. In the evening the King and Queen gave him a grand dinner. The popular reception was most cordial. On Tuesday evening there was a great state ball at Buckingham Palace. On Tuesday morn-

ing the President received the French colony, and then paid a round of calls on members of the English royal house. In the afternoon, accompanied by King Edward and Queen Alexandra, he paid a state visit to the Franco-British Exhibition. Huge crowds gathered wherever there was a possibility of seeing him, and the cheers with which he was greeted were exceptionally hearty. On Wednesday M. Pichon, French Minister of Foreign Affairs, and M. Paul Cambon, French Ambassador to Great Britain, had a long conference on international

PRESIDENT FALLIERES.

affairs with Sir Edward Grey, Secretary of State for Foreign Affairs, at the Foreign Office. All questions affecting the policy of France and Great Britain were discussed, showing a complete agreement. During the day there were various social functions, concluding with a gala opera night, when Melba and Tetrassini sang. On Thursday the French Ambassador, M. Cambon, gave a magnificent banquet in return to King Edward and President Fallières, with nearly a hundred guests, and on Friday morning the President returned to his own country. M. Pichon, French Minister of Foreign Affairs, who accom-

panied the President of France, declared that the latter had been profoundly impressed with the magnificent reception accorded him in London. He said:

"It is in my eyes a most cheering justification to those of us who have all their lives supported the policy of an understanding with Great Britain to see that policy triumph today in the form of a close and, to adopt King Edward's phrase, a 'permanent' entente. The enthusiastic welcome given the President of the French Republic proves that the *entente cordiale* has definitely entered into the policies of the two countries as one of the fundamental bases thereof."

French and other European journals have much to say of the *entente* thus cemented between the two countries, which has been made all the easier by the better relations between Great Britain and Russia, France's ally. The question has been raised whether this anticipates a tripartite treaty of defense between the three countries, but this is not regarded as necessary either in France or England. Besides, the Laborite voters and many others would object to any alliance with Russia. Both King Edward and President Fallières will soon visit St. Petersburg, and the Laborite members of Parliament have presented a protest. The cordiality with which the French President was received has had an excellent effect in France, and it may seem somewhat to have isolated Germany.

China and Japan

It is doubtful how much credit should be given to a report from a Russian source that the dispute between the Chinese and Japanese over the Korean frontier has led China to send 5,000 foreign drilled troops from Kirin to Tchentaow with the view to maintaining her claim to possession of the latter place. It is stated that the Japanese have been taxing the residents of Tchentaow, contending that the town is in Korean territory, which China denies. The Japanese difficulties in Korea have not yet ended, and the conflicts seem to be getting worse, altho the Japanese military authorities assert that with the additional forces called for the uprising will be quelled within sixty days. According to military reports fifty-three engagements were fought last month in the campaign

of the Japanese against Korean insurgents, and 549 insurgents killed, many wounded and a large number captured. The Japanese lost thirty killed. The insurgents invariably outnumbered the Japanese forces five to one.—The Chinese boycott of Japanese goods is causing much loss to factories in Japan. In Kobe and Osaka 16,000 workmen engaged mostly in the manufacture of matches and allied industries have been thrown out of work.—The Japanese War Office will grant allowances to officers to go to Russia and China to acquire the languages of those countries.

Foreign Church Notes

The official religious statistics of Germany, just published for 1905, show that the numerical ratio of Catholics and Protestants remains practically unchanged. When the Empire was established, in 1871, the Protestants constituted 62.3 per cent. of the population, the Catholics 36.2, other Christians 0.2, and Jews 1.3 per cent. Now the Protestants are 62.0 per cent., the Catholics 36.4, the other Christians 0.4, and the Jews 1 per cent. A singular phenomenon is the fact that the largest Catholic increase is in Protestant sections, and the largest Protestant increase in Catholic districts.—The Geneva law for the separation of State and Church goes into effect with the 1st of January next year, and recently elections were held to choose the commission for the adjustment of Church affairs in the future. The three parties—namely, the liberals, the evangelical and the orthodox, under leadership of Paul Pictet—agreed upon a list of candidates, which gave to the first 22 members, to the second 34, and to the third 11. Of the 11,000 voters enrolled, only 3,200 actually cast their ballots.—All Germany, and with it thousands of congregations in America in historic connection with the Church of the Fatherland, are celebrating at this season with much enthusiasm the centennial of the birth of three great practical leaders of Church life, namely Wilhelm Löhe, who did much in his day for the German churches in the West of this country by supplying them with pastors and funds, and was a leader in the revival of the

deaconness cause; Louis Harms, the founder of the flourishing Hermannsburg Mission Society; and Heinrich Wichern, the father of inner mission work, so fruitful of excellent results in German social and religious life. Nearly all of the German universities are marking this occasion by granting honorary theological titles to representatives of practical Church life. — Pastor W. Bunke and others in the conservative Church ranks of Germany, are charging Prof. A. Harnack and other advanced men with forming a "liberal trust" in the Church of the Fatherland, claiming that only those scholars who come up to the radical position of such papers as the *Theologische Literaturzeitung* can hope for appointment in the universities or for recognition as men of scholarship. The conservatives are protesting loud and long against the "liberalizing" of the theological faculties, especially in Prussia.

Revolt in Samos

The disturbances reported in the island of Samos, while locally serious, are of no particular international importance. Samos is a little island of only 180 square miles, and has a population of 53,000. In classic times it was famous as an early seat of Ionian culture, and for its Ionic architecture and pottery. It was the birthplace of Pythagoras. It is under the suzerainty of Turkey, and yet has self-government under the protection, since 1832, of Great Britain, France and Russia. The population is Greek. There seems to be a conflict between the Governor, Kopassiz Effendi, and the Senate, which has led to open war, in which 150 persons have been killed or wounded at the capital, Varthy. The small Turkish garrison is beleaguered, and the life of the Governor is reported to be in danger. The Porte is sending troops to the neighboring island of Chios to suppress the uprising, and has demanded the recall of the Greek Consul on the island, who is accused of aiding the revolt; but the Greek Government asks for particulars, and meanwhile has sent a transport to take off the refugees. Constantinople now reports the Prince-Governor of Samos has been re-established in authority and the revolt

crushed. Meanwhile the orders to the Italian fleet to take a two months' cruise in the Levant is regarded as a warning to Turkey.

Chinese Journalism

The journal is not unknown in China, as *The Pekingbao*, the official journal of Peking is said to have been started over 1,000 years ago, but a new journalism has come up within the last three or four years. As a result of the rapid diffusion of modern ideas since the war between Japan and Russia, every province has its journal, but the most important of these are in Peking, Shanghai, Tientsin and Canton. In each of these centers there are a dozen dailies, composed for the most part in the spoken language, and so accessible to all. They have brought to the people what they have never had the opportunity to possess, the current events and the spirit of criticism. Hitherto the people had not even known what had occurred even in the most important matters, except by public rumor, which was easily misled by the functionaries or intentionally falsified. In the capital, where there are no guarantees against punishment, the journalists penetrate even to the interior of the palace, and one journal told of the sickness of the Emperor and of the Dowager Empress, and of her fear of the revolutionaries. Another told of the enormous gifts which the old Prince Tsing, dean of the Imperial family, had received on his anniversary, or, rather, what he had compelled the attachés to give him. And satirical poetry was written on this same Prince Tsing. The celestial editors did not fail to attack any one man for his ideas, nor the whole of China for its belief in spirits and the philosophy of Confucius. The journals which are published more particularly in the foreign concessions at Shanghai, Peking, Tientsin, Hankow and Canton are naturally those that show the most independence in their attacks. Such is the impartiality shown to the publishers at Tientsin and the other Japanese concessions, and also to the *Universal Gazette* of Shanghai, each of which has a circulation of from 12,000 to 15,000 copies, which go thruout all China, that they are strongly anti-mandarin, if not anti-dynastic. They are creating a new

vigorous fight for independence and patriotism, and their formula is "China for the Chinese." It is under the influence of this sentiment that an active campaign has been created against the intrusion of Japanese priests at Fukien, and the hostilities to foreign railroad enterprises, and the late Japanese boycott. They have strongly opposed the English and other railroad concessions. On the literary side they are much given to *feuilletons* in the way of romance in their political and original stories as well as in their translations from the English and the French popular stories. They have much to say in the original stories of the corruptions of officials. As an example may be mentioned "The Sleeping Lion," a story published in a commercial journal of Shanghai, the lion, of course, being China. These journals are to a great extent owned by corporations of commercial people who wish progress, and to some extent are supported by liberal Mandarins. The editors are paid about \$28 a month, and writers are lucky if they can get \$30 a month. More journals have been planned of late at Shanghai, and one has been started with a fund of \$160,000, and another at Chekiang with a capital of \$240,000. All this is an absolutely new development and cannot help being an extremely important element in the establishment of a national spirit, and cannot much be affected by the news of the week that the Chinese Government has decreed a closer censorship of the press, forbidding articles attacking the Government, and prohibiting offensive papers published in the concessions from being circulated outside foreign limits.

India and Persia The little war on the northwestern frontier of India has ended. The British punitive expedition against the Mohmand tribesmen under General Willcocks is now on its way back from Afghan to Indian territory. This unexpectedly rapid collapse of tribal opposition and the close of the campaign are attributed largely to the tactful management, from the political side, of the Viceroy, Lord Minto, and remove what quite recently seemed a threatening situation, possibly involving an Afghan

war. The British losses in the eighteen days of the campaign were six officers killed and nine wounded, seventy-two men killed and 144 wounded. Nearly half of the deaths, however, were caused by cholera. The tribesmen submitted unconditionally. A later report says that a strong Afghan band has invaded Persia, 180 miles southeast of Kerman; but this has no bearing on the Indian campaign.—The conflict between the Shah of Persia and his new Parliament is complicated by the difficulties with Russia. Not long ago a Russian captain and a number of soldiers were killed by Persian brigands near the frontier, and it is not forgotten that not so very long ago the Russian Minister Grebayedeff was murdered in Teheran. On Wednesday of last week three men entered the official residence of the Russian financial agent and wounded him severely. One of the assailants was killed. This event has raised much indignation in St. Petersburg.

France and Morocco Some days ago Mulai Hafid, the brother and rival of Abd-ul-Aziz, sent an embassy to Paris to seek peace with France under conditions satisfactory to French honor. But he is attempting to seize the throne from his brother, who is the legitimate ruler and has been recognized as such by the French in their attempts to punish the Moroccans for the murder of French citizens; and accordingly the embassy received no official recognition. Now, however, the pretender has secured control of nearly the whole of Moroccan territory, and is almost certain to supplant his brother. He claims that Abd-ul-Aziz has been untrue to Moslem law, and has made himself practically an infidel by his acceptance of Christian measures. Naturally the Moslem tribes in the interior, which are very rigid in their faith, have accepted him, and it is likely that France will find herself obliged to deal with him. Indeed of late, as if in anticipation of such a result, the French energy has relaxed, as if to find out with whom France has to deal. The envoys of Mulai Hafid in Paris declared that he has no dislike to foreigners and would welcome their influence and their railways. This is to be taken with

some reserve, as it is not in accord with what has been regarded as the attitude of his party.

Female Suffrage in England

More important than might at first seem is the surrender of Mr.

Asquith to the advocates of female suffrage. The suffragettes have been badgering the Liberals because they are in power, and their opposition has had something to do with the falling off of Liberal majorities. Lady Carlisle, a noted leader of the Suffragists, begged a meeting of Radical ladies to hold their hands and have patience until Mr. Asquith should give his answer to a deputation of Liberal members of Parliament favorable to woman suffrage. The answer came in the agreement which he made with them that altho he could not put it into a Government measure, yet if it was introduced by a private member he would not oppose it, but would favor its passage, but that he would wish it to be a democratic measure. This means that he would desire suffrage for all women as for all men, and not confine it to women with property or to unmarried women of a certain age. That is, he would not, we understand, wish it to be confined to the propertied classes, which might be supposed to represent mainly Conservative views. *The Spectator* says that this is certainly the most momentous event that has taken place in the world of politics in the present generation, possibly the most momentous in the whole of British political history. It is not anticipated that the House of Lords would accept such a democratic measure, but it might extend the suffrage to women with property, even married women who have a separate property and unmarried women who support themselves; but that would involve larger extensions later. *The Spectator* begs Unionists, in their distracted state, to unite in opposing this proposition in any form, and to insist on the reform of the electoral machinery, so that Ireland shall not have forty more votes than its population allows, that plural voting be abolished, and a system of proportional voting adopted under which a minority can "plump" their votes and be represented.

During his recent electoral campaign in Dundee Mr. Winston S. Churchill promised to favor a measure of home rule in Scotland. His pledge has borne quick fruit in a bill introduced by a Scotch member, the object of which is to devolve to a legislative body in Scotland the power to make laws on matters relating exclusively to that country. A. J. Balfour objected strongly, but the House, by 257 votes to 102, voted in favor of allowing the bill to go to its first reading. This is not likely to become a law, but it indicates that home rule for Scotland may prepare the way for the same measure for Ireland.—The German Ministry of Education has announced that under the plan for the exchange of professors between the University of Berlin and Harvard and Columbia, Albrecht Penck, director of the Geographical Institute, will go to Columbia for the coming scholastic year, and Eugen Kühnemann, Professor of Philosophy in Breslau University, will go to Harvard. America sends to Berlin W. M. Davis, Professor of Geology in Harvard, and Dr. Felix Adler, of Columbia, who will deliver a course of lectures on ethical problems in America. Professor Kuno Francke, curator of the Germanic Museum at Harvard University, who originally negotiated this exchange of professors, proposes an extension of exchange so as to include art. He says that neither country knows much of the art of the other, and that America is now freed from the dominion of French art.—The French Chamber of Deputies, by a vote of 349 to 170, adopted a clause imposing an income tax on rentes, after Prime Minister Clemenceau stated that the Government made the clause a question of confidence.—It will be remembered that the loss of valuable treasures from French churches was one of the occasions, or results, of the law requiring their transfer to the control of the Government. There is now reported the theft of priceless ecclesiastical plate and other treasures from the Cathedral of St. Etienne, at Limoges. The robbery is similar to the notorious thefts attributed to the Thomas brothers. The booty is roughly estimated to be worth \$25,000.

Vacation Experiences

BY READERS OF THE INDEPENDENT

[The enjoyment of telling about a vacation afterward as only less—and often greater—than the original experiences. But few of us have a large enough circle of appreciative friends to gratify fully our desire for retrospective narration, which is, perhaps, one reason why this annual department has been so popular a feature of THE INDEPENDENT. It serves as a clearing house for vacation experiences. By means of it one can “swap stories” with thousands of people who have had, or are in search of, a good time. This year we asked particularly for hints as to new places to see and new things to do, for the purpose of extending the knowledge of our own country, and leading the seeker for rest and recreation into unbeaten paths. How well our readers have responded will be seen from the following, which are merely a varied selection from the great number of letters we have received.—EDITOR.]

A Convict's Vacation.

THE INDEPENDENT has brought more joy and sunshine than any other reading matter I am allowed to receive except my letters from my loved ones. And if this letter is found to be unavailable for the purpose for which it is sent, please accept it as my sentiments for your magazine. My vacation last summer was of only three hours' duration—but ever to be remembered. Returning to my cell on the evening of June 6th I found, reposing invitingly on the seat of my chair, my beloved and punctual friend and companion of a journey soon to begin, THE INDEPENDENT.

After a few moments spent in preliminaries, getting ourselves comfortably fixt, we were off. The “Survey of the World,” which, at any other time, would have been our first stop, we hurriedly past by. And, as eager as we were to reach our destination, “Vacation Experiences,” the picture of our honored ex-President, Grover Cleveland, compelled us to linger for a while because of our admiration.

But soon we were off again, and no other stop was made until the caption over the entrance to our station came into view and assured us of our arrival.

We soon found ourselves amid delightful scenes and experiences. Our enjoyment knew no bounds and often we stopt to search our memory or to give vent to our feelings because of some similar happening.

The “Farmers' Vacation” we dubbed *sui generis*, and our favorite. For we, too, often find ourselves returning from a nocturnal visit to scenes of pleasures that are past. But “A Vacation with Bees” we gave a wide berth, for, since childhood, we have still a grievance against them. The photos were grand! That “Common Carrier,” the donkey with six children on his back, certainly possest a great earning capacity; it reminded me of street cars I saw in a big city once. And that feast for the eyes, “The First Vacation,” the prize piece of the mother and child, by Eila M. Boulton, I have now. It's all that's left of our vacation—the only souvenir. And often I gaze upon it to freshen my memories. So interested did we become in our enjoyment that no heed was taken of the time as it past until

the sounding of a gong informed us but ten more minutes and our vacation would be over.

And with a joy and a sigh we journeyed back to await another twelve months, when our faithful friend shall come to take us upon another journey of recreation and rest.

MARYLAND PENITENTIARY, BALTIMORE.

Camping in Northern Vermont.

A camping trip may be very enjoyable even if the camper's meet with indifferent success. My friend, George M., and I proved this on our last deer-hunting trip. Our camping grounds are in the town of Ferdinand, on the Nulhegan River, between the North and Yellow Branches. October 16th, the day we hit the trail, was nearly perfect and we enjoyed every moment of our trip on the railroad, and on alighting from the train at Wenlock, at once procured a pole, which we ran under our trunk straps and setting it on our shoulders carried it one-half mile to where we found a good camping spot.

Our camp outfit consists of an Abercrombie & Fitch special waterproof tent, a sheet-iron camp stove and all culinary utensils, and on reaching our destination our first work was to pitch the tent, but as it has a rope ridge this was not a long job; the stove was then set up and soon George was doing the cook act, that is, turning flapjacks with a flip of the frypan.

We were up with Old Sol next morning, and after breakfast set to work to fix up our camp. George made an excellent bed of fir poles and twigs, while I made some shelves, a table, etc., after which we shot a partridge for dinner. We decided to visit an old logging camp about seven miles up the tote road next day, but when about a mile from camp it began to rain, so we turned back; but when we reached camp it had stopped, so I suggested a trip to South America Pond, six miles to the south, but George preferred to stay in camp, so I went alone. In an old lumber camp, near the pond, lives a man who watches the lumber camps in the vicinity and is also fire warden for that district. While talking with him something was said about porcu-

piners, and he said, "Them quill-pigs do bother me turrible and it don't do any good to lick 'em nuther; they come back the next night **just the same.**" Near South America Pond I shot two partridges and a rabbit and then started back to camp. I arrived there about 5 o'clock and when I saw the steaming supper of partridge and rabbit I was truly glad George had stayed in camp.

The next day being Sunday we stayed in camp and read all day, but on Monday morning the law was off of deer and we were out

we returned home in fine trim and feeling well repaid, tho we shot no deer.

W. DUNSTIN WHITE.

RYEGATE, VT.

Tramping in the Berkshires.

A college friend and I have twice obeyed the call of the open road and tramp thru parts of Berkshire County, Mass. The first time we started at East Northfield and traveled up the Deerfield Valley, over Hoosac Moun-

THE VERMONT CAMP.

bright and early. While walking up an old logging road I saw a partridge light on a limb near and I shot at it, and had hardly started when two deer jumped over the bushes ahead of me, but did not give me a chance to shoot, and I kept in the road about twenty rods farther, when I stepped on an old log, keeping my eyes up on the ridge all the while, until I heard the leaves rustle, and, looking close by, I saw a large doe feeding and another one stood a little farther away and the third lay between them. Of course, these deer were all does, which are protected in Vermont; and, of course, my camera was in camp.

Every day passed a good deal like this. We saw deer every day, but they were all does, and the evenings in camp were spent in reading and in discussing the advantages of our rifles. George used a Savage 303 and mine was a Winchester 32 Special, and both were the best. (?) At the end of two weeks

tain to Williamstown, thence to Richmond, Mass., then to Hudson, N. Y. We covered 120 miles in five days, making thirty the last day, and found the trip thoroly enjoyable. We slept in country hotels and lunched on crackers, canned meat and fruit, bought in the villages. This plan costs \$1.50 to \$2 a day.

Last summer we tried another plan, which was even more successful. We carried blankets and raincoats with us and slept out at night under trees or in barns. In this way we were absolutely independent of hotels or towns and could stop wherever we liked. There was also a considerable saving in expense, as there was no lodging to pay for. We got one warm meal a day at some town en route, but depended on cold supplies for the other meals. The expense was about eighty cents a day.

We started at Holyoke, Mass., and walked from there to Lee, Great Barrington, Stock-

bridge, Lenox, Pittsfield, Adams, Savoy and back to Northampton. We had lifts in wagons and once were carried ten miles in an automobile. We used the Berkshire trolley twice to get over familiar ground. From Adams we climbed up "The Slide" to the top of Mt. Graylock, the highest mountain in Massachusetts.

I found the following outfit amply adequate: Woolen blanket, raincoat (carried in roll over the shoulder), army haversack, leggings, old blue serge suit, old shoes, slouch hat, toilet articles. Roll and haversack together weighed twelve pounds. At night I laid the raincoat on the ground, wrapt up in my blanket and lay down beside my partner. His rubber blanket covered both of us and kept us dry one night during a heavy thunder shower.

The trip occupied five days, gave us splendid exercise and most interesting scenery, including historic Stockbridge, fashionable Lenox, a mountain view of a great sweep of country and a trip thru back hill towns, far from the madding automobile. The roads varied from the State highway, crowded with traffic, to narrow roads where rabbits and partridges are to be seen. There is an indescribable charm

of a vacation I am going to describe. We took up a claim on the Shoshone Reservation and came here a year ago. If a vacation is a change, this certainly was. The horses were smaller, the distances greater, the roads longer, my appetite bigger and the meals shorter. My vacation is different from most, because I don't have to keep worrying for fear I don't get my money's worth, and I mix in enough work to make the play better. We are in the sheep district, tho we see lots of cowboys. There isn't as much known of the sheep men as there is of the cattle men, because Mr. Hough and Mr. Beach and Mr. Lewis never got acquainted with the sheep men, but that doesn't keep them from being good fellows with big hearts and full of fun, and their stories are as good as the ones the cowboys tell, and as truthful. It is great fun to visit their big white, cozy wagons, where you are welcome to eat whether they are at home or not, and you are sure to find plenty of good supplies. I had to learn that a bunch of sheep didn't mean forty or fifty, as it did back home, but as the French camp-mover said, "Oh, mebbe, t'ree tous." I learnt to

A NEW ENGLAND SCENE.

about such a trip and it benefits the spirit, as well as the body.

KENNETH C. MACARTHUR.

NEW YORK CITY.

From a Girl of Ten.

I don't know whether the older readers of THE INDEPENDENT would like it or not, but I know any boy or girl would enjoy the kind

raise bum lambs on a bottle. "Bum" lambs are lambs whose mammas die or disown them. The weakest lamb I had is now the leader of a bunch. I learnt that a dead line is an imaginary line like the equator, but the sheep man knows mighty quick when he gets over it. I also learnt to tell the colors of horses, to cut out cows, herd sheep and do fractions. I never played in the sand or built little forts on the beach, but I don't see how it could

WASHAKIE.

be more fun than to ride up into the canyon, build a stove oven, roast potatoes and after dinner play horse thieves and robbers among the rocks big enough to hide a dozen horses. One day, when we were riding thru the canyon, my pony, Washakie, slipped and fell off a ten-foot ledge, but I slid off backward and wasn't hurt a bit, but when I went home this winter I tried to learn roller skating and fell on the pavement and broke my arm. It is a good place out here to learn to shoot, for there is plenty of stuff and plenty of room. The rabbits just stand still after you shoot at them, and flip their long ears and wait. I killed my first rabbit the other day first shot. There is plenty of room to camp out here and plenty of good spring water, to say nothing of the sulphur springs, and I'll try to make any one who comes out here have a good time. I think my pony will hold seven.

I'm ten years old and have gained three inches and twenty pounds out here.

SHOSHONE, WYO.

The Maine Islands.

Being rather unconventional myself, I decided last summer to spend an unconventional vacation. I had a hazy idea that Maine would be suitable, and being entirely ignorant of

all that pertained to that State, sat down and examined a map of it. The coast line looked delicious and an approximate choice was hard to make, but I at length determined on either Casco or Penobscot bays. Casco was finally eliminated, because too near Boston and Portland, which left Penobscot as a final choice. Getting a large scale map of that portion of the Maine Coast, I was astonished to find among its thousand islands as great a choice as before. In despair I closed my eyes, and waving a pencil about I brought it down on what, upon opening them, I found to be Deer Isle. The choice was made. I immediately dispatched letters to postmasters at different settlements there, and was fortunate to receive a reply from one, giving me the address of an old resident, a farmer-fisherman, with whom I at last made arrangements. After the intricacies of a journey from New Jersey, ending with a forty-mile steamboat voyage to the island, my wife and I indeed found we were in undiscovered America. We found our boarding place to be quite unique. On the front stoop of the farmhouse, on our arrival, were a number of stuffed native wild fowl. The boy of the family was a taxidermist. In the barn, swinging by his tail, was Jocko, a monkey brought home from a South American voyage. The chickens, whose roosting place was in the barn, had to scratch in the orchard, the house being between, and, Yankee fashion,

the "Captain" had invented and constructed a covered "henway" from the barn roosts, bridging the space between barn and house, and descending by incline back of the house to the orchard, presenting daily the edifying spectacle of hens crossing the bridge in one direction to lay eggs, and in the other to scratch worms, with all the seriousness of business dispatch. As for eating, if any one fancies good vegetables in season, let him feast from a Maine garden, where heavy dews soak the ground at night and warm suns smile by day; where blueberries carpet the ground and outrival the azure of the skies; where yellow cream, combined with aforesaid blueberries, both in unlimited quantities, made a dish ever to be longed for; and where all the food of the sea, including the lobster in his native haunt, is to be had abundantly.

The island itself, heavily fir-clad, is ten miles long and from a hundred-yard dash to two miles wide, in outline about as irregular as the wildest line you could scrawl. It is also hilly, and from the shore roads presents magnificent views of sea and mountain in all directions. Even to walk down the commonest road, with the magnificence of the panorama before you, with the beautiful blending of the red and white spruce glistening in the morning dew, the rich ozone of the spruce laden air, the succulent red raspberries (here as common by the roadside as blackberries in Jersey), their deep blood color mayhap commingling with the lighter blush of a thousand wild roses (bountifully abundant everywhere), and the neat white farm houses dotting this land and sea scape—to experience these things is

to add several years of life to the average New York man of toil.

Need I to add that, in homesteads hundreds of years old, you will find residents living in the houses they were born in, up to the respectable age of 108; that oxen are the mainstay of the farmers, and their slow, placid walk and air of peace give the blush to that same nervous, foolishly impetuous business man; that modernism has not as yet crept in, there being no public improvements, no hellish automobiles—nothing but peace. It should not be necessary to mention sailing, where the natives are those who man the international cup racers, or rowing or fishing or swimming. It is interesting, however, to be able to hire a nice buggy which seats two for a dollar for the afternoon. The roads are smooth and hard and wind about in drives nowhere to be surpassed. There is a flat rate of \$7 per week all over the island for boarding, and you can make no mistake wherever you go. Personally, I would recommend my retired Grand Banks captain, as I know him. And if the foregoing were not enticing enough, I would mention the strange wild fowl along shore, the partridge in the woods, the fish hawk's nest high in the pines, the wild dots of islands for picnicking, the wilder ledges, grass tufted, where the sea birds lay their eggs, and where you may see their young (if you are adventurous enough) from the crack of the shell to the toddling birdlet, the sportive dolphin and the bobbing seal—but why more?

WESTFIELD, N. J.

A. B. PRICE.

THE LAUNCHING.

"Jamie."

Jamie and I spent our vacation together. I was the schoolma'am, the old maid auntie of his mother, and Jamie was just growing away from babyhood, eighteen months old, still in dresses, at the beginning of the summer, but glorying in knickerbockers toward the end.

Such chums we were! Words had not yet come to be his possession, but *ideas*, indeed, were by no means lacking, conveyed by motions of the hand, and the most bewitching of smiles.

It was on a farm—Bonnie Brae Farm—that we had our summer, where the lawn swept down from the house to the finest of butternut trees, in one place branching so low that both children and dog could climb, and the curious seedlings from the fallen nuts of the previous season were sending out their first leaves and rootlets from the mine of rich meats. In another place, the most beautiful groupings of maple trees, under which we sat together and the little head cuddled to sleep on my arm.

"Jamie, do you want to go to the mail box with me?" A radiant smile and clasp of the two little hands, his usual way of expressing cordial assent, said, more strongly than words, "How could you guess what so entirely meets my approbation?"

This walk then became our daily delight; he grasping my little finger and trudging along, down the grassy slope, under shade of the trees, toward the road where the automobiles whizzed by and where the R. F. D. box often contained treasures to which Jamie must be lifted to secure.

But Jamie's delight was the shed of the barn, where sleigh, buggies and wagons were sheltered, where the horses' heads peeped from their stalls, and, sometimes, under the hay a stolen nest revealed some white eggs.

When Jamie caught my little finger with one hand, pointed to the shed with the other and smiled bewitchingly, there could be no resistance; I was simply *obliged* to go to the shed, watch him clamber in a wonderful way, considering his babyhood, into the spring wagon, and

then climb up beside him and take my seat. Away from books and cares! Away from all ambitions and exactions of society, in a horseless wagon, day after day! What a vacation! Can you imagine one more in contrast with the ordinary life of a school teacher in a large city? Can you realize the joy of having a lovely child always choose his seat by you when driving or reach his happy face to you for a good-night kiss?

Blessed baby! Do you know what a comfort you were to a tired heart and body? Will you grow away into a rough boy? Will you not, sometimes, smile into your life the sweet girl who will yield her heart to you forever?

ANNA T. BALLANTINE.

FISK UNIVERSITY, NASHVILLE, TENN.

Five Girls and a Tramp.

Two of our most successful vacations have been walking trips. On the first trip five young women planned to walk thru the Berkshire Hills for a week in May. The idea met with protest from those in authority. "Where would we spend the nights?" "How could we take any baggage?" "How could we find our way?" etc.

Our first step was to secure the necessary Government Geological Survey maps and study distances between towns on the same railroad, so that we might express our common trunk

from place to place, while we followed on the less traveled mountain roads. We decided to start at Norfolk, Conn., and walk across Massachusetts to Bennington, Vt., spending the nights at Sheffield, Great Barrington, Tyringham, Pittsfield and Williamstown. We engaged our accommodations in advance thru friends in each town.

The trip proved delightful beyond any possible anticipation, and the most glorious day is still a matter of argument. We averaged about fifteen miles a day and ate our midday meals, supplied by kindly housekeepers, in fields overrun by columbine and by waterfalls, or underneath apple trees, so full of blossoms that they looked like gigantic pop-corn balls.

FIRST DAY OF THE TRIP.

But when the trip was over we felt that another time we should like to be independent of hotels. So last summer a courageous relative offered himself as chaperon to a caravan party of five. We went up to a little village in the mountains of Vermont and hired a horse and wagon for a week. In this wagon we packed a tent and poles (which protruded from the rear in a most ungainly fashion), blankets, several suit cases of clothing (we took too much), a sleeping bag for our escort, who was to sleep in the wagon, a bag of provisions (also too big), a bundle of cooking utensils, oats, feed-bag, halter, horse blanket, etc., and a heterogeneous collection of rubber coats, tin pails, milk cans and mason jars, which in our first-day innocence we stuffed in the spare

to spend the night, prest cream and eggs upon us. They were much surprised to find that in our chaperon they were entertaining a minister "unawares."

We are discussing now the possibility this summer of combining reasonable respectability with knapsacks, and stopping over night wherever the road leads us.

HELEN FOX.

NEW YORK CITY.

A Unique House Party.

We were eight college girls who had been together for four years. When commencement week drew near and we were soon to be scattered from Boston to Japan, we decided to spend two weeks together before the final

OUR SUMMER CAMPING HOUSE.

corners, not having learnt the horrid habit of unattached articles to drop off the cart when going up hill.

Our chief care at the end of each day was to find a spring or stream by which to camp. On several occasions our eggs were scrambled by candle light, because we were late in finding a suitable place. We took turns during the day in driving the horse.

To our surprise, we were treated with the greatest courtesy along the route, for we certainly did look a bit like gypsies, and several asked us where we were going to "show." But when we had a rainy night the hospitable farmer, in whose hay-lofts we had arranged

leave-taking, provided it could be done cheaply, for the graduating expenses were already large. At first the plan was to take a cottage at some beach and "keep house" ourselves. But one evening as we were trying for the fiftieth time to decide upon a place, one of the girls burst in upon us to say that there was a furnished house in her old home town which we might have for the last week in June and the first in July. We need supply only bed and table linen. Needless to say, the offer was accepted with glad hearts, and a few days after commencement we were all on our way to the little country town in Connecticut.

We had come to a large, yellow brick house,

with four oaks in front, and above on a high ridge a long row of oaks, separating the house completely from the highway. Large, airy rooms, a big side porch, two hammocks swung under the trees, made us happy at once. Nearby was a pretty little lake, and beyond a stretch of green woods. Or, by following a little river, you came upon meadow and pasture and orchid haunts. By trolley, we could easily reach the low-lying hills, just right for long tramps and climbing and picnics. So much for the setting.

In dividing the housework among us, we achieved a small triumph. The nine of us (including an elder sister, who acted as chaperone) were divided into three groups. Then the three girls in each group were to work together for the two weeks. One group was to have charge of preparing and serving a meal, another group of "cleaning up" and washing the dishes. And by a wonderful series of combinations and permutations no group had charge of the same meal twice in the same week. This disposed of the most important part of the work.

The first thing which we did upon arriving (after gathering huge jars of daisies, our class flower, to decorate porch and front steps) was to plan all the menus. And tempting ones they were. None of us were experienced cooks, but one had a special way of making lemon-ice, another strawberry shortcake, another fried chicken, and another, and best of all, delicious bread. Each one had a "try" at her own specialty. Breakfast was to be an informal meal, which all helped to serve. The course was always the same: Puffed rice, bananas, bread and butter and coffee, and, on rare occasions, crullers. When the meals were all planned, two groups were assigned to each, one to prepare and one to clear away. Then a long list of all the menus, with the names of those in charge of each meal, was posted conspicuously in the kitchen. We studied the list every morning and were on hand at the proper time. Just one more word about these menus. Cream, eggs, chicken, vegetables, strawberries were purchased at a nearby farm house and at such a phenomenally small price that we could have an elaborate repast for almost a song.

All our meals (with the exception of one supper) were served out of doors, under the big trees, on a long ping-pong table. And those out-door meals were one of the nicest parts of the day. Everything tasted delicious, and we were so expert by the second week that rarely a day past but that we entertained guests from the city or classmates who lived in the vicinity.

We spent our days exploring the country and living in the open air. Picnics were a favorite "stunt." In the evening the cousin would drive up with the big carry-all and five of us would go off on a long drive, while he took the other four out in the boat, or we would sit out on the porch and sing our college song (to the accompaniment of a guitar). One dark and rainy night our gifted reader

thrilled us with the horrors of Poe's "Tales." For I regret to say that after four years' training in the classics, there were members of the party who always took down from the well-stocked book-cases Poe or Sherlock Holmes or Myrtle Reed! The last night of our stay will ever be famous for a serenade. With Japanese lanterns and torchlights, we sang our favorite songs under our neighbors' windows, always ending with an original ditty, full of "local hits."

The hospitality of the town was lavished upon us. We were asked to have a float in the great "Fourth of July parade," we were invited to lawn parties, the minister called upon us. And when we went away, we were urged to all come soon again, and so we are going to, the very first chance we get!

L. M. S.

BROOKLYN, N. Y.

Mountain Mist.

To one whose daily life is surrounded by brick walls and whose vacation consists usually in what pleasure a half-holiday outing at the week's end and a restful Sunday by the sea in summer affords, the unexpected gift of a week's respite in late September of last year was certainly a divine blessing.

To me the call to the mountains at that time of the year is most overwhelming, and only by sheer force of will power am I restrained from annually sacrificing, besides my necessary weekly pittance, the accusations by my friends of neglect of business for a month of the peace and uplift which the mountains offer.

With hardly a moment's notice I stole away last fall to a quiet and unpretentious little spot high up in New Hampshire's highest hills, away from all the imported city's conventionalities which infest the mountain resorts, where I could feast on nature's bounties undisturbed. Arriving at the station at twilight, the seven-mile drive, chiefly thru woods, was exceedingly restful, and the glory of the hills was made doubly impressive by the soft light from the rising moon. Happily, my first day there was a rainy one, and I thereby gained a much needed rest. A rainy day in such a place is not so uninteresting to a lover of nature as one might think, for the ever shifting clouds which cover the hills give an air of mystery to the landscape which is exceedingly interesting.

An early peep from my window the following morning revealed an entirely different scene from that of the day before. The valley itself appeared to be an ocean with islands sprinkled here and there, rising out of it. It has a most curious effect and I hastened with my camera to a commanding spot nearby and took the picture I send herewith. For an hour or more I watched this beautiful effect, which was ever changing, exposing new islands now and again, and becoming more and more beautiful as the rays from the rising sun penetrated the opaque mass with streaks of golden light.

Equally as fascinating and even more beautiful was a nearby view which I had a few days later of Mt. Washington covered with snow. The green and gold of the base of the mountain, with the pink and purple of its summit as the clear morning sun flooded it all with light, was most impressive and uplifting in its majestic splendor.

I thought of Mark Twain's "New England Weather" the day we took the long drive thru Nature's fairyland; a perfect morning, with wonderful sky effects, followed by a tremendous downpour, accompanied by thunder and lightning, which happened, unfortunately, after we had left our carriage, just as we were in a deep gorge admiring the grandeur of the

and a bedstead. A little cut grass filled out a mattress; an old hollow stump served as a stove. When the mattress got soggy there was more grass; when the stove burned out there were more stumps. Thus housekeeping was very simple and quickly disposed of. The place had a special charm for us in its remoteness and primitiveness. We saw everything with as much surprise and ecstasy as actual explorers.

On one of our trips of exploration we found a deserted Indian camp. There, tied together at the top stood the poles, which only required a few blankets thrown about them to complete a tepee. Below in the center a depression lined with stones marked the place of their

A SEA OF MIST.

scenery, and from which we were unable to escape till we were drenched to the skin. We forgot all grandeur for the moment in our endeavor to find some means of protecting the ladies of our party, but alas! it was a dismal failure, the only failure on my vacation trip.

W. F. KINGMAN.

PROVIDENCE, R. I.

A Primitive Vacation.

To get away from the accustomed scene, to live in the open—that is our notion of an ideal vacation. We spent such a one near Milaca, in the northern part of Minnesota. Thru the kindness of a friend, we were permitted to use an unoccupied farm house, delightfully situated at the junction of Whitney Brook and Rum River. Our furniture consisted of three broken chairs, a rocker, a table

camp fire. Two patches of potatoes, three by six feet, bordered with sod, lay near by. Evidently the Indian was providing for the day of his return.

Our friend said we must visit the "Jungle." Across country, thru the bush, we went till we reached a ravine so densely filled with tamaracks that the sun could not penetrate into it. Underfoot were fallen logs and brush matted together with moss; below this was water. Of course, our feet slipped thru at times, but that only added to the fun; and thru the ravine we made our way with the zest of discoverers. Why hadn't we the right to name for ourselves the birds that warbled and chirped overhead, or those beautiful white blossoms that grew on a low bush? No doubt their real names are quite unsatisfactory. Beside a log we found what must be orchids—we had seen them before only in illustrations.

Then the queen of the orchid was discovered. Some one called, "Come, Come! Here is the Minnesota flower!" We hurried to the place. What a beautiful sight met our eyes! The moccasin flower, with its large red and white blossoms, grew in profusion all around us. We picked and picked until our arms were full, then started home, regretting we had to leave any to waste their beauty in that dark ravine.

After these trips we enjoyed the exhilarated sense of rest that only follows physical exertion in the open. We would spend the late afternoons in reading or watching the insistent life of nature around us; the evenings in telling stories or in listening to the whip-poor-will.

"He calls not thru the day;
But when the shadows gray
Across the sunset draw their lengthening veil,
He tells his twilight tale."

At length a "drowsy numbness" would steal over us, but there was no "heartache." Not after days spent thus!

ESTELLE BRANDE.

MINNEAPOLIS, MINN

Professor Driggs, Reverend Simpkins and Sol Kraft, Take Notice.

For the man who has heard the click of the reel and felt the pull of the speckled mountain trout on a good jointed steel or bamboo pole, to learn where this particular species of the finny tribe lurks in abundance, will certainly bring a thrill of pleasure.

Lost River empties into the Weber about a quarter of a mile above Devil's Slide in Weber Cañon. Devil's Slide is on the U. P. R. R., about forty miles east of Ogden, Utah. Thousands of people pass within a city's block of this unique nature formation, but very few indeed stop to enjoy this beautiful canyon scenery and inhale the invigorating mountain air.

Professor Driggs, superintendent of the Utah School for the Deaf and Blind, is a busy man; likewise the writer, yet when the warm days in June come the desire for a little outing is so great that we usually manage to plan a little fishing trip. For a number of years, Lost River has been our favorite selection, and we have never come back disappointed or with an empty basket. Last year we left Ogden on the morning of the Fourth of July and started fishing in the afternoon, about 1 o'clock, and finished the next day at sundown. We caught eighty-six trout, from seven to fourteen inches long. We were accompanied by the Rev. Peter Simpkins, of Salt Lake. Having heard some of our fish stories, he concluded to try it. By the way, he is no back number at telling stories himself. In his vest pocket (among some good Havanas) is a little red-covered morocco memo that seems always to remind him of *another one* that is still better than the *other one*. The notable feature upon our meeting at the union depot at Ogden was the size of his basket. He is fond of trout. Trout is good brain food. No doubt his congregation noticed this the following Sunday!

One thing about catching trout—you have got to fish. Usually the best results come from fishing up-stream, wading in the water. For this you want gum hip-boots or waders. Then there is a knack in knowing just when to spank your fly into just the right spot in a little bubbling foam beside the rolling riffle. If you don't get a raise the first or second cast, you may as well move on. Once you catch on and land a few half-pounders and feel them kicking around in your basket, a mosquito can get a good square meal at your expense and you'll not know it till you get home. Mosquitos seem to enjoy fishing. Where there is good fishing there are usually some very bad mosquitos. Ask Sol Kraft, of Chicago. However, it only lends flavor to the sport. After a day's fishing, with a fifteen-pound basket full, swung on a mighty tired pair of shoulders, comes the supper at the

THE RIGHT SPOT.

Toone Rancho or the Thackery House. Cold fresh milk tinctured with cream, fresh ripe strawberries and radishes, new potatoes and crisp lettuce, fried trout, good and brown, hot biscuit—no cake, thank you; just a cigar. Then to bed. If you can't sleep after such a day, you need a change of climate. The doctor can't do anything for you!

OGDEN, UTAH.

JOHN T. HURST.

The Navigable Connecticut River.

Most people enjoy sailing, while but very few consider themselves adept enough to take a cruise. Here is the barest outline of a vacation for these latter, a vacation that is inexpensive, safe, delightful and varied; that gives out-of-door life; that takes you to places both beautiful and filled with historical asso-

say, *in the world!* Furthermore, you can vary your life and camp on their banks; you can fish, you can even hunt for small game—if in the fall, for rails and snipe. You can visit the quaint old towns, and see such sights as Nathan Hale's old schoolhouse at East Haddam, or the grave of Lady Fenwick, dated 1648, at Saybrook. At Essex you can see the abandoned yacht "Dauntless," which one time

THE REGATTA.

ciations; where leisure increases delight; and which, tho spent on the water, cannot produce seasickness. In short, sail down the Connecticut River! Get a small centerboard boat—about twenty-five feet in length—at Hartford, take one, two or three companions, and sail to Saybrook. There is no kind of doubt that the Connecticut River is not well known and therefore not appreciated; and yet no river can show greater diversity of beauty. Sand banks that bring multi-colored fields to an end, and sand spits and coves that take on rainbow colors at sunrise and sunset, charm you for the first fifteen miles. From then on (below Middletown) the scenery is wilder and grander. Tree-laden hills come to the water edges on both sides, and sometimes those edges are a hundred and more feet above the water, lining the river with precipitous cliffs of brown stone or shale. Sometimes the little white New England towns come to the water's edge with their dock and coal-yard; sometimes they are seen on the tops of the hills or nestled on the sides. And often a little stream flows in from one side or the other. And herein lies this cruiser's joy: those streams are navigable for the small boat! And some of them—for example, Salmon or Eight Mile Rivers—have no equal, I am emboldened to

held the record for transatlantic sailing. At Lyme is the famous artists' colony, which, in itself, predicts the beauty of the town. Best of all, perhaps, are the views that can be seen from the tops of the hills, heights that are easily and quickly reached from the shore. And all this while you can stay as long as you wish, for no wind can ever ruffle the water enough to make more than a small anchor necessary; while there is seldom such an absolute dearth of wind that you cannot make progress against the slight current.

The distance is only forty-nine miles, but to consume two weeks on the trip is to hurry.

(Rev.) GEO. ROBERTS, JR.

ENGLEWOOD, N. J.

A Farmer's Experience with Vacation People.

The telephone bell rings and I answer a call. The city people are getting ready to come to their cottage upon the lake shore near by, and they wish to engage board at the farmhouse. I must meet them at the depot or the steamboat dock to help them move their personal effects. There are a great variety of articles

to be taken to the cottage and the two-horse wagon is loaded to its utmost capacity with boxes, barrels, trunks, groceries, sporting goods and clothing. The load arrives at the cottage a little ahead of the party, who make the last few miles by steamboat, and I go to the dock to greet the party and to assist in carrying any personal luggage to the cottage. Upon meeting one such party, consisting of the father, mother, children and a maiden lady, who was carrying a rather cumbersome package, I asked if I might assist her with it, and she replied, "Oh! no! no! Thank you, I can carry it." Later I

learned that Auntie has her favorite cat in that basket and she thinks as much of it as of any human being.

There are twenty children camping or boarding within half a mile of the farm. These children overrun the place and beseech me continually for permission to ride the horses and farm implements. Frequently I have had three or four of them on the machine while operating a binder, with two or three on the horses. If I go to the dock with a stoneboat there are six or eight of them ready

for a boat ride on dry land and one for each horse. The children are active, but the older visitors, as a rule, come to rest, to read, to motor, or a drive thru the country. They are what country people would call rather lazy, but there is always the exception, and the exception is likely to be the specimen hunter, who will ask me to take him across the lake to a gorge on a Sunday morning, when I would rather sleep or read. He is armed with a hammer and chisel, and commences an industrious and laborious search for what he calls crinoid stems and trilobates.

Sometimes a party of people from the lake will walk up to the upper portion of my farm, where the view of the lake and scenery is unobstructed. They will seat themselves on the top rail of an old fence until the rail well-nigh breaks with the weight and the fence corners start from their positions, and with their faces turned toward the horizon and with the eye they will trace the outline of hill, lake and ravine for hours and hours at a time. They become enthusiastic and say, "Why, we should think that under such con-

HELPING (?) THE FARMER.

ditions you would live to a very old age, such pure air, such magnificent scenery!" They ask many questions about farming and their probable success as farmers, and finely conclude to buy a farm near by and take lessons in agriculture of me. But when the cold November winds and rains sweep the fields, when the flower and leaf are gone, when the squirrel has gathered his hickory nuts, and the wild goose has turned to the South, they forget all these plans and hie themselves away to the protection and luxury of their city homes, and their country friends are no more thought of until the season changes again and the wild goose returns from the South.

L. C. LINCOLN.

CANANDAIGUA, N. Y.

A Vacation for All.

I had been practising eight years without a vacation. Only once, and for three days then, had I visited my parents at the old homestead, a hundred miles away. So Lou and I finally decided to take our vacation with my parents. They were each more than sixty, and were living alone on the old homestead. My sister and her husband were teaching near where I was practising; while my younger brother, a boy of nineteen, was in college. He spent his vacations at home. Sister and her husband agreed to spend part of their vacation with us at father's.

This vacation would cost very little, and would be the best possible for sister's six-year-old boy and our own two-year-old son. As the expenses would be so light, we planned to spend two months.

Early in February we selected and ordered garden seed sent to mother. She always had a good garden, but we wrote her to make an extra effort to have vegetables enough for us all. I had some high-grade garden fertilizer sent for old David, mother's negro gardener, to use in connection with his home-made fertilizer.

We went to father's early in June. The others had already arrived. What a joy it was to be back with the whole family as of old! I almost forgot that I was a parent myself in that I was a boy again. We young men did as much of father's work as he would permit, while sister and Lou gave mother a vacation. Father was kept busy with the two grandchildren. He and mother both seemed to turn children with the rest of us.

Old David had been unusually successful with the garden. Such vegetables as that sandy loam produced! Fruit was in abundance. Greensboros and Elbertas were as fine as ever grew. Many of the trees and vines I had planted when a schoolboy. The grapes were as luscious as could be. There were more than a dozen different kinds, but the Brightons, Brilliants and Delawares were especially fine. The melons were abundant and choice in quality.

No hotel could have procured such milk,

eggs and chickens. We occasionally had fish caught from the same old fishing holes we had frequented as children. The water is free-stone, from a deep well. In it lurks no danger of typhoid fever, that peril so often encountered in promiscuous travel.

Sister and Lou spent some time in canning fruit and vegetables. The piano and our journals gave amusement for the evenings. Driving, horseback riding and games took up many hours. But we all helped work in the garden and orchard as well as give assistance to David and the cook in their general work.

The quiet country surroundings, pure air, wholesome food, outdoor exercise and regular hours refreshed and invigorated us all. It is hard to say whether grandparents, parents or children enjoyed these two months most.

BIRMINGHAM, ALA.

An All-Year-Round Vacation.

As our yearly income does not exceed \$450 for three of us, after paying living expenses, not very much is left for travel or vacations; so we are compelled to enjoy our vacation at home.

We have chosen as the site of our home an ideal spot for an all-year-round vacation. We are about one-half mile from the village where my husband works, but are surrounded with the wilds of nature. Just across the road from the front of our house is a forest of young trees, such as are common to the hillsides of New York and Pennsylvania. Thru these we may wander at will during the warm days of the year, or if too weary for a ramble we may stretch our hammock and go to sleep amid a concert of nature's songsters.

This forest abounds in native wild flowers, ranging from the modest violet and snowy trillium to the gorgeous golden rod of late autumn, and as we walk among our favorites we are often startled by a little wild rabbit or a squirrel bounding away thru the ferns at our feet. All around the house are a goodly number of hickory trees and in these we have placed cottages for the little feathered tenants that we may watch their housekeeping in summer.

We know where the wintergreen berries grow large as cranberries, also where to find all the other delicious wild fruits and nuts which we may gather at our own pleasure; and surely no vacation sport is more healthful or enjoyable than tramping over our steep hillsides in search of these. Not far from the rear of our home a silvery creek winds its way between banks of forget-me-nots to the Allegheny River. This contains plenty of fish and is just the place for summer dreaming.

When we wish for a change, the trolleys are ever ready to take us to the city, only a few miles distant. Then in winter what journeys we take by way of our books from the

public library and our magazine! In a few short months we have in this way visited nearly every country on the globe as well as nearly all parts of our own land, with nothing of that weariness which comes to other travelers. We like this way of living best, for we can work hard every day and yet enjoy on all-round vacation.

ROWENA M. CHAPEL.

SHINGLE HOUSE, PA.

A Reindeer Trip in Alaska.

While spending the winter of 1898 in St. Michael, Alaska, I and my wife had a trip of sixty miles, by reindeer sleds, in charge of two Laplander drivers, from St. Michael to the Swedish Mission, at Unalakleet. Dr. Sheldon Jackson had promised us the conveyance early in the fall, so the first of the winter was past in pleasant anticipation of the trip and spending the Christmas season at the mission.

We had never tried winter traveling in the Arctic, and a great deal of preparation was necessary. Fur clothing, robes, hoods, mittens and everything that would keep the cold out and the warmth in must be had, as well as advice. Much of the latter was offered by the old timers, "Sour Doughs," as they are called up there. One man told us that one could easily run fifty miles a day alongside of the sleigh, and sleep in the open, under a light fur robe; and that raw salmon would taste good after the first day out. This advice was only *partly* true. Starting December 21st, with the thermometer at 30 below, at 1 p. m., each on a sleigh drawn by one reindeer, and an extra deer drawing a "pulk" for our baggage, my wife is nearly "out of sight" in lynx robe and fur hood. The deer are held by the head, looking toward the rear of the sleigh, and when all is ready the drivers loosen them, drop on their seats, and away we go, each deer trying to go in the wrong direction as fast as possible. Finally they strike the trail on the open ice, and trot along at about five miles an hour. A reindeer start cannot be described. The onlooker sees a wild effort to escape and a general confusion. A passenger hangs on, and hopes, and the Lap drivers, with supreme patience, untangle every kind of a mixup.

Soon the cold would drive us to our feet, and we would run until out of breath, then ride till the cold began to bite. The face was the hardest part to keep warm.

The interior of an Eskimo house is not an ideal stopping place, but we were only too glad to accept the hospitality of old Miunich, at Klikitarak. The smells of various degrees of disagreeableness were forgotten in the enjoyment of the genial warmth.

The whole village called to see the white woman who had arrived and see her prepare supper, and who persisted in being well and happy in spite of cold and weariness.

The next day we only traveled about twelve miles, stopping at Golsovia. The cold was intense, and the sun was so low that the small hills kept it hidden most of the day. During the last half hour of travel my nose was frozen on one side, and not being properly thawed out a blister covering the whole side of it was there in the morning.

Our first thrilling experience was when we came to a steep hill to descend. As a reindeer pulls by a single strap leading between the hind legs, and nothing to hold back by, he is always looking out for the sled to run upon him; so the drivers took the deer from the front sled and tied him behind the rear one. Then they start down, and every deer spreads his hoofs and holds back, the snow flies, and the caravan looks like an avalanche, but they come out on the level at the bottom of the hill in good shape. The next hill was not so bad, so they let us off, and started down pellmell, the deer keeping ahead as long as possible, then turn to one side, and around comes the sled, rolling over and over, like the boy at the end of the "whip cracker."

During the afternoon of the third day a hard snow storm made the traveling fearful, and we often wondered if warmth and comfort would ever be found again. We cannot see how the drivers can know the way, but suddenly the lights appear, and the deer are on the glare ice of the Unalakleet River. They simply flew, and did not stop when they came to the bank, but plunged along over logs and ice hummocks until they came to Mr. Carlson's door. A warm welcome is always a joy, and the way we were received, and our every want provided for, made us forget all thought of the hardships of the three shortest days and two longest nights of 1898.

Away up here near the home of Santa Claus Christmas means "Peace and Good Will," and the good people at the mission seemed very happy in the joy they were giving to all around them. A tree at the home on Christmas Eve, and a service before daylight Christmas morning at the church, where there were two trees, and tea and cookies for all the Eskimo people. In the evening thirty or forty Laplanders from the Reindeer Station at Eaton, come seven miles down the river, on their sleighs, and have a merry time. It was easy to imagine oneself among a whole colony of Kriss Kringles. One day we went up to the station, and saw the herd of over 600 deer, a lovely sight; and to see the Laps living as they did at home, and drest in the gayest of colors. There were forests of spruce covering valley and hillside to delighted eyes grown weary of a treeless country.

The two weeks spent at Unalakleet was a very happy holiday season, and one long to be remembered. By the time we reached St. Michael again we had become fairly good reindeer drivers, and have since known some of the enjoyment of the Eskimo woman who had spent a winter in "The States." She said: "Every day people sit all around my room to hear me tell what I saw."

E. T. HATCH.

RIDGEFIELD, WIS.

Country People in the City.

I have visited several of our largest cities, and I believe I felt the thrill of new scenes and wonders as much as the wealthy tourists visiting the hills and valleys of our country for the first time. I do not believe in going to the city to do the town, as we often hear it spoken of, for if one does that in town they will be

done; but I do believe if one goes to see and learn they will spend a profitable and pleasant vacation, and I think that can be done by going to the city of Washington. It seems to me that no one can stand near the Capitol and then go thru its halls and up the stairs, one flight after another until they come to the top of the dome, and look out over the public buildings of these United States for the first time and not feel well paid for the effort it cost in hard earned dollars, and methinks they will have peculiar sensations running thru them. There are a great many things in Washington to see and learn that the people in the country know nothing about. There is the Navy Yard, where they make the great guns that they are trying to shoot across the ocean with (for we don't need them on this side); there is the Printing and Engraving Department, where Uncle Sam prints his money, and the U. S. Treasury, where he keeps it; the Post Office Department and Dead Letter Office; the Museum, where there are untold wonders to look at, and the immense wealth in buildings and monuments. All this and more can be seen, yes, much more, by every worker who will save one month's wages out of his year's work, who is no farther away than northeastern New York. A ten-day trip, with good lodging and board (when there is an excursion), can be done on \$25, but you can pay much more if you wish to.

SEYMOUR WARNER.

MAYFIELD, N. Y.

The Grand Canyon.

Spend your vacation in camp on the rim of the Grand Canyon of the Colorado in Arizona, and the memory of such an experience will be one of the joys of your remaining years. It is so different that no other point approaches it in uniqueness of scenes and experience.

Yes, you may have seen the Canyon—during the one to three days of the average tourist—but that is only an introduction. With acquaintanceship and a degree of familiarity with this great chasm, it reveals to you its real character. Let the effect of its grandeur soak in. Make friendly overtures to its spirit, get the message it has for you. It will be a secret—you cannot impart it.

The lights and shadows of the early morning, intensified by the slanting rays of the rising sun, bring out in bold relief the prominence of the opposite side, thirteen miles distant, while the elongated shadows, shrinking with the advance of day, with the sunlight invading every nook and corner, the bold cragged and irregular face of the opposite front interspersed with darkened valleys finally penetrated by the noonday sun, the whole scene changes to a flattened wall, when the shadows begin to grow from the other side of the prominences, a constantly changing scene, a moving picture with a film of rock and crag sixty miles long and 5,000 feet from edge to edge.

Fuel is plentiful in the forest near the hotel at Bright Angel; water may be obtained from the tank cars of the railroad company, and supplies by arrangement with any of the grocerymen at Williams. Sleep on the ground, it is dry, clean and sandy; provide abundance of bedding, as the air is cool and bracing; altitude, about 8,000 feet.

J. W. McNARY.

DAYTON, OHIO.

Why Not Trolley?

Every winter my wife and I spend considerable time discussing what ground our next summer's vacation trolley jaunt will embrace, for both of us are enthusiastic devotees of that phase of outdoor enjoyment. There is scarcely a trolley road in Southern New England from Rochester and Concord, N. H., to Monument Beach and Narragansett Pier, and from Portland to New York City, with which we are not more or less familiar, and we are convinced that there is no healthier or more invigorating mode of enjoying a week or fortnight's respite from the hard, dull routine of a continuous city occupation than a few hours daily in the forward seats of an open electric speeding over a new country with many pleasant surprises of scenery opening up at almost every turn of the route. And all at an average cost of 1¼ cents a mile, or, in other words, an expense of a dollar a day for transportation for each person will be sufficient for any ordinary journey.

Perhaps the most satisfying trip, on the whole, we have ever taken was from our home in Providence to the Connecticut Valley and Berkshire Hill country. Starting one beautiful August morning quite early we rode to Worcester, where after a tarry of an hour or two we turned westward and glided swiftly over the hills and down thru the valleys of Leicester, Spencer and Warren, deciding, for various reasons, to remain over night at West Brookfield.

We resumed our trip very early the next morning, the rails winding thru a wild, unpopulated, heavily-wooded tract, and as a heavy shower during the night had freshened the air our ride to Ware was most delightful. From Ware, thru Palmer, we sped quickly to Springfield, and with a glimpse of the extensive grounds of the Arsenal and St. Gaudens's figure of the "Puritan," one more change of cars carried us to Holyoke, and up the inclined road to the summit of Mt. Tom. A couple of hours here for rest and refreshment and we were off again thru South Hadley to Amherst, and after skirting the base of the Holyoke range arrived in Northampton, and being obliged to remain nearly an hour for connections we utilized the time by a stroll over the campus of Smith College. An hour's run almost along the edge of the banks of the Connecticut and hurrying thru quaint, sleepy old Deerfield we were soon at Greenfield, where we decided we had had enough for one day and sought the hotel for a quiet hour before dinner.

A walk early the next morning along the wide main street, with its century old elms, is one of our cherished memories.

The only rail ride for the trip then took us over the mountains and thru the smoky bore of Hoosac Tunnel to the attractive town of North Adams. Jumping onto a car almost immediately after arriving we went to Williamstown, nestled under the shadow of old Graylock, and looked over the grounds of Williams College, not neglecting the beautiful new chapel and the Haystack Monument.

The end of that afternoon found us in Pittsfield, with its fascinating wide, shady streets, and its Soldiers' Monument: "To the Dead a Tribute, To the Living a Memory, To Posterity an Emblem of Loyalty to the Flag of Their Country."

Remaining here over the Sabbath, we resumed our journey to incomparable Lenox, past a pleasant hour in the inviting parlor of the Curtis Hotel, enjoyed the fascinating outlook from the rear of the cemetery adjoining the old "Church on the Hill," admired the Protestant Episcopal Church and surroundings, then on down the quiet winding valley of the Housatonic, spending a few days in and around Stockbridge and Great Barrington.

Our journey ended at the "Berkshire Inn," where the proprietor, evidently a lover of nature, has placed several placards, with appropriate inscriptions, on the grand old elms that encircle and whose foliage almost hides the structure itself, one of which reads as follows:

Cæsar saw fifty, we an hundred years.
Still green an hundred more we'll stand like seers,
And watch the generations as they go
Beneath our branches in their hurried flow.

CHARLES M. YOUNG.

PROVIDENCE, R. I.

Try Preaching.

I take it that a number of the readers of THE INDEPENDENT are like myself, student preachers. It was my happy fortune last summer to spend my entire school vacation as a Sunday school missionary among the members of my church fraternity. I interested the Home Mission Board in my project to the extent that they supplied me with about twenty-five volumes of standard reading matter for Sunday school teachers and workers. I began to work a community (my work was mostly among country people, where rations

were fresh and exceedingly palatable) generally on Monday. The week was spent in visiting the membership of that congregation, distributing the reading matter as I went, and assigning topics for an all-day meeting that I proposed to conduct at the church the next Sunday. Another thing that furnished me with a point of beginnings in my visiting was that I took a census of the membership as I went thru the week.

On Sunday we came together where the usual morning exercises were held. Being commissioned to preach, I was always allowed the privilege of using the morning sermon hour for presenting some phase of the Sunday school work of the church. At this time also I presented the results of the census I had made, tabulating and classifying it and exhibiting it in chart form. That always took the ear of my audience.

The afternoon we spent in what we call out West a Sunday school convention. The topics that I had passed out in the visiting of the week were called for and discussed. The books were collected and the next week was spent in very much the same way.

The expenses of my travel were met by a contribution by the audience in the afternoon. I never went hungry nor without all the comforts I wished. Sometimes the collection was below what I might have wished, but when the whole summer was counted up I had my board and lodging for the time, my expenses were all paid, I had an exceedingly valuable experience in preparation for my future work, I had an extensive acquaintance among the people of my fraternity, I had experience in traveling that cannot help but broaden any student, and beside all that I had about \$135 to my credit in the bank. It was the happiest summer of my life. It was the most fruitful of good of anything I have ever done, and I hope to repeat it to a great extent this summer. Have not said a thing about the fishing excursion I was to join, where we camped out and fished in a large reservoir. Haven't said a thing about the drive of seventy miles across the prairies in one day, in a little old, wornout rig, where we three sat in one seat the whole way and had to let our feet dangle outside. Haven't said a thing about a good many similar things that all put together make life a mighty interesting thing for the people among whom I worked. W. O. BECKNER.

McPHERSON, KAN.

YALE-HARVARD BOAT RACE, NEW LONDON, CONN.

A Motor or a Horse

BY RICHARD Z. WINSTON

[The following article is intended to answer a question that confronts so many persons who own country homes, tho it should interest all who can leave the city for more than a month. The author is a prominent motorist and a member of a number of clubs.—EDITOR.]

SO much has been said about the extravagant outlay required to maintain an automobile that many have been deterred from owning a machine for fear of bankruptcy, but in the present stage of the industry it may be safely claimed that the cost of motoring need not be any greater than riding behind a good horse. No other sport or pleasure, however, permits of greater extravagance than automobiling, and one may easily spend a small fortune in fancy cars and accessories; but at the other end of the scale there is no equally enjoyable recreation that can be followed with greater economy and efficiency.

The majority are not interested in

racing or in owning high-priced cars. They are in the same position as the man who owns one or two good horses for the mere pleasure derived from their use. A large class of people living in the country and small towns and villages continually put the proposition to themselves: "Can I afford to own an automobile?"

Possibly the best way to answer this question is to put another: "Can I afford to own a horse?" Most of us can answer this second query without any very great mathematical calculation. But, before arriving at a conclusion, it would be well to consider the further modifying question: "Am I willing to give the same amount of personal attention to the care

THE OLD AND THE NEW.

of a motorcar that I bestow upon a horse?"

A great many lovers of horseflesh have their own barns and take personal charge of the family horse without finding the

chauffeur just as he would engage a coachman if he maintained a stable of several horses.

A just basis of comparison may be found in the small runabout automobile

A SAVANNAH TOLL-GATE.

work at all irksome or unpleasant. The motorist who wishes to keep down the expense can, with even less trouble, attend to his own machine and keep it in excellent repair at all times. Of course, there will come times when the car will have to visit the repair shops, but then the horse must be shod at regular intervals, and broken harness and carriages must be repaired by experts. Under the same care and supervision one will cost about as much as another.

To make a fair comparison between the cost of keeping a motorcar and a horse it is essential that items should be classified with some respect to the size and power of the automobile. A thirty or forty horse power touring car is not in the same class with the single family horse, but rather with a stable of two or three horses. A man who expects to keep a high-powered touring car would, in the ordinary course of events, retain a

seating two and the single family horse and carriage. Such a runabout may cost from \$500 to \$850 complete, and for a good, trustworthy horse and carriage, with harness and other equipments, about the same amount would be invested. The initial cost would thus be approximately the same, and interest on the investment need not be considered further. Likewise the stable or garage rent can be eliminated, for a country place with even a very small stable could accommodate an automobile without further expense than a slight increase in the insurance.

We have heard a good deal about the rapid depreciation of automobiles, some placing it at 10 per cent. and upward per year, but such arguments are misleading. One could drive a horse to death and wreck its health and further usefulness in much less than a year. A careless motorist can in a similar way use up a machine within twelve months. The only

safe way to secure reliable data concerning the life of usefulness of an automobile is to take a large number of cases and strike an average. An automobile company recently attempted to secure such data thru the newspapers, and received the records of nearly two hundred cars in over thirty different States. From these records it was found that the mileage obtained from the different cars ranged all the way from 850 to 32,000, but the majority showed up somewhere between 10,000 and 20,000.

On this basis a good motorcar should last a careful driver anywhere from eight to twelve years. A horse kept that length of time in constant service would not bring much more at the auction room than the automobile. Similarly in regard to the tires, it has been found by actual test in a large number of cases that from 4,000 to 15,000 miles can be covered with a set of good tires before they are ren-

and carriage as well as to a motorcar. A friend of the writer's has had three runaway accidents with spirited horses in the past twenty years, and not a single accident with his motorcar, which he has been driving now for five years.

What does it cost to run a car, and how many gallons of gasoline will be required? To answer this question it is necessary once more to show the wide range of results. A single car has run as high as one gallon of gasoline for $9\frac{2}{3}$ miles, and another has obtained a record of 32 miles from a single gallon. Out of 168 sworn statements of owners of single cylinder cars obtained by an automobile company, it was ascertained that 40 per cent. averaged 20 miles on a gallon of gasoline, or an average for the total of $18\frac{1}{3}$ miles per gallon. While the cost of gasoline varies in different parts of the country, the average may safely be placed at 18 cents, altho there is a tendency to-

THE WATER'S FINE.

dered useless. There is always the possibility of punctures and blow-outs, but these in ninety-nine cases out of a hundred are due to careless driving or ignorance. Accidents will happen to a horse

ward a general advance to 20 cents. If we accept the 18 cents per gallon as a standard, the cost for fuel for operating a single cylinder car would be about one cent per mile per car.

Repairs have always been greatly exaggerated because of the great number of reckless drivers and speed-maniacs. A car that is driven recklessly over all kinds of roads and in all kinds of weather must of necessity go to the repair shops often. Every smash-up means a big repair bill. But careful driving means an astonishing small repair bill computed annually. Not including tires, the average repair bills for the 186 cars mentioned above for the first year and a half amounted to \$2.17 per month, or 51 cents per week; or, to put it on a better basis, the average per mile was one cent.

From these figures, which are as nearly

| | |
|--|--------|
| Oats and hay per week..... | \$2.50 |
| Shoeing, per week..... | .50 |
| Repairs of harness and carriage per week | .50 |
| Sundries, such as new brushes, combs, etc. | .25 |

Total per week..... 3.75

Compared with this cost we have for the single-cylinder runabout automobile the following approximate cost of up-keep:

| | |
|---|--------|
| Fuel, on the basis of a weekly mileage of 250 | \$2.50 |
| Repairs per week..... | .51 |
| Cost or depreciation of tires..... | 1.00 |
| Sundries | .25 |

Total per week..... \$4.26

There is an apparent advantage in fa-

THERE ARE SOME CONSIDERATE AUTOMOBILISTS, EVEN IF YOU DO NOT THINK SO.

official as any that can be compiled, and derived from a large number of individual cases, it is possible to formulate some pretty accurate estimates of the relative cost of keeping an automobile. For the man keeping one horse in the suburbs or small town, with his own barn as a part of the estate, and taking personal care of the animal, the cost would be about as follows:

vor of the horse and carriage of 51 cents per week, but this is more than compensated for in the distance traveled by the automobile. What horse could or would average 250 miles per week? The real advantage is in favor of the motor-car on this account of greater distances covered, and the quicker speed attained for any particular purpose. Rapid transit in the country is just as real in mod-

ern life as in the city, and it proves an economic factor in all of our business and pleasures.

On the same basis compare the four-seat runabout with the cost of keeping two horses. If one kept two horses, either a coachman, gardener, or man of all work would have to be employed, but any man with a little knack for machinery could care for and operate a dou-

der touring car, capable of seating seven persons, would in all probability employ a chauffeur, and if he developed a love for horseflesh he would keep a stable of two or three horses and employ a coachman and in all likelihood a stableman. His string of three horses and two men would cost him a good deal more than his touring car with a skilled chauffeur at \$50 to \$75 per month. The cost of

REPAIRING.

ble-cylinder, four-seat runabout or small touring car. The cost of operating this larger machine would probably amount to 20 per cent. more than for the small runabout. This is a liberal allowance, and would go chiefly for the extra fuel used. If two horses were kept the cost would be nearly doubled, certainly in the matter of feed, if not in the repairs of harness and carriage and sundries. There is also the question of veterinary doctor's fees, which in some instances amount to more than shoeing for a year. The danger of accident and loss from sickness is about the same for the horse as for similar risks with the motorcar.

The owner of a big four or six cylin-

der would not advance as rapidly as the cost of feed for his horses, and the repairs would not double, altho the shoeing of that number of horses would increase threefold.

There is one other side to the question worthy of consideration. The man who spends from four to six months in the country and the balance of the year in the city could make the automobile an inexpensive luxury. During the winter months the machine would be laid up in some barn or garage, where it would cost comparatively little for storage. There would be no other expense to it. A stable of horses, on the other hand, would constantly incur an expense, tho

less in the winter than in the summer. They would have to be fed and given a certain amount of exercise. The cost of wintering a horse in the country is rarely less than \$25 to \$50 per month, depending upon many local circumstances. An automobile can be placed in a garage on the country place and left there for the season at practically no expense to the owner.

Relatively speaking, the automobile renders the cost of transportation per mile less than any other means of locomotion, and in comparing its upkeep with any other system this fact must be kept in mind. An old horse that can jog along a few miles a day, and live on a bunch of hay and a few oats, may not cost nearly as much as an ordinary motorcar, but the difference in the appearance and the speed and number of miles traveled in comfort is something worth considering.

A common practice today that is gaining favor among those who spend from four to six months of each year in the

country is to rent a motorcar and keep it in a small barn attached to the place. Such cars are rented all the way from \$150 a season up. They are second-hand cars, but put in good condition for the season. To the rent price you must add the cost of fuel and temporary repairs, but not depreciation and extensive repairs, such as renewal of tires, etc. The result of this method is that one has the full enjoyment of a car for the season at a cost of about \$50 per month and upward. The amount of enjoyment obtained from it is not to be easily measured in dollars and cents. It may even be considered in the light of an important factor in saving carfare and time in journeying to and from the city or the nearest railway station. If due credit is given to this gain the investment will prove a most serviceable one.

NEW YORK CITY.

The Nightingale and the Frog

BY H. H. KNIBBS

ABOVE, the flitting singer stops
And twitters in the thistle-tops,
While o'er the wide green field below,
Where sedges sob and light winds blow,
Where lazy white-cupped lilies float,
Each in his wide green graceful boat,
Beneath the wooing summer sky,
Those mysteries, the marshes, lie.

Then when the magic of the moon
Has set their silence all a-tune,
With cricket, frog, and katydid,
Soft throbs the air (the singer hid
Deep in the green unlighted vale)
With revery of the nightingale.

If ghost of Schubert should appear,
I'd marvel not, to find him here,
With goose-quill penning pensively
The echo of your minstrelsy!
Ye singers, that forever look
Within the Master's music book,
Was ever sweeter music played
Than your unanswered serenade?

How all the harpings hush, while he
Enthralls the night with melody,
Till, stirred by something in the song
That quieted the chirping throng.
The frog, squat, blinking at the moon,
Takes up the bass-notes of the tune,
And chants a mellow monotone,
A cool, quaint music, all his own.

Unanswered? Yes, but not unheard,
That chance duet of frog and bird.
The maid-moon o'er the marshes yearned,
And hearing, deeper, brighter, burned.
She whispered to the tide to pause,
Obeying her, his law of laws,
And crept back to his home, the sea,
To dream of your weird melody.

ROCHESTER, N. Y.

A First Ascent of the Nun Kun, Middle Himalaya

BY FANNY BULLOCK WORKMAN, F. R. S. G. S.

[The author of the following article, who has already contributed to *THE INDEPENDENT*, is a Grand Medalist of Club Alpin Français and Officier de l'Instruction Publique de France. With her husband, Dr. William Hunter Workman, she is one of the most celebrated living mountain climbers, having ascended higher altitudes than any other woman and all but a very few men. The Workmans are joint authors of "Sketches Awheel in Modern Iberia" and "In the Ice World of Himalaya." Their home is at Worcester, Mass.—EDITOR.]

PASSING thru the Surn Valley in Eastern Kashmir, some years ago, on our return from a journey to the border of Turkestan, Dr. Workman and I caught our first glimpse of the Nun Kun range. A dazzling snow peak soared to meet the clear evening sky, while around it three wonderful sheer rock aiguilles, dashed with snow and tinted with the red after-glow, shot upward like prongs of flame. Then and there we decided, should the fates allow, to return and investigate these picturesque and beautiful mountains.

For three seasons after we were fully occupied with mountain exploration in Baltistan, but during this time I never forgot the fairy-like summits glowing like torches in the glory of the departing sun, and, one good day in May, we found ourselves with Cyprien Savoye, guide of Courmayeur, and six Italian porters in Srinagar prepared to start for a thoro exploration of this range.

The village of Surn, twelve marches from Srinagar, was to be our base for coolies and ordinary supplies of meal and sheep, but unfortunately the villagers, who were to act as coolies, were nearly starving in consequence of the failure of crops the two previous summers in the Surn Valley. We were, therefore, obliged to send up all the meal and rice

needed to feed our prospective coolies for eight weeks from Srinagar, and this supply amounted to 16,000 pounds. The forwarding of this and our own tinned food required considerable planning, particularly in Kashmir, where at all times it is difficult to procure enough coolies for one's transport.

But finally it was arranged, and, before we ourselves left, the advance commissariat caravan of 245 coolies departed under charge of our English agent. He had a lot of trouble, tho, before he got his supplies up to Surn, for at the foot of the first high pass on the route 100 men deserted, carrying off what they could steal and leaving the rest on the path, so he was obliged to make short double marches each day with the remaining men, thus taking three weeks to cover

FANNY BULLOCK WORKMAN.

the usual twelve days' journey. The Nun Kun, like Ruwenzori, in Africa, conquered by the Duke of the Abruzzi, is a great mountain massif, differing from Ruwenzori in two particulars: (1) it is twelve miles square instead of seven, (2) it is much higher, its seven highest peaks varying from 21,000 to 23,400 feet, so that our lower camps were pitched at altitudes at which the Ruwenzori peaks culminate.

Leaving the bulk of the supplies in charge of the agent, at the end of June

CAMP ITALIA. NUN KUN PLATEAU.

we left Surn with sixty coolies, twenty-five sheep and sixteen goats for the upper Surn Valley.

The northern approach to the Nun Kun, the Shafat Valley leading to the Shafat glacier, which we wished to ascend, should be reached in two days from Surn village, but the fierce, rushing, bridgeless Surn River has to be forded, and this year it was so swollen by the melting of the glaciers above that we had to make three extra long marches before a ford could be accomplished, and return two marches on the opposite side of the river to the entrance of this valley. Finally a base camp at 15,100 feet was established far up the Shafat glacier, on a rough spur of a lower Nun Kun peak. To this point and 2,000 feet higher a few sportsmen and two travelers had previously penetrated, but no one had succeeded in exploring the higher ice falls, saddles, or summits of the massif. It was not our intention to make a dash for

a mountain, put up a flagstaff and return satisfied with the booty of a high Himalayan peak, but rather to continue our usual method of Himalayan work, viz., to study the glaciers, make observations and measure as accurately as possible all cols and peaks ascended.

Furthermore, we wished to camp high and remain sufficiently long at high points to observe the effects of rarefied air on our large party of Europeans. In order to do this and not be driven down by recalcitrant coolies, the six Italian porters had been engaged with the understanding that they should carry all camp kit above where coolies could be willingly induced to climb. The porters were also to do all their own cooking, because on previous expeditions the Kashmir cook had stolen so much of their food and given them such scrumpy dinners that on occasion they went to bed hungry. This season that never happened, and often, after a hard day aloft, a large

saucepan of soup might be seen steaming or a half sheep roasting cheerily over their native fireplace built of stones on a bleak mountain flank.

A week was past in investigating the upper part of the Shafat glacier and another east ice fall, and in climbing lower peaks for orientation and measuring, and then, the weather being very fine, we decided to establish camps among the highest peaks. The very highest Nun Kun peak was seen from a point just above Base Camp, but the other high summits were cut off from view by lower mountains and a mighty ice wall which we saw must be overcome before we could come in touch with the most important peaks.

Guide Savoye with two porters made a reconnaissance, and after hearing his report it was decided to send four porters ahead with light camp kit to establish one or two bivouacs. They were to take coolies as high as possible, then push on alone, leave tents and provisions, and return to meet our party. Giving them a

few days' start, one clear morning we left Base Camp with the guide, remaining porters and fourteen coolies. Clambering over huge tiresome moraine ridges and wading icy glacial torrents we at last threw off the exhausting lower débris work that makes the approach to snowy Himalayan peaks so trying, and reached snow. This day's climb was especially interesting, as on the snow-slopes ascended we came on stretches of "Niéves-Pénitentes," found in the Andes, but seen by us for the first time in Himalaya. They are small corrugated ice-pinnacles varying in height from one to three feet. They have cowls of snow usually turning downward in the same direction, causing them to resemble groups of penitent monks, hence their name, penitent snows.

After 1 p. m., reaching a snow hollow near some rocks, a wood pile left by the porters was discovered, and, as the coolies could light fires on the rocks and cook their food, we camped on the snow here at 17,657 feet, calling the camp

AN ICE FALL OF THE NUN KUN.

Photograph by Mrs. Workman.

Nièves Penitentes Camp. All had a good sleep there, and luckily, for we were destined to pass five sleepless nights higher up.

The next day's climb was a hard one, over walls of ice, up sharp slants gashed by immense crevices, and the coolies, altho marching bravely, required much help from the guides in surmounting the many obstacles. In the afternoon, just as they had successfully conquered some high snow seracs, a shout of joy was raised, for further up, on a desolate snow slope, two tiny shelter tents were seen, and looking thru a zeiss glass we saw three porters descending an ice wall above the tents. We realized now the magnitude of the challenge thrown down to us by the Nun Kun. Not only was ice and snow to be our environment for several days, but the mountaineering conditions were to be of the gravest, most difficult nature.

We pushed on, and in an hour brought

the caravan, now fairly breathless from the altitude, to the tents. It was an awesome spot, this White Needle Camp at 19,900 feet, named after a tall, white aiguille, towering to the left and backed by the long 700 foot high ice wall, which had to be scaled before the mysteries of the Nun Kun would be unfurled. The coolies could do no more, and most of them lay prostrate from mountain sickness in the snow. Still, two sturdy fellows and a tent-servant volunteered to stay on and carry loads the following day. The rest were sent down to the lower camp. After a warm soup we got thru the next sleepless twelve hours as best we could. This bivouac was 550 feet higher than our last highest camp in Balistan, and lungs had, indeed, to be trained with a will to the endurance of diminished atmosphere.

The third day's climb was to be devoted to the overcoming of the ice wall by our porters, all loaded to forty pounds. In climbing, loaded, above 20,000 feet the distance covered all depends on the slope, and many of those of the Nun Kun are almost prohibitive. We marched in two roped caravans, utter silence reigning on the line, except when every five minutes one or another porter gasped the word "Halt." Each halt was more difficult to endure than the last, for we were on a perpendicular face and there was little rest in driving in ice axes and spiked boots in order to prevent being precipitated into the icy abyss below, where yawning blue chasms fluted with snow ruffles invited one to lose consciousness in their merciless depth. After climbing some hundreds of feet it was decided to attempt an ascending traverse of the wall. As this feat was slowly carried on I realized dimly, between gasping for

breath and watching each step, the beauty of the panorama unfolding. The great Shafat glacier lay in shadow, a trackless snow sheet thousands of feet beneath, and then lifting one's gaze to the hills it rested on wave upon wave of snow mountains, the beautiful ranges of Zanskar, glowing mauve and ruby as the early sun struck their noble crests.

Behind us rose only the interminable wall, the outer snow coating of which was fast melting, warning us as we sank thru onto hard ice that it was time human beings sought a more secure terrain. Shortening each halt to a few seconds, Savoye led on, the hoarse breathing of the loaded porters making a weird accompaniment of the movements of the otherwise speechless strenuous band. Brought at last to a projecting snow buttress, Savoye, held tightly by two porters, cut out a short straight staircase which we all carefully mounted, and to our joy found ourselves on firm snow and were hence able to advance over gently rising slopes. When, after a long rest to their greatly taxed lungs, the men were ready to continue, we saw stretching in front one of the most impressive sights of this wonderland of Himalaya. I recall the strong impression made on my mind of a great snow lake we came upon at the head of the Biafo glacier in Baltistan, but that was small indeed compared to the grandeur of the Nun Kun snow lake or high undulating basin now opening. This plateau, one and a half by three miles, is not indicated on the survey map, probably because its existence was never suspected.

Unapproachable on all sides, except by wild ice falls and the wall we had vanquished, it rises and falls in blinding white billows in the uppermost core of

BREAKFAST ON THE NUN KUN PLATEAU AT 20,600 FEET.
Photograph by Mrs. Workman.

the massif and above, crowning it like a tiara, loom all the highest peaks, including the aiguilles we had seen years before from the valley, piercing the sky like scimitars of fire. They looked, of course, much lower from the basin, for we had been ascending their flanks for three days and were now nearing the end of our journey.

Soon Camp Italia at 20,632 feet graced the scene, the first colony of tents ever planted on the Nun Kun plateau. The afternoon was spent in examining the glacial outlets to the basin, in making observations and deciding what summit we should try for. The highest peak rose from the plateau in such sheer snow slants that it was deemed impossible for porters loaded, so it was agreed to push on to the base of the second peak, lower by about 150 feet, and attempt that. The three natives were sent down from here and they seemed quite ready to attempt

descending the wall alone, rather than stay on.

One Italian porter got ill from altitude effects, leaving only six men for carrying loads the next day. As these could not carry all the needed food and camp impedimenta, the plan was for them to take our tents, clothes and food to the base of the mountain and return for their own the same day; thus the final ascent could not be made until the day after.

Another cold and sleepless night, minimum 4° F., and we were off before the sun touched the basin. Altho we were on a so-called plateau, it was climbing up and down snow hillocks all the same, and at 21,000 feet, not easy for those loaded, particularly as by the time we arrived at the base the snow was soft and in bad condition. Mist came in and it began to snow by the time our tents were pitched, and clearly it was uncertain whether the guide and porters could re-join us that night. Descend they must, as they had no tents, so it was settled

that if they could, they would return at sunset, if not we should remain there alone and they would join us by daybreak the following morning.

I confess to feeling a bit depressed as I saw them disappear, leaving us alone in the fog-shrouded plateau, but we had plenty to do with our instruments and in noting some extraordinary temperatures. This camp, which was carefully measured by boiling point observations, compared with simultaneous readings taken at a lower barometric station by a Government official for us, was at 21,300 feet and named Camp America. It is, we believe, the highest authentic camp yet made by explorers and the highest measured point at which mountaineers have past a night.

It ceased snowing by 2 o'clock, and the sun shone faintly through the mist, producing a most sickening heat even at that great height. We wrapped our heads in wet towels and proceeded to observe the temperature. At 2:30 the sun tem-

PORTERS PREPARING DINNER.

Photograph by Dr. and Mrs. Workman.

perature, taken with black bulb thermometer, was 193° F.; at 4 p. m., 140° . Just after sunset it froze and at 7 p. m. the glass stood at zero, while the lowest temperature registered during the night was four below. Thus in fifteen hours we had to endure variations in temperature of 197 degrees.

After a soup prepared over a small Swedish stove, we got into our eider sleeping sacks and passed the most horrible, dismal night experienced up to date. Dead tired as we were, no sleep came to lessen the monotony of the dragging hours. We simply lay there gasping for breath. At daybreak the click of ice axes was heard without, and Savoye and two porters arrived with icicles hanging from their hair and mustaches. They were nearly frozen with marching up the arctic plateau before light.

We turned our remaining energy to getting coffee for the start upward, but it was slow work, for the stove suffered

also from want of oxygen and would not light readily. At last we somehow got on our frozen boots, packed up some congealed meat and a supply of biscuits and chocolate and were off. No one felt at all fit after three quite sleepless nights, but I suppose nerve power sustained us, for we kept on hour after hour up the sharpest slopes, overcoming by strenuous effort two gruesome seracked ice falls, which threatened at first glance to render the ascent impossible.

Savoye and the porters, who were as good at snow craft as guides, worked their axes with untiring energy, hacking and chopping out the mountain with a will that could only conquer. At 22,720 feet they nicked out some hollows in the snow where we sat down for a short breakfast.

There a change of route was necessary, a sharp rock arête, nearly devoid of snow, with a sheer precipice dropping into space on the outer side, had to be followed. Clouds were coming in apace,

MRS. WORKMAN AND GUIDES AT 23,000 FEET ON THE NUN KUN.

Photograph by Dr. Workman.

and as Dr. Workman wished to secure a few photographs before it was too late, he and one porter remained here, while Savoye, the other porter and I continued the ascent.

I remember little of this hour and a half, except that what strength we possessed was spent in getting from one crag to another, for difficult rock climbing at over 22,000 feet is one hundred times more arduous than climbing on snow. Our gaspings for breath became extreme and Savoye halted every three minutes to lure life from the breeze which blew freshly on our parched lips and burning throats. One thing I do remember, tho, and that is the precipice.

The Nun Kun is the highest mountain range of the region, and towers over other ranges lying within a radius of 100 miles, and this peak we were on is one of its great aiguilles as seen from Surn, a rock pinnacle sharper than the Matterhorn and over 8,000 feet higher than that king of the Alps. And thus when I looked off to the right my eye fell into a deathly void far down, in which other summits lifted their pigmy tops, from whose flanks glaciers wound their way toward green valleys now lost in haze. Climbing along a precipice, with higher mountains rising to right or left, offering a certain moral support, is not very trying, but when the precipice overhangs the whole world and there is nothing to look up to the sensation is peculiar. To one affected with vertigo the sight would have been impossible, but fortunately I am not inclined that way.

Finally we stopped, our hard stint accomplished. The vast sparsely inhabited mountain world of Middle Himalaya lay far below, undulating on three sides in snow waves like an arctic floe. To the southwest rose slightly above us the highest peak swathed in cloud. Such a cold wind blew that I could remain but a few minutes to note the instruments and take a few snapshots.

Going down we climbed a rock point where the others could see us and where Dr. Workman photographed us at over 23,000 feet. I named the mountain Pinnacle Peak, and its height, after careful computation, is placed at 23,300 feet. By this ascent I broke my own last woman's altitude record of 22,568 feet in Baltistan,

and am to be numbered, I believe, with the few men who have climbed to over 23,000 feet.

Rejoining the others, we made tracks for lower ground, but the descent in the afternoon, as are all Himalayan descents, was very risky. The sun's heat after 12 noon is so powerful that there is always danger on sharp inclines of starting an avalanche, and on this peak at each step we sank thru onto ice. Still we reached Camp America at 7 p. m. and felt like thanking the mountain gods for letting us thru so easily. We cooked a soup, threw off our boots and flung ourselves into our sleeping bags, but, as usual, not to sleep.

I will not dilate upon the miseries of the second night at this arctic camp, but merely add that it was two degrees colder than the previous one—6° F. This is by no means a very low temperature, but the mountaineer, weakened by loss of sleep and want of oxygen, feels such a temperature probably more than the Arctic explorer does 40 degrees below zero at a low altitude, where he can sleep and keep warm in fur skins.

The next day the plateau was traversed, freed again from human invasion, and left to such guardianship as stray snow leopards prowling there as the gods of the mountains might offer, and we descended to White Needle Camp, where the last sleepless night was past. A porter hurried on from there in the afternoon, traveling into the night, and the next day early the sleeping servants were called up to prepare the fatted sheep for our arrival, while the lower slopes of the Nun Kun soon teemed with coolies, hurrying for all they were worth to bring down our camp.

Reaching Base Camp the greater part of two days was spent in sleeping, and at the end of the third we all felt as well as possible. Preparations were at once begun for the first circuit of the Nun Kun range, over forty miles of untrodden glaciers and passes, which was carried out with entire success, but which space will not allow me to describe.

A few of the observations made upon the effects of altitude upon nine Europeans during this season of high work may be of interest. The experiment of taking European porters to carry loads

above where coolies can be forced proved satisfactory. They and the guide carried loads of thirty to forty pounds and stood the test well. Whether Europeans can carry above 22,000 feet on sharp slopes has yet to be proved, but on moderate inclines above that height some would probably succeed, while others would give out. Which would be the men to stand the strain could not be determined in advance, for the strongest man is not always the most enduring one at a great height.

From mountain sickness, which, in the accepted sense, means great bodily debility, migraine and severe nausea, only one of our nine Europeans suffered. We were always able to carry out our daily task, altho subject to what may be termed

mountain lassitude above 20,000 feet. The body is certainly not in its normal state above that height, and most persons experience loss of appetite and insomnia, and I believe these symptoms rather increase than diminish the longer one remains very high. Therefore I do not believe in acclimatization at and above 21,000 feet. I would lay special stress on insomnia, from which we all suffered greatly, for I believe that when the highest peaks of 28,000 and 29,000 feet are seriously attacked more will fail through sleeplessness and its effects than from any other cause, for it is the true mother of all altitude symptoms and more to be dreaded on Everest than mountain sickness.

PARIS, FRANCE.

The Return

BY FRANCIS G. MARQUETTE

SHE left the nursing hills of Meenaghally,
A maiden, and the morning in her face—
Oh, the dim, fond eyes that watched her down the valley,
The hearts that glowed and trembled for her grace.

Why is it hearts of age alone are fearful,
When life no longer needs its pearl to guard?
Why is it only old faint eyes are tearful,
While youth with laughing glances soon is scarred?

She came to tears: once, in the long times after,
Again she walked the well known fields of home;
Weeping she met the ghosts of her old laughter
That died with innocence beyond the foam.

A white cross now proclaimed the peaceful sleeping
Of souls that sooner would have known the flame
Than that the cross should there be proudly keeping—
And not their child—the father's spotless name.

Still, it was half of peace, amid the clover
To lay her face upon her mother's grave,
And know no cloud of time could e'er come over
The heart that hers its liliated fragrance gave.

Stories From the Trail

BY W. J. LONG

AUTHOR OF "SCHOOL OF THE WOODS," "A LITTLE BROTHER TO THE BEAR," ETC.

WE were sleeping soundly, after a long day in the wolf trails, when a persistent knocking aroused me at daylight. It was a woodpecker hammering on the birds' table and plainly calling for his crumbs. The chickadees repeated his call softly, and a solitary pine grosbeak perched on a roof-pole looked in at the open *commoosie* and the two lazy sleepers inquisitively. Outside the snow lay four feet deep; the mercury huddled down below the zero mark; the dead fire sent a thin column of smoke straight up into air that seemed to sparkle with life as the light ran in thru the evergreens.

"Hello!" said Bob, poking his head out of his sleeping bag, "your friends want their breakfast."

"Well," I said, "it's a good work, and hospitality is the chief virtue. Suppose you stir the fire and get it for them. Porridge, trout, bacon, toast and coffee will just suit that woodpecker, and I'll take whatever he leaves." Then we crawled out, rubbed our faces in snow—a scant tribute to civilization, which, however, shocked all the sleep out of us—and took a look at the sky, the woods, the lake lying all white and still under its soft mantle.

Oh, but it was good to be alive then; good to be awakened by birds that braved the northern winter cheerfully, and good to stretch and breathe deep of the keen, pure air that had blown over a thousand miles of spruce and balsam and had been sniffed only by the wild things. So the day began with joy, as a day should begin when one expects good hunting.

An hour later we said good-bye and good luck on the lake shore, my friend heading northeast and I due south, each with a hundred square miles of wilderness all to himself. Bob took his sledge and camera, but I traveled light, on a voyage of discovery, with no other object than to see what I should see and to follow the wild trails wherever they might lead.

It had snowed in the night; every track would now tell a new story. And that, by the way, is one of the joys of the winter woods, that no matter how shy and secretive the wood folk may be, you have but to go out at your own comfortable time and the tattling snow will tell you all about them.

The sun was just up as I doubled the first point; the light swept over the lake and rippled up the hills, showing rank upon rank of giant evergreens, each one bearing his burden of snow tenderly, as if he loved it. Then the morning wind shook them, filling the air with diamond dust, thru which the sunshine broke in a thousand rainbows. Near at hand, under the great hard woods, the snow takes many shapes; now it spreads a smooth white page to catch the story of wandering feet; again it is rolled into fantastic curves by the eddying winds—here a mound, there a shadowy cave into which leads a single wild track, and beyond that a fairyland of arches and grottoes and ice caverns under the cliffs. And all this wide, still world, fresh and beautiful, as if God had just made and decked it for His own pleasure, this new world over which the Infinite brooded silently, was altogether my own. I slipped along between lake and woods, and marveled once more at the beauty and magic of the winter wilderness.

Some shadows on the snow under the western shore caught my eye and I went over to find the first trail—a curious trail, consisting of a few deep tracks close together, followed by a long groove plowed thru the snow. Keeonekh, the otter, left that trail. He is wooing a mate now, and wherever you go you find him making endless, erratic journeys over the ice and thru the woods, as if finding a wife made him very uneasy. His legs are short and his body heavy, and in the snow he makes progress by taking a few jumps, to get momentum, and then sliding forward on his belly. On level ground his slides are short, from two to

five feet ; but he takes advantage of every downward slope to make much longer distances. So his trail curves in and out, making a beautiful and unmistakable record. Here he came down from an-

other lake by way of a little brook, and I followed his trail more than a mile along the shore, *jump-jump-slide, jump-jump-slide*, as if he were moving to waltz music. "You are taking your time,

Keeonekh," I thought; "but why do you hide so? Ah! yes, I remember. Last night the wolves were howling."

Ordinarily the otter travels boldly, being a good fighter and able to take care of himself; but here the tracks curve in and out under the bank, taking advantage of every overhanging tree and rock to keep under cover. Suddenly he begins to hurry. No doubt about it, for his jumps and the slides lengthen and the snow flies merrily, making me cast about for the cause. Nothing suspicious here; but over on the opposite shore another track comes rushing down from the woods. I follow Keeonekh, and my own stride lengthens and my blood begins to tingle as I see how desperately he is working. No waltz time now, but a headlong rush and slide for safety.

On the thin ice of the inlet Keeonekh darted to a black spot near a projecting stick and began to dig furiously. This was undoubtedly one of the refuge holes which all otters keep open in winter, but the frost had sealed it up since his last

visit and there was no time evidently to break thru. The other tracks, from the distant woods, swerved around this spot in a great circle, and I went over to find the trail of a big wolf that came flying up the inlet, sixteen feet to the jump. It is easy enough now to understand why Keeonekh was in a hurry. "But why in the world did he not keep on up the inlet to open water and safety?"

Keeonekh jumped and slid away to the woods, and I followed on snowshoes to find that he knew more about the country than I did. Just over a low ridge was the outlet of another lake and a water-hole that never froze over. It was nearer than the mouth of the inlet, tho the traveling was at first much harder. The wolf must have been near and coming like a cyclone, and Keeonekh took a desperate chance. Both trails went up the bank by a natural runway, wolf and otter sinking belly-deep at every jump. At the top Keeonekh sprang aside from the runway and plunged over an almost perpendicular bank. One straight, clean

slide of thirty feet down the bank, and he shot over the ice into open water. And then I had the first chuckle of the day, in following the wolf as he ran down the easy runway and went around to the opposite side of the hole and stood watching. Keeonekh was under water now and could go where he pleased unseen.

to find that beavers had been cutting a fresh store of food-wood. It was near a little brook that sang to itself cheerfully, deep under the snow and ice, and wherever they went the beavers dug holes of refuge near their work, so that they could escape to the brook if suddenly attacked. They were carrying their wood

A STORY FROM THE TRAILS.

One wolf follows at the buck's heels; the rest of the pack race alongside.

Photograph by R. C. W. Lett. Copyright.

Meanwhile the wolf, who could hardly understand such possibilities, was waiting for his game to come out and be eaten up.

The wolf turned away eastward into the big woods, probably to rejoin the pack which I had heard howling in the night. I would follow him later and find out, but just now a faint, distant mark stretching straight across the snow of the lake demanded attention. Here was an old trail beaten hard by the feet of a pair of very large beavers, where they had gone back and forth for days past. But what are these curious marks and scratches? I followed first to the woods on my right,

across the lake—a dangerous and unusual proceeding—and the curious scratches were made by the sticks as they dragged them along. That they knew their danger was evident enough. The trail led straight for the nearest point on the opposite side; there it hid itself cunningly, and again started straight across another bay for open water.

Here the beavers had their winter home; the rich, meaty smell of the animals was everywhere. Their wood had probably "soured" under water, or else they had eaten it all up, and as they had already cut all the favorite wood near at hand they had gone far away for a fresh

supply. Tho there were several youngsters in the colony, judging by the tracks about the open water, the old beavers had gone out alone on their dangerous foraging.

From the open water an inviting trail led up the brook, and I followed it to where the beavers had been cutting a big yellow birch that morning. It was an astonishing piece of work, and the chips showed how easily their teeth cut even frozen hardwood. That this tree was intended for food is most improbable. Their teeth grow rapidly, and unless the cutting edges are kept worn down they soon grow troublesome. So the beaver comes out often in winter and tackles a

the lake there was deep water, and a dam was therefore unnecessary. The current was also swift enough to give a bit of open water all winter; and this is an advantage which the beavers seem to appreciate. So they did not bother to build a dam, but made their lodge on the lake shore, with tunnels leading into it from under the ice. There was another tunnel also—I found it later, after an hour's search—which had been cunningly prepared when the house was built, before the ground froze. It led far away from the lodge and came out under a great fallen pine, so that the beavers could go safely inland and get a bite or two of fresh twigs to vary their winter diet.

"HERE IS WHERE THE BUCK TURNED TO FIGHT."

Potograph by R. C. W. Lett. Copyright.

big tree to keep his teeth in trim. Further up the brook one old beaver had made his way alone to a swamp, where he cut a cedar and ate a few of the green leaves. This for medicine, which nearly all beavers seem to need at times in winter.

There was no dam built at this place, for just beyond where the stream entered

Their house loomed up finely across the stream and I went over to investigate. An old wolf trail led up one side and a lynx trail on the other, showing where these prowlers had climbed the house and took a long, hungry sniff of the rich odors that poured up thru the beavers' ventilator. A faint breath of vapor hung over it now, showing that the beav-

ers were at home, and I followed softly after the lynx. They heard me, or else my weight shook the lodge; there was a faint stir, a sound of water; then the vapor faded away and the beavers were safe in their tunnels listening.

From beaver I turned to minnows, for that bit of open water looked springy and fishy. There were plenty of trout in the other lakes, by my camp, but they would touch nothing but minnows, and minnows were more precious than rubies. To catch a trout was nothing. All you had to do was to place a long twig over the water-hole, tie a flag to your line and stick it in the end of the split twig, and then sit down by the fire and smoke your pipe till the flag was pulled into the hole. Whereupon you pulled out your trout—a big, fat, delicious trout that tasted as if he had been raised on milk and honey. But first you had to catch a minnow for bait, and that called for a fisherman. In the first place, it was next to impossible to find them. Then I had come unprepared for such fine work and had to make a hook out of a bent pin—which was good, in that it brought back one's boyhood. Lying on thin, dangerous ice I crumbled some bread from my lunch into the open water to attract the minnows, if any were there; and for an hour, or until I was almost frozen, I used all my fine art with a pin, a bit of flesh, a thread and a moose-wood twig. After which I had one minnow, a good inch and a half long. I froze him hard, while I ate lunch and made a dipper of hot tea, and carried him home carefully in an outside pocket. Sport is a matter of sentiment; but real enjoyment comes from necessity. Never a big salmon, of all I have taken, was ever so well angled for or gave so much solid satisfaction as that one small minnow.

Turning from the lake I headed northeast thru magnificent hardwood ridges, to find the trail of the wolves I had heard howling. How still the world was! And how empty, how utterly lifeless and desolate were these big woods that blossomed last summer and that would soon blossom again into myriad forms of life and beauty! Nature seems dead, but she has only slipped on a mask. Tho nothing moves here, tho you may hurry along on snowshoes hour after hour, and see no

living thing, yet there is life all around you—keen, eager, abundant life, hidden cunningly from your prying eyes. You may travel all day and see nothing, or everything. A dozen foxes have crossed this ridge since sunrise. There was probably a den in that rough ledge yonder, and the young still come back daily to sleep near the old place. They are mating now, traveling two by two, and to untangle their trails is an endless puzzle. Last week a fox took Bob's wolf bait on a perfect tracking snow, and after trailing him two long hours with his tangles and criss-crosses I had not the faintest idea of which way he was heading. There on that open snow under the big trees two foxes came down. I stop to draw the trail just as they left it. So:

TRAIL OF TWO FOXES, COMING FROM THE RIGHT.

Arrow points indicate direction of trail. Opposite points show where one or both foxes returned, stepping in their own tracks. Note that, when they finish their crisscross, they are heading for the same place as when they first appear. The sketch covers about two hundred yards of a trail that was miles long.

A lynx crossed here, and I follow his round pugs down to the cedar swamp to find how he hunts rabbits. Mice and squirrels—there's one now! Meeko is up in a thick spruce, but runs down inquisitively to see a man. He begins to scold as I stand perfectly quiet, and I begin to talk squirrel talk by drawing in my breath, with variations, between my lips and teeth. Presently Meeko rushes down the tree and over the snow. Another squirrel tumbles out from under a log. I talk more excitedly, and two more come chasing breakneck down the hill. Another rushes headlong from an-

other tree. There are five in sight, running all about, closer and closer, until one climbs my leg and leaps off, scared, but chattering. Whereupon they all scatter and climb different trees and say *kilch*, *kilch*, and then take to chasing and punishing one poor wretch who, they think, raised all the row about nothing.

There is life here, you see, and on the snow at your feet is the plain record, more interesting a thousand times than any book of natural history. You swing along silently mile after mile on the snowshoes; now over hardwood ridges that never before were crossed by a man's trail, now creeping thru evergreen thickets and crossing wild beaver meadows and little unnamed lakes; and hardly a rod of ground but offers a trail to follow and a story to read. Here is good hunting. As I come down a ridge in the late afternoon I get one terrible start—the only real scare that this big lonely wilderness offered. The woods were still, the snow unmarked, and I was looking intently far ahead for gray shadows—for there is certainly a deer yard on that densely wooded hill—when out from under my snowshoes burst a bomb, with a rush and roar and flurry of snow that scared me stiff while it blinded me. It was a grouse that had already swooped into the snow for the night—before the big owls begin to hunt—and I had put the long snowshoes fairly over him before I noticed the hole he had made where he went in. There he is now, up in that spruce, close against the stem, looking back to see what scared him. The heavy revolver swings up in line with his head. He will be a rare *bonne bouche*, and the wilderness must feed its wanderers; but wait! Grouse are very scarce here, as they are at home this year. I have crossed but one trail all day. When you kill a bird he is dead, and makes no more trails and raises no more little ones. "Well, little friend, you have had a hard rub with disease and owls and foxes, and these big woods seem to need you. Besides, I have a minnow in my pocket, and the minnow will catch a trout. Good-by and good luck," I call, and so we break even. But I was more scared than he was.

In the valley below I found the trail of the wolf pack, six big, powerful brutes that kept well together till they struck the

foot of the hill, when they spread out to sweep the cover from end to end. I hurry now, for there is a story ahead that I wish had never been written. Ah, see that! Here are two deep holes in the snow where two deer rested in one of the paths of their winter yard, and here comes a wolf. He is hunting keenly; but tho he is near, his trail shows no sign of game. For deer give out very little scent when resting, and as the wolf rarely follows a cold trail he must run almost over them before he knows where they are. There they break away; they have sniffed the rank wolf smell, and as they jump he catches body scent and is after them in a terrific rush. Poor deer, it's all over now; you have absolutely no chance. But what is this? A short run, and the wolf whirls from the trail and darts to a distant part of the yard. Another and another join him, and the pack goes leaping along a deep trail left by a running buck and a single big wolf. It was undoubtedly the leader's trail cry that I heard last night, and the pack breaking in with their terrifying answer. The buck is heading for the nearest lake; but it is half a mile away and he will never reach it. I have followed a score of just such trails, and whether in deep snow, or on the open lake, with the best of running, I have not found one where a deer could keep ahead of these fleet brutes more than a few moments. It is partly the wolf's extra speed, partly the deer's mental paralysis, I think, that makes the chase so short.

Within a dozen great jumps the wolf caught his game, and the buck whirled to fight. See where the pack rolled in behind him, while the big wolf held him in front. And there! He must have leaped clear over the wolves as he broke away for the lake.

The trail is a marvelously interesting one now. Some of the pack are racing along on either side of the deer, while one keeps close to his heels. There the buck is thrown fairly, probably by the wolf behind, but he jumps up and is away again. A few red drops show in the snow; but the deer is unhurt; the big wolf has not yet had his chance. Again the deer is thrown, and this time he stays down. There he lies, just as he fell. The big wolf saw his chance, and before the deer

could spring to his feet his back was broken by one terrific snap. I examine the wound carefully and cut away the skin. Only two deep fang marks show, and the flesh here is not eaten or even crushed; yet the back falls apart like a broken hinge. The wolves eat a little from the hindquarters, and two of them drink at the throat. There is no other mark on the body save that broken back, with its mute testimony to the power of a wolf's snap. There is no trace of fighting or quarreling in the pack as the big, satisfied brutes go roaming off thru the woods, like lazy dogs.

There is real hunting ahead now, and I long for more daylight. You will be told that it is absolutely useless to try to hunt wolves in this wild, rough, densely wooded country, but that is a mistake. Only yesterday I found a deer killed in the early morning, and before noon I had trailed the pack to where they were resting under a ledge. I was scarcely ten yards away when the first massive gray head rose out of the bushes to sniff suspiciously. But the light is already fading, and there are long miles between us and camp. There is the snowshoe trail stretching away behind you, and it gives one a little feeling of comfort to know that he cannot get lost, tho he never saw these woods before. But the trail is long, and the lake is hardly more than a couple of miles to the west. No need to study your compass; there's the sunset. So into the sunset you go, and behind the sunset is the splendor of the twilight, with one great star like a lamp hanging over it.

It is dark and the stars are glittering like jewels when I reach the big lake.

As I swing along homeward under the shore a long howl rolls down from the hill. There is a moment of tense, startled stillness; then the rallying cry of the wolves goes shivering thru the woods. The pack was nearer than we thought. Perhaps they even saw me as I hurried over the last hill thru the shadows. "These big, powerful brutes never harm a man. No, they are terrible cowards where a man is," you tell yourself confidently. But your stride lengthens; you are just a wee bit nervous; wait a bit. So I sit down on a log and smoke a pipe and listen to the cry. There is no danger here; don't worry. But when you are out in the woods at night, and alone, there is something uncanny in the cry of a pack of wolves close at hand, and all the fool stories of wolf ferocity you ever heard come crowding back to say, "Now will you believe it? Now will you believe?" No, not a bit. I finish the pipe and move homeward more leisurely thru the witchery of the wilderness night.

A dull gleam among the trees greets me suddenly and Bob—dear, generous, kindly Bob, who worries about me, but never about himself—hears the click of my snowshoes and comes out from the fire where he is keeping supper warm, hungry as he is, to share it with me. "Welcome home, b'y; what luck?" he calls, and I know by his voice that he too has had a good day and has something interesting to tell me. So we eat, and sit before the glowing birch logs, and share our experiences; while the night gathers close about the little *com-moosie* and the fire that makes the wilderness home.

STAMFORD, CONN.

THE KAISER AND HIS HUNTING PARTY.

Kaiser Wilhelm as a Hunter

BY WOLF VON KOCKEL

[The author of this article is a young man of rank who writes under a *nom de plume*. He has taken part in several of the hunts which he mentions and has seen all that he describes.—EDITOR.]

THE third of November is a day that is annually greeted with joy throughout Germany, for it is the day sacred to St. Hubert, patron of the forests, and, to celebrate it worthily, hunts are organized all over the country. The supreme head of the festivities is our Kaiser, who is considered the honorary master of the hounds of every hunt in the land. And he is quite worthy of this high honor, for he has always been passionately fond of the chase and equestrianism, it being related that when a mere child, and too young to mount a horse, one of his favorite amusements was banister riding! He understands full well what a fine riding school is hunting, and has made it an army regulation that the officers of cavalry regiments must always take part in the hunts of the region where they are stationed. Of course, this mili-

tary contingent adds to the picturesqueness of meets, so that civilians as well as soldiers always warmly approve of this wise imperial order. It has become customary, therefore, to organize a hunt in every garrison town on November 3d, and the hounds are set to fox or boar. But if there are no dogs to be had, the officers put up with a simple paper-chase, in which, as the Emperor has well said, they get all the exercise and practice of horseback riding without the killing of the poor little fox.

The most important wild boar hunt takes place in Hanover, where they are organized under the auspices of the military riding school, and in the neighborhood of Berlin, where it is the court piqueur, or picker, as this convenient French term is sometimes given in English, I believe, who takes charge of mat-

ters. The Kaiser seldom misses one of these hunts, especially if he be at the capital at the moment when they occur. Any officer is allowed to participate in the "Big Red Hunts" of Berlin, as they are popularly called, and civilians are also permitted, under certain conditions, to join the field. The master of the hounds is appointed by the Emperor, and at the present moment this important post is filled by Major Count Spee, adjutant-inspector of cavalry. The prescribed uniform is a red coat and a black velvet cap, which must give place to a high hat on St. Hubert's Day. The master is distinguished by his velvet collar and a black and white bow on his arm. The Emperor sometimes bestows this bow on other important personages, who then become aids of the master, and he himself is also decorated with one. The head piqueur, Herr Palm, and his two assistants have costumes with dark green facings and collars bordered with satin. This hunt used to take place at Grünewald, in the environs of Berlin, with thousands of the population of the capital as onlookers. But now it occurs some fifteen miles away on a tract of land used by the Döberitz garrison. The date for the meet is given out a few days beforehand by the court piqueur so that the horses can be sent on by special train, and now the hunt comes off without there being a troublesome crowd attending it.

The boar is let out of his box by some officers about ten minutes before the hunt begins, and is just disappearing in the woods when the horn of the imperial motorcar announces the arrival of the Emperor. His Majesty and the princes mount, the piqueur sounds the "royal greeting," and the master of the hounds comes forward to receive the imperial party. A moment later the dogs are let loose and scatter over the field, the piqueur sounds the opening of the chase, while the Emperor, some hundred yards behind the pack, starts off at a gallop, with the master and some of his personal friends at his side, while the field follows, which on grand occasions, such as St. Hubert's Day, sometimes numbers as many as three hundred. The sight of all these red coats is very impressive, and once seen is not soon forgotten.

It is not easy to follow one of these

Döberitz hunts, for the Emperor sets a rapid pace, there is much underbrush often growing a yard high, there are rather ugly ravines with steep banks, and brooms and light pines abound in this Döberitz wood. The result is that the field is soon scattered. Suddenly, at a signal, the piqueurs shoot past the first riders and jump from their saddles, for the dogs have brought the boar to a standstill. The piqueurs drive them off and then, according to an old custom, it is the Emperor who gives the death stroke. In the meanwhile, the rest of the field has caught up and surrounds the imperial party. Most of them are now busy breaking twigs from the trees, as a supply for the Emperor, who, while the quarry is given to the dogs, presents each member of the field one of the twigs as a souvenir of the hunt. The Empress and the Crown Princess, with other ladies, all in carriages and not on horseback on the occasion of St. Hubert's Day, have in the meanwhile come up for the kill, and the Emperor gives first to his consort one of the twigs, an oak branch. Then the other ladies receive a twig in turn, the ceremony closing with similar presentations to the gentlemen. During the distribution of the twigs, the Emperor chats affably with everybody. While this has been going on the quarry has been cut up and the hounds have finished their feast; and the master of the hounds and the piqueurs, who are sounding on their horns, are present at this closing scene. When the dogs have finished, the horns are sounded once more, and then the hunt is ended. Now all the hunters remount, the ladies enter their carriages, and, while the latter drive home, the Emperor leads the male portion of the party to the Döberitz barracks, the streets leading there having been adorned with triumphal arches and wreaths of flowers. The officers' club, on these occasions, looks like an old castle, with the imperial banners floating from its roof and decorated in the interior with pine branches. The Kaiser is the host at the dinner which follows, and is toasted by the officer who reached the boar first at the kill. Thus ends with feasting a grand day's sport.

These are about the only mounted hunts which the Kaiser still participates

in, but his activity as a sportsman with shotgun and rifle continues to be very great. Those who have seen him on a shooting party are very high in praise of his skill as a marksman and as an all-round Nimrod. Partly free from the cares of state and the tyranny of etiquette, his charming personality stands out in a most fascinating manner. He becomes a simple, everyday man, this monarch whose every need and wish is generally cared for by others, but who now looks out, himself, for even the smallest imaginable of his wants. He is a hunter like all the rest of the party. For the nonce he ceases to be the Kaiser of Germany.

The Kaiser's favorite pastime in venatorial sports is stalking, with the battue a good second, and in both species of shooting, he is exceedingly clever. But it should be added that at no time and nowhere does he entirely neglect the duties of government for any length of time. I have more than once noticed that staff officers bring him government telegrams and dispatches to all his shooting parties; and, what is more, he reads them and answers them. He does not get so completely away from State affairs as does President Roosevelt on his recreation hunts. In this respect these two rulers, who resemble one another in many respects, differ somewhat.

I have just said that the Kaiser is a good shot. And no wonder, for he has practised with firearms from his very youngest days, until he is now perfectly at home with shotgun and rifle. He raises the weapon to his shoulder with his right hand alone and then fires, not at all using his left arm; yet he very rarely misses his aim. His gun, if of German make, is 6 or 11 millimeter caliber; if of English or French make, it is caliber 20 or 12, depending on the size of the game. The really remarkable aim of the Emperor is due to his early training and his excellent eye, which at one glance measures distances and picks out in an instant the best bird or animal in a battue party.

The hunting season begins for the Emperor in the spring with mountain cocks and roebucks. After the summer rest come, at first, pheasant and partridge parties, followed by the stalking of big game in Rominten and Hubertusstock, the large court hunts for wild boars,

closing with a pheasant shooting party at Potsdam, which generally occurs about Christmas time. Sandwiched in between these Imperial fixtures are invitations from the Emperor's friends, who, notwithstanding the preference which he has for simplicity in all his hunting parties, do things on a grand scale.

A word about the chief imperial preserves. Rominten, which I have just mentioned, is in Eastern Prussia, and has a scurfy heath over which browse a multitude of fallow deer. Here the Emperor shoots only with his nearest relatives. The small picturesque hunting-boxes, with a northern architectural stamp quite their own, reveal the fact that the Imperial family resides here alone and without show. The grand royal stag, boar and deer hunts take place at Königs-Wusterhausen, near Berlin, in the forest of Colbitz-Letzlinger, in Springe and in the Föhre. The guarding and game-breeding in these preserves are under the care of court foresters at whose head stands today Baron von Heinitze-Weissenrode. The whole preserve is fenced in and the duties of the foresters is to prevent poaching and to feed and care for the game in winter.

At all the hunts attended by the Emperor, the court hunting uniform is worn, a creation of his present Majesty in 1880. It consists of a gray-green coat with a dark green cloth collar and trousers of the same material. When thus attired, the Emperor always wears on his breast the order of St. Hubert of the White Stag, founded by Prince Frederic Charles and adopted by the Emperor. Attached to a green ribbon bearing the inscription in French, "Vive le Roy et ses Chasseurs," is a delicately-wrought silver stag. The Emperor bestows this order on all first-class sportsmen, and it is even now whispered about that if President Roosevelt makes his rumored visit to Germany on his retirement from the White House, he is pretty sure to receive this decoration from the hands of our Kaiser, and if one half of all that is reported here of the President's prowess as a hunter of big game be true, he will richly deserve this honor.

The Emperor spends about a week at Rominten each year and almost every moment during the visit is devoted to the

stalking of fallow deer. Followed by an attendant whose sole duty it is to hand him the cocked gun, the royal sportsman moves on from preserve to preserve, shooting over the whole region. Scattered thru the forest are huts and little sheds, which have been built where the game is thickest, whence their movements can be more easily watched, and whence they can be comfortably shot. But this does not mean that the Emperor shrinks from the task of stalking his game under the most trying circumstances. When he hunts at Rominten, he really "makes a day of it." In proof

proud leader low. Then the royal party climbed quickly into the stalking wagon which was waiting hard by, and was rapidly driven to a mead, where it was expected another fine stag would be found. Soon his cry was heard, and just as the Emperor was beginning to stalk him, suddenly a doe, followed by a large stag, rushed by in front of him. Quickly advancing a step or two, the Emperor brings gun to shoulder and fires, when the stag rolls over, hit squarely in the breast. Again the wagon is brought into play, and the hunters hasten to other sheds, but with-

100 GRUNEWALD. Josephsloos. Hof- und Waldschneegruppe. — FR. Phot.

THE GRUNEWALD CASTLE.

of this, let me describe an ordinary day's sport at this, his favorite shooting ground.

On September 30th of last year, the Imperial motor-car came up at 4:30 in the morning, bringing the Emperor to a preserve where the forester had located, a few days before, a fine stag. His Majesty had scarcely reached a platform near the haunt of the animal, when he perceived the stag about a hundred yards away in the midst of a herd of does, which began to show signs of alarm. But before one of them had had time to move, the Imperial rifle had laid their

out getting another shot, the now frightened game having sought cover.

The Emperor then went home for breakfast, the quarry in the meantime having been brought to him for inspection. But about 3:30 in the afternoon their Majesties and the Princess Victoria Louisa are back again at the lodge of the chief forester, where a few small deer and a stately stag are seen advancing some two hundred paces away. Thereupon the Emperor seizes his gun and kills him at the first shot. Then, while the ladies drive to a lodge near the Dagutsch dell, the Emperor stalks in the same di-

rection, trying to get a shot at a stag which was to close the day's sport; and his efforts are finally crowned with success. But still another stag, who was not on the program, also fell a few minutes later before this Imperial dead shot. During the few days of this last season at Rominten the Emperor's total was three stags of eighteen antlers, four of sixteen, seven of fourteen, four of twelve and two of ten, and also twenty deer and a fox. On this occasion the Emperor used his 8 millimeter rifle, loaded with a special kind of shot and powder, and provided with a Goerz "Certar" aiming telescope magnifying two and three-quarter times.

The sojourn of their majesties at Hubertusstock from October 13th to the 17th was past in a similar way. Here the Emperor killed one stag of sixteen antlers, thirteen of fourteen, five of twelve and one of ten, as well as twenty-one other stag and a buck. Prince Oscar, the fifth son of the Emperor, a lad of eighteen, who accompanied his father, killed six fine bucks, which speaks well for his sportsmanship.

Very different from these calm shooting parties are the strenuous hunts in Silesia and East Prussia, where the Emperor accepts the invitations of some of his sporting friends. Apart from the visits to Duke Ernest Gunther, of Schleswig-Holstein, at Altenburg or at Schaumburg-Lippe, where the Emperor often goes for a hunt, he especially delights in the sport offered by his Silesian magnates, for their land is renowned for its enormous pheasant shooting parties, and the number of birds killed there annually bear testimony to the good care taken of the game in those regions.

When the Emperor accepts an invitation of this kind, he generally arrives at the castle of his prospective host toward evening, and after the cordial reception a banquet is served. The Emperor is always expansive at these feasts, and wine is not necessary to awaken his remarkable conversational powers. The invitations to these hunts are very limited and choice; beyond the Emperor's suite they embrace, as a rule, only the commanding general of the region and some of the more distinguished neighbors of the host. After the supper, the Emperor likes to play a little whist and skat, a popular

German card game somewhat resembling whist. This is one of the rare occasions when the Emperor has any money about him, for nobody in his suite could very well put up his antes. Large sums are never staked at these games, for the Emperor plays only about one-tenth of a cent per point. But on one of these occasions a gentleman lost twenty marks, or about five dollars, and when, at the end of the game, everybody settled up, he remarked, of course in fun and forgetting who had been at the table opposed to him: "Why, I see I have fallen among robbers!" This happened at the country house of Judge von Dietze-Barby, near Magdeburg, where the Emperor especially likes to go for hare shooting. The remark amused the Emperor so much that, when he went to the judge's the following year, he requested that this same gentleman be invited, and when the latter appeared, the Emperor handed him a twenty-mark piece mounted with diamonds, remarking: "Returned by the robber!"

The next morning, after a hearty breakfast, all the guests are carried in landaus to the meeting place, and the shooting begins about ten o'clock. The piqueurs, who are already gathered there, greet the imperial family with a royal blast on hunting horns. Each sportsman then takes his place, the best, of course, being reserved for His Majesty, who has behind him three and sometimes four attendants, whose only duty it is to hand him loaded guns. But the Emperor is not selfish and does not try to have all the shooting for himself. Sometimes he even lets a whole beat go by without firing a shot, while he entertains the ladies who are following the hunt. Ordinarily, after a few beats, a dinner halt is sounded, and under a tent pitched for that purpose the sportsmen make a simple meal, which generally consists of soup, an entrée, a roast, and what are known as Berlin pancakes. When it is cold a glass of punch is offered. At the end of this repast the Emperor indulges in a smoke, using a small pipe, which he designed. The bowl, which is of meerschäum and is decorated with a black cock made of silver, is fastened to a cherrywood stem, ending in a bone mouthpiece. After the smoke the party proceeds to the last battue, and then re-

turns home, where, after a short rest, the hunt supper is served, when the talk is all about the day's sport.

Now a few figures concerning the number of birds or animals killed on these imperial shooting parties. The totals prove the Emperor to be no ordinary hunter. Thus, on November 11th, 1897, when he was staying with Count Carl von Zichnowsky in Kuchelna, the shooting party lasted from noon till half-past three, the total of the game killed being 4,244 pheasants, 46 hares, 6 rabbits and 4 owls. Of these, 1,224 pheasants, 10 hares and 2 owls belonged to the Emperor, the rest being divided among thirteen hunters. The Emperor used five central, double-barreled guns, caliber 20, loaded by four men. On November 9th last, while the Emperor was in Gross-Strehlitz, at the Count of Tschirschky-Renard's, the total, from 9:30 to 4 p. m., was one deer, 2,389 pheasants, 67 hares, 291 rabbits and 6 woodcock, the Emperor's share being 1,058 pheasants, 2 hares, 74 rabbits and 4 woodcock. The pheasants nearly always flying in bunches, it happened that His Majesty managed to make three, four and even five double shots in succession. Shooting over these same preserves in 1904, the Emperor's bag was 520 pheasants, 11 hares and one rabbit. These figures show that the German Emperor can be ranked very high as a pheasant shot, for the rapid flight of these birds requires the greatest skill on the part of the sportsman. In fact, when a pheasant is brought down flying toward the gun, so that the bird falls at the gunner's feet, it is called in Silesia "an imperial shot."

Besides the shooting parties at the castles already named, the Emperor also visits the preserves of Counts Henckel von Donnermark and Tiele-Winkler, where important pheasant battues take place, the game killed here being sold at Berlin. The birds shot by the Emperor are marked with a crown, and so bring a bigger price in the market.

For fox hunting and black-cock shooting, the Emperor prefers the Duke of Fürsternberg's at Donaueschingen. His favorite deer hunting is done at Primkenau, at the home of the Duke Ernest Günther of Schleswig-Holstein, and in the preserves of Count Dohner-Schlobitten in East Prussia. The Emperor has

also done some fine deer hunting in Hungary, as the guest of Francis Joseph, as is shown by the results of the hunting season of September 16th to 19th of last year, which took place over the region between the Drave and the Danube, when were brought to earth one stag of 22 antlers, the antlers weighing 19 pounds; one stag of 20 antlers, 2 of 18, one of 16, 2 of 14, 2 of 12, one of 10, and a fine buck. The Emperor also enjoys a rare sport on the estate of the Duke of Pless, who is a successful breeder of buffaloes, an animal that is now rapidly disappearing in Germany. He killed three of them at a hunt a few years ago. But perhaps the most unusual sporting feat of our energetic Kaiser was his killing of a whale with a harpoon-gun, near Soarö, during one of his yachting expeditions in Norwegian waters. "That beats Roosevelt," said a certain American diplomat when he heard of this rather remarkable performance.

In 1902, the German Emperor celebrated the thirtieth anniversary of his career as a sportsman, and the total of the game which he killed during that period proves his exceptional ability as a hunter and shooter. It appears that during these thirty years he has bagged 47,443 pieces of game, of which 2,507 are small game, 1,596 bucks, 1,302 ordinary deer, 7 elks, 3 reindeer, 3 bears, 1 whale, etc. This is not a bad record and is surpassed, I believe, by no other European ruler.

The oldest hunting seat of the Prussian royal family is Königs-Wusterhausen, briefly mentioned at the beginning of this article. But this interesting place, which still bears the stamp of the olden times, deserves a more detailed description. The estate was acquired in the seventeenth century by the Elector Frederic William, but, as he seldom indulged in the chase, the spot played a very small rôle in the festivities of his reign. But such was not the case with King Frederic William I, who erected a castle there and made the place famous. He was a great hunter and this was his favorite hunting ground. Here he held his famous "tobacco assemblies," quiet evenings with a chosen few, where each guest was free, and, in fact, was expected, to express his views openly on anything and everything, regardless of the King's presence. In

1863, William I rebuilt the castle, which had not been kept up by his predecessors and was going to ruin. He altered as little as possible the original architecture, preserving all the souvenirs of the early days. As a rule, the present Kaiser goes there but once a year, and then only for a day. He is accompanied only by his boon companions, and keeps up the old tradition of the tobacco council, observing all the customs of two centuries ago. The long white pipes are past around, filled with excellent tobacco, and lighted, as of yore, not with the modern match,

but with a folded piece of paper. The next morning occurs a deer and boar hunt, and the sport is always good, as the game has not been disturbed for a twelve-month. In 1904, the bag was about 300. Supper at the castle follows, and the same evening the Emperor is back in Berlin. This visit to this ancient hunting box closes the sporting season, and the annual exhibition of the antlers follows, the occasion being seized to display all the cynegetic trophies of the German Emperor.

BERLIN, GERMANY.

The Wright Brothers' Flights

BY OCTAVE CHANUTE

AUTHOR OF "PROGRESS IN FLYING MACHINES," ETC.

IT will be remembered that last December the Signal Corps of the United States Army issued an advertisement inviting proposals for furnishing a "heavier than air flying machine" according to specifications attached. These specifications have been criticised by both foreign and American technical journals as being amazingly severe, but the officials answer, fairly enough, that they have only specified what some of the inventors, in private interviews, have stated that they could perform; that the Government must be protected from being trifled with, and that the tests will be conducted with justice and liberality.

Notwithstanding the strictness of the specifications no less than forty-one bids were received. Thirty-eight did not comply with the stipulations, and three were accepted; these being those of J. F. Scott, of Chicago (since withdrawn), of A. M. Herring, of New York, who bid \$20,000, and of Wright Brothers, of Dayton, O., who proposed to deliver a flying machine in 200 days from the award (February 8th, 1908) for a sum of \$25,000, a very moderate price for such a unique apparatus.

It is now generally conceded that Wright Brothers have accomplished the extraordinary performances claimed by them in their letter to the *Aerophile* in 1905 and to the Aero Club of America in 1906. That, beginning with a first

flight with a motor-driven flying machine, December 17th, 1903, spending the season of 1904 in learning how to fly in circular courses, they succeeded in 1905 in perfecting modes of control with which they made at last continuous flights of eleven, twelve, fifteen, twenty, twenty-one and twenty-four miles, at speeds of about thirty-eight miles per hour, alighting in every case safely, ready to start again upon the replenishing of the fuel supply.

These experiments had been privately conducted on secluded grounds eight miles from Dayton, upon understandings with adjoining farmers and the press not to notice them in any way, but the last flight attracted so much attention that many came out with cameras to the practice grounds, and Wright Brothers, becoming alarmed lest their secrets should be discovered, stopped experimenting at once, dismantled the machine, and have not flown since. It would have been perhaps preferable to have first made one public demonstration, provided the crowd was not allowed to approach close to the machine, for the secrets of its construction are not easily discoverable when it is high in air, and then it would have been easy to organize a company to exploit and defend it.

Instead of that Wright Brothers stated publicly what they had accomplished, and these statements were received with

general incredulity by those who were not aware of what had previously been done, or those who did not know the Wrights. They inaugurated negotiations for the sale of their invention to various governments for war purposes, asking, it must be confessed, very high prices. Being somewhat opinionated as well as straightforward, they made two mistakes: the first that the principal market for flying machines would be for war purposes (where cost is no object), instead of for sporting purposes, as more correctly judged by the French, and the second that contracts could be obtained for a secret machine contingent upon making a flight of thirty or forty miles within one hour. Two years were therefore spent in fruitless negotiations. Wright Brothers seem now to have changed their point of view, but meanwhile large numbers of French aviators have begun experimenting, operating in public, and teaching each other, so that they have obtained promising results, altho not yet equal to the American performances.

Under their contract with the United States Government Wright Brothers seem to have begun the preliminary tests of their machine in the beginning of May, but not to have been discovered by the press until the 8th. Instead of operating near their shop at Dayton, as in 1904 and 1905, they went to their former experimenting ground at Kill Devil Hills, south of Kitty Hawk, North Carolina. It is a forlorn spot on that long tongue of sand which stretches long the coast south of Norfolk, between the Atlantic and Albemarle and Pamlico sounds. It is about as desolate a region as exists near civilization, only inhabited by a few fishermen and the life saving crews of the Government. Its access is roundabout and tedious. This sandspit is two or three miles wide in the vicinity of the Kill Devil Hills.

Here the Wrights established their camp, assembled their machine, and began tuning it up. The reporters seem to have detected them from Manteo, a little town ten miles away on Roanoke Island, the seat of the first settlement by Sir Walter Raleigh in 1585, this being now doubly historic ground. There followed an amusing contest; the reporters, naturally eager for information, and the Wrights so strongly resisting all attempts

at description of their machine that they stopped experimenting when the reporters came around. The latter have said that new and possibly improved methods of steering having been introduced, these are being tested with extreme caution—that caution which has contributed so much to the success of the Wright brothers. On the 8th of May ten ascensions were reported, all of them perfect, the longest being one and a half miles. This disclosed that the adjustment required a slight alteration. On the 10th three flights were reported, one of them two miles at a speed of forty-six miles per hour. In landing the gasoline engine gathered in some sand, and as a few grains of this are sufficient to produce cutting, it had to be carefully removed before other ascents were attempted. On the 13th two very successful flights are reported, the longest being three miles, with the machine under perfect control.

On the 14th three remarkable flights are reported as made by Orville Wright, in one of which he had another man on the machine. Then Wilbur Wright alone made a flight of eight miles, at a speed of about forty-five miles an hour, at the close of which the machine was wrecked behind a sand dune. The operator had only a few scratches, and he explained that he had made a mistake by grasping the wrong lever of the steering gear recently installed, this being the one which directed the course downward, while the other lever directed it upward; a mistake very likely to occur with a nervous man operating a new arrangement.

The machine was sent back to Dayton (nearly 800 miles) for rebuilding. This ought not to occupy more than two weeks, when the adjusting tests will be resumed, the scene of which has not been disclosed. The tests already made substantiate the absolute truth of what the Wrights have hitherto claimed as to their past achievements, and hold out good hopes that if no disastrous accident intervenes the Wright brothers will be enabled to fulfill all the Government requirements. They have until August 28th to make delivery, and thirty days after that for the tests, so that there seems to be sufficient time to rebuild the machine and to obtain thoro control over so novel and complicated an invention.

CHICAGO, ILL.

Literature

Some Books of Travel

THE advance of civilization presents some strange sights—mostly tragic—and suggests some confusing reflections to the traveler visiting the ever-shifting camps of the pioneers on its selvedge. Destruction, often ruthless, of the old conditions goes hand in hand with the establishment of the new—destruction partly unavoidable, partly wilful to hasten the process. Disease, the rifle and alcohol have been thru the ages efficient, if unofficial and officially disclaimed, agents of the one simon - pure civilization, which, of couse, is ours. It is only in comparatively recent years that the missionary has fully developed his counteracting methods of adaption, reconciliation and preservation. Nor should it be forgotten that the evils of civilization which the pioneer brings along with its benefits are almost as disastrous to him as to their recipients, and that, moreover, he faces enemies more potent than any of these—many deadly climates. The thin line at the front is constantly changing, new faces taking the place of those obscurely dead and buried, or sent home with shattered health.

This tragedy of the advance posts is brought out in Mr. Richard Harding Davis's *The Congo and Coasts of Africa*,¹ and gives the book what value it has. Mr. Davis was sent out to investigate the much-disputed "atrocities" of the administration and exploitation of the Kongo Free State, but it is not likely that his book will be referred to much in future discussions of the subject. It cer-

tainly contains nothing that is new or authoritative. As a narrative of travel, pure and simple, however, it is readable, picturesque and, as said, suggestive.

Mr. C. G. Schillings, the author and photographer of "Flashlights in the Jungle," returns to his beloved hunting ground in *In Wildest Africa*.² It must be said that the many photographs in this book are not nearly so good as those in its predecessor. His text, however, is readable, the keynote of the tragedy of civilization being struck here, too, time and again. Mr. Schillings sympathizes with the romantic, warlike Masai, who are disappearing, before the weapons of precision of the advancing white, but he is far more concerned with another victim of civilization, the fauna of Africa. He makes a plea for its preservation, and for that of the fauna of other continents as well.

Mr. Frederick Moore's *The Passing of Morocco*³ is a newspaper correspondent's record of first impressions. The book is of no more permanent importance than is Mr. Davis's, but the chapters deal-

ing with conditions in the country and the diplomatic complications resulting therefrom suffice for the information of the general reader. Here the tragedy is not that of the substitution of civilization for barbarism or savagery, but of remodeling, probably with the rifle, a decadent civilization established with the sword. Even "pacific penetration" burns an enormous amount of gunpowder.

It is curious to observe that in our zeal for our own civilization we rarely

MR. DAVIS AND THE WOOD

forget to regret the civilizations we are effacing, not in Morocco, to be sure, but certainly in the classic countries of the Mediterranean. The Anglo-Saxon considers Italy especially as his pleasuredome, as holy ground to be kept intact for his delectation. He would shackle active modern Italy to the ruins of Roman antiquity, Sicily he would preserve as a treasure house of memories of *Grecia Major*, and Athens, tho for this he cares less, as a monument of the Hellenic spirit. Thus we have the paradoxical spectacle of London sacrificing her own landmarks on the altar of "progress,"

KOREAN VILLAGE IDOLS.

Guardians of the Road. In Underwood's "The Call of Korea."

while her papers print indignant protests against the tragedy of a similar procedure at Rome. And have we not already begun to regret the disappearance of the Japan of cherry blossoms, cloisonné and Mmes. Chrysanthème and Butterfly?

Mr. T. R. Sullivan is steeped in the classic spirit in *Lands of Summer*⁴ "across the sea." He loves Italy, Greece, and Sicily with the genuinely Anglo-Saxon love of their far distant past, yet succeeds at the same time in giving to

⁴LANDS OF SUMMER. By T. R. Sullivan. Illustrated. Houghton, Mifflin & Co., 12mo, \$1.50 net.

the narrative of his travels the note of the contemporaneous book of travel. The classical student may read him at home, with pleasure and some profit; the tourist will find him of some service on the spot.

Our Oriental pupils, having adopted, adapted, and, some think, strangely changed, what seemed serviceable to them of our civilization, having mastered to perfection both our art of saving and of destroying life, and treated with polite indifference, as of no practical importance either way, the system of ethics upon which that civilization is still, if often somewhat remotely, based, have turned teachers in their turn, and begun to carry its benefits to a decidedly recalcitrant Korea. The Christian model they have chosen, some say, is that of Russia, but then the same charge has been brought against King Leopold in the Kongo region, against the English and the Germans in South Africa, against the Portuguese in Lourenço Marquez, the Dutch in Java, the Spaniards in the Philippines, and, according to Boston, against ourselves in these same blessed isles. So who dare cast the first stone? It is so difficult to civilize people against their will without a certain measure of energetic firmness. Mr. Horace G. Underwood, for twenty-three years a missionary, pleads in *The Call of Korea*⁵ for a liberal support of the missions in that country, whose salvation, he says, can be so easily achieved by modern missionary teaching. Victory lies within easy reach, but money is needed, and men. The book furnishes a condensed, but comprehensive, study of the country and its people.

The Breaking In of a Yachtsman's Wife. By Mary Heaton Vorse. Boston: Houghton, Mifflin & Co. \$1.50.

The writer of this little book has a sense of humor which is apparent in the first chapter and appears intermittently thruout the story. A maritime miscellany is connected by a thread of a love story, in which the scene changes from our Atlantic Coast to the Mediterranean. In Venice the nautical New Englanders find themselves nonplussed at the difficulties of propelling a gondola. Crabs in

⁵THE CALL OF KOREA. By Horace G. Underwood. Illustrated. F. H. Revell Co., 12mo, 75 cents net.

those climes are caught forward and not backward. Even after one has carefully learned this fact, the most one can do is to make a gondola travel laterally at about two knots an hour. The conversations and repartee are clever, and the sketches by Reginald Birch add to the interest of the text.

Camping and Tramping With Roosevelt.

By John Burroughs. Boston: Houghton, Mifflin & Co. \$1.00.

Mr. Burroughs must have relaxed his

a veritable Boswell to President Roosevelt, and noted with great care the opinions and expressions of our Chief Executive. Even the President's reminiscences of the Cuban War, when he was the leader of the Rough Riders, find a place in the volume. Of hunting there is little, partly because their field of operations was in Yellowstone Park, where there is a ban on the rifle, and partly because of the difficulty in escaping from their fellow men. John Burroughs's admiration for the President is

THE PRESIDENT ON GLACIER POINT, YOSEMITE VALLEY.

In Burroughs's "Camping and Tramping with Roosevelt." Houghton, Mifflin & Co.

From stereograph, copyright 1905, by Underwood & Underwood, New York.

usual vigilant observance of nature during the occurrence of the events described in this little book. He became

most patent. In the latter part of the book a visit to Oyster Bay is described, and the President revealed as a sports-

KNEE-DEEP IN JUNE.

man at home. The book is well illustrated, containing some very characteristic photographs of the President.

The Way of the Woods. By Edward Breck. New York: G. P. Putnam's Sons. \$1.75.

In the list of necessary articles which Mr. Breck recommends for a camping outfit he omits to mention his own book. We suggest that the prospective camper would do well to slip a copy in his hip pocket and consult the volume at frequent intervals. It is an Encyclopedia Britannica of the woods. In addition to enumerating the required articles for an expedition, the author gives their approximate cost and where they may be obtained, a feature lacking in many books of a similar character. The chapter on Woodcraft is the best section of the book. There is no royal road to the learning of this science, which is defined as "being at home in the wilderness." One must sleep on the ground, walk oneself footsore, satisfy hunger with one's own resources, and overcome the continuous and ever varying difficulties

of the trail with one's own ingenuity, before acquiring the honorary degree of woodsman. Our only criticism of the book is that the outfits are inclined to be elaborate. If the author would read the vacation experiences of some of our readers, he would see that it is quite possible to enjoy the woods even if not clothed in duxbak or khaki.

Favorite Fish and Fishing. By James A. Henshall. New York: Outing Publishing Co. Pp. 192. Illustrated. \$1.25.

In this new book Dr. Henshall has given not only information valuable to the angler, but also it is interesting reading. There are five chapters, as follows: The Black Bass, "the game fish of the people"; The Grayling, which the good Bishop of Milan, in a sermon to the fishes, called "the flower of fishes," because it is one of the most beautiful and sweetest of all the finny tribe; The Trout, "the angler's pride"; The Tarpon, otherwise called "His Majesty the Silver King"; and Fish and Fishing in Florida. The book is illustrated by photographs. It will undoubtedly be interesting to

many enthusiastic sportsmen, but otherwise does not deserve special attention as a natural history book.

✧
The Shameless Diary of an Explorer. By Robert Dunn. New York: Outing Publishing Co. \$1.50.

In reading books of adventure and exploration, in which the distance traveled daily and the climatic conditions

an expedition makes a more readable narrative. At the close of the book we feel as if each member of the expedition were a personal friend.

✧
Camp and Trail. By Stewart Edward White. New York: Outing Publishing Co. \$1.25.

Here is a book that you do not want to read unless you are planning to spend

MT. McKINLEY, 20,300 FEET, FROM THE NORTHWEST, VALLEY OF THE TATLATHNA RIVER, KUSKOKWIM WATERSHED, AUGUST 15, 1903.

From Dunn's "The Shameless Diary of an Explorer."

were carefully noted, we have often wondered about the unmentioned details. What the men thought of it all, if their shoes hurt them, if they were or were not congenial to each other, whether they got mad or indeed acted like ordinary human beings under more usual conditions. Robert Dunn in this diary gives us all these minute and very interesting details. In the opening of the book he speaks of Mount McKinley as the objective point, but adds that a dozen other lands could have served the purport of this diary quite as well. He is right, and has discovered something more famous explorers have overlooked, that a touch of human interest in the account of

your vacation in the woods. If a man were to get no vacation at all, it would be positive cruelty to put this volume in his way. Unlike most guide books, it is written in narrative form, most interesting to read. If you have been in the woods the descriptions call you to return with compelling force. If you never have been, then you begin to wonder why you have wasted your opportunities so long. There is nothing pedantic or patronizing about the advice. One might almost imagine it was an old Maine guide talking, while he sat on a log and puffed an inverted corncob pipe. The author has an aversion to new patent devices, preferring the old stand-

bys. The chapter laconically called "Grub" is one that should have careful consideration. The author is emphatic in his opinions, and we believe those that follow his advice will not come to grief.

British Highways and Byways From a Motor Car: Being a Record of a Five Thousand Mile Tour in England, Wales and Scotland. By Thomas D. Murphy. With illustrations and maps. Boston: L. C. Page & Co. Pp. 318. \$3.00.

A glance at the maps which accompany Mr. Murphy's volume will show how large a proportion of Great Britain was included in his five thousand mile tour. Except for the almost complete omission of the east coast of England, from Dover to Berwick-on-Tweed, Mr. Murphy succeeded in making himself remarkably well acquainted with all that is most characteristic, both in British cities and in rural Britain; and, as far as could be done in the short space of three hundred pages, he imparts his knowledge and impressions clearly and pleasantly to his readers. There can, indeed, be no more ideal way of visiting a fully settled and compact country like Great Britain than by motor car; and since this means of traveling has come into vogue, it has opened a wholly new field for guides and hand books. Mr.

Murphy has not aimed solely at producing a guide book, and he has succeeded in giving us something more readable and more literary in character than the ordinary compendiums. Yet future travelers by motor car, or even bicyclists, might do worse than follow the main outlines of his tour, and in so doing they would be greatly aided by his hints concerning the sights to be seen and the accommodation available. Mr. Murphy's experiences in and around London and again in some of the

ON THE TRAIL.
From White's "Camp and Trail."

more remote parts of the country, might save the intending tourist considerable annoyance and loss of time; and the author's love of historic places and of beautiful scenery makes the book of considerable value as a *vade mecum*. The book is lightened up with photographic views, which give a fairly adequate conception of some of the most characteristic bits of British scenery.

Afield with the Seasons. By James Buckham. With illustrations. 12mo, pp. 174. Thomas Y. Crowell & Co. \$1.25.

To those who love nature and out-of-doors, Buckham's *Afield with the Seasons* will mightily appeal. The reader is first and very appropriately taken thru the spring season, filled as it is with its glorious promise. He is made to *feel* the spring and to hear the first crow-note as its harbinger. The migrating geese, in V-shaped flocks, fly athwart the background and reveal themselves in description quite as vividly as they would in moving pictures. The joys of spring, its sports and pastimes, all appear, and by easy gradations merge into the good old summer time, with its singing birds, the flocks, the rippling brooks and all that is idealistic of the second season. The reader catches something of the joy of the birds and their individuality, something of the wizardry of fishing, something of the fascination of summer and its sounds; he hears the music of Nature, he sees with the author the delights that forever lurk in an old lane, and he revels in the deep woods in July, where there is a sense of coolness and of companionship for those properly attuned to appreciate the things that have inspired the book. And then the summer fades into the autumn. Frost comes, with its exhilaration and its tang. It is harvest time and the promise of spring is realized. The gray November days are followed by

winter chronicles, and the cycle is complete. The book is refreshing, and after reading it life seems fuller than it did before. Those who know nothing about the revelations of animal life made by the snow have a great treat before them in the chapter on the woods in winter. The author has both seen and described, which is a rare combination.

The Bird Our Brother. By Olive Thorne Miller. Boston: Houghton, Mifflin & Co. Pp. 297. \$1.25.

This new book, by the well-known author of a long series of bird books, is

THE DEEP WOODS IN JULY.
In Buckman's "Afield with the Seasons."

a contribution to the study of the bird as he is in life, and is designed to throw a strong light upon his life and his ways. It is simply an earnest attempt to bring into compact form for the general reader information which the author has gathered during thirty years of close study of bird life. It ought to stimulate better

OLIVE THORNE MILLER.
Author of "The Bird Our Brother."

acquaintance with the lives of the birds. The chapters deal with the following topics: Individuality, Intelligence, Language, Altruism, Education, Affections,

Courtship, Home, Amusements, Means of Defense and Attack, Odd Ways, Equipment, Usefulness to Us. All of these are interesting reading, and, so far as observable facts are concerned, are quite reliable. The modern psychologist will undoubtedly question the author's point of view in reading so much human life into bird life; but aside from this possible quibble about interpretation of actions, the book is certainly interesting reading, and forms a good climax to the series of books which this author has contributed.

The Case for the Goat. By "Home Counties." New York: E. P. Dutton & Co., 1908. Pp. 157. \$1.25.

The very name of this animal is so linked with jokes and ridicule that the average reader of the book lists in the periodicals will probably take this new book to be a contribution by some budding humorist. However, it is a very serious book in defense of that much-abused, domesticated mammal which even in classical literature is known as *vacca pauperis*, "the poor man's cow," suggesting the familiar associations with rubbish, tin cans and unsightly back yards. The age of the simple life of

AN ENGLISH GOAT.
From "The Case for the Goat."

the goat seems to be passing into history, for there is now a British Goat Society composed of enthusiastic owners (including a duchess, several lords and ladies of the realm, some honorables, colonels and reverends), who recommend the best of hay, oats and bran as food for the goat quite superior to paper gleaned from billboards and empty tin cans. And this coming of the goat into high classes of society is due largely to the scientific discovery of the peculiar value of goat's milk, especially for children. This is the animal's great claim

their care, the case is clearly in favor of the goat as the proper family cow for both prince and pauper who live in suburbs and country. With regard to goat farming for the purpose of supplying milk in quantity to city dealers, the outlook at present is not hopeful, because a regular demand has not yet been developed.

Leaf and Tendril. By John Burroughs. Boston: Houghton, Mifflin & Co. Pp. 282. \$1.10.

The latest addition to the long row of

John Burroughs

In "Leaf and Tendril."

for popular favor, and, considering the economic advantages as compared with cows in first cost of the animals and of

volumes in the works of this famous essay-naturalist is largely a collection of papers which within the last few years

have attracted attention in American magazines. It is scarcely possible in limited space to give the readers of this review a better idea of the contents of the book than by mentioning the titles of the leading chapters: The Art of Seeing Things, The Coming of Summer, A Breath of April, A Walk in the Fields, Gay Plumes and Dull, Straight Seeing and Straight Thinking, Human Traits in the Animals, Animal and Plant Intelligence, The Reasonable but Unreasoning Animals, The Grist of the Gods, The Divine Soil, An Outlook Upon Life, "All's Right With the World." To the naturalist the most interesting are those which deal with animal behavior, and Mr. Burroughs stands firmly for his well-known belief that we are not justified in reading human life into common actions of animals. One who reads this book and compares it with some of the author's earlier works is struck by the fact that the critical controversies in which the author has been engaged in recent years have resulted in making him a more scientific writer of nature essays. In fact, the author seems to have applied to his own writing much of the advice which, in the chapter on "Straight Seeing and Thinking," he freely offers for the benefit of some of his contemporaries who are supposed to see things thru their imagination. And as a result of this apparently unconscious change in point of view and outlook to nature, Mr. Burroughs himself has become much more cautious in using his imagination and interpreting and narrating facts. It is to be hoped that other essay-naturalists will continue to improve in the same way until ultimately we may have attractive essays and stories in line with the actual facts in nature.

Wild Flower Garden Families. By Clarence M. Weed. J. B. Lippincott Co. \$1.50.

Wild Flower Garden Families is by Clarence M. Weed, and is intended for the use of nature classes in schools. The botanical families are arranged in the order in which the flowers blossom, so that the pupil may begin at the beginning of the book with buttercups and anemones, and end the course with goldenrods and gen-

tians. The work is well conceived and executed, and there are questions for each chapter. We particularly like the instructions given in the introduction about collecting and preserving plants.

PASTURE THISTLE.
In Weed's "Wild Flower Families."

There are nearly a hundred fairly good illustrations. We wish the author were not so afraid of using botanical names, at least the generic ones.

Big Game at Sea. By Charles Frederick Holder. New York: Outing Publishing Co. \$2.00.

The average person thinks of fishing as a lazy man's sport, to be indulged in during the hot summer weather, while dreaming on a river bank. To read the present book is to be disillusioned. The opening chapter tells of trailing the sea-bat, a gigantic species of ray, weighing over a ton and seventeen feet long. One of these powerful sea monsters towed the rowboat several miles and was harpooned many times before it was subjugated. The author finds great enjoyment in diving for eight hundred pound turtles,

while they are peacefully asleep on the bottom of the ocean. The amphibious loggerheads rush to the surface in their first astonishment at being seized. This gives the intrepid author a chance to catch his breath before the next long dive. Mr. Holder regrets that he cannot stay under water twenty minutes, so that he could wage a more active campaign. The rest of the book tells of devilfish fourteen feet across, of four hundred pound sea-bass and giant sun-

The Garden Book for Young People. Frederick A. Stokes Co. \$1.50.

The Garden Book for Young People is by Alice Lounsberry, and follows the somewhat ancient method of giving instruction in story form, after the model of the Rollo Books. The children are taught how to make a garden, and are, of course, very enthusiastic about it. There are nearly fifty illustrations, including wild flowers, some of which surprise us, for we have

"JOSEPH HAD TO GET DOWN ON HIS KNEES AND USE THE SICKLE."

In Lounsberry's "The Garden Book for Young People."

fish weighing almost a ton. The book will appeal to any one who has a spark of physical enthusiasm,

never seen wild ginger, wake robins, windflowers growing so lonesome and with such long, naked stems.

Literary Notes

....The address of the New Talmud Publishing Co. is now Boston instead of New York, as given in a recent note in this column.

....The latest organ for the propagation of the new international language is *The Esperanto News*, published semi-monthly at \$1 a year at 10 Wall street, New York.

....Maud Cruttwell follows her convenient catalog of the "Paintings in the Florentine Galleries" with an equally convenient and still more needed *Guide to the Paintings in the Churches and Minor Museums of Florence* (Dutton, \$1.25), giving brief descriptions and criticisms with quotations from Vasari.

....A useful handbook explaining the intricacies of modern advertising and the methods to obtain the maximum results has been issued by the Bankers' Publishing Co. The author is T. D. MacGregor, who is manager of the publicity department of the company, and has had a wide experience as an advertiser, agent and publisher. (Price, \$1.00.)

....The Chicago & Northwestern and the Chicago, St. Paul, Minneapolis & Omaha Railways have set other railroad companies a good example by publishing a pamphlet on the *Origin of the Place Names* connected with the system. It gives in convenient form for reference a great deal of historical information about the settlement of towns in our Northwestern States.

....The Putnams will presently publish a new novel by Myrtle Reed (Mrs. J. S. McCullough). It bears the title *Flower of the Dusk*. The same publishers will have their imprint on a book by Prosser Hall Frye, of the University of Nebraska. Balzac, George Sand, Zola, Maupassant, Corneille, Anatole France, Sainte-Beuve are essay subjects in the Frye book. *A Manual of American Literature*, edited by Theodore Stanton, M. A., is a third forthcoming Putnam publication.

....*Tolhausen's Technological Dictionary*, by Alexander Tolhausen, Ph. D., translator to the Great Seal Patent Office of Great Britain, first published in 1877, is now issued in a fifth edition revised and brought down to date by Louis Tolhausen, former Consul-General of France to Great Britain. The chief aim of the author in his long labors and patient research was to unite in the smallest space, and at the most moderate price possible, the greatest number of technical terms used in English, German and French belonging to the subjects enumerated in a given classified list of industries and crafts. In this he succeeded admirably. Each volume contains over 75,000 such terms with their equivalents in three languages and includes a valuable bibliography of the principal works consulted in its compilation, a classified list of the industries and crafts dealt with, and a large supplement containing all modern terms and expressions used in electricity, telegraphy and telephony. The value of such a work to all scientific institutions, trade schools, industrial laboratories and establishments cannot be too highly estimated, while it should find a prominent place on the reference shelves of

every library throughout the country. (The Macmillan Co.)

Pebbles

"WHAT will happen when women get the ballot?"

"That's easily answered."

"Well?"

"They won't want it."—*Louisville Courier-Journal*.

It does not pay to be too truthful. A reporter was once discharged at this office for writing in his account of a wedding: "The groom wore the same suit that he wore at both of his other marriages, and the bride looked haggard in her white silk."

THE mellow moonlight shone serene

Upon the barracks gray,

Where stretched in deep and soothing sleep

The tired soldiers lay.

A messenger rode up post-haste

With news of fights and slaughters,

An awful carnage met his gaze—

The soldiers were in quarters.

—*The Peace Advocate*.

INTERVIEWING MOTHER EDDY.

"Ah, good morning, madam," said the man who was taking the local census. "What is your husband's name, please?"

"Eddy."

"Ah, yes! Eddie. That's your pet name for him, I presume. What is his last name?"

"That's it, Eddy. E-d-d-y."

"And his first name," continued the caller, beginning to write.

"Edward; Some folks call him Eddie Eddy; some say double Eddy, just to joke him."

"What's his occupation?"

"He's an editor."

"Ah! Um!" muttered the scribe, drawing a long breath. "Have you any family?"

"Of course. A daughter, who is the oldest, and some boys."

"Daughter's name, please?"

"Edwina Eddy."

"Ah! remarkable coincidence. What's the boys' names?"

"Well, there's the oldest; his name's Edwin Eddy. Then the next one's named Edgar; then follows Edmund, and the baby we just call Ed."

"What's his full name?" gasped the surprised one, feebly.

"Edgecomb. After my family. I'm an Edgecombe. My brother boards with us, and his name's Edgerton Edgecomb."

"And your religion. Of course, you're all Christian Scientists?"

"No, we're not. We are New Thought people, and we figure that's a long way ahead of Christian Science, tho people have their own opinions, of course."

"Goodness!" exclaimed the man, slamming his book together and getting ready to run.

"Where do you folks hail from?"

"Edgartown, Massachusetts! And I'd have you know that my full name's Edna Eddy."—*Judge*

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, \$2.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, \$1.75 a year extra; to Canada, \$1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with \$1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

Waste ; Waste—Nothing but Waste

THE gathering of the Governors at Washington, if it accomplishes nothing else, has given some astonishing statistics concerning the drift of American life. It certainly has become imperative for us to look ahead, and know where we are tending. That the American people have gone ahead faster than any other people in accumulating material wealth in the evolution of intellectual organizations and possibly in the exercise of moral power can be conceded; that we have been rushing to an early decadence and end we shall not as easily admit. Yet the facts are not to be dodged, nor can they be cried down with patriotic shouts. Listening to the leading speakers, including Mr. Carnegie and Mr. Hill, it is evident that loot and graft have been among our least destructive sins; and that while waking up to the need of reform along the lines of political and social honesty, we still more need to comprehend the tremendous fact that our material wealth faces exhaustion.

Coal was sold for the first time in the United States for fuel about 1830; we

are now mining five tons annually to every person in the United States. THE INDEPENDENT was the first magazine to give public voice to Edward Orton's estimate, twenty years ago, that coal could not keep up with the demand beyond 1950. Present estimates credit us with still possessing at least two millions of millions of unmined tons. Last year we mined four hundred and seventy millions. Using that as a divisor, it is easy to see that Mr. Orton's estimate was not far from right. China has the bulk of all the coal that remains for the future, and it is now asserted that instead of supplying the world for one hundred years to come, China will be compelled to use, on her own expanding enterprises, nearly, or quite, every ton that she can produce. At the Governors' Conference Mr. Hill told us that we are close on the heels of Great Britain, whose manufacturing industries have already felt the check from failing production. Charles P. Steinmets, who is an expert authority, says that many of us will be alive when the supply of coal, both hard and soft, will be exhausted. As fuel it cannot be used but a few years more. As a substitute, wood is out of the question, and our wits must be at work to secure some substitute that will save us from freezing to death. He suggests that every creek and brook must be utilized to collect water power, and change it into electricity for home use. Even then we shall have to hibernate our manufacturing industries. Will we form a habit of going South every winter like the birds? It is not impossible that there will be a great movement of this sort, especially if aerial transit materializes. Its first application may be to move us to and fro with the seasons.

Our forests were practically unbroken in 1830; they will barely last, at the present rate of consumption, until 1930. Our standing timber is now estimated at two million millions of feet; our annual cut at forty thousand millions. We are consuming annually more than three times as much timber as forest growing can replace. When the forests fail the lumber business, which is now our fourth greatest industry, will disappear. Mining will be far more expensive, and the price of coal and iron will go up. Every-

thing manufactured from mines and forests will increase in price, and every citizen must feel the pinch. Our French Ambassador, taking a lesson from France, warns us: "No forests, no waterways. After devastating the fields, the rivers will be blocked with sand and detritus. Do you want navigable rivers, or do you prefer torrents?" Each year we are told that one million six hundred thousand horse-power runs over the dams, that might be rented, to yield thirty-two millions annually. The waste is in every direction. Stripping the hills of trees means floods in the spring and droughts in the summer. Our movement to control the forests and increase reservations has not come early enough, and it has not gone far enough. President Roosevelt is right that neither States nor nation can afford to allow the greed of speculators to ruin the Republic.

Natural gas, with coal oil, was discovered and utilized about 1850. With conservative use they should have lasted one thousand years. As matters are going they will not serve us beyond 1950. The iron age began about with the nineteenth century. The mining of iron doubled every seven years, and our present production is six hundred pounds per capita. Mr. Hill agrees with Mr. Carnegie that iron will not be available for common use on anything like present terms, after the middle of the century. What are we to do about it, for our whole social as well as industrial life will have to be readjusted to new conditions?

Professor Shaler, of Harvard, was constantly giving us warnings against soil waste. Mr. Hill repeats that warning in most impressive terms. The average yield of wheat has gone steadily down, and even Kansas does not report an average yield per acre beyond thirteen bushels. Soil waste is something that the average farmer seems to be unable to grasp. The Waterways Commissioner of the United States reports that not less than one billion tons of earth are annually swept into the sea, and that 90 per cent. of this is our best soil for crops. Its bulk is one-fifth of a cubic mile. Applied as a fertilizer, it would cover three hundred and forty thousand square miles to the depth of an inch. Its value is estimated at more than one billion of dol-

lars. Its loss is a form of taxation that falls directly upon the farmer, and, as such, it is greater than his indirect taxation thru tariff. We must understand, however, that soil means largely something of our own making, and that we can not only preserve what has already laid over the earth, but can rapidly increase it. As matters are, this possible annual increase is at least one-half of it wasted by burning. Several of our States, from Oklahoma to Florida, are annually burned over, in the interest of range cattle. In this way the larger part of what Nature annually deposits is turned back into the sky, as smoke and gas. We have just discovered that the whole country is covered by Nature with legumes, which might be used for soil making, as they have the power to take nitrogen from air. Nitrogen is the most important element of plant life, or, indeed, any other life. We ought never to exhaust the natural supply, and we ought to be able to conserve what Nature passes to us for immediate consumption.

Our streams gave us fish enough, in 1850, to supply one-third of all our required food; now all that we get from the sea and from shrinking streams is 5 per cent. of food supply. In the Southern waters, the largest of all our sporting fish, the tarpons, are left to rot—barely one-fourth of the annual catch being used. In 1850 buffalo covered hundreds of square miles. In half a century we succeeded in obliterating this enormous resource for food—for fun. It is a sample of the waste that has gone on in every direction; while today, altho the laws are growing stringent, the destruction of beast and bird is astounding—mostly for sport and decoration. The effort of the Government to restock our streams parallels the demand for their restoration-to navigation.

In 1850 we had public lands enough to offer a homestead to every honest seeker. Now Uncle Sam is not rich enough to give us an acre apiece. The nation owns but fifty millions of acres surveyed, and probably thirty-five millions of acres unsurveyed. Most of our great homestead was thrown away on speculators. Last year twenty-one millions of acres were disposed of. What remains will last possibly five years longer.

Our waste of physical and moral power has been quite as reckless as that of material wealth. Our human frame comes to us from lower mammalian life. We have adopted habits that are pulling down the superb physical frame we inherited and are creating a waste of slavery to intoxicants and narcotics. Our ratio of degenerates is enormously on the increase, while to nothing else can we attribute the presence of anarchy in the United States but the shameful lack of economic social habits. We have educated a ruling class, but we have educated our common people away from the land and from that sort of knowledge which enables them to honor work and achievement. Industrial education alone can save our working classes from degeneracy. For more reasons than one the American people should face this problem of waste; and, if for no other reason, we shall honor the administration of Mr. Roosevelt for the high pressure given to the development of natural resources on economic lines. The salvation of the American people depends not on armies and navies, but on the stopping of WASTE and the just distribution of wealth.

The Session of Congress

CONGRESS assembled in December, less than two months after the beginning of the panic. Revenues were falling; public expenditures had been rising, and a deficit for the fiscal year was in sight. Receipts continued to decline. In the face of a growing deficit, which now exceeds \$60,000,000, those who controlled legislation provided for the expenditure of \$1,008,000,000 in the year beginning with July next, knowing that the Government's revenue in that year would not exceed \$900,000,000 and might be \$25,000,000 less. The time for passing the billion mark in appropriations was not wisely chosen. It may not have occurred to the members of the Republican majority who are responsible for this extravagance that in the political campaign they would be required to defend it before constituents suffering by reason of the enforced economies of panic depression. To make these enormous appropriations was not good politics, nor was it justifiable in any

way. The increase was due largely to the grants in the interest of what may be called militarism. These, if pensions be included, amount to nearly \$400,000,000. They would have been even greater if the President's urgent appeals had been successful. Arguments for economy in public expenses have had no weight with him. But they do have weight with the people, and if his party shall suffer on account of this Billion session, much of the responsibility must rest upon him.

It was apparently the purpose of the leaders of the majority to avoid nearly all legislation except the appropriation bills, and this purpose was but slightly affected by the President's numerous messages. Political expediency at last compelled compromise action upon the currency question. The new law is not a good one. It is patchwork. After all that was said and done in the House, the provisions of the Senate's bill clearly survive in the enacted compromise. Even the railroad bonds which Mr. Aldrich was constrained to drop in the Senate may be brought in under this law. There is discrimination against the use of commercial paper and in favor of those banks which may offer the bonds named in the Senate bill as security for emergency issues. It is quite clear that banks offering such bonds (and empowered to apply directly and individually to the Comptroller) would have a decided advantage over banks that might form the associations which are proposed. The arguments against the original Aldrich bill may be used with not less force against this law, which will tend to retard, rather than to facilitate, that currency reform which is to be desired. It is unfortunate, also, that the new Monetary Commission is composed exclusively of members of Congress.

In the field of labor legislation there were added to the statutes an Employers' Liability law (within the limits of the recent Supreme Court decision), a similar law relating to Government employees, and a Child Labor law for the District of Columbia. There should also have been some modification of injunction practice. Here organized labor asked too much and got nothing. Labor was also interested in the complicated bill for amending the Sherman Anti-Trust law, but would have gained little or nothing by

the enactment of it. In its effect upon industrial combinations, however, this bill was one involving great changes in procedure and a grant of extraordinary power to an executive officer. Congress did well to lay it aside. If industrial combinations are to be controlled by Federal licenses, the end should be sought in some other way. But the Sherman act ought to be amended.

There was practically no railroad legislation whatever, and the House, under the leadership of Mr. Tawney, chairman of the Appropriations Committee, even attempted to nullify an important provision of the new Rate law by withholding the money needed for an inspection of railroad accounts. Mr. Roosevelt's recommendations were ignored. Railroads are still forbidden to make pooling agreements, the Commission has not been empowered to pass upon future issues of securities, and there is no provision for a physical valuation of railway property. Nor was the exaction of penalties under the commodity (or coal) clause of the Rate law suspended. With a national campaign at hand, the dominant party was unwilling to touch the railroad question on one side or the other, except, as we have said, in the matter of inspection, and its attempted action relating to that was distinctly opposed to effective official regulation. It was not inclined to offend those to whom it has been accustomed to look for campaign contributions, and it shrewdly prevented legislation for campaign fund publicity by attaching the Crumpacker amendment to the McCall bill.

The postal savings bank bill was not past, but it was made a special order for the next session, and should not be regarded as lost. Wood pulp was not put on the free list. With general tariff revision impending, the removal of the duty on one product could scarcely have been expected. But reduction of the duties on imports from the Philippines should not have been deferred. The ocean mail pay bill was a reasonable one, and the failure of the House to concur with the Senate in the passage of it is to be regretted. Recent disclosures of monopoly and land fraud in the Rocky Mountain coal trade should have caused a favorable consideration of the President's recommenda-

tion that provision be made for leasing the Government's coal lands.

On the credit side should be placed the prohibition of race-track betting in the District, the release of the Philippines from the bonds of our coastwise navigation laws, and the ratification of thirty-seven treaties by the Senate. A majority of these were the fruit of the Hague Conference.

The record of the session is not a good one, and it could easily have been improved. Such records have been made before by a dominant party, in sessions immediately preceding Presidential elections. Leaders shrink from taking action the political effect of which they cannot foresee, and at such times their power to measure this effect and to estimate rightly the drift of public opinion is impaired. Moreover, members are engaged in planning for renomination and re-election, and thus their attention is diverted from their work at Washington. The halls of Congress become arenas for stump speaking, and careful legislation is displaced by political sparring. After adjournment the discovery is sometimes made that a conscientious regard for the work of the session, with care in perfecting legislation, would have been more profitable both for the ruling party and for its elected representatives.

A National Fight for Prohibition

THE Prohibition Party is small, but the prohibition cause is large. The ranks on each side are closing up. The brewers and distillers are at last thoroly awake, and will make the most desperate fight to stop the advance of the prohibition columns.

On Tuesday of last week North Carolina by a majority of 40,000 voted prohibition to take place with the new year. That follows a similar exclusion of alcohol in Alabama and Oklahoma. The National Liquor Dealers' Association made a strong fight against prohibition, not that they expected to win the fight, but they hoped that a small majority would encourage a resubmission to the people and would help their cause in Virginia and other neighboring States. The majority is big enough to assure that North Caro-

lina will remain dry for a series of years. But it is not under the banner of the Liquor Dealers' Association that the army of the saloons will fight prohibition, but under that of the National Model License League, an organization created for the purpose by the distillers, brewers and wholesale men. The secretary is editor of *The Wine and Spirit Gazette*, and we are told that his organization has eight hundred members and five hundred million dollars behind it. It proposes an active campaign. It will—for it must—speak for a good saloon, not more than one for five hundred people, one that will not sell to minors, nor have any immoral annexes, indeed such a saloon as one might take his wife to, but not his boys and girls.

Against the Liquor Dealers' Association—we mean the Model License League—is aligned the Anti-Saloon League. This is an organization closely allied to the churches, and quite unpolitical. It has no half a billion of wealth behind it. It goes on Sunday to churches, Protestant or Catholic, for its support and money. It is an admirable example of a modest, tireless, moneyless organization that simply rests on the people. It has no faith in the genuineness of this belated reform of the saloon. It knows that the saloon waxed worse and worse, morally corrupt, and showed no power of self-reform and no desire to reform until fear awoke this desire. These manufacturers, brewers or distillers, own the saloons, and are responsible for all their present evil. They had never thought of giving the people clean saloons until they found their gains were being taken away. They are frightened—and well they may be—as they see one State after another banishing the traffic.

It is now a fight between the saloon and the Church, just as it is a fight between the race-track gamblers and the Church. The Church stands back of the moral sentiment of the country, and is sure to stand a unit behind the Anti-Saloon League. So stand the Presbyterians in their General Assembly, and so stand the Methodists in their General Conference, and so stands every other Christian body with scarce an exception. If the issue is fairly presented the Church will win.

Baptist Union

THE movement of union goes on favorably and quite as fast as could be expected, even if the hesitation and delay of the Congregational National Council has seemed to the United Brethren and the Methodist Protestants so much of a rebuff that they have turned to advances of the Methodists. But the present immediate interest is in the approach of the Baptists and the Free Baptists.

The negotiations have been most skillfully conducted. First in Eastern Canada the two bodies actually united. Then commissions of the two in the United States were appointed. The Free Baptists required their commission to ask of the Baptists "at least some statement which may indicate a common principle which under our differences in belief and practice, so far as they still survive, may be tolerated in associational fellowship." Under this broad instruction the committees met and came to an agreement.

For their success certain conditions were very happy. The Baptists have had no national organization, only missionary boards and State conferences. Thus much was eliminated. The only differences that have existed are two, as to Calvinism and close communion. As to the former the "Basis of Union" speaks freely, admitting that differences on that subject have ceased to have any importance; as to the latter not one word is said—it is ignored.

The story is told of the origin of the Baptist churches in this country, and, under the Whitefield revivals, the origin of the Free Baptist churches, which were purely Baptist, and "held less rigid Calvinistic views than were common." They have grown to 87,000 members, with six colleges and two theological seminaries, and have active mission boards. Then it is agreed that "during this century and a quarter the Baptists have been greatly modified," so that "the Baptists today have little, if any, more sense of restriction in their Calvinism" than the Free-will Baptists had in 1780. Such being the case why should they not unite? The three great Baptist societies last year resolved, "that the original cause and occasion of separation between our two bodies have

practically disappeared, and that in all the essentials of Christian doctrine, as well as of church administration and polity, we are essentially one."

That was significant. "Christian doctrine" meant Calvinism; "Church administration" meant close communion, the sleeping dog which it was not yet quite as safe to disturb as Calvinism. But when the two joint committees met they had it in mind, and they agreed on this very sensible statement:

"Differences, if still existing, may be left, where the New Testament leaves them, to the teaching of the Scriptures under the guidance of the Holy Spirit."

That could not have been better said, and is a model for all future negotiations for Church union. It is a principle that may apply to other matters than close communion, which has ceased to be insisted on by most Northern Baptists. And yet it was only twenty-six years ago that Prof. W. C. Wilkinson began a series of articles in *THE INDEPENDENT* denouncing close communion as a sound doctrine; and Dr. Bright, editor of the *American Baptist*, stoutly defended it in a national Baptist journal. A quarrel between the two parties shows a mighty parallax. The railroad question is carefully dropped out of except, as we inspect, any bodies will almost insensitizing to together. The Free Baptists effective office, doubt not, accept the plan, which inclined to nothing more than that they been accepted send their missionary money to the three Baptist societies, and that "all missionaries and pastors of the united bodies shall be recognized as on the same footing." The Free Baptists, which have a national conference, will approve it in the regular way; and three-fourths of the Baptist State conventions, "where there are Yearly Meetings, or Associations of Free Baptists." That is wise and politic. It rules out the Baptist State Conventions, where the Free Baptists are few, and where the close communion sentiment still survives, as it does as we leave the Northern tier of States. They have nothing to do with it; they are independent; there is no national body in which they have a right to object.

We rejoice in this almost certain union, just as we would have rejoiced if negotiations nearly a generation ago for union with the Congregationalists had

succeeded. But this ought not to be the last of Baptist union. How about the Disciples, who claim over a million members? Or how about the Southern Baptists; must that sectional division be forever kept up? And what real reason divides all those denominations that hold the same faith and the same form of free popular government?

Smoke Consumption

THE agitation against the smoke nuisance during the last few years has made a great change in some of our large cities. The dark clouds that once hung over them, showering angular hail and sooty snow, have been dissipated and the inhabitants can breathe freely. The marble statues in the parks do not so rapidly become antiques. The books in public libraries no longer betray their readers by the thumbprints on their margins. At first the manufacturers said it could not be done, that where there was much business there must be some smoke. But a persistent course of fining changed their minds and they found it possible and even profitable to improve their furnaces and methods of firing until only vanishing blue wreaths adorned the tall chimneys.

Now that the external smoke nuisance is largely abated, it is time to consider whether similar remedies cannot be used for clearing the atmosphere inside our houses and public buildings. There is no more excuse for a pipe's smoking than a chimney's smoking. Both are cases of incomplete combustion due to unskilful firing. The tobacco user should be required, like the engineer, to pass a practical examination to prove his ability to run a pipe without its smoking before he is allowed to practise in public. The legislation necessary to accomplish this reform would involve less inconvenience and interference with the freedom of the individual than that which at present aims to secure a partial segregation of smokers. There is no reason why a man who wants to enjoy a cigar, cigaret or pipe should be compelled to ride in an inferior railroad car or stand on the platform of the trolley or be banished from the society of the ladies after dinner. Every man ought to have the right to

smoke whenever and wherever he likes, on condition, of course, that he consume his own smoke.

The trouble with the smoker is that he is too altruistic. He insists on sharing his pleasure with everybody in the room, regardless of the fact that some of them may not like his brand of tobacco or any other. He has the manners of the Wild West cowboy, who makes everybody in sight take a drink with him. This aromatic altrusion is not only disagreeable but wasteful. It would be easy to calculate, if one had the data, the time and the ability, how many cigarets a day could be made from the unconsumed matter lost by the habitual cigar or pipe smoker. The means of accomplishing smokeless smoking may, as usual, be left to the inventors after the legislation making it obligatory has been past. Pipes could be made with a smoke trap as they are now with a nicotine trap. Cigars and cigarets could be soaked in nitrates or some other oxidizing substance to insure complete combustion. In France and other countries where tobacco is a government monopoly a special brand of nicotine-free tobacco is put on the market just as we have coffee without caffeine. It would equally be easy to produce an odorless and smokeless tobacco. There is no reason why a man who wants to smoke himself should be obliged to smoke other people.

Sale of Immoral Books

THE bookseller's shop is a wellspring of wisdom and wickedness. Out of it flows all our learning. Out of it also flows all our folly and half our vice. Is there salt to heal the waters?

The American Booksellers' Association meeting in New York last week recognized the evil and in a measure the duty. They passed the following resolution:

"Resolved, That, recognizing the responsibility of the booksellers in distributing the literature of the community, this association feels called upon at this time to use its influence to discourage the publication and sale of books of pronounced immoral plot and tone."

We are afraid this does not mean much speedy reform. It is good, very good, and talk is cheap and resolutions

cost nothing. The difficulty is to make people to live up to their resolutions, for associations can resolve annually to turn over a new leaf, but, like all birthday resolutions, these are the froth of the moment. Who is to enforce them? In an address before the association Dr. Hillis said:

"I don't see why four women in England should distil passion and sell it like whisky. I'm a little bit inclined to think that all men who sell books of that kind ought to have the bottom of their feet basted right merrily."

But men will continue to sell passion and whisky for the same reason that women write the one and distillers make the other, because people want them and are willing to pay good money for bad stuff. You can't stop the sale of whisky till you make and execute a law forbidding its manufacture and sale; and you can't prevent women from writing erotic books, nor men from selling them, until you provide an efficient system under which the sale of such books is forbidden and punished; and that is no easy thing to achieve. It is harder than to stop the sale of whisky.

Take newspapers. By far the larger number of newspapers are ethically decent. This is true of the entire rural press, and of by far the larger number of city papers. The strong papers, by which we mean the influential ones, are clean, on the whole, even if they are fouled with reports of the gambling at horse-races. But there are in the larger cities a certain number of dailies that are utterly conscienceless and sensational, and have a large circulation in the class of people that like such rot. Equally there are a few weeklies that cater to vice, prurient and nasty. They also have their patrons, and we suppose they pay because they are wanted. It is impossible to prevent the exclusion from the mails or the stands of these journals that are not quite obscene. It is of little use to try legislation against them; we must appeal to the slower court of public opinion, taste and moral sense.

It is so with books. Dr. Hillis has spoken well; the American Booksellers' Association has spoken well. Such words help formulate public sentiment and have a certain slow and sure influence. It will come to be the rule by and by that

reputable booksellers will not offer plots of passion for sale, and fewer women will find it pays to write them. Perhaps as valuable an agency as any will be the elimination of such books from public libraries, and then the agreement of these libraries to let the public know what are the prohibited books, so that booksellers will take notice. Stop the sale of whisky and you do much for thrift and morals. Stop the sale of bad books and you do much to cleanse the character of our people.

Public and Corporate Slouch

THERE are Americans who conduct themselves in a quiet and orderly way in public and in private. There are Americans who are courteous and considerate in their relations with one another, who are respectful to the aged and attentive to the weak and the infirm. It is deeply to be deplored that these habits cannot be said to be distinguishing marks of American character. Unhappily, some millions of Americans, both male and female, do not possess them. Tens of thousands, both men and women, apparently despise them. Rudeness, vulgarity, indecency and general offensiveness in public seem to be regarded by whole classes of the population as achievements to be proud of, a kind of smartness, as bravado and insolence are to the dime-novel cowboy.

It has often been pointed out by observers of American manners that people that are respectful, polite and orderly in Europe become indifferent in America, and let their children grow up to be young hoodlums; and the explanation usually given is that, having associated good behavior with despotic discipline in the Old World, they think of rudeness as an assertion of equality and a necessary part of liberty in the United States. This explanation has been overworked.

In both the Old World and the New there are certain agencies that exert a disciplinary pressure in behalf of decent behavior, or, on the contrary, set an example of carelessness or worse, thereby encouraging rowdiness and a general disregard of the rights and feelings of fellow men. Chief among such agencies

are public officials and public service corporations. Speaking in general terms, these agencies in Europe maintain a certain standard decency of behavior in public places. Without always enforcing a strictly militaristic discipline, they, on the whole, do for the average citizen a large part of what Mr. Kipling tells us the barracks and the drill ground do for the non-commissioned man. They may not always succeed in making him

" . . . keep 's rifle an' 'isself jus' so," but they do appreciably assist him toward

"Gettin' clear o' dirtiness, gettin' done with mess."

Speaking generally, in like manner, these agencies in America engender slouch, nastiness and incivility.

It isn't a nice thing to say, but it is true, that more than 60 per cent. of the State capitals, city and boro halls, courtrooms and other official buildings and apartments in the United States are vilely dirty and almost hopelessly disorderly. On the floor of the hall of the House of Representatives of one of the most famous State capitols in America there lie, or a very short time ago did lie, five tobacco-juice-cemented layers of carpeting, as some living-room walls are covered with successive layers of paper. The public parks of New York and other large cities are strewn with papers, luncheon boxes, banana skins and peanut shells; and street railway corporations, elevated railway and subway companies are permitted to run cars and trains that are like pigsties in looks and fully as unsanitary in point of bacterial population. As a rule, their guards and conductors seem not to be expected to interfere with drunkards, obscene brawlers or fighting hoodlums unless they are damaging the company's material property.

We have been moved to these remarks by two incidents which give some ground for hope that the activity of public officials and public service corporations as exemplars of slouch and teachers of disorder may presently be curtailed. Mr. Hornaday has announced that hereafter people who enjoy the Zoological Park will not be permitted to "mess it up" with their paper boxes and peanut shucks, or to abuse it worse than as many

animals would if turned loose. Judge Finelite has refused to set aside a verdict for three hundred dollars against the Interborough Company given to a woman who had been seriously hurt by a flying shoe thrown in a brawl in a car on the elevated road. The company asked to have this verdict set aside on the ground that it should be held to be the duty of every passenger to protect himself as against every other passenger. Justice Finelite declares that a common carrier may not allow passengers to indulge in riotous acts and behavior that result in the injury of other passengers. We trust that the higher courts will find that Justice Finelite's ruling is not unconstitutional.

Hateful Good People

It is not so difficult to be respectable, provided one has been trained to it, law-abiding, honest, and even abominably truthful, but it is exceedingly difficult to be really good, and almost impossible to win distinction at it. For the peculiarity of goodness is that it is a secret grace, offended by renown. And very many people with a reputation for it have only got malignant cases of hateful goodness. But they are always to be recognized by certain immoral peculiarities. The first thing that betrays the hatefully good person is that he never has an ethical use of words. He sustains a shotgun relation to the world in his vocabulary, refers to it as he would to a jungle monster. His speech is padded with brotherly terms, but he is an awful elder brother who would surely begrudge any prodigal younger brother his ring and fatted calf. Another peculiarity is that he takes his vices by proxy. He is intensely interested in the evil that other men do. He does not know it, but he is a righteous man hungering and thirsting after the world, the flesh and the devil. He keeps his own virtues in a death trance of preservation and has a duty-doing talent for alms giving, but he always lacks the genius of mercy. This is one of the peculiar earmarks of all hatefully good people. Win thru to what they really think, and one discovers that they believe it is immoral to be merciful. They are doctrinaires of goodness, they understand only the for-

mal theology of it, mistake this for moral experience. At bottom they are spiritual savages who hope to hasten the coming of the millennium by wholesale punishments. They have a tribal jealousy of the wicked and of his disposition to flourish like the green bay tree. They are always in a hurry for the year to come when they can cut down the unprofitable fig tree. And the more fig trees they destroy the better they feel by contrast.

Not long ago a minister went before the governing board of his church, confessed to a grave offense and declared his repentance. His brethren not only deprived him of his credentials, but they published their reasons for doing so at great length with many biblical flourishes in the daily papers of the victim's native city. And even when the hatefully good are not so public-spirited in their protective vengeance, privately they entertain a conscientious enmity toward all sinners and other God lonesome people. This accounts in a very great measure for the unlawful and unspiritual antagonism that exists between the world and the Church. There are too many people in the latter who are simply the pall-bearers of goodness.

Now, thoughtful people have always been able to distinguish between a man and his reputation, even when he could not do it himself. The trouble is that it is the characteristic of this class to preserve a discreet silence concerning such distinctions, and so society has suffered too much from believing in the lambkin reputation of wolverine saints. But now the common people are beginning to make bludgeon distinctions between the truly good and the hatefully good people, and that is the reason why so much fur is flying these days and why some of the wounded are complaining that the world is full of sacrilege. So it is, but the practice of so much hateful goodness is largely responsible for the provocations that have led to this state of profanity.

The trouble with the hatefully good is that they cultivate their spiritual faculty too exclusively for their own salvation. And this is not the way to develop it. They do not know it, but they worship a caste Deity who promises to save them and damn the rest. Now, if some of us must be lost, why make a virtue of rub-

bing it in? The Pharisees made the same mistake, and the Pharisees are an antiquated type of moral gentility.

But the most noticeable peculiarity of hatefully good people is their clannish spirit. They can survive in their present state only upon quarantine regulations. They do not go into society among sinners except professionally, of course, first, because of the danger to their reputation—and nothing in the world is so dear to them as their reputations—and, second, because they cannot stand the strain. They dissolve, and become what they are, of the earth earthy, of the world most worldly. When all is said they represent the moribund element in life. They are one of our secret causes of open disorders. What we need is missionaries for them and we will get them, only they are not likely to come in a hymnal mood.

Buddhism and Christianity

It is a sad thing when one has been working for years on an important investigation to have the fruit of it lost in a moment, but that is what happened to our correspondent, Mr. A. Lloyd, an English scholar residing in Tokyo, when a book he had sent to the press was lately destroyed by fire. It was a careful study of the development of Buddhism, defining the claims of the rival schools of Sakyamuni and Christ, a question of tremendous interest for the East. Buddha Sakyamuni was born about 550 B. C., and died about 480 B. C., and was thus the contemporary of the great Hebrew prophets. On his death Buddhism divided into two schools, called the Mahayana and the Hinayana; and when in a great council the Mahayana teachers were defeated they went over into the northwest provinces and Bactria and were incorporated into the Persian and later Parthian kingdoms. Here they came under Greek and Parthian influences and on the other side reached China. Mr. Lloyd believes that the teachings of the Jewish prophets affected Buddhism, and that a northern Buddhism developed from the agnosticism of Sakyamuni thru a period of many gods and Buddhas into a monotheism by means of the absorption into one eternal Buddha of all the other Buddhas. In the

so called Hodo period the term *mandala* was adopted to express the sum total of all that is divine in the universe, corresponding to the Greek term *pleroma* of Paul and the Gnostics. As there was a great religious revival in India and in Palestine in the sixth century B. C., so there was a similar revival in both lands in the first century; and just at the time when Jesus was born at Bethlehem the Buddhist writers tell us that the Buddha appeared again. Mr. Lloyd would have us believe that what was called the Eternal Sakyamuni corresponds to the Eternal Christ, and that the last purer form of the Mahayana Buddhism "received its developing impulse from the manifestation of Christ to the Gentiles." Thus would a sympathy of religions arise which would bring Buddhism to Christ.

The Tri-Church Union

Many may like to understand how matters stand since the meeting of the General Conference of the Methodist Protestant Church, with the negotiations for union of that Church with the United Brethren and the Congregationalists; and it may seem that, since the proposals have come for union with the Methodist Church, the former negotiations are all off. This is by no means the case. The position, if we understand it, is this: It was expected by the confident friends of the union that the Congregational National Council at Cleveland last October would cordially approve the Act of Union as agreed upon by the representatives of the three bodies. But several ministers of large city churches who had had no part in the negotiations opposed the union. The proposal was referred to a large committee, in which the leading opponents were represented; and, for the sake of securing absolute unanimity, the large majority who favored union yielded and accepted delay and revision of the conditions of union. That greatly endangered union, and was, in our view, a most unwise act. Now the Methodist Protestants have met and have voted against any revision. This will block the Congregational program. Now the Methodists ask union with the Methodist Protestants, but it is union of all the families of Methodism, and no plan or

conditions or compromise are suggested. To accomplish this would take many years, for there is great difference between Churches episcopally and non-episcopally governed. There will be no immediate action there, but there may be possibly union between the Methodist Protestants and the United Brethren without waiting for the Congregationalists. If the latter really mean what they have said, they can express themselves in their Conferences; and when they come together in their National Council again two years from next October, they can, having had plenty of time to consider, then approve the Act of Union as it stands, with any declaratory statement they may think wise by way of interpretation, and can then present it to the other bodies for approval. We believe Congregationalists want the union. President W. Douglas Mackenzie, of Hartford Theological Seminary, is now the Chairman of the Councils Committee in charge of the movement.

The Hold-up of the Senate

It is a somewhat serious question whether the Senate does not need a cloture rule, so that, when, as last Saturday night, all but three of the Senators desired to come to a vote, they might be able to do so. Democrats and Republicans equally wished to have the bill past, but three men agreed to talk indefinitely to prevent it, and it was only by the misapprehension of one of the three, a blind man, and the quickness of Senator Aldrich and the Vice-President, taking advantage of his blunder, that a vote was reached and Congress could adjourn. That is really as much of a hold-up as when one brigand presents a pistol at a stageful of passengers. The majority have the right to rule, and the Lower House found it necessary to make rules for that purpose. There should be freedom of debate, but no merely dilatory measures allowed. Doubtless the three Senators were within the rule, which has a good purpose, to allow full discussion, but this was not discussion—it was bulldozing. It ought to be possible to formulate a rule which will both allow full discussion and yet rule out such merely dilatory tactics, which

threaten health as well as good nature and legislation.

Direct Election of Senators

The following confession of sin ought to be good for the shriven soul. Mr. Bryan had recommended the election of Senators by the direct vote of the people. There is no franker or abler paper in the South than *The News and Courier*, of Charleston, S. C., and it is interesting to read its objections to the plan. Like nearly everything in the politics of the section it runs back to the negro. It dares not trust the popular vote, but it can trust a legislature properly gerrymandered. It admits a Republican vote of 15,000 in the State which might be increased to 30,000. It then imagines a man of high repute as candidate for the Senatorship declaring that he is a State Democrat, but a national Republican ("there are such"), drawing off "thousands of Democrats who, but for the negro question, would be Republicans, because for business reasons they incline to Republican politics"; and it adds:

"He would have 15,000 negroes voting solidly with him to start with and the votes would be counted because the election machinery would be in the hands of the Federal authorities."

They "would be counted"! The "Federal authorities" would secure an honest election under a Federal law. So we read:

"Our banker or manufacturer candidate and his friends would want it. They would want *their votes counted*."

That is enlightening. Then we are told that the hill counties, all white, would vote solidly for such a candidate. He might be elected under the plan for the direct vote for Senators. That seems to us all right, that the people should rule; but it does not so seem to the writer. He tells us how the will of the people can be thwarted:

"It is always possible, and in our judgment right and wise, to so gerrymander the districts that two-thirds of the negro voters shall be included in two districts without surrendering them to the Republican party."

This is the first shameless defense of a gerrymander that we have ever met. Our contemporary admits that the

one party system is "in some respects most disheartening," that "it checks progress and chills independent thought"; but so long as there is a heavy negro population there must be but one party, and anything that endangers it must be opposed, and the election of Senators must be in the legislature, because the rich white counties can, by false counting or gerrymandering, hold control of the legislature for a longer period than they can of the qualified voters under an honest count. Such a confession requires penance.

Educational Sanity We will forgive President Thomas of Bryn Mawr College for her slap at improvements in spelling implied in the card which she sends with her admirable article on "Women's College and University Education." She begs to explain that she is "not responsible for the simplified spelling adopted by *The Educational Review*. She tells us that the present generation of college women are better educated than college men, because they have more steadfastly maintained the four years' course and abjured free electives, preferring a full group-system. She is down on professional studies taking the place of disciplinary study. She says:

"In many colleges everything that is desirable for a human being to learn to do counts toward the bachelor's degree—ladder work in the gymnasium (why not going up stairs?), swimming in the tank (why not one's morning bath?), cataloging in the library (why not writing one's letter home?).

She denies utterly the truth of the theory involved in the free elective system too long in vogue, that all studies one could elect are equally good for purposes of mental training and discipline. She stoutly objects to riddling the college curriculum for women with hygiene and sanitary drainage and domestic science and child study and all the rest of the so called practical studies. They are not disciplinary, and belong to the professional schools or post graduate work.

We published in our issue of May 14th an article showing the importance of preserving the scenic beauties of the Hetch-Hetchy Valley, the lower portions of the

Tuolumne Canyon, in California, which is threatened with being converted into a reservoir for the convenience of San Francisco. We regret that Secretary Garfield has given his consent to this destruction. Neither he nor Mr. Pinchot has ever seen the valley, and we believe a protest will arise that will revoke the permission. Only absolute necessity would justify this profanation, and that necessity does not exist.

Those who criticise the Japanese for their severe rule in Korea must admit that Japan is taking most active steps to give modern civilization to that backward land. There are about five hundred Korean students in Japan, and the superintendent employed by the Korean Government to watch over their studies is a Christian and aids in every way the Korean Christian Association. They have a Bible class of over 120 members. One can easily see what their influence will be in their own land. They will be the chief officials twenty years from now.

It may indicate a change in international sympathy, or it may be due entirely to trade necessities, but the Prussian Minister of Public Instruction has directed that henceforth in the gymnasiums there shall be obligatory instruction in English for three years, instead of optional; while the instruction in French shall be optional instead of obligatory. In the German schools there is no half holiday on Saturday.

Perhaps the last thing we would think of using concrete for is boats. And yet Italy has five barges of 120 tons or more of reinforced concrete, and is likely to try it on a larger and more important scale. These barges have been subjected to severe tests and have stood them well.

The star Epsilon Ursæ Majoris, says an astronomer, is approaching the earth at the rate of four and a half miles an hour. Then get out of the way, for when it strikes it will make a greater hole than that made by a meteor in Arizona that the scientists are so concerned about.

Bad State Insurance Regulation

LESTER WILLIAM ZARTMAN, Ph. D., instructor in insurance and political economy at Yale University, in the *Yale Review* has directed attention to some "Mistakes in State Insurance Regulations" which are well worth the most careful consideration. The idea that legislation alone is a panacea for all insurance ills is shown to be erroneous, at least at times, since, before 1905, the State of New York had seen fit to amend her law regulating insurance investments not less than twenty-one times, notwithstanding which it was found necessary to make an entirely new revision in the following year. During the last three years much attention has been paid to the prevailing system of American life insurance. There have been many indictments against the various insurance companies, but practically every such indictment has been an indictment against State supervision. The trouble has been not that we have not had enough supervision, but rather that we have had too much ill-considered supervision. As Mr. George E. Ide stated in his recent address before the students at Cornell, to which we referred briefly last week, "The present tendency toward close and detailed regulation of the business of corporate life is unwise and unpractical." Mr. Zartman, in his *Review* paper, instanced as one mistake the laws compelling investments to be made in certain localities. In Texas the Robertson bill is directly in point.

The provisions of an Alabama law enacted a few years ago virtually advised the citizens of that State to go ahead and cheat the insurance companies, to get policies by fraud if they cared to do so. If they were not caught, well and good; if caught, they would get their money back. Mr. Zartman might well call such a law a mistake. The limitation of the amount of new business which a company can write comes under the same category. The idea back of such regulation is based on a fallacy, and is only to be compared with the law proposed by a

Western legislator, who sought to repeal the law of demand and supply.

The absurdity of regulating an insurance company in forty-six different ways is strikingly brought out by merely calling attention to the impossibility of forty-six different States seeking solutions of insurance problems in forty-six different ways of ever providing uniform laws—which ought to be if an ideal condition is ever to prevail. National supervision is advocated by instructor Zartman only upon condition that national supervision fully supplants the multiple State supervision that is now so objectionable. It must be confessed that he makes an exceedingly good case out of his argument for national supervision. He disposes of the objections urged by some that the insurance laws enacted by Congress for the District of Columbia are about the worst on record by admitting that these laws are bad, but he asserts that this does not of necessity mean much, since it takes time, energy and ability to work out a code of laws regulating so technical a business as that of insurance, and it is quite easy to see that while Congress might not be willing to give much thought to a code applying only to the District of Columbia, the situation would be entirely changed if the question involved the insurance business of the whole country. Reformation of insurance abuses is to be looked for, according to Mr. Zartman, in laws securing publicity and responsibility, such laws to be enforced by a national department of insurance.

A MAN was urged for two hours by a life insurance agent to take out a policy, but flatly refused. A few minutes later he dropped dead. It is not made clear whether he was talked to death, or whether death came as a punishment for his foolishness in not taking out a policy. —*Rough Notes.*

"TWISTING" is now illegal in New York State under a legislative bill signed by the Governor.

A Billion Session and the Deficit

ONLY seventeen years ago there was some protest against the liberal appropriations of the first Billion Congress; now we have a Billion Session. According to last week's official reports, the appropriations of the present session for the coming fiscal year are \$1,008,804,894, so that the second session may fall a little below the billion mark and still make a total of \$2,000,000,000 for the two years of the Sixtieth Congress.

This session's great appropriations have been made in the face of a growing deficit for the current year and of a certainty that next year's deficit will be much larger. Expenditures of the current fiscal year (which will expire on June 30th) have exceeded receipts by more than \$60,000,000, while there was a surplus last year of about an equal amount. This year's deficit will probably be \$65,000,000. What of next year? Members of the Appropriations Committee of the House estimate the year's revenue at from \$850,000,000 to \$900,000,000. The estimate of the Secretary of the Treasury is \$878,123,011. It is plain, therefore, that a deficit ranging from \$125,000,000 to \$150,000,000 may be expected following this year's shortage of \$65,000,000. Legislation involving such great deficits is not creditable to the Republican majority. It must be a handicap for the party in the national campaign. Revenue has recently declined, it is true, on account of the panic, but less than half the difference between this year's figures and those of last year is due to this; more than half is accounted for by increase of expenditures.

Both parties are committed to a revision of the tariff next year. Revision, whether undertaken by the Republicans or by the Democrats, will be affected by the influence of a huge deficit. We shall not point out now what the effect of this influence may be, except by saying that it will tend to prevent any additions to the free list. It is possible that the inevitable deficit is regarded with complacency by the advocates of very high duties, altho

they will be reminded that in many instances customs revenue can be increased by a reduction of high rates.

....In answer to an inquiry from the Legislature, the Massachusetts Supreme Court has sent a written opinion that a tax on transfers of stock would be unconstitutional.

....Samuel H. Miller has been appointed cashier of the Chase National Bank, of which A. Barton Hepburn is president and Albert H. Wiggin is vice-president. The capital of the Chase is \$5,000,000, the surplus and undivided profits exceed \$5,000,000, and the total resources are more than \$110,500,000.

....Checks for the regular semi-annual dividend of the Pennsylvania Railroad Company, amounting to nearly \$9,500,000, were mailed last week to 59,415 shareholders, this number showing an increase of 14,000 since one year ago. There were 21,028 women shareholders, in June, 1907, and there are now 27,767.

....Speyer & Co., Kuhn, Loeb & Co., Hallgarten & Co., and Ladenburg, Thalmann & Co. offer at 94 for public subscription \$13,750,000 of the prior lien 4½ per cent. sinking fund redeemable gold bonds of the National Railways of Mexico, maturing in 1957. A controlling interest in the stock of this company is held by the Mexican Government. There is every indication that the offering will be highly successful.

....Theodore H. Price, of New York, a prominent operator in cotton, was indicted last week in New York and Washington, in company with Frederick A. Peckham, Moses Haas and Edwin S. Holmes, Jr. Mr. Price is charged with having conspired to defraud the Government and to bribe a public officer. These indictments relate to the investigation concerning a conspiracy to obtain, in 1905, advance information as to the Government's cotton reports from Holmes, who was then an assistant statistician of the Department of Agriculture.

Survey of the World

The Republicans at Chicago

When the Republican National Committee assembled in Chicago, on the 5th, to hear arguments in the cases of contested delegates, and to decide upon the names to be placed on the temporary roll of the convention, it was seen that proxies had been given to three men actively engaged in the canvass for Secretary Taft. These were Frank H. Hitchcock (proxy from New Mexico), A. F. Statter (proxy from Alaska) and Charles G. Phelps (proxy from North Dakota). Senator Lodge held a proxy from the Philippines. Nine other seats were filled by proxies. Friends of other candidates made formal protest against the presence of the three representatives of Mr. Taft named above. This protest was laid on the table. The Alabama and Arkansas contests, involving twenty-four delegates, were decided in favor of the supporters of Mr. Taft. It is said that there was no demand for a roll call, and that the minority vote was very small. These cases consumed one day. On the 6th, the committee's decisions in the Florida and Georgia cases added sixteen Taft votes to the roll. These decisions are said to have been practically unanimous. That evening, at a meeting of the "allies," as they are called (the supporters of Messrs. Knox, Fairbanks, Cannon and Hughes), it was decided that no further action should be taken by them before the National Committee, and that their arguments should be reserved for the Committee on Credentials. Among those attending were Senator Crane and Senator Hemenway. It was asserted by the "allies" that the National Committee had been packed and that it had prejudged all contests in favor of Mr. Taft. There was much bitter feeling. Some of the

friends of Mr. Taft said that it was a blunder to place in the committee his campaign manager and two of the latter's assistants when decisions in contests were about to be made. Opponents of Mr. Taft pointed out that nearly all of the forty delegates admitted were Federal office-holders. When the committee began its work, the contests to be considered affected 229 seats, including those of the delegates-at-large from eleven Southern States.—While the allies asserted that Mr. Taft had not secured a majority, the prevailing impression in Chicago was that he would be nominated on the first ballot. The manager of his canvass had claimed for him at least 584 votes, or ninety-three more than a majority. Prominent independent newspapers gave him about 570. Congressman James S. Sherman, of New York, predicted either his nomination on the first ballot or the renomination of Mr. Roosevelt on the third. Mr. Sherman had been brought forward by his friends for the second place on the ticket. It was said that the President and Mr. Taft desired the nomination of Senator Dolliver. Secretary Cortelyou was said to be the candidate of Eastern conservatives for the second place. Many were talking of the possible renomination of Vice-President Fairbanks, but the latter's chief representative said that Mr. Fairbanks was seeking nothing but the first place. John Hays Hammond, the noted mining engineer, now a resident of Massachusetts, announced his own candidacy for the second place, but the friends of Governor Guild said they were not disturbed by his action.—It was admitted that there would be a sharp contest over the tariff resolutions in the platform. Mr. Taft has insisted upon a frank declaration for

revision upon the lines of the platform recently adopted in Ohio. Prominent among the opponents of revision are the representatives of the Protective Tariff League. Mr. Payne, chairman of the Ways and Means Committee of the House, said on the 6th:

"I see that some of the papers claim that this whole business is a subterfuge and that no tariff revision is contemplated. Exactly the opposite is the truth. As surely as the next Administration is Republican, the preparation of a bill will be undertaken by the committee very soon after the election, with the view of a special session of Congress to make it a law."

Owing to the tariff laws of foreign countries, he added, we must have maximum and minimum rates.—Organizations of negro voters have sent many representatives to Chicago, where they have been talking of forming a new party.—There seems to be some authority for the report that Mr. Roosevelt intends to go to Africa in April next and to spend several months there, hunting big game.

Railroads and the Laws

In the Massachusetts Senate, the bill permitting the New York, New Haven & Hartford Railroad Company to hold its Boston & Maine stock until July 1st, 1910 (the voting power of the shares being given to the Railroad Commission) has been past by a large majority. Some say this bill is hostile to the Government's suit against the New Haven Company. The New York Central desires to transfer its trolley property to a new street railway company which shall be under the jurisdiction of the New York Public Service Commission. This trolley property is capitalized at about \$60,000,000, and the company is said to have options upon additional trolley lines capitalized at \$40,000,000. In its suit against the New Haven Company the Government seeks to separate that company from its trolley lines, alleging that the combination is in violation of the Sherman act. The Central's extensive trolley holdings are all in one State.—At Los Angeles, on the 1st, the Southern Pacific was indicted by a Federal grand jury for giving rebates in California.—Seven suits, designed to test the constitutionality of the commodity (or coal) clause of the new Rate law, were begun by the Government, in Philadelphia, on the 5th, against the Pennsylvania, Reading, Lack-

awanna and other roads, which control the anthracite coal trade.

State Elections

At the election in Oregon, George C. Chamberlain, a Democrat, was nominated by the people for the United States Senate, receiving a majority of about 1,000 over H. M. Cake, Republican, altho the Republican nominees for State offices were elected, with two Republican members of the House at Washington. It is expected that Governor Chamberlain will be elected by the Legislature, altho nearly all of the members of that body are Republicans. According to the latest reports, a majority of them at last week's election subscribed to what was called "Statement No. 1," which bound them to vote for that Senatorial candidate who should receive a majority at the polls. A proposition providing for a long step toward the single tax was rejected. It freed from taxation all dwelling houses, barns, machinery, buildings used for manufacturing, fences, farm implements, fruit trees, live stock, household furniture and workmen's tools. A proposition for woman suffrage was also defeated, and one for the recall is reported to have been lost.—At the Democratic primaries in Georgia, Governor Hoke Smith, candidate for a second term, was beaten by Joseph M. Brown, whom he had removed from the office of Railroad Commissioner. Mr. Brown's majority was about 14,000. He had made no speeches and was not well known to the people. In a signed statement he says:

"Prohibition was not an issue in the campaign. The people have decided that the legislation attempted and that which was threatened against corporations and capital were too extreme. The verdict of the people is condemnation of agitation which has proved so harmful to vested interests."

In explanation of Governor Smith's losses it is said that the influence of Thomas E. Watson, the Populist leader, was turned against him, and that many believed the prevailing depression of business to be due largely to Governor Smith's attitude toward the railroads. His opponents carried banners bearing the words "Brown and Prosperity" and "Hoke and Hunger."—At the Iowa primaries, Senator Allison was nominated for re-election by a majority of about 12,000 over Governor Cummins.

Trust Cases It became known last week that preparation had been made by the Department of Justice and by District-Attorney Sims, in Chicago, for proceeding in the courts against the Standard Oil Company in rebate cases involving 3,400 counts or charges similar to those on account of which Judge Landis imposed the memorable fine of \$29,240,000, and it was pointed out in dispatches from Washington that in these cases, if the company should be convicted upon all the counts, a fine of \$68,000,000 would be permitted by the law. On the 5th, Attorney-General Bonaparte said, in response to inquiry, that action had been deferred until the fall months.—At Rochester, N. Y., on the 2d, the trial of the Standard Oil Company for receiving rebates on shipments from Olean to Vermont was begun before Judge Hazel. In the indictments there are forty counts, and the fine, in case of conviction, may be \$800,000.—In the Government's suit for the dissolution of the same company, the taking of testimony before a special examiner, at New York, has been suspended until the 22d.—The International Harvester Company for receiving rebates on shipvester Trust, has been defending itself before a special commissioner in Chicago, in the suit by which Kansas seeks to prohibit it from doing business in that State. The company denies that the prices of its products have been increased since the consolidation a few years ago, but asserts that on account of the higher cost of labor and raw material it would have been justified in raising them.—The Supreme Court has decided that H. Clay Pierce, of the Waters-Pierce Oil Company, under indictment in Texas for perjury in misrepresenting the relation of his company to the Standard Oil Company, is subject to extradition at the demand of that State.—A decision was announced last week by the same court in a case relating to the retail price of books. A certain book having been sold at a department store in New York for 80 cents, altho the publishers had stipulated that the price should be \$1, suit was brought by the publishers, on the ground that this sale below the stipulated price was infringement of copyright. The court's decision was in favor of the department store. A similar decision was

reached in a case in which publishers sought to prevent retail sales of books at prices below those fixed by the Publishers' Association.

On the Panama Isthmus

It has been decided that 500 American marines shall be detailed to guard the polling places in the Panama republic during the two election days in July. According to reports from Washington, revolutionary tendencies have been developed in the campaign. The two Presidential candidates are Vice-President Obaldia and Señor Arias, now Secretary of State. During President Amador's absence in Europe, the Vice-President, being a reformer, made appointments and regulations which are said to have reduced the income of the President's brother-in-law, then Mayor of Panama, by about \$5,000 a year. This appears to have been resented by the President, upon his return. Señor Arias is a capitalist interested in franchise corporations, one of which had been required by Obaldia to square its accounts with the Government, at a cost of \$40,000. President Amador now supports Arias, and has recently removed three provincial Governors who were Obaldia's friends. It is asserted that he has also arbitrarily reduced the number of presidential electors in several places where Obaldia has a majority of the voters, and has increased the number in places controlled by the followers of Arias. Some predict that if Arias is elected, or "counted in," there will be a revolution.—Jackson Smith, a member of the Canal Commission, and for three years manager of the labor and subsistence departments, has resigned, and his successor in the Commission is Lieut.-Col. Harry F. Hodges, of the Engineer Corps, heretofore purchasing agent. President Roosevelt express his appreciation of Mr. Smith's earnest and effective service.—In response to the Commission's advertisement for 4,500,000 barrels of Portland cement, twenty-five proposals were received, the price (for delivery on the Isthmus) being in the neighborhood of \$8,000,000. One manufacturer offered the use of his factory, for a royalty of 25 cents a barrel.—It is expected that the Government will buy two large steamships and place them in service

along the west coast, the conduct of the Pacific Mail Company having been quite unsatisfactory.

Philippine Islands

There are indications of approaching disorder in the Moro country, where one prominent chief is said to have sworn that he will kill twenty Americans and then declare war. The Legislative Assembly complains because the Moro province is not under its authority. Several Filipino agitators recently went to Zamboanga and at a banquet there, which was attended by American officers, demanded that Mindanao should be governed by Filipinos and that the Americans should return to America. But the Moros regard Filipinos with hatred or contempt.—Faustina Ablen, who called himself the Pope of Leyte, and Espiridion Rota, his chief follower, were hanged in Bilibid prison last week. These fanatics had been found guilty of several cruel murders.—Bishop Brent has declined the offered bishopric of Washington (which was held by the late Bishop Satterlee), saying that God bids him to stay in the Philippines.

The King Visits the Czar

The meeting of King Edward with Emperor Nicholas at Reval is recognized as having a political significance, and as such is the object of criticism and comment in both countries. The Socialist and Labor members of the House of Commons protested emphatically against the idea of a state visit, on the ground that it was an official condonation of the tyrannical régime in Russia and an attempt to bolster up the financial credit of that country. The matter came up when James O'Grady, Labor member for Leeds, moved to cut down the appropriation for the expenses of the trip to \$500. Keir Hardie, Socialist member from Merthyr Tydfil, used such strong language in referring to the atrocious deeds of the Russian Government, that he was compelled by the Speaker to withdraw it. In reply, Sir Edward Grey, Secretary for Foreign Affairs, said that the Government accepted the full responsibility of advising the King to pay the visit, and that he hoped that the visit

would have a political effect in improving the relations between the two countries. The general peace of the world depended largely on the friendship of Russia and Great Britain, and to treat the Emperor with marked discourtesy, as suggested by the Laborites, would destroy the value of the Anglo-Russian treaty, and sooner or later lead to war. Mr. Balfour assured the Government that the entire Unionist party approved of Sir Edward's "able and dignified speech," and the Laborite amendment was defeated by a vote of 225 to 59. On their part the Socialist members of the Duma telegraphed their thanks to their comrades in the House of Commons for protesting against the visit of King Edward, on the ground that it was an approval of the Russian administration, and would do nothing toward bringing about a real alliance between the two peoples. The visit is equally offensive to the extreme reactionaries of Russia, who prefer a closer connection with Germany, as they fear the influence of the democratic ideas England. The royal yacht "Victoria and Albert," having on board King Edward, Queen Alexandra and Princess Victoria, left on June 6th for Reval by the way of the Kiel Canal. At Kiel they were welcomed by Prince Henry of Prussia and his wife in behalf of the Kaiser, and the yacht received the royal salutes of forty German warships as she steamed between the two lines in which they were arranged.—A serious and apparently useful discussion of the management of the Russian navy occurred in the Duma in connection with the naval clause of the budget. Premier Stolypin exerted all his power to secure the approval of the item appropriating \$5,500,000 to begin the construction of four new battleships this year, but this item was rejected by a vote of 194 to 78, and the total appropriation cut down from \$43,500,000 to \$36,500,000. In the debate the conduct of the navy during the war was denounced in the severest terms, and its present condition declared to be quite as bad. Vice-Admiral Bostrem, Vice-Minister of Marine, attempted to defend the alleged defects in the construction of the cruiser "Rurik," and to palliate the undeniable fact that the English firm which built the cruiser became acquainted with the secrets of the manufacture of Russian guns,

shells and armor. Mr. Kolubiakin, Constitutional Democrat, declared that the fleet was inadequately manned because the naval officers shirked their sea duty. In 1906, he said, there were 3,211 officers at sea, 881 men short of the required number, while 4,392 were ashore. Mr. Guchkoff, Octobrist, denounced ex-Viceroy Alexieff as the "evil genius who was mainly responsible for the disasters in the Russo-Japanese War," but, instead of being punished, he was today a member of the Council of the Empire and had a voice in naval affairs. The promises of reforms in the navy, repeatedly made by the Ministry and ordered by the Emperor, had not been carried out, and he demanded the appointment of a commission to investigate the condition of the Admiralty and the fleet. Premier Stolypin made no attempt to defend the acts of the past, but asserted that the old evils could not now be repeated because of the existence of the Duma. He feared the refusal of appropriations would leave the country wholly defenseless and prevent officers and men from getting the training on modern vessels.

The Reduction of Postage With England

It was announced simultaneously on June 4th by Postmaster-General Buxton in London and Postmaster-General Meyer in Washington that an agreement had been reached between the United States and Great Britain establishing a rate for letter postage of two cents an ounce between the two countries to take effect on October 1st, 1908. The Universal Postal Union on October 1st, 1907, adopted the international postage rate of five cents for the first ounce and three cents for each additional ounce, with the provision that any two States could form a restricted union adopting a lower rate. Both Postmasters-General believe that the expansion of correspondence caused by the reduction will ultimately compensate for the loss involved during the first few years. It is estimated by the authorities of Great Britain that their loss will for the present amount to \$650,000 a year. John Henniker Heaton, "the father of imperial penny postage," in an interview says: "I attribute our success not to my efforts, but to the influence of Ambassador Reid, Ambassador Bryce, Lord

Blyth and John Wanamaker."—In the House of Commons, Mr. Churchill, President of the Board of Trade, was interpellated in regard to the increased price of meat, which is supposed to be due to the action of the American packers, who are controlling the English market more and more exclusively, and the appointment of a commission was asked for to see what could be done to relieve the British consumer from the tyranny of the trust. Mr. Churchill promised that he would see what could be done regarding "the operations of these great trusts which grew up beyond the protectionist tariff."

The entombment of the body of Zola in the Pantheon excited the furious animosity of the Nationalists, Clericals and anti-Semites, culminating in an attempt to assassinate Major Alfred Dreyfus as he stood beside the bier of the man who had rescued him from his unjust imprisonment. The body of Emile Zola was quietly conveyed by night from the cemetery of Montmartre on the night of June 4th, and in the morning one hundred and fifty thousand people gathered in the vicinity of the Pantheon to witness the ceremonies. The musical part of the program was furnished by the Republican Guard band and the chorus and orchestra of the Conservatory. M. Doumergue, Minister of Public Instruction, delivered an address in honor of Zola, laying much more stress upon his single-handed championship of the cause of Dreyfus than upon his achievements in literature. Altho Zola had been granted the honor of a state funeral by a vote of parliament, and the President and members of the Cabinet were present, the diplomatic corps as a whole failed to respond to the official invitation. The only foreign ambassador present was Henry White, of the United States. At the conclusion of the exercises in the Pantheon a parade of 30,000 troops took place in front of the building. Major Dreyfus and his wife occupied a conspicuous position near the catafalque, and as they were passing out at the conclusion of the ceremony the military editor of the *Gaulois* rose from his seat in the press section and fired two shots from a revolver at Dreyfus from behind. The first

shot went wild, and Dreyfus in turning received the second shot in his left arm, with which he protected his face. This instinctive action saved his life, and the wound is not serious. The assailant was Louis A. Gregori, a man of sixty-four years, and highly esteemed as an authority on army matters. As the shots echoed loudly thru the dome of the building, it was at first supposed that an attack had been made upon President Fallières. Gregori was at once seized by the bystanders and was protected from their wrath with difficulty by the members of the Guard who surrounded him. He declared before a magistrate that he had acted in a moment of exasperation at the sight of the army being compelled to do honor to the man who had maligned it in the Dreyfus affair as well as in the *Débâcle*. It is not known whether his trial will be made the occasion of again opening this celebrated case, but the literary, racial and political controversies have revived with all their old fury. On the whole, the incident has reacted in favor of the Government, in spite of the violence of the Nationalist press. *L'Action Française* concludes its leader with the words: "Do you desire that Zola's body be ejected from the Pantheon? Do you desire to march Dreyfus to the execution block? If so, invoke your king."

Turkey and the Balkan States

In spite of the unfavorable financial conditions prevailing all over the world, the railroad projects in Turkey are booming. Surveys are being made of the route of the railroad which Austria proposes to construct thru the province of Novibazar, from Uvatz in Bosnia to Mitrovitza, where it will connect with the railroad from Salonika. It is believed that it will be necessary to build this on a narrow gauge because it is a mountain railroad, and the expense of its construction on the standard gauge would amount to \$6,000,000 extra. And, besides this, the gauge of the Bosnian railroads would have to be changed, including the new eastern extension, from Serajevo to Uvatz. On this route the cuttings, bridges and the ninety-eight tunnels are on the narrow gauge scale. — The railroad from the Servian border at Merdare to

Stimlia, where it will connect with the Mitrovitza-Salonika railroad connecting the Danube with the Adriatic, seems likely to be constructed, for Austria-Hungary and Germany have now joined with Russia, Italy and France in advising the Porte to permit the surveys of the road to be made. — The Sultan has issued an Iradé sanctioning the proposals of the Turkish Council of Ministers for the construction of four additional sections of the Bagdad railroad. This division of 500 miles includes the most difficult part of the line, the passage thru the Taurus Mountains. According to the plans adopted the Tschakyd Tschai Valley will be used as a pass instead of the Cilician Gates. From Adana the railroad will run eastward across the Euphrates along the foot of the Anti-Taurus range to a point near Mardin. The cost of this extension is estimated at \$45,000,000, which is guaranteed by Turkey. Its construction, like the rest of the railroad, is in the hands of German capitalists and engineers, but it is announced from Berlin that foreign capital will be permitted to participate in the enterprise. — Diplomatic relations have been broken off between Montenegro and Servia on account of the apparent complicity of Crown Prince George of Servia in revolutionary conspiracies against the Montenegrin Government. Last year a large quantity of bombs and ammunition were found stored in Cetinje and fifty-two persons are now on trial for revolutionary conspiracy. According to the testimony of two witnesses the bombs were manufactured in the Servian arsenal in Kraguyevatz by order of Prince George and with the knowledge of King Peter, and were brought from Belgrade to Montenegro by servants of the Servian Government.

Tolstoy's Jubilee

Count Tolstoy will be eighty years old on September 10th, or on August 18th by the Russian calendar. A Russian committee is arranging for the celebration after consulting with the aged author. His views do not allow the sort of celebration with bands, processions and speeches which is usual on such occasions, and a more quiet and reasonable program is arranged, and English people are asked to take part, and doubtless Americans also.

It is only probable that a medal in his honor will be struck, as was done when Carlyle reached that age. An address of congratulation will be prepared and signed by those who have been benefited by his writings. Then a complete edition of his works will be published in English, and a cheap edition in Russian. If the Russian fund subscribed is large enough the estate of Yasnaya Poliana, where he was born and lives, will be purchased of the family and given over to the peasants who occupy it; but this is left, of course, to the Russian admirers alone. For forty years Tolstoy has been one of the great names in European literature, one of the few writers who have influenced public thought. It was before 1870 that his "*La Guerre et la Paix*" appeared in French, as the author was recognized immediately as one who had given such a picture of a whole nation as no other hand could paint. It was filled with a thousand details, and covered faithfully a multitude of characters in all spheres of life. His "*Anna Karenina*," which followed several years later, was immensely read, and its influence was great in literature. But by the time he was fifty years old Tolstoy became dissatisfied with literature and science as vain and fleeting when compared with religion, and he has for many years devoted himself to expounding the teachings of Christ as he understands them, under five commandments: Never be angry; allow yourself neither sexual license nor divorce; take no oaths of service of any kind; do not resist force with force; be a citizen of the world, and not of any one country. These rules are opposed to the teachings of the Russian Church and the laws of the Russian State; and Tolstoy was excommunicated and his writings were forbidden to be printed, and but for his world-wide fame he would have been imprisoned. These rules forbid war, make the soldier or the policeman a criminal. His anarchism is purely philosophical and allows no use of force.

Foreign Notes The complicated franchise system of Prussia, according to which the wealthy and official classes have a permanent influence in the elections, has hitherto accomplished the purpose for which it was devised—that is, the exclusion of

the Socialists from the Diet. The 320,000 Socialist voters have had no representative, while the Conservatives, altho fewer in number, have 150. In the election of June 3d, however, five Socialist members were returned, four from Berlin and one from Hanover.—The Zu Eulenberg case, like the Dreyfus affair, is remarkable for its startling reversals in legal aspects and popular feeling. The Supreme Court has set aside the verdict of the lower court which convicted Maximilian Harden of libel, and the case will be tried again.—The Belgian Chamber of Deputies opens this week, and will begin work upon the treaty for the annexation of the Kongo State. The Government has lost ground slightly by the recent election, its former majority of twelve being now reduced to eight. The Catholics lost two seats and the Liberals three, while the Socialists have gained five. The Socialist campaigners made the most of the financial conditions of the annexation treaty, and demanded compulsory secular education, universal equal suffrage and the reduction and reform of military services.—At Vigneux, France, an attempt by twelve gendarmes to arrest one of the striking stonemasons was resisted by a mob of 200, and in the ensuing fight two workmen were killed and six wounded, and four of the gendarmes were wounded. The funeral of one of the victims was made the scene of a violent labor demonstration, but there was no conflict with the authorities.—The Shah of Persia has left Teheran for his summer palace in the hills, on account of the reports of fresh plots of assassination. The bazaars are closed and the capital is again in a turmoil. The suggestion comes from Russian sources that the time is ripe for foreign intervention to save the country from anarchy.—In Morocco the cause of Mulai Hafid, Sultan of the South, is again in the ascendant. The army of the other Sultan, Abd-el-Aziz, which set out not long ago from Rabat for the reconquest of Fez, has returned discomfited, the tribesmen having deserted their leader, General Bagdani. The wives of Bagdani and his brother were captured by Mulai Hafid, who has advised him that the women would be sold unless he surrenders. General Bagdani will request the intervention of the diplomatic corps to rescue them.

The Ballot as a Whip

BY HORACE BUMSTEAD

LATELY PRESIDENT OF ATLANTA UNIVERSITY

A GOOD many years ago Mr. George W. Cable, in addressing an audience of colored people, said (I quote from memory): "Do not let any political party feel that they are always sure of your vote, nor let any party feel that they can never get your vote." This was good advice, and it begins to look as tho the time was at hand when it would be acted upon by the negroes of this country more extensively than ever before since emancipation.

It was most natural that the newly freed and newly enfranchised negro should for many years vote almost solidly for the party which had given him his freedom and the ballot. Not only gratitude, but the hope of further protection of his rights would impel him to do this, and both of these have been worthy motives.

But what is the situation today? For years the Republican party has been showing a diminishing disposition to do anything for the protection of the negro, and an increasing acquiescence in the placing of disabilities upon him by unfriendly hands. The case has been aggravated by the fact that the negro has not asked for special legislation in his interest, as for a race that wanted to be petted and coddled, but simply for the protection of his ordinary rights of citizenship, as conferred upon him by law, and especially by the war amendments to the United States Constitution, which were secured by the Republican party. Not only has the party as a whole failed in recent years to do anything to preserve his rights, but the most conspicuous and influential Republican leaders have made it clear, either by published utterances or significant silence, that they have no present intention of doing anything. Instead of deeds they are giving him pleasant words about being patient and waiting for time to give him relief, and intimating more or less plainly that hereafter he must work out his own salvation.

Conspicuous among these leaders is the most prominent Republican candidate for the Presidential nomination, Secretary Taft, a man possessing an unusual equipment in many ways for the presidential office. But

he has been a conspicuous representative of the do-nothing policy as regards the negro. He has even condoned the disfranchisement of the negro in the South, and called it "a step forward," because not so bad as "open violence." He has endeavored to build up "Lily White" Republicanism in the South, involving the virtual exclusion of the negro from party counsels in that section, and has spoken to Southern audiences about the negroes as "a class of persons so ignorant and so subject to oppression and misleading that they are merely political children, not having the mental stature of manhood," adding that "their voice in the government (even when not suppressed) secures no benefit to them."

And then there is the Brownsville affair and the joint responsibility of Secretary Taft and President Roosevelt for the dismissal of the colored soldiers. That it was a joint responsibility is clear from Secretary Taft's report in December, 1906, in which he elaborately defends the President's action as just and necessary, and also reveals the fact that the President's order was preceded by and based upon his own (the War Department's) concurrence in General Garlington's recommendation that the soldiers be dismissed.

Whatever the truth may be as regards the soldiers' guilt or innocence, the negro citizen has the same reason for condemning their dismissal, the innocent with the guilty (if, indeed, there were any guilty)—the same reason that many good white people all over the country are finding. And this regardless of the question of color. If, because the soldiers were all colored, the negro suspects that there was race prejudice be-

hind the dismissal, and finds confirmatory evidence of it in the records of those responsible for the dismissal, and so shows resentment, he is not acting irrationally even if he reasons incorrectly. If it had been a regiment of Germans or Irishmen, such we had in the Civil War, race pride and resentment would have been no less quick to assert themselves.

The situation confronting the negro today, then, seems to be this: The Democratic party has robbed him of his rights. The Republican party has acquiesced and refuses to help him. Neither party has any claim on him for support on racial grounds. Whatever debt of gratitude he owed the Republican party has long since been paid. If both parties have sinned against him, the one by oppression and the other by abandonment, he has reason for regarding the Republican party as the greater sinner, being the one responsible for his freedom and enfranchisement, and the one to which he has given a generation of support.

If the negro finds in this situation good ground for using the ballot as a whip, to be laid on the back of the greatest sinner of the two parties, he has many good precedents to justify his action. Massachusetts and New York have repeatedly elected Governors by a similar use of the ballot, and Presidents of the United States have been elected in the same way. The English "suffragettes" are today seeking to punish the Liberal party on the same principle. Indeed, there are few elections where the purpose of punishing somebody—a party, a faction, a candidate—does not find a place among the mixed motives of the voters.

And it is an entirely legitimate motive in certain political crises. The rebuke of wrong-doing is sometimes more important than the approval of well-doing. The defeat of false political friends may sometimes be worth while, even at the cost of supporting declared political enemies. If the negroes of the doubtful Northern States should help to defeat Taft and elect Bryan, no one would misinterpret the meaning of their vote. The Republicans would not be likely to let such a thing happen a second time. The Democrats would concede much to retain their new allies.

The negro is freer today from all party

obligations than he has ever been before, and there are two lines of action on which he may legitimately use his freedom. First, he may use the ballot as a whip to secure from one party or another the rights of which he has been unjustly deprived. In this he would be making his primary object the self-protection of his race from aggressive wrong. He would not be drawing, objectionably, a color line in rallying the members of his race for this purpose—he would be seeking escape from the color line of which he has been made an unwilling victim. If the ballot of universal or general suffrage means anything for the self-protection of suffering or endangered classes in a State, it means that negroes may with the same propriety use the ballot as a whip for the guarding of their civil and political rights as Jews or Germans or Irishmen might for the same purpose, or as manufacturers might use it to protect their industries, or laborers to protect their labor. And of all the interests for which the ballot is supposed to afford protection to the weak, none are more fundamental or more sacred than civil and political rights.

But some negroes agree with those of their white friends who discourage agitation for their rights and advise the policy of patience and waiting for their rights to come to them by and by. Does it follow that such negroes must therefore vote the Republican ticket at the next election? By no means. They have discharged their debt of gratitude to that party. If, then, they are to eliminate the motive of racial self-protection, why should they not choose between the parties as all other people choose—judging men and measures and policies on their merits and voting accordingly? Why may not negroes have diverse opinions on the tariff, the currency, the regulation of trusts, socialism, and territorial expansion, as well as white people? They do have such diverse opinions far more extensively than many people believe; but the solid South and the increasingly unsympathetic North have created a situation that has prevented their free expression. If, then, some negroes decide that they do not care to use the ballot as a whip to safeguard their rights, let them still remember that they are free to vote (wherever they have a vote) like all other

men, and to choose between parties according to their best judgment.

Hitherto Southern Democrats have feared a solid negro vote in the South and to have suppress it; and Northern Republicans have felt so sure of a solid negro vote in the North that the suppression

of that vote in the South has given them little or no concern. If, in the coming election, the negroes act on Mr. Cable's advice, as they now seem likely to do, it cannot but have a very salutary influence both in the North and the South.

BROOKLINE, MASS.

The Cry of Life

BY M. WOOLSEY STRYKER

Oh, that a song might sound again,
As it rang in the dawn when song was young,
When life was new and the heart was strung
To a lusty cry; when women and men
Knew crag and flood and the fierce beast's den!
When the mystical Earth and untamed joy
Of passion and strength made man a Boy,
Who leaped and dared! Whose wondering ken
Held flame and storm! When fear was strange,
And the rushing deed was vivid and bold!
Before the sophists or cynics spake,
When the open world was a wild, free range!
Oh, for the pulses that now grow cold;
Oh, that the dream of power would wake!

So calls the will that longs for more
Than a dull age gives to its noble pain;
But it shall not there in a wild world gain,
By animal quest and a brutal roar,
The fruit that the tree of knowledge bore,
The hope, with its pang, of a task born thru,
The bitter-sweet of a truth to do,
The love that in suffering finds its door.
Up, for the life that is life indeed,
For the eye that sees with a deeper sense,
For the breast that shares with the hungry lip,
For the soul from its savage tether freed--
Almighty life! from the impotence
Of its body, born to God's fellowship.

CLINTON, N. Y.

A Unique Experiment in College Democracy

BY ARTHUR CLEVELAND HALL

PROFESSOR OF ECONOMICS IN KENYON COLLEGE

A RECENT development of student self-government at Kenyon College, Gambier, Ohio, serves to place that little college in the forefront of student democracies. The honor system of examinations has long been in successful operation there, but a similar system has now been applied to the everyday life of the student body in its relations to the faculty and the trustees.

All Kenyon men live together on the beautiful college campus, and not far off are the homes of the faculty. There are no technical or professional schools, and all things favor the growth of democracy, for the students and faculty are on very friendly terms and believe in working together for the good of Kenyon.

The "assembly" is the college folk-moot. All students are members, and every man has one vote. The professors also may be members. It meets regularly once a month, and thru its three main elected committees controls all the activities of the student world.

The athletic departments, the musical, oratorical and dramatic associations, and the college paper, come under the direction of the executive committee, which has always one faculty and seven student members, representing fraternity and non-fraternity groups. Any team or organization going out to represent Kenyon must have the sanction of this committee, both for its membership and destination. If a man is deficient in his studies the faculty member of the committee

objects to him. The committee appoints all business managers, votes all money appropriations, and audits all accounts. It reports each month to the assembly and is bound by certain rules, but has full power within the limits assigned to it. If the assembly should condemn its actions strongly the committee would resign and a new one be elected forthwith.

The second committee of the assembly is the honor committee, which has entire charge of all examinations and written tests. For Kenyon students have bound themselves not to cheat or use any unfair means, and to discountenance any such action by others. For the maintenance of this pledge the assembly elects its honor committee (three seniors, two juniors, one sophomore and one freshman), to keep order in the examination room, try offenders, and, if necessary, report them to the faculty for punishment.

The third committee, whose creation December 1st, 1907, marks the rounding out of the democratic system of student self-government, is called the dormitory committee. It is formed like the executive committee, of seven seniors, but has no faculty member. All elections are entirely in the hands of the assembly, and are believed to be very free from anything like fraternity politics. By the will of the student body this third committee is empowered to maintain proper discipline in the college dormitories, and to see to it that the rules of the trustees and faculty are enforced. The power conferred resembles in some ways that of the old Roman tribunes. If anything is going wrong in dormitories or on the campus, any member of the committee may appear and put a stop to it, and he is in duty bound to do so when information comes to him. If a "rough house" results in damage to college property the committee see to it that the money loss falls on those who had the fun of the destruction, and not on the innocent as well.

Communications to the college treasurer about such matters are kept absolutely secret. The committee has many duties, but perhaps the most important rule to be enforced is that "forbidding the keeping or drinking of intoxicating liquors on college grounds or in college buildings."

For the more serious offenses of whatever kind, "It shall be the duty of the dormitory committee" (to quote from the regulations, which each new Kenyon student signs voluntarily at the first regular meeting of the assembly each year) "to advise the assembly to inflict the following penalties":

(a) "In the first instance, vote of censure by the assembly." "The motion for the vote shall be made by the chairman of the dormitory committee."

(b) "In the second instance, suspension of from one to four weeks from the usual privileges of the college dormitories."

(c) "In the third instance, punishment at the discretion of the faculty."

The members of the committee believe that their chief power lies in the vote of censure by the assembly. In but one instance since the new system began has an offense been serious enough to warrant such censure of the student body, and the immediate result was the public apology of the delinquents. It is probable that the students would prefer to suffer almost any punishment from the faculty rather than face the disapproval, scorn and possible contempt of their fellows in full college meeting. If the student body should refuse to support the dormitory committee and inflict a penalty—what then? In certain instances (most serious offenses) the committee is empowered to carry the case to the college faculty, but it would be much more likely to resign and let another committee be chosen.

So far, in the working of this entire honor system, it seems as if the best and most representative men were elected on all important committees. The students want to govern themselves, much preferring it to inquisitorial oversight. The faculty and trustees prefer it also, for the system works well in practice. Therefore it has been extended even to the enforcement of the liquor prohibition on college grounds. Gambier has no saloons. It means the perpetual referendum of entire classes of evils from the faculty to the student body, which elects its representatives to deal with such things. The work of the faculty is lightened and made much more pleasant, and the removal of all spying and espionage fosters a healthy

growth of sympathy and friendship between professors and students.

An editorial in the college paper voices the general sentiment of Kenyon undergraduates:

"We feel that we have raised both the standard of scholarship and the general tone of the college, and it is certain that the honor system

has roused in every man the personal consciousness of an added dignity in identifying himself as a Kenyon man."

Surely there can be no better training in self-control, no better school for good citizenship, than this democratic system of student self-government for the welfare of their alma mater.

GAMBIER, OHIO.

The Grand Prix and the Derby

BY CHARLES DAWBARN

THE Grand Prix is the great culminating point in the Paris season; it is the high-water mark of fashion and elegance; at the same time, it possesses a real, sporting interest. It is always run in the middle of June. After that the Paris season is supposed to be over; in reality, it exists for another three or four weeks, but shorn of its brilliance and official character. The race has been run for nearly fifty years. The only interval was the year of the Commune, 1871, when people had other and more desperate struggles to think about. It was established by the Duc de Morny, a distinguished courtier and politician. However, he never gave his name to the race as did Lord Derby, who founded the celebrated classic event in England. It is the one occasion in the year when all classes mingle.

The race has often been compared with the English Derby, but in reality there are many points of difference. Across the Straits, the old contests on Epsom Downs is the occasion for a great public holiday by all sorts and conditions of men. Judges conducting assizes have been known to refer darkly to an important event that was taking place on the morrow, which would interfere with the business of the court and necessitate an adjournment. Merchants and managers at the head of great commercial houses receive curious missives from their clerks accounting for their absence on that day. It would seem as if a terrible epidemic had broken out among the staff and their families, confining some to their beds, and carrying off aunts and other

relatives prematurely to their graves, entailing an instant burial. Every one, by hook or crook, endeavors to get off on Derby Day in order to be present on the downs at the hour when the Derby winner is being steered to victory.

The sight on the Epsom road is one of the most extraordinary in the world. All manner of vehicles are out, from the tiny donkey-shay of the humble costermonger to the lordly four-in-hand and motorcars of the plutocrats. In one long, endless procession they sweep out of London on to the great broad expanse of undulating turf, where is held this mighty race that yearly tries the mettle of the best horses in the world. Nor does the Blue Ribbon of the Turf, as it has been called, always fall to an Englishman. Boss Croker won it with an Irish bred horse and other strangers, French or colonial, have, before now, wrested the laurels from native brows. The Derby lacks the elegance of the Grand Prix. The arrangements for the race are much more rough and ready. For instance, there is no charge made to enter the heath. It is free to everybody. Thousands who go there never watch the race at all. They are content to believe that somebody in a pink cap over there has won the Derby; that is quite sufficient for them. It is a popular picnic, and the odd little vehicles that have come from town often convey substantial baskets of provisions. The family forms itself into a group, discusses its viands and comports itself as it would on an ordinary day excursion. A vast number, too, of the poorer elements of the population camp out on the downs all night. Nor

can the wealthy members of society entirely escape from this great, surging, working-class environment. No road is kept to the grand stand, and aristocrats and millionaires have to force their way thru the crowd to this privileged position where is situated the royal box. The King's presence is always a feature of the day. His Majesty arrives in an open barouche drawn by four horses with postilions. He is always greeted with a great roaring welcome by a vast assemblage.

The differences between Grand Prix and Derby are never more clearly shown

rocks in a stormy sea; thousands of arms are uplifted, thousands of hats wave, tens of thousands of handkerchiefs are agitated; it is a wild, delirious moment when this tornado of British enthusiasm is let loose in honor of a sporting King and the king of sports.

In the constitution of the racecourse itself the British model approaches much nearer the American than the French. There is a huge Tattersall's ring, in which the most reputable bookmakers in England cry the odds. There is a perfect Babel of voices before any of the big races

SOME COSTUMES SEEN IN THE PADDOCK ON GRAND PRIX DAY.

than at the lunch in the grand stand on the Surrey downs. It is a curious sight to see well-dressed men and exquisitely gowned women sitting at long tables and clamoring for some attention from over-worked and not over-clean waiters who seem suddenly to have grown deaf and blind. When at last the food is served it is far from being appetizing, more especially as it is served on a table that is innocent of linen. If by chance the King wins, as may very reasonably happen this year, the spectacle is stupendous, overwhelming, extraordinary. There starts from tens of thousands of lips a great, hoarse cry, like the boom of waves on

start, "Three to one, bar none," "Three to one on the field," "Five to four on Persimmon" assail the ears on all sides, uttered by fussy-looking gentlemen in light gray bowlers or black top hats and checks of a surprising pattern, the protruding waistcoat ornamented with a watchchain of unmistakable weight. But it is in the outside bookmaker, the bookmaker who has no place in the ring, that the student of human nature finds most curious and humorous examples. Here is the "Original Old Joe" camped under a big white umbrella, who swears in large letters on a blackboard that he has occupied this identical spot for the last

five-and-twenty years. Then there is Jem Brown, of Battersea, who seems to be equally proud of his antecedents and tells you that he is "the real old firm." A hundred others, mounted on boxes and chairs, proclaim their honesty and their extraordinary acumen in spotting a winner, tho it is just possible that, when paying-out time comes, these blatant gentle-

ting is bigger than ever. More and more money finds its way to the "pari-mutuel," which is the only system allowed in France. The "pari-mutuel" pays and never runs away, and, furthermore, it has the advantage of contributing a large slice of its takings, viz., 12 per cent., to the hospitals and poorhouses of the city. The balance goes to the society which is

THE START FOR THE GRAND PRIX.
General view of the field.

men will be nowhere to be seen. These are some of the sights and sounds of Derby Day in England.

The Grand Prix is a vastly different proposition. Tho a large section of the Parisian population wends its way to the Bois, the crowd that remains outside the gates of the superb race track of Longchamp is as great as that which enters. And be sure that every one who pays his franc and goes upon the "pelouse" (as the racecourse itself is called) does so with the determination to bet, and to have at least five francs on the great race or one of the minor events. The bookmaker has been suppress in France—he is no longer allowed to do business on the course or in the paddock—but the bet-

responsible for the racing. This is the Jockey Club, which, in France, as in England, is an aristocratic and arbitrary body which keeps a sharp eye on jockeys and presides generally over the arrangements of the meeting. A French crowd is apt to be very impatient when its feelings are aroused, and some time ago it burnt down the whole of the "pari-mutuel" booths on the Longchamp course because it was displeased by the decision of one of the stewards. So violent and menacing was the attitude, in fact, that the police and military, as well as firemen, had to be called in to save the grand stands from a like fate. The determined manner in which the crowd crossed from the "pelouse" to the paddock for the purpose of

firing the little wooden buildings reminded some of the older people present of the grim determination of the mob during the Commune.

The Bois, which is one of the loveliest open spaces in Europe, is full of color and animation on Grand Prix Day. Every one of the beautiful avenues in this superb park supports a regiment of people marching either to the racecourse or to some coign of vantage whence they may witness the returning equipages. It is one of the curious delights of the Parisian populace to look at other people enjoying themselves. They will stand by the hour together, admiring the clothes and admiring the carriages of other people. It is a simple joy and it costs nothing; the French are, above all, a frugal people. The "note" of Longchamp is social elegance. The paddock furnishes a delightful spectacle. Under the spreading chestnut trees, covered with white and pink blossom, are to be seen some of the most beautiful women in Europe.

Their gowns are matchless, like their complexions; their hats are perfect dreams of the milliner's art, and their colors are always delicately brought out by the subtly chosen background of the parasol. Grand Prix Day marks a great festival in the annals of fashion; women devote many weeks of thought and sleepless nights to the confection of the gown which is to astonish the feminine world. The Rue de la Paix works its fingers to the bone and its brains to a state of rawness in imagining fine things for the backs of Parisiennes and "les belles Américaines." There is no woman in the world who absorbs with such readiness French fashions and the art of dressing as the fair daughters of Columbia. See them after a few weeks' residence in Paris, and you may hardly distinguish them from the most stylish Frenchwoman. Money and taste have gone hand in hand, and the result is a beauteous picture of the artistic ensemble.

The essential difference between racing

THE PRESIDENT OF THE REPUBLIC AT THE GRAND PRIX.

in France and racing, say, in America, is that the one is a great social pastime and the other is not. There is, of course, in the States no race analogous to that of

among women, also, has vastly increased during the past few years in Paris, and there are several shops, apparently innocently engaged in a confectioner's busi-

THE RETURN OF THE GRAND PRIX WINNER.

the Grand Prix; local handicaps and blue ribbons bear no sort of relation to it. But the chief reason is that horse racing is a society matter in France, whereas in America it has chief interest and concern for a large class of professional race followers; nor are the city poolrooms without a certain influence on the fixtures. The racing man in the States is a race apart, whereas the racing man in France is generally a social personage, who is equally interested in half a dozen other sports.

Betting, however, as I have stated elsewhere in this article, plays a large part in racing in France, as in other countries. Nor has the abolition of the bookmaker stopt tape-betting. On the contrary, there is more than ever; but it is carried on in a clandestine manner. There are certain so-called banking houses in Paris, which are nothing more than turf commission agents, who, under cover of cashing checks and performing other operations of the banking business, really get money "on" for clients. Betting

ness, which, in reality, encourage and record the bets of women.

The home-coming is always a great spectacle after the Grand Prix. There is one tremendous, endless procession of cabs, motors and dogcarts sweeping thru the leafy avenues of the Bois down the majestic Champs Elysées to the broad and splendid Place de la Concorde, which is the spacious antechamber to the town of Paris proper. At night the city is given up to gaiety. In all the chief restaurants tables have been engaged for weeks beforehand, and menus of a special sort are "de rigueur." Along the Champs Elysées the summer music halls resound to the strains of the summer orchestra and to the top note of the summer girl. It is a night of feasting and riot, especially if an Anglo-Saxon horse has carried off the trophy. It seems to give an excellent excuse for a thorogoining celebration. England, indeed, contributes much to racing in France and has contributed much in the past. The best strains are from English blood, and a

large sporting vocabulary has been taken over bodily from the land of Shakespeare, tho to Great Will's credit be it said that he was innocent of the racing jargon now to be found in the mouths of the frequenters of Longchamp as well as the habitués of the Derby and St. Leger in England. "Jockey" has become regularly acclimatized, so has the word "outsider," pronounced "ootsederr," and every French sportsman twists his tongue greedily around the expression "dead-heat," which, alas, he ill treats as if he were a cockney, and delivers as "dead-

eat." Indeed, many of the so-called French victories of late years have simply been those of horses who have spent a portion of their life in French stables and been nourished on French hay. But whether it is the Derby or Longchamp, the best horse invariably wins, for it is a great classic event in which the public at large are passionately interested, and there is never any suspicion of foul play, or of the thousand tricks which in other departments of sport sometimes inspire a doubt as to the genuineness of the performance.

PARIS, FRANCE.

Impotency

BY KATE THOMAS

THERE is so much in this great world.
My soul grows sick with looking at the ways
That wind and knot and part to meet again
And part again and knot and wind and fade.

Children of fashion; children of the streets;
Children of fashion hiding hungry hearts,
Children of fashion steeped in sordid thoughts,
Children of fashion crying for the light,
Children of fashion careless of the dark.
Children of gutters starving for kind words,
Children of gutters starving for dry bread,
Children of gutters steeped in sordid thoughts,
Children of gutters crying for the light,
Children of gutters careless of the dark.

O God! to see the way this heaving mass
Goes by with smiles and tears (and fewer smiles!).
Laughing and cursing (ay, and cursing more!).
What can one puny mind do in the whirl?
What use one weakling arm to sway the tide?
Ho! stand with arms rock-ribbéd! There's a wave
That washes rock to powder. Set your will
In purpose fixt, as is the brain that willed
Fixt in the skull. The sea flings wide a corpse,
And cares not if it rot on putrid sands.

NEW YORK CITY.

A Code of Ethics for Lawyers

[Last year the American Bar Association directed a special committee to prepare a draft of the canons of professional ethics for the use of American lawyers. The committee has submitted the following draft, which will doubtless be accepted by the Bar Association in August. The matter is of such wide interest and great importance that we feel compelled to direct to it the attention of our readers. The committee are Henry St. G. Tucker, Virginia; Lucien Hugh Alexander, Pennsylvania; Justice David J. Brewer, District of Columbia; F. V. Brown, Minnesota; J. M. Dickinson, Illinois; Franklin Ferris, Missouri; W. W. Howe, Louisiana; Thomas H. Hubbard, New York; J. G. Jenkins, Wisconsin; Judge T. G. Jones, Alabama; Alton B. Parker, New York; Geo. R. Peck, Illinois; Francis L. Stetson, New York, and E. R. Thayer, Massachusetts.—EDITOR.]

NO code or set of rules can be framed which will particularize all the duties of the lawyer in the varying phases of litigation or in all the relations of professional life. The following canons of ethics are adopted by the American Bar Association as a general guide, yet the enumeration of particular duties should not be construed as a denial of the existence of others equally imperative, tho not specifically mentioned:

1. *Duties of Lawyers to Courts and Judicial Officers.*—The law enjoins respect for courts and for judicial officers for the sake of the office, and not for the sake of the individual who for the time being administers its functions. A bad opinion of the incumbent, however well founded, cannot justify withholding from him the deference due the office while he is administering it. The proprieties of the judicial station limit the ability of judges to defend themselves, and in the discharge of their duties courts and judicial officers always should receive the support and countenance of the Bar against unjust criticism and popular clamor.

2. *The Selection of Judges.*—It is the duty of the Bar to endeavor to prevent political considerations from outweighing judicial fitness in the selection of judges. It should protest earnestly and actively against the appointment or election of those who are unsuitable for the Bench; and it should strive to have elevated thereto only those willing to forego other employments, whether of a business, political or other character, which may embarrass their free and fair consideration of questions before them for decision. The aspiration of lawyers for judicial position should be governed by an im-

partial estimate of their ability to add honor to the office and not by a desire for the distinction the position may bring to themselves.

3. *Attempts to Exert Personal Influence on the Court.*—Marked attention and unusual hospitality on the part of a lawyer to a judge, uncalled for by the personal relations of the parties, subject both the judge and the lawyer to misconstructions of motive and should be avoided. A lawyer should not communicate or argue privately with the judge as to the merits of a pending cause, and he deserves rebuke and denunciation for any device or attempt to gain from a judge special personal consideration or favor. A self-respecting independence in the discharge of professional duty, without denial or diminution of the courtesy and respect due the judge's station, is the only proper foundation for cordial personal and official relations between Bench and Bar.

4. *When Counsel for an Indigent Prisoner.*—A lawyer assigned as counsel for an indigent prisoner ought not to ask to be excused for any trivial reason, and should always exert his best efforts in his behalf.

5. *Defending One Whom Advocate Believes to Be Guilty.*—A lawyer may undertake with propriety the defense of a person accused of a crime, altho he knows or believes him guilty, and having undertaken it, he is bound by all fair and honorable means to present such defenses as the law of the land permits, to the end that no person may be deprived of life or liberty but by due process of law.

6. *Adverse Influences and Conflicting Interests.*—It is the duty of a lawyer at the time of retainer to disclose to the

lient all the circumstances of his relations to the parties, and any interest in or connection with the controversy, which might influence the client in the selection of counsel.

It is unprofessional to represent conflicting interests in the same suit or transaction, except by express consent of all concerned, given after a full disclosure of the facts. Within the meaning of this canon, a lawyer represents conflicting interests when, in behalf of one client, it is his duty to contend for that which duty to another client requires him to oppose.

The obligation to represent the client with undivided fidelity and not to divulge his secrets or confidences forbids also the subsequent acceptance of retainers or employment from others in matters adversely affecting any interest of the client with respect to which confidence has been reposed.

7. *Professional Colleagues and Conflicts of Opinion.*—A client's proffer of assistance of additional counsel should not be regarded as evidence of want of confidence, but the matter should be left to the determination of the client after frank advice from counsel. A lawyer should decline association as colleague if it is objectionable to the original counsel. If the lawyer first retained is relieved, another may come into the case, but efforts, direct or indirect, in any way to encroach upon the business of another lawyer are unprofessional.

When lawyers jointly associated in a cause cannot agree as to any matter vital to the interest of the client, the conflict of opinion should be frankly stated to him for his final determination as to the course to be pursued. His decision should be accepted unless the nature of the difference makes it impracticable for the lawyer whose judgment has been overruled to co-operate effectively. In this event it is his duty to ask the client to relieve him.

8. *Advising upon the Merits of a Client's Cause.*—A lawyer should endeavor to obtain full knowledge of his client's cause before advising thereon, and he is bound to give a candid opinion of the merits and probable result of pending or contemplated litigation. The miscarriages to which at times justice is sub-

ject, by reason of surprises and disappointments in evidence and witnesses, and thru mistakes of juries and errors of courts, even tho only occasional, admonish lawyers to beware of bold and confident assurances to clients, especially where the employment may depend upon such assurance. Whenever the controversy will admit of fair adjustment, the client should be advised to avoid or to end the litigation.

9. *Negotiations with Opposite Party.*—A lawyer should not in any way communicate upon the subject of controversy with a party represented by counsel; much less should he undertake to negotiate or compromise the matter with him, but should deal only with his counsel. It is incumbent upon the lawyer most particularly to avoid everything that may tend to mislead a party not represented by counsel, and he should not undertake to advise him as to the law.

10. *Business Dealings with Clients.*—Lawyers should avoid becoming either borrowers or creditors of their clients; and they should scrupulously refrain from bargaining about the subject matter of their litigation.

11. *Dealing with Trust Property.*—Money of the client or other trust property coming into the possession of the lawyer should be reported promptly, and except with the client's knowledge and consent should not be commingled with his private property or be used by him.

12. *Fixing the Amount of the Fee.*—In fixing fees, lawyers should avoid charges which overestimate their advice and services, as well as those which undervalue them. A client's ability to pay cannot justify a charge in excess of the value of the service, tho his poverty may require a less charge, or even none at all. The reasonable requests of brother lawyers, and of their widows and orphans without ample means, should receive special and kindly consideration.

In determining the amount of the fee, the following elements should be considered: (1) The time and labor required, the novelty and difficulty of the questions involved and the skill requisite properly to conduct the cause; (2) whether the acceptance of employment in the particular case will preclude the lawyer's appearance for others in cases like-

ly to arise out of the transaction, and in which there is a reasonable expectation that otherwise he would be employed, or will involve the loss of other business while employed in the particular case or antagonisms with other clients; (3) the customary charges of the Bar for similar services; (4) the amount involved in the controversy and the benefits resulting to the client from the services; (5) the contingency or the certainty of the compensation; and (6) the character of the employment, whether casual or for an established and constant client. No one of these considerations in itself is controlling. They are mere guides in ascertaining the real value of the service.

In fixing fees it should never be forgotten that the profession is a branch of the administration of justice and not a mere money-getting trade.

13. *Contingent Fees.*—Contingent fees may be contracted for, but they lead to many abuses and should be under the supervision of the Court.*

14. *Suing a Client for a Fee.*—Controversies with clients concerning compensation are to be avoided by the lawyer so far as shall be compatible with his self-respect and with his right to receive reasonable recompense for his services; and lawsuits with clients should be resorted to only to prevent injustice, imposition or fraud.

15. *How Far a Lawyer May Go in Supporting a Client's Cause.*—Nothing operates more certainly to create or to foster popular prejudice against lawyers as a class and to deprive the profession of that full measure of public esteem and confidence which belongs to the proper discharge of its duties than does the false claim, often set up by the unscrupulous in defense of questionable transactions, that it is the duty of the lawyer to do whatever may enable him to succeed in winning his client's cause.

A lawyer "owes entire devotion to the interest of his client, warm zeal in the maintenance and defense of his cause and the exertion of the utmost skill and ability," to the end that nothing may be taken or withheld from him, save by the rules of law, legally applied. Nevertheless, it is steadfastly to be borne in mind

that the great trust is to be performed within and not without the bounds of the law. The office of attorney does not permit, much less does it demand for any client, violation of law or any manner of fraud or chicanery. No lawyer is justified in substituting another's conscience for his own. A lawyer should not do for a client what his sense of honor would forbid him to do for himself.

16. *Restraining Clients from Improprieties.*—A lawyer should use his best efforts to restrain and to prevent his clients from doing those things which the lawyer himself ought not to do, particularly with reference to their conduct toward courts, judicial officers, jurors, witnesses and suitors. If a client persists in wrongdoing to the detriment of the administration of justice, the lawyer should terminate their relation.

17. *Ill Feeling and Personalities Between Advocates.*—Clients, not lawyers, are the litigants. Whatever may be the ill feeling existing between clients, it should not be allowed to involve counsel in their conduct and demeanor toward each other or toward suitors in the case. All personalities between counsel should be scrupulously avoided. In the trial of a cause it is indecent to allude to the personal history or the personal peculiarities and idiosyncrasies of counsel on the other side. Personal colloquies between counsel which cause delay and promote unseemly wrangling should also be carefully avoided.

18. *Treatment of Witnesses and Litigants.*—A lawyer should always treat adverse witnesses and suitors with fairness and due consideration, and he should never minister to the malevolence or prejudices of a client in the trial or conduct of a cause. The client cannot be made the keeper of the lawyer's conscience in professional matters. He cannot demand as of right that his counsel shall abuse the opposite party or indulge in offensive personalities. Improper speech is not excusable on the ground that it is what the client would say if speaking in his own behalf.

19. *Appearance of Lawyer as Witness for His Client.*—When a lawyer is a witness for his client, except as to merely formal matters, such as the attestation or custody of an instrument and the like.

*Hon. James G. Jenkins, of the committee, dissents from Canon 13, as he is opposed to contingent fees under any circumstances.

he should leave the trial of the case to other counsel. Except when essential to the ends of justice, a lawyer should avoid testifying in court in behalf of his client. Similarly it is improper for a lawyer to assert in argument his personal belief in his client's innocence or the justice of his cause.

20. *Newspaper Discussion of Pending Litigation.*—Newspaper publications by a lawyer as to pending or anticipated litigation may interfere with a fair trial in the courts and otherwise prejudice the due administration of justice. Generally they are to be condemned. If the extreme circumstances of a particular case justify a statement to the public, it is unprofessional to make it anonymously. An *ex parte* reference to the facts should not go beyond quotation from the records and papers on file in the court; but even in extreme cases it is better to avoid any *ex parte* statement.

21. *Punctuality and Expedition.*—Lawyers owe it to the courts and to the public, whose business the courts transact, as well as to their clients, to be punctual in attendance, and to be concise and direct in the trial or disposition of their causes. They should try their cases on the merits, and should not resort to any legal technicalities not necessary to establish the merits.

22. *Candor and Fairness.*—The conduct of the lawyer before the Court and with other lawyers should be characterized by candor and fairness.

It is not candid or fair for the lawyer in opening his case to mislead his opponent by concealing or withholding positions upon which he then intends finally to rely; or in argument to assert as a fact that which has not been proved; or knowingly to misquote the contents of a paper, the testimony of a witness, the language or the argument of opposing counsel, or the language of a decision or a textbook; or with knowledge of its invalidity, to cite as authority a decision that has been overruled, or a statute that has been repealed.

It is unprofessional and dishonorable to deal other than candidly with the facts in taking the statements of witnesses, in drawing affidavits and other documents, and in the presentation of causes.

A lawyer should not offer evidence

which he knows the Court should reject, in order to get the same before the jury by argument for its admissibility, nor should he address to the judge arguments upon any point not properly calling for determination by him. Neither should he introduce into an argument, suitably addressed to the Court, remarks or statements intended to influence the jury or bystanders.

These and all kindred practices, appropriately termed "pettifoggery," are unprofessional and unworthy of an officer of the law charged, as is the lawyer, with the duty of aiding in the administration of justice.

23. *Attitude Toward Jury.*—All attempts to curry favor with juries by fawning, flattery or pretended solicitude for their personal comfort are unprofessional. Suggestions of counsel, looking to the comfort or convenience of jurors, and propositions to dispense with argument, should be made to the Court out of the jury's hearing. A lawyer must never converse privately with jurors about the case; and both before and during the trial he should avoid communicating with them, even as to matters foreign to the cause.

24. *Right of Lawyer to Control the Incidents of the Trial.*—As to incidental matters pending the trial, not affecting the merits of the cause, or working substantial prejudice to the rights of the client, such as forcing the opposite lawyer to trial when he is under affliction or bereavement; forcing the trial on a particular day to the injury of the opposite lawyer when no harm will result from a trial at a different time; agreeing to an extension of time for signing a bill of exceptions, cross interrogatories and the like, the lawyer must be allowed to judge. In such matters no client has a right to demand that his counsel shall be illiberal, or that he do anything therein repugnant to his own sense of honor and propriety.

25. *Taking Technical Advantage of Opposite Counsel; Agreements With Him.*—A lawyer should not ignore known customs or practice of the Bar or of a particular Court, even when the law permits, without giving timely notice to the opposing counsel. As far as possible, important agreements, affecting the rights of clients, should be reduced to

writing; but it is dishonorable to avoid performance of an agreement fairly made because it is not reduced to writing, as required by rules of Court.

26. *Professional Advocacy Other Than Before Courts.*—A lawyer openly and in his true character may render professional services before legislative or other bodies, regarding proposed legislation and in advocacy of claims before departments of the government, upon the same principles of ethics which justify his appearance before the courts; but it is unprofessional for a lawyer so engaged to conceal his attorneyship, or to employ secret personal solicitations, or to use means other than those addressed to the reason and understanding to influence action.

27. *Advertising, Direct or Indirect.*—The most worthy and effective advertisement possible, even for a young lawyer, and especially with his brother lawyers, is the establishment of a well-merited reputation for professional capacity and fidelity to trust. This cannot be forced, but must be the outcome of character and conduct. The publication or circulation of ordinary simple business cards, being a matter of personal taste or local custom, and sometimes of convenience, is not *per se* improper. But solicitation of business by circulars or advertisements, or by personal communications or interviews, not warranted by personal relations, is unprofessional. It is equally unprofessional to procure business by indirection thru touters of any kind, whether allied real estate firms or trust companies advertising to secure the drawing of deeds or wills or offering retainers in exchange for executorships or trusteeships to be influenced by the lawyer. Indirect advertisement for business by furnishing or inspiring newspaper comments concerning causes in which the lawyer has been or is engaged, or concerning the manner of their conduct, the magnitude of the interests involved, the importance of the lawyer's positions, and all other like self-laudation, defy the traditions and lower the tone of our high calling, and are intolerable.

28. *Stirring Up Litigation, Directly or Thru Agents.*—It is unprofessional for a lawyer to volunteer advice to bring a

lawsuit, except in rare cases where ties of blood relationship or trust make it his duty to do so. Not only is stirring up strife and litigation unprofessional, but it is disreputable in morals, contrary to public policy and indictable at common law. No one should be permitted to remain in the profession who hunts up defects in titles or other causes of action and informs thereof in order to be employed to bring suit, or who breeds litigation by seeking out those with claims for personal injuries or those having any other grounds of action in order to secure them as clients, or who employs agents or runners for like purposes, or who pays or rewards, directly or indirectly, those who bring or influence the bringing of such cases to his office, or who remunerates policemen, court or prison officials, physicians, hospital attaches or others who may succeed, under the guise of giving disinterested friendly advice, in influencing the criminal, the sick and the injured, the ignorant or others, to seek his professional services. A duty to the public and to the profession devolves upon every member of the Bar, having knowledge of such practices upon the part of any practitioner, immediately to inform thereof to the end that the offender may be disbarred.

29. *Upholding the Honor of the Profession.*—Lawyers should expose without fear or favor before the proper tribunals corrupt or dishonest conduct in the profession, and should accept without hesitation employment against a member of the Bar who has wronged his client. The counsel upon the trial of a cause in which perjury has been committed owe it to the profession and to the public to bring the matter to the knowledge of the prosecuting authorities. A lawyer should aid in guarding the Bar against the admission to the profession of candidates unfit or unqualified because deficient in either moral character or education. He should strive at all times to uphold the honor and to maintain the dignity of the profession and to improve not only the law, but the administration of justice.

30. *Justifiable and Unjustifiable Litigations.*—A lawyer must decline to conduct a civil cause or to make a defense

when convinced that the purpose is merely to harass or injure the opposite party, or to work oppression and wrong.

He may counsel and maintain only such actions and proceedings as appear to him just. His appearance in court should be deemed equivalent to an assertion, on his honor, that in his opinion his client is justly entitled to some measure of relief refused by his adversary. Upon that measure he may insist, tho he disapprove his client's character.

31. *Responsibility for Litigation.*—No lawyer is obliged to act either as adviser or advocate for any person who may wish to become his client. He has the right to refuse retainers. Every lawyer must decide what business he will accept as counselor, what causes he will bring into court for plaintiffs, what cases he will contest in court for defendants. The responsibility for advising questionable transactions, for bringing questionable suits, for urging questionable defenses, is the lawyer's responsibility. He cannot escape it by urging as an excuse that he is only following his client's instructions.

32. *The Lawyer's Duty in Its Last Analysis.*—No client, corporate or individual, however powerful, nor any cause, civil or political, however important, is entitled to receive, nor should any lawyer render, any service or advice involving disloyalty to the law whose ministers we are, or disrespect of the judicial office, which we are bound to uphold, or corruption of any person or persons exercising a public office or private trust, or deception or betrayal of the public. When rendering any such improper service or advice, the lawyer lays aside his robe of office, and in his own person invites and merits stern and just condemnation. Correspondingly, he advances the honor of his profession and the best interests of his client when he renders service or gives advice tending to impress

upon the client and his undertaking exact compliance with the strictest principles of moral law. He must also observe and advise his client to observe the statute law, tho until a statute shall have been construed and interpreted by competent adjudication, he is free and is entitled to advise as to its validity and as to what he conscientiously believes to be its just meaning and extent. But above all a lawyer will find his highest honor in a deserved reputation for fidelity to private trust and to public duty, as an honest man and as a patriotic and loyal citizen.

OATH OF ADMISSION.

I do solemnly swear:

I will support the Constitution of the United States and the Constitution of the State of;

I will maintain the respect due to Courts of Justice and judicial officers;

I will counsel and maintain only such actions, proceedings and defenses as appear to me legally debatable and just, except the defense of a person charged with a public offense;

I will employ for the purpose of maintaining the causes confided to me such means only as are consistent with truth and honor, and will never seek to mislead the judge or jury by any artifice or false statement of fact or law;

I will maintain the confidence and preserve inviolate the secrets of my client, and will accept no compensation in connection with his business except from him or with his knowledge and approval;

I will abstain from all offensive personality, and advance no fact prejudicial to the honor or reputation of a party or witness, unless required by the justice of the cause with which I am charged;

I will never reject, from any consideration personal to myself, the cause of the defenseless or oppressed, or delay any man's cause for lucre or malice.
So help me God.

The Dead Premier and the New Government in England

BY JUSTIN McCARTHY

I CANNOT call to mind during my recollections of English public life any event which called forth a more thoro sentiment of national regret than that which was made manifest on the death of Sir Henry Campbell-Bannerman. I can indeed recall to mind the deaths of greater statesmen, of men whose careers must leave a deeper imprint on the history of these countries and of the civilized world, but I cannot remember the passing away of any political leader whose death was followed by such an outburst of genuine sorrow from political opponents and political followers alike.

The late Prime Minister appears to have been one of those rare human beings who thruout a long and active career never made an enemy. Not that he was in the least degree a man to make cau-

tious or crafty concessions with the object of effecting here and there some passing compromise with political antagonists. Sir Henry Campbell-Bannerman never was known to give way, never was expected to give way, on any question of principle. But he had a sweet and genial nature, a generous consideration for the feelings of others, and a gift of quiet, sympathetic and winning humor which played with modulating influence upon the tempers of even his most extreme parliamentary and political adversaries.

All this would not have been much to be wondered at if the late Prime Minister had been merely an easy-going, kind-hearted man whose principal object was to get quietly thru the duties of his office without causing any particular trouble to the party in Opposition. But we all know that this was not by any means the characteristic of Sir Henry Campbell-Bannerman's statesmanship. Thruout his whole official career he was engaged in the carrying of measures, especially Liberal and progressive, directly devoted to the promotion of the most advanced principles of Liberal and popular government and to the political equality of all classes. For once at least it might literally be said that the representatives of all political and social parties, orders and classes in Great Britain and Ireland laid their funeral flowers on one Prime Minister's grave.

The newly constituted administration had soon to set itself to some of its most trying work. One very encouraging symptom for the prospects of the Cabinet was the very large, the almost overwhelming, majority obtained for the second reading of the licensing measure, the measure which aims at establishing some wholesome restriction on the drink traffic of these countries. Mr. Asquith, the new Prime Minister, and his colleagues have to be congratulated on this great success, which to the last seemed somewhat doubtful. It means, of course,

T. P. O'CONNOR.

the acceptance of the whole principle of this measure by the representative chamber, and the remainder of the work, so far as the House of Commons is concerned, will be the adjustment of all the various details of the bill and its completion as a legislative measure. Then the Licensing bill will go to the House of Lords, and it is entirely in the power of the House of Lords to bring the work of the Government thus far to complete frustration for the present. If the majority of the peers should make up their minds to adopt this course the Commons can either send the measure back again in the same form to the hereditary chamber or can appeal to the country by means of a general election and leave it to the constituencies to say whether or not the Liberal party are to return to power and begin a new struggle with the Tory peers. Thus far, however, Mr. Asquith and his colleagues have won a very distinct victory, but then it must be owned that there have been many remarkable evidences in these recent days of the sudden reaction which has apparently begun to set in against some of the essential principles of the Liberal party.

The complete defeat of Mr. Winston Churchill at Manchester has borne striking testimony to the existence of this sudden reaction. It may be interesting to my American readers to take some notice of the part played during this election and during Mr. Winston Churchill's subsequent candidature for the constituency of Dundee in Scotland by the Suffragettes, as they are called, the organization of women advocates for woman's suffrage. These ladies, or at least those of them who habitually take part in public agitation, have pursued Mr. Churchill with an extraordinary vehemence and with many odd forms of hostile demonstration.

Now, Mr. Churchill is himself in favor of the principle of woman's suffrage, but the position taken by the Suffragettes is that he now holds a place in an administration which has not adopted the principle of woman's suffrage, and that therefore they are bound to oppose him, just as if he were one of its proclaimed enemies. Therefore organized numbers of their body have been hunting him up and down wherever he made his movements

MRS. CAMPBELL-PRAED.

in Manchester or in Dundee, and doing their level—or rather their very irregular—best to prevent him from being heard at a public meeting, even if they cannot prevent him from coming on a platform or standing at an open window to address a crowd.

One ingenious and persistent lady invented a plan of her own and carried it into execution for the purpose of accomplishing this object. She obtained a railway bell of huge dimensions, and, carrying this in her hands, she followed Mr. Churchill wherever he made his appearance, and persisted in ringing the bell with passionate vehemence, so as to drown the sound of his voice whenever he began to speak. When the police captured the bell and removed for the time this particular lady, some one of her organized companions immediately after came forward and sounded another loud timbrel with the same motive at heart. Now, Mr. Churchill is not the sort of man who could take much pleasure in a struggle of this ludicrous and rather humiliating kind. Nobody in or out of the House of Commons could have more of

genuine courage than he, but he has not been much accustomed, I should think, to this method of political warfare, a variety of bell ringing which even Edgar Allan Poe never appears to have had sounded in his ears, and he must have often sincerely wished that he had some ready means "to silence that dreadful bell." All the time, however, Mr. Churchill himself felt quite certain as to the result of the contest—certain that he must win, and must win even by a very large majority. So of course the result proved, and, altho the Liberal majority was not so great as on former occasions when the contest was only between Radical and Tory, it was indeed very substantial and even very large in a struggle where there were four competitors, one of them being a representative of the Labor party. My countrymen in the United States will have read with delight the announcement of the fact that Mr. Churchill, in the speech which he delivered after the declaration of the poll, proclaimed that his victory was a victory for Ireland as well.

The new Prime Minister has opened his official career under apparently very happy auspices. His budget speech has been in every sense very successful, and it is made memorable in England's financial history by the fact that it introduces for the first time the measure so long yearned for and looked for and so often promised—the measure for the establishment of an old age pension fund. Such a measure was in more recent days first promised by Mr. Chamberlain, but it was only promised, and no practical step was taken to make it a performance. The whole question had been arousing agitation during many years, but nothing really had been done to make it more than a mere theme of discussion until Mr. Asquith obtained his opportunity for making it the subject of legislative action. The Government have also carried the second reading of their Licensing bill by a substantial majority, despite the tremendous trade interests which naturally set themselves against any such measure, and thus far, therefore, we have not seen much practical result coming from the threatened political reaction.

A very timely tribute has been paid to the political career and personal charac-

ter of Sir Henry Campbell-Bannerman in the small volume just given to the world by Mr. T. P. O'Connor, and which Messrs. Hodder & Stoughton, of London, have published. "T. P.," as he is familiarly called in London, has devoted the whole of his working lifetime to a combination of political movement and newspaper writing. By his constant attendance in the House of Commons, where he is one of the most ready, vigorous and brilliant debaters, he has unceasing opportunities of studying the characteristics of political leaders and his descriptions of this order have long won for him a distinct and peculiar reputation. He had for many years been a most sincere admirer of the late Prime Minister, to whom, indeed, he had been closely attracted long before Sir Henry Campbell-Bannerman had become recognized as a great rising statesman by the outer public or even by the general opinion of the House of Commons. Of late years "T. P." had been in very close and friendly relationship with Campbell-Bannerman and knew, as some others of us did, of that thoro devotion to the cause of Ireland's Home Rule, which belonged to the late Premier before it had found opportunity of making itself known even to the majority of the House of Commons.

"T. P." therefore has much light to shed on the subject of his book, which not many political writers now could have poured upon it, and the work is accomplished in its author's happiest style. It is actually a narrative of the life of its hero, but it is also something much more than that—it brings the man himself, the inner man, fully and clearly before the mind of the reader, back to the living world and into companionship with all who study and appreciate its pages. It is therefore sure to find an equal welcome from those of the outer world who knew nothing of Campbell-Bannerman but from the pages of newspapers, and those who knew him personally and had ample opportunities of observing him and studying him in all his paths of life. The volume is rich in characteristic anecdotes, and I may add is brought out in excellent style and sold at a very cheap price.

The extreme Conservatives, and more

especially those of the north of Ireland, are at present endeavoring to arouse a sensational clamor against the policy of Home Rule. There is perhaps a hope coming up in their breasts that the recent reaction against Liberalism in England might be turned to practical account for such a purpose. But such a hope on their part is the most utter delusion. I am glad to be able to assure my countrymen in the United States that the prospects of Home Rule never looked so favorable as they do at the present moment. I have had the most gratifying assurances from men in the center of English political life in many parts of the country that the feeling against Home Rule for Ireland—I mean the old-fashioned instinct of dread and hostility for the principle of Ireland's self-government—is becoming a mere unmeaning tradition among the great majority of the English people. The difficulties in the way of the present Government come from entirely different sources and I am well convinced that Mr. Asquith and his colleagues will believe they have an easy time before them, if their most formidable enemies were the enemies of Home Rule.

I have just been reading the latest novel of Mrs. Campbell Praed, published by Cassell & Co., who are publishers in New York as well as in London. This story is called "By Their Fruits," and it is in every sense a decidedly remarkable novel. According to my thinking, it is, on the whole, the most remarkable and the most original novel Mrs. Praed has yet brought out, and its heroine is certainly one of the most charming,

noble-minded woman figures in our recent literature, at once poetically ideal and yet thoroly lifelike and real. The central idea of the story is, I take it for granted, likely to be keenly criticised, for it makes a certain strain on the faith of many readers. It is founded on the existence of two twin sisters who are perfectly alike in form and feature, equally beautiful, equally symmetrical and not to be distinguished one from the other when seen apart even by their nearest friends and closest relatives, and who yet are thoroly unlike, are actual contrasts in all qualitates of mind and heart, intellect and feeling, tastes and manners. The one is as thoroly corrupt in morals and vulgar in tastes as the other is exquisitely pure of heart, refined and exalted in intellect. I do not, however, intend to expound the story here or to enter into any criticism of its possibilities and its impressions. I only desire to call the attention of my American readers to the fact that "By Their Fruits" is well deserving of prompt and close attention at a time when the tendency of fiction is certainly not to occupy itself with the production of too many novels likely to arouse an earnest and absorbing interest. Besides the two sisters, the heroine and the anti-heroine, if I may venture so to call them, there are some other striking figures in the novel—one, for instance, that of Barrington Voss, the exponent of scientific philosophy, whose part in the story I shall not venture to describe, because any want of sufficient caution in doing so would reveal in advance too much of the plot.

LONDON, ENGLAND.

The Penalty of Progress

BY EDWARD A. MOSELEY

SECRETARY OF THE INTERSTATE COMMERCE COMMISSION

IT is impossible for me to give the subject of industrial accidents exhaustive treatment within the necessarily brief limits of an article of this character, nor shall I attempt it. I can only hope to indicate the proportions of a problem which, in my judgment, is of transcendent importance in its bearing upon our welfare as a nation, and point out what has been done toward its solution in the comparatively limited sphere of federal activity.

Society cannot be indifferent to the need of its widows; it cannot safely ignore the cry of children made fatherless by methods and machines which typify our present wonderful industrial development. If the elements of national vitality, prosperity and happiness are sapped to produce such development, it is purchased at too great a price; and in our strenuous attempts to write down industrial results in big figures it is high time we paused to count the cost in human life and limb.

The most commendable feature of the Roosevelt administration, the fact that stands out most prominently as entitling it to popular approval, is the consistent effort that has been made to awaken the public conscience in industrial matters and secure justice for wage-earners. The keynote of this effort was struck by the President in his Georgia Day speech at Jamestown, when, in discussing the question of industrial accidents, he said:

"Legislation should be had, alike from the nation and from the States, not only to guard against the needless multiplication of these accidents, but to relieve the financial suffering due to them. . . . It is neither just, expedient nor humane, it is revolting to judgment and sentiment alike, that the financial burden of accidents occurring because of the necessary exigencies of their daily occupation should be thrust upon those sufferers who are least able to bear it, and that such remedy as is theirs should only be obtained by litigation which now burdens our courts."

The remedy proposed by the President is a workmen's compensation. He rightly judges that only by increasing the financial responsibility of employers for the

death or injury of their employees can industrial accidents be reduced to the limits of the unavoidable. Said the President:

"Congress should adopt legislation providing limited but definite compensation for accidents to all workmen within the scope of the Federal power, including employees in navy yards and arsenals. Similar legislation should follow thruout the States. The old and inadequate remedy of suit for negligence would then gradually disappear. Such a policy would mean that with increased responsibility of the employer would come increased care, and accidents would be reduced in number."

One who has given but little thought to the subject may think the President's language somewhat radical, even revolutionary. Careful consideration, however, will convince an impartial investigator that Mr. Roosevelt has not overstated the injustice which society imposes upon wage earners and their families by requiring them to bear the whole burden of industrial accidents; and the remedy proposed, namely, a definite compensation act, is, as the President well said, only a step toward securing "fair and equitable treatment for each and every one of our people."

It is well known that the constantly recurring accidents in all industrial occupations result in a certain constant ratio of killed and injured, which is known as the "professional risk" of the employment. In Great Britain and the countries of Continental Europe it is the theory that this risk should be borne by the employer, since the labor of the employee is an absolutely necessary factor in the conduct of industry and the employer derives all his profit therefrom. The employee is, therefore, entitled to compensation for any damage which he may sustain (affecting his earning power or his ability to maintain himself and his dependents) while in the exercise of his vocation. This theory finds its legal expression in the Employers' Liability and Workmen's Compensation Acts of Great Britain, and in numerous statutes modifying the common law rules of master

and servant in Germany, France, Switzerland, and other countries of Continental Europe. There is no question about the compensation to which an injured workman is entitled and he receives it without recourse to an action at law.

In the United States, however, altho he is theoretically endowed with greater political power than in any other country on earth, the wage worker has had no such protection. He has been forced to go into court to obtain compensation for injuries received as an incident of his employment, and he labored under the additional disadvantage of having little or no statutory protection, especially in those employments that came within the jurisdiction of the federal courts, such as work for interstate common carriers. In such cases a maimed workman must show that his injury undoubtedly was caused by the negligence of his employer, and he must do this under common law rules that placed the employer practically beyond the reach of liability.

Reference to a leading case, namely, *Baltimore & Ohio Railroad Company v. Baugh*, 149 U. S., 368, will illustrate the disabilities under which railroad employees have labored and emphasize the need of federal legislation for their protection. Baugh was a locomotive fireman, who received an injury thru the negligence of his engineer. He began an action for damages against the Baltimore & Ohio Railroad Company, his employer, in one of the courts of the State of Ohio, but the defendant, claiming citizenship in Maryland by reason of its incorporation in that State, obtained a removal of the cause to the Circuit Court of the United States for the Southern District of Maryland. That court, following the decisions of the Ohio courts, gave Baugh a judgment for \$6,750, but the railroad company appealed the case to the Supreme Court of the United States, where the judgment of the lower court was reversed on the ground that, because of its inter-

state character, the liability of the railroad company must be determined by the general law and not by the decisions of the Supreme Court of the State of Ohio. Under the general law, Baugh could obtain nothing, altho under the law as interpreted by the Supreme Court of the State of Ohio he had been awarded a verdict to the amount of nearly seven thousand dollars. We may thus observe the paradoxical condition that an inter-

EDWARD A. MOSELEY,

state railroad in the State of Ohio may incur no liability for the death or injury of an employee, while an employee of a parallel intrastate road who might be killed or injured under precisely similar conditions would be awarded damages.

The existence of such conditions as this early attracted the attention of Mr. Roosevelt, and in his first message to Congress, December 2, 1902, he recommended the enactment of an employers' liability law. This recommendation was

repeated in subsequent messages, and finally resulted in the passage of the act of June 11, 1906, which came before the Supreme Court of the United States to determine its constitutionality, the right of Congress to pass such a law having been contested by the railroads.

Let us briefly consider the financial burden imposed upon railroad employees by the casualties which are an incident of their calling. It is well known that employees in railroad train service are unable to procure insurance in any of the old line companies, except at rates that are practically prohibitive, while most of the companies absolutely refuse to accept such risks under any consideration. Certain of the companies will write five, ten and fifteen year endowment policies for switchmen at premiums based upon a twenty year advance in age; thus, for instance, a switchman, aged twenty-five years, may obtain such a policy by paying the forty-five year premium rate. Inasmuch as insurance premium rates are based upon broad observation and are always the result of careful and accurate consideration, this fact is vastly significant. It means that the man who embraces the occupation of railroad switchman thereby at once cuts twenty years off his reasonable expectancy of life. If there is any compensating advantage in this occupation to offset the horror of this grim fact, the writer has failed to discover it in more than twenty years' close observation of the conditions of railway labor.

Being denied the benefits of ordinary insurance, railroad employees have been compelled to establish and maintain insurance societies of their own. These societies are never called upon to pay death claims as a result of old age. Their payments, however, on account of railroad accidents are surprisingly large, and in most of the organizations represent a major portion of the total claims paid. In the year 1906 the Brotherhood of Railroad Trainmen, with a membership of 82,937, composed of conductors, brakemen, switchmen and baggagemen, paid 1,350 claims, amounting to a total of \$1,671,548.96. More than two-thirds of these claims, or 927 of the whole number, representing a cash total of considerably more than a million dollars, were

paid as a result of deaths and disabilities caused by railroad accidents. During the year ending June 30, 1907, the Brotherhood of Locomotive Firemen and Enginemen, with a membership of about 63,000 engineers and firemen, paid 663 death and disability claims, amounting to \$947,100. More than 51 per cent. of these claims, or 340 of the whole number, representing a cash payment of \$489,500, were paid on account of deaths and disabilities caused by railroad accidents. The Switchmen's Union of North America is a comparatively small organization, with membership confined to switchmen employed in railroad yard service. Last year this organization paid 179 death and disability claims. Three-fourths of these claims, or 128 of the whole number, were paid for deaths or disabilities incurred by members while in the ordinary discharge of their vocation!

Why should this enormous toll of life and treasure be exacted from railroad employees? Does the efficient operation of the nation's splendid transportation system require that this great burden should remain where it has been? Suppose we admit that the terrible sacrifice of lives and limbs is a necessary concomitant of railroad operation. Suppose we resign ourselves with Oriental fatalism to the belief that our transportation Juggernaut must continue to crush out the lives of its operatives without abatement. Even then, can we excuse ourselves for saddling upon those operatives the financial burden of providing for the needs of their widows and orphans, made such by the very exigencies of the industry itself? Is it not more to the point, and more akin to justice, that this burden should be assumed by the transportation industry, and thru it, by society as a whole?

The necessary factors of railroad operation are sentient and insentient; human beings and the tools and materials with which they work. Both are subjected to wear and tear, both are wasted in the performance of their functions. The railroads bear the expense of repairing the waste of their insentient instruments of operation, the wear and tear of roadbed and track, bridges and buildings, locomotives and cars; but for their sentient instruments of operation they have

no concern. The waste of human life and limb, the wear and tear of that active, intelligent army of human beings whose labor alone makes their operation possible is not a necessary item in the expense account of railroads. They maintain a fund for the replacement of all the insentient factors of operation that are worn out or wrecked and have to be consigned to the scrap heap, but the human being that is wrecked as a consequence of his professional risk so as to make him unfit for further service is cast aside, and the carrier would assume no responsibility whatever for his condition. He must assume his own risk, must bear his own damage as tho it had occurred by reason of his fault or his negligence, when, as a matter of fact, his damage is as much a result of the operation of the property as is the damage to locomotives and cars, bridges and buildings, roadway and track, for all of which the carrier provides without question. As was said by Professor Bushnell in a thought-provoking article calling attention to the alarming increase in the number of abnormal dependents in the United States, "Soldiers suffer because they are professional destroyers, but members of this great industrial army are struck down every year in this country because they are producers. This is the price they have to pay for the privilege of earning their bread in serving civilization."

It is to the everlasting credit of President Roosevelt that he has perceived the essential injustice of this situation and has earnestly endeavored to correct it, not alone by advocating the passage of employers' liability and workmen's compensation acts, but by insisting upon a rigid enforcement of Federal statutes calculated to reduce the number of accidents, as well as pointing out the need of strengthening or supplementing such legislation in the interest of greater safety. The safety appliance act of 1893, for the better protection of railroad employees in coupling and uncoupling cars, has been vigorously enforced by the administration under the direction of Mr. Roosevelt; indeed, had it not been for the work of Senator Knox, then Attorney-General, in securing action by the Supreme Court of the United States in the Johnson case, the humane purpose of

this beneficent law would have been largely defeated. This was the first instance wherein the Federal Government intervened in a private suit for the purpose of preserving the integrity of an Act of Congress, and to both the President and Senator Knox a debt of gratitude is due for inaugurating the proceedings in this case and pushing them to a successful conclusion. There can be no doubt that many lives have thus been saved to the nation that would otherwise have been wasted.

Regulation of the hours of labor of railway employees in train service is another matter that has been urged upon Congress by the President, for the purpose of reducing the number of lives lost in railroad accidents. After vigorous opposition by the railroads thru two sessions of Congress a law limiting the hours of labor of employees in train service was placed on the statute books. This law became effective on the 4th of March, 1908.

A law requiring the use of block signals on railroads engaged in interstate commerce is another measure that has been firmly advocated by the administration. As a measure for the prevention of collisions the enforcement of a space interval between trains, which will be brought about by the enforcement of a proper block signal system, is a matter of paramount importance. The railroads have opposed the enactment of such legislation on the score of expense, but when its vast possibilities in the way of saving human life are taken into consideration, it would seem that arguments of this character should have little weight. Again, the matter of expense has been greatly overestimated by the railroads, as the bill for the regulation of this matter, which has the support of the administration, is so formulated as to provide that the item of expense shall not be unduly burdensome upon any particular carrier. In order that Congress may have full information on this subject so as to enable it to legislate intelligently a joint resolution was past directing the Interstate Commerce Commission to investigate and report on the use of and necessity for block signal systems and appliances for the automatic control of railway trains, and an appropriation of \$50,-

ooo dollars was granted the Commission to enable it to make experimental tests of such block signal systems and appliances. Under the authority of this resolution the Commission appointed a board of experts to make a thoro investigation of the whole subject.

All these matters are steps in the direction of lessening the number of industrial accidents, and so of greater economy in the expenditure of human life. In the article previously referred to Professor Bushnell states that "at a conservative figure, 1,000,000 workers in the United States every year are killed or injured in industry by accidents, of which three-quarters are proven by European experience to be wholly unnecessary." I do not know whence Professor Bushnell derives his authority for the statement that 75 per cent. of our industrial accidents are wholly unnecessary, and I am inclined to believe his estimate excessive; but it is nevertheless a fact which cannot be questioned that in all industrial occupations in the United States there is a reckless and wholly unnecessary waste of human life. This shameful condition will continue until effective measures are taken to increase the financial responsibility of employers for the death or injury of employees; in other words, in-

dustrial slaughter will go on as long as it remains cheaper to maim and kill men than to provide effective measures of safety for them. Whether we like to recognize it or not the fact remains that the whole matter is one of dollars and cents, and we as a nation are greatly to blame that our statutes and our courts have held human life too cheap. We have held safety appliances more expensive than human beings. We must reverse this policy by the enactment of effective liability and compensation acts in all of our States and by vigorous enforcement of such laws of that character as are now on our statute books.

Federal legislation is not able to deal with this question in all of its aspects, as the power of Congress to deal with the conditions of labor is necessarily limited to labor engaged in interstate commerce or upon the waters of the United States. The Federal power has a fertile field of operation, however, in connection with railroads engaged in interstate commerce, and it is encouraging to note that Congress has apparently embarked upon a program of remedial legislation which promises vastly to increase our regard for the value of human life and reduce the number of accidents upon interstate railroads to the limits of the unavoidable.

WASHINGTON, D. C.

Extravagance and Married Happiness

[In our issue of May 21, we published an article entitled "A Lesson in Extravagance," in which an "Unhappy Husband" recounted the causes which seemed to him to have made his married life a failure. As we supposed, this article has caused wide interest among our readers, and we herewith publish a few letters from those that have been sent to us.—
EDITOR.]

Advice from One Who Has Had Two Wives and Numerous Love Affairs in Many Lands.

The "Unhappy Husband" attributes his matrimonial failure and subsequent unhappiness to his wife's love of money and "extravagance." We believe he is mistaken respecting the cause of this deplorable ruin of a home.

He begs, at the close of his article, to offer some words of counsel to those about to marry. So I humbly ask attention to a few suggestions, showing how to manage a clever young wife, employing his mistakes as so many texts.

First the wedding trip. He ought to have frankly told her exactly how much money he had; indeed, it would have been well to count it over together, and, when she proposed or even insisted on a larger expenditure than his purse warranted, it was for him smilingly to say "No, it cannot be. I love you too well to mortgage our future independence." She surely would, notwithstanding her disappointment, have respected him and felt she could trust his judgment in the future.

Respecting the inconveniences and sacrifices of the mission home, they should all have been presented to her in a clean-cut manner, for I fancy only the half was told her. A woman is rarely discontented with her surroundings

if she can truly anticipate what she must endure.

When she announced her intention to study music for three months in a distant city, it was his right and bounden duty to put his arm around her and looking into her eyes say: "Three months in San Francisco? Why, my dear, I cannot and *will not* live without you. I recognize fully and with pride your love of music and your talent. Therefore I propose that we buy two violins and employ the best local teacher. I will study with you and we will practice five hours daily, and some time in the future we will study together in the city." According to the husband's statement the only objection recorded is "We could ill afford the expense."

Later, when the music teacher requested her by letter to join him in a series of musical recitals, it was the "Unhappy Husband's" duty to send him a telegram demanding an immediate apology, and if it did not arrive on time he should have visited the studio, after leaving which there should have been several fiddles in ruins, a surgeon's bill for him to pay and a list of musical recitals canceled.

A woman with an artistic temperament and real power delights in the man of decision and courage, a Romeo who will climb a ladder for her, a Leander who dare swim the Hellespont and demand her, and only her, altho she stands at the altar serving powerful and avenging gods.

Such women know instinctively they are mercurial and need a strong hand to guide, a firm, tender voice to say yes or *no* in times of mental indecision. The man who always says yes, yes, they have little respect for, and respect is the keystone of love's arch; when that crumbles the otherwise impregnable structure begins to disintegrate. The wise man makes himself the sympathetic comrade and helpful guide of his bride; he inspires her with confidence and admiration. He will then desire no other arm to defend or voice to counsel. She will not feel the lure of money and will never be tempted to taste the fatal lotus leaf. It was this "Unhappy Husband's" privilege to order from Best's emporium in New York City an oval-shaped basket, silk lined, and satin trimmed, mutely but eloquently suggestive of many little garments and articles which a woman's heart loves to contrive and arrange, whether she acknowledges the same or not. Had he done this without consultation, and asking if he might be permitted so to do, violins would have been forgotten, and other musical recitals than a lullaby would not have been heard in his home. T. F. C.

NEW YORK CITY.

Wren or Canary.

Somebody has told us to "hitch your wagon to a star," but I do not think they meant to advise young men, burning with missionary zeal, to hitch their wagons to operatic stars, altho "Unhappy Husband" seems to have thought so.

"Unhappy Husband" does not arouse much sympathy in me, because he does not prove

that Bessie ever deceived him. Bessie, "pretty, stylish, fun loving," remained Bessie, "pretty, stylish, fun loving" to the end of the chapter. Like many men he expected marriage to effect some miraculous change that would permit him to indulge his fancy for this bright creature, and yet not burden him with its vagaries. Fortunately for the world this often proves true, but when it does not, behold the "Unhappy Husband!"

If one should enter a store and purchase a white suit of clothes, need one be surprised if a white suit of clothes comes home, and not a sober, work-a-day suit, that will be of use in the world?

You "pays your money and you takes your choice"—particularly the lords of creation, for they have it all in their own hands, for *they* do the asking usually.

If he really wanted a dear, little, brown wren, why chase a canary?

Compare his situation with a woman who awakens to the fact that her hero has only the qualities of a coward and a brute, and she is absolutely at his mercy.

Is life long enough to go on feeling sorry for "Unhappy Husband" too?

I think not.

A LADY.

TORONTO, CANADA.

Wants the Wife's Story.

I have just read the wail of the "Unhappy Husband," and laid down the paper with an infinite pity—pity for the unhappy husband, and pity for the unhappy wife; for who can doubt that she was and is, at least, equally unhappy?

The article is written from the man's standpoint, and from his "wit and wisdom" to his doctor's degree *he* is without fault. It is the old story—"The woman whom thou gavest me, . . . she"—was the sole offender.

I would like to hear the woman's story in this same case, but perhaps she has never been an editor nor a reporter and is less ready to rush into print with her marital woes. Therefore I, a sympathetic old maid, crave liberty of THE INDEPENDENT to come to the defense of this unknown, unhappy wife.

Between the lines of the husband's self-righteous story I read the story of the young bride fresh from the cultured life of an Eastern university town, finding herself in the far new West, the wife of a minister or teacher or editor, wrapped up in himself and his own pursuits, failing in sympathy with the girl-wife, failing to become even "almost indispensable" to her, failing to make her happy, even tho he "knew how to wear his clothes." There are other things that the woman-heart finds more all-important than this knowledge.

I can believe that not *wanderlust* nor extravagance, but desperate loneliness and homesick longing led the woman's heart to cry out for the girlhood home before she had been a wife for a year. I can even suppose that in "changing the details to prevent identification," the writer has taken such liberties in the portrayal of the wife's character that her own mother would not recognize the picture.

Perhaps there was more occasion than he admits for her to use her musical talents to supplement the family income. Perhaps it was not because of the wife's shortcomings but his own that his trustees asked for his resignation.

To his own mind the writer has "made it plain that upon the rock of extravagance for desired luxuries our marriage ship has gone to her woe." I am skeptical enough still to believe that the rock of the man's selfishness and desire to dominate had even more to do with the sad wreck.

I find in the telling of the story no such noble benevolence as the writer vaunts.

I believe no home could be saved, no good accomplished by the telling. The writer claims that he is still loyal to his wife. I appeal to the wide circle of readers of THE INDEPENDENT to know if man ever wrote or spoke thus of the woman he loyally loved.

Finally, in the story as told I see only the man's desire to justify himself before the world. But then I am only

A SYMPATHETIC OLD MAID.

WASHINGTON.

Two Sins of Omission.

The two most patent errors made by the "Unhappy Husband" were that he did not get his wife to take an active interest in his financial affairs from the beginning, and that there was not a baby during the early years to absorb the time and affections of the young wife. It was in his power to have been happy, and I fear that he is guilty of sins of omission.

I, also, married a professor's daughter. She had been raised in a city, and loved society. We went directly to my work in a small town instead of taking an extended honeymoon. Two little boys have taken up the time of my wife. While almost wholly deprived of educated companions, she was kept from being lonesome by the chimney and by the interest she took in my work.

We are now financially able to take an extended vacation and to move into a more desirable community when we are ready for work again.

A HAPPY HUSBAND.

ALABAMA.

More Unhappiness for "The Unhappy Husband."

Such deep and heartfelt "confessions" as are given to the public by "The Unhappy Husband" lead one to doubt his sincerity, as he may be notoriety loving, like his frivolous wife.

He states that his wife was "a belle, pretty, stylish and fun loving," qualities which evidently attracted him, yet they were not the best qualifications for the companion of a minister of the gospel.

He says he "was burning to be of use in the world," but gave up his opportunity to please a selfish butterfly.

His wife is, most likely, not the "idol of the wealthy," or the talented creature he seems to think her, and her "stage life" has not been a success, otherwise why does she continue to come to him for money?

Presumably she has not been able to attract wealthy suitors, hence she does not seek a divorce; but the Evelyn Thaw type of woman can always find some weak Harry, who fondly believes that all the world looks at her with his adoring eyes.

Or his wife may have been only vain and silly, and so easily flattered that she became the plaything of the unscrupulous, and was as much sinned against as sinning.

In her letter she says she has "grown mentally and spiritually," (?) that her former "life was narrow," and now she "has larger and freer ideals," etc.

This language sounds like a quotation from a free-love magazine.

Neither the man nor his wife seems to be in need of sympathy, but unfortunately such cases are too common.

The writer of this letter holds that woman is very much what man makes her. The trouble is that men have wrong ideals and women try to live up to them.

Fewer talentless, flashily dressed women would be "before the public" (a distinction which falls upon the evil more than the good) did they not believe the "stage" life an aid toward marrying well.

Do our men, as a class, really admire the woman who is best described by that fine word "gentlewoman"—the woman who is refined, who forgets herself, and considers others, the woman who is domestic, a wholesome being with intelligence, and will, and sweet reasonableness, and the ability to serve those she loves in numberless ways; "who effaces herself save for the pervasive fragrance of an exquisite personality"?

The finest description of a good woman is found in an old book, which says of her: "Her price is above rubies. She worketh willingly with her hands. The heart of her husband doth safely trust in her, and she will do him good and not evil, all the days of her life."

When men desire these qualities in woman, they will find them, for, as stated before, woman, usually, is what she thinks man desires her to be.

Woman Responsible.

The peculiar environments and strange vicissitudes of life have given me a broad field for observation, and in every condition, I am sorry to say, I see the growing need of this lesson in "High Finance." It is "High Finance" in the humblest home on earth when men and women live beyond their means, and unhappiness in some form is the inevitable consequence.

I am a woman, and realize fully that woman is not responsible for all the ills of domestic life. But, to a large extent (where she has sense enough to keep herself and her woman's rights in the background), she is a leader there, and wields an influence that is appalling. She is not the mainspring in the financial time-piece, but in all happy and well-regulated homes she is the hairspring. To be this she must understand both the worth and the

worthlessness of money, which can be imparted only by practical experience, for which mothers are largely responsible. *

I don't know how to express this growing evil, nor how to correct it, but I do know that this divorce canker is spreading alarmingly; that there is a tendency against the old-fashioned home of happiness, and sweet content, with man as its head, and a sweet, unassuming, womanly woman just sufficiently in the background to make the picture attractive.

Homes are growing scarce where the dominant feature is the well-spring of joy in sweet connubial love, and monetary considerations are only secondary, and when such home life is destroyed the foundation for all good government is undermined.

Woman may or may not have a right to vote, but she has a right to keep, and fill gracefully, the position as queen in some independent home and to rule supreme in the heart of some noble, upright man, exerting an influence for good that will tell even in eternity. Every woman is responsible for the Eden she makes or mars.

A Scriptural Helpmeet Needed.

The object of the "Unhappy Husband's" article is stated "To warn any young man contemplating matrimony, etc." The warning is a good one, and no doubt many a young man

will take warning, but the "lesson" to others is given at too great an expense to himself, and to the service of the Lord.

Evidently if this young minister had kept in view the Bible idea of a Christian woman, grave, sober, faithful in all things, adorning herself in modest apparel, etc., he would not have had such an unfortunate experience. Even "the winds of gossip" said "That they never dreamed of Bessie marrying a minister." Evidently the public realized that she was not adapted to be a minister's wife. When a young minister is not looking for a "helpmeet" in the service of the Lord, but for "the college belle, pretty, stylish, fun loving," he should expect to find his young wife averse to the spirit of Christ or the spirit of self-sacrifice. A young minister should not marry until he realizes that a tree is known by its fruit. Once in a while a young woman marries a young man of ungodly habits, expecting to reform him, and, as a rule, she is disappointed and unhappy in her married life. A young man with a college and a theological education, ready for the service of the Lord, has no Scriptural right to marry one who is in need of a spiritual reformation in order to be a "helpmeet" in the Lord's service.

The "Unhappy Husband" was evidently sincere, honest in his purposes, and true in his love, but he is the unfortunate victim of thinking too lightly of God's profound revelation of the married state, of being unequally yoked together.

TOPEKA, KAN.

Three Score and Ten

BY ANDREW H. SMITH

THREE score and ten! Next birthday, whew!
My promissory note comes due—
O friend, already past that way
Say what may I expect the day?
Shall I be conscious of a jog
Like to the slipping of a cog,
And then go on on borrowed time,
With halting verse and limping rime,
A trespasser upon the scene
Where mine the leading part has been,
With nothing I can call my own,
But everything a kindly loan?
How many days of grace, alas!
Will Father Time allow to pass

Ere he remind me of the debt
I do not realize as yet?
It may be (do I *hope*, or *fear*?)
He'll stay his hand for many a year.
It may be ere a twelve-months' tithe
He'll turn his glass, and swing his scythe.
It matters not; one thing is sure,
In this one thing I stand secure,
No protest can befall the note,
Be payment near or far remote,
Or few or many birthdays chime.
Turn the note over, Father Time,
Behold across the back of it
The name of Jesus Christ is writ.

GENEVA, N. Y.

Concerning Lafcadio Hearn

A WONDERFUL luminosity overspreads the canvases of the landscape painter Turner, largely because of an affection of the eye, which broke up and elongated the rays of light. There is nothing startling in the contention of Dr. Gould* that not only Hearn's style, but also his character, was largely the product of a terrible myopia—in technical terms, of twenty-five diopters. Neither his birth in the Ionian Islands, of a Greek mother and an Irish father, nor his untrained youth and unfriended arrival in America at nineteen, thinks the doctor, were as potent in the development of his character and his literary manner as was his faulty vision. One eye was destroyed in youth, the other was of little use for a distance of more than two feet; he wrote with his paper three inches from his face, and the whole world of the average man was for him made up of indistinct masses, not outlined in form, but blocked in with color. As a newspaper reporter Hearn's work was marked by a peculiar gruesomeness, for he was forced to recount facts, not impressions merely, and to him nothing was distinctly visible save on the closest scrutiny; he constructed his ideas thru the piling up of details studied almost at the end of his nose, which forced him to be realistic in the most unpleasant sense, and when the objects were repulsive in themselves, Hearn's catalogue of minute details produced inevitably the most repellent result. It is humanity's good fortune to see many things from a safe distance.

He lived much in the senses, for his physical energies, denied vigorous exercise by his semi-blindness, turned toward the sensual. But necessity was a fortunate taskmaster, and, together with time, curbed his gruesomeness, his dangerous sensualism, and limited the working and reworking of lines and phrases which he loved in common with his French masters, Flaubert and Gautier.

In New Orleans and later in the West Indies he found scope for his wonderful sense of color, seen all the more intensely because without the controlling sense of form. Leaving the minute, he is thrust into a world of unreality, a shifting phantasmagoria of colors which delighted his senses and led him to endow the elementalness of nature, as he saw it, with an almost conscious life. But this world of vagueness and physical inertia denied him a knowledge of detail and dramatic activity—the elements out of which a story teller must reconstruct life—and he was forced to rely upon others for his facts. He retold them in his wonderful fashion, with exquisite grace of word and style, with increased brilliancy of color, but always with less reality, with that vagueness and subduedness, that loss of form and lack of action, that lend the mystic charm to his later work. Thus he was led to the ghostly, the mysterious, the charm of the twilight world, and when he passed from the burning color of the tropics to what he called the "chromatically spectral" landscape of Japan, and felt in his sympathetic fashion the emotional restraint of Japanese culture, his style developed that peculiar ghostliness, that limpidity, as of color washed out with many waters, which characterizes most of his Japanese work.

However good some of the West Indian work, it is his books on Japan that insure Hearn's place in literature. His discussions of Japanese religions are somewhat weakened by a lack of erudition and a hasty enthusiasm, but his sympathetic nature gave him an insight into the genius of the people and their religious conceptions which is more intuitive and therefore more valuable than any other foreigner has yet attained. It was for him especially to see how much the whole spirit of Japanese society, its coherence, its patriotism, its self-devotion, rests upon the sense of the ghostly hierarchy of the dead, the myriads of unseen who crowd the islands until the living feel themselves as only transitory

*CONCERNING LAFCADIO HEARN. By George M. Gould, M. D. Philadelphia: George W. Jacobs and Company. \$1.50.

representatives of the illimitable national life, the spiritual Japan. But he caught also the quiet color of Japanese life, he caught the calm, the restraint, the sense of proportion, of spacing, which so wonderfully infuses their art, and he caught the ghostly in their thought, the constant sense of spirit back of them—and these impressions he crystallized in a style which perfectly mirrors its subject, an interpretation of Japan which no pure Occidental could have reached.

Whether, as Dr. Gould seems to think, Hearn's myopia was almost wholly responsible for his peculiar genius, as well as his peculiar moral and artistic faults, is still a debatable question. Hobbies are always easier to ride than real horses. Surely his heredity and training—or lack of it—had more to answer for than the author allows. Nevertheless he has certainly pointed out the most important factor in Hearn's work and made a valuable contribution to the analysis of his character and style. Dr. Gould disclaims the necessity for a Life of Hearn, arguing that it is his work and not his personal adventures that demand attention; he also rather justly criticises the publication of certain letters which portray the weakest side of Hearn's character and were written in friendly confidence, but the doctor seems himself a little too sweeping in his remarks upon Hearn's personality. He was at best a strange mortal, and very hard to judge. To the essential loveliness of the man Dr. Gould is a ready witness, as well as to his often senseless ingratitude. The reader of the book will desire rather less repetition and a few more authoritative facts, but he will remember that the subject was an elusive one, and that the insight given into Hearn's character and work is both timely and fascinating. The book is furnished with a full and valuable bibliography by Miss Stedman.

Modernism

PIUS X has made it a sin to read *The Programme of Modernism*.¹ We, on the other hand, are inclined to think that for any man interested in the problems

and fortunes of Christianity it would be a sin not to read it. For it is a very remarkable book. As we have already noticed in our review of the original Italian edition, it is a statement of the intellectual position of Modernism, and a vindication of Modernists from sundry serious, but false, accusations which the late encyclical has hurled against them. The author or authors of the work are fully acquainted with the methods and results of biblical criticism and of present-day philosophy; and it is the hand of a master that has sketched in small compass the story of how these two departments of learning have forced certain adaptations and alterations in a reluctant theology.

What we would desire to see, both in this book and in other writings of Modernist Catholics, is a recognition of the services of Protestantism in the evolution of Christianity. Fundamental in the conceptions of the Modernists is the ever-developing Christian consciousness as a source of spiritual power and a principle of doctrinal expansion. But the Christian consciousness has widened and deepened in Protestantism as well as in Catholicism, and has there become a factor not to be overlooked in forming a liberal synthesis on which a larger and truer Church of Christ may rest. The Modernists are doing more than any other class of men at the present time for the coming union of Christian believers. Let them courageously welcome the spiritual fruits produced in no small measure by Protestantism, and their words will ring still further and deeper than they do today.

Mr. Lilley's book on Modernism² is almost wholly a collection of newspaper and magazine articles on the present problems of Roman Catholicism. Mr. Lilley is thoroly acquainted with his subject, and writes agreeably and kindly. While his book is, from the nature of its contents, fragmentary and sketchy, it will serve in some way as a history of Modernism until we get a fuller and more consecutive one.

Dr. Godrycz³ is master of scholastic

¹THE PROGRAMME OF MODERNISM: A Reply to the Encyclical "Pascendi" of Pius X. Translated from the Italian by Father Tyrrell. New York: G. P. Putnam's Sons. \$1.50.

²MODERNISM: A RECORD AND REVIEW. By Rev. A. L. Lilley. New York: Scribner's Sons.

³THE DOCTRINE OF MODERNISM AND ITS REFUTATION. By J. Godrycz. Philadelphia: J. J. McVey. 75 cents.

philosophy, which he declares is the official philosophy of the Church, and is rejected by Modernism. His method is scholastic; he follows the text of the Papal encyclical against Modernism, and first gives his statement of what Modernism is in a form for easy reply, and then follows it by a "Refutation," which we confess is hard to read, because the method seems so deductive and unreal. Thus his Refutation begins by asserting that Modernism is based on Positivism, which is rationalistic and irreligious. If we understand his argument, when he condescends "to use the language of natural sciences," particular laws are subordinate to general laws; these general laws "must be the manifestation of one fundamental law"; therefore must have come from one source, a supreme intelligence, that is, God. He supports his attacks on the Modernists by quotations from Newman Smyth and George Washington, and concludes that "one of the greatest persecutions that ever swept over the Church is preparing in Europe."

Folks Back Home. By Eugene Wood. New York: The McClure Co. \$1.50.

These are homespun yarns, which Mr. Wood has collected under the title, *Folks Back Home*. They are stories of Central Ohio told with the unfailing humor and in the dialect that characterized the earlier book, "Back Home." Dared we call the author the "Mary Wilkins of the Middle West" we would indicate the strength and limitations of his genius. His people are real rural neighbors of ours and of one another. They indulge in tentative and elided remarks, and say "so's" and "'spose" as nine people out of ten do everywhere; it is not peculiar to Central Ohio to be slovenly of enunciation. But we wonder, and of our wonder find no end, how Eugene Wood knows some things! Mary Wilkins, as a woman, has a right to know endless details of maiden ladies' meager economies and fluttering modesties of thought and demeanor, but how should a man divine these sanctities of prest-rose lives? It is uncanny to chance upon passages where the author prattles along about "Battenburg" and "taffety"; and whether "shirrin' or tucks" can be run more easily; and that "cotton-battin' is

better than swan's down to trim Santa Claus's red coat," and that "it takes only four yards of silk to make a waist now instead of five," as in the era of the big sleeve. Mr. Wood's expert knowledge of homely ways goes deeper than these external things, and some of the stories are authoritative social studies of village habit and custom; they are always whimsically correct to the utmost detail, often tender, sometimes pathetic, and once or twice the laughing voice of the narrator deepens to tragedy, but the prevailing note is that of light-hearted humor, more boisterous than that of Mrs. Freeman, whose clowning wears a sober suit of gray instead of Mr. Wood's motley.

The Spirit of Old West Point (1858-1862).

By Morris Schaff. Boston: Houghton, Mifflin & Co. \$3.00.

This is an old soldier's dream of his cadet days—fifty years syne. Strange it is in what unexpected quarters romance will make itself manifest. For General Schaff resigned from the army in 1871 (he was brevetted in 1864 for gallant and meritorious service in the Wilderness campaign), and became a manufacturer at Pittsfield, Mass. As Inspector-General of the Massachusetts militia, and as a member of the State Board of Health and Gas and Electric Commission, he has had a particularly practical experience. Yet his book is one whole appreciation of what he calls "the overarching spiritual West Point," altho the actual West Point is described with great vivacity. Coming from an Ohio farm, and passing his four years at West Point during the outbreak and first year of the Civil War, General Schaff's experiences at the United States Military Academy were unusually characteristic. A supporter of the North in the great contest, he is not an unfair partisan in describing the turmoil at the Academy during the secession of the States, the trouble and fights over the John Brown raid, the political campaign of 1860, the resignations of the cadets from Southern States, and finally the advanced graduation of classes that they might serve at the seat of war. At the Academy with him, as officers or cadets, were many who gained name and fame during the four years' contest, in-

cluding Reynolds, Schofield, Fitz Lee, Custer, Mackenzie, Gillespie, Horace Porter, Rosser, and Pelham, and he describes some of their gallant feats in the succeeding years. It is as an interpreter of the influences which transform raw cadets into high-minded officers with the privilege and judgment to command, however, that General Schaff is particularly successful.

English Costume. Painted and described by Dion Clayton Calthrop. New York: The Macmillan Co. \$6.00.

The author of this work has taken the date of the Conquest as his starting point and has limited himself to civil costume, that is, the dress a man or woman not confined to a professional garb as is a soldier or an ecclesiastic. He has traced the influence of one garment upon its successor and noted the changes that have taken place so that the reader of English history may be able to visualize the dress. He presents seventy-two page illustrations in color, covering the period from William I to that of George IV, while in black and white there are two series of half-tone reproductions, thirty-two of engravings by Hollar, and, to illustrate costumes during the sixty years' reign of George III, forty-eight by the author and twelve by the Dightons, father and son, besides line engravings by the author—a whole page of boots and shoes, of sleeves, of coiffures, of caps and headgear, of coats and doublets, and groups of figures, hundreds of them scattered thruout the text. Some chapters of the book have appeared in the *Connoisseur* and the work is also issued in four volumes. The text gives interesting allusions to noted fops and tailors, and the chapter on the "Custume of Elizabeth's Time" contains a subdivision entitled "Shakespeare and Clothes," with some hints as to costuming the plays.

The Familiar Letters of James Howell.

With an introduction by Agnes Reppelier. Two volumes. Boston: Houghton, Mifflin & Co. \$5.00.

Letters may more than history enclose,
The choicest learning both in verse and prose;
They knowledge can unto our souls display
By a more gentle and familiar way.

Thus Howell, in his stilted verse, introduces his collection of chatty and com-

panionable letters. Whether these letters are all or but in part genuine, and how far he may have been tempted to add to or edit them, is a bootless question. Their gossipy character separates them from authoritative history, and yet their vivid incidental accounts of European countries, notably Holland, France and Spain in sixteen hundred and odd, have the life and color of truth. They are the spirited letters of a quick-eyed cosmopolitan English traveler; he has been called an early journalist or reporter; rather, he wrote as a clubman talks. No wonder Thackeray loved him and read him till the candle sputtered by the bedside. One may fancy that thru Howell's words Thackeray saw Ravellac's torture a hundred times, and the novelist probably did not question whether the Saragossa bedlam-house had underground dungeons or no, but simply enjoyed the practical joke of the "young-old Captain Bolea" in putting the provost "very shining brave" into one of them. Many as are the good letters, few are more readable than these. More sincere than Walpole, gentle almost as Lamb, nearer to Stevenson of the moderns, Miss Reppelier has done well, and the printers have done better, in adding this edition of the letters to those recently issued in the Dent and Stott libraries.

Home From Sea. By George S. Wasson. Boston: Houghton, Mifflin & Co. \$1.50.

The life of our coastwise folk furnishes an inexhaustible supply of material for literature of all variety. Kipling's "Captains Courageous" and Mrs. Ward's "A Singular Life," written after a study of the people of Gloucester, rank high among our American novels. The romance of the fishing fleets has been successfully told in shorter stories by James B. Connolly, Norman Duncan and Ralph D. Paine. This present collection of stories is more in the form of retrospect and reminiscence by the old cronies of Marblehead and Salem. There is a strong flavor of New England, that appears in the dialect, as well as in the dry humor of the characters. The plots of the stories are not thrilling. The author depicts rather the existence of worn-out mariners of the ocean. A few of the

stories originally appeared in the *Atlantic Monthly* and in the *Century Magazine*.

Literary Notes

...On looking thru the little book by Dr. E. L. Walton entitled *Why Worry*, we think of a number of people who ought to read it, but it would not do to send it to them except anonymously, for neurasthenia and hypochondria, tho common and indeed fashionable diseases are not willingly acknowledged by their victims. The author discusses worry and obsession from the standpoint of the neurologist, devoting most of his attention to how absurd and dangerous is the mental attitude of those who can't stop tapping with the fingers or can't endure such tapping; who must have the head of their bed to the north or will not sit with the face to the wall; who go back three times to see if they locked the door or wash the hands after touching anything. (Lippin-

...*Government By the People*, by Robert H. Fuller (Macmillan), is a convenient manual for the study of American government, so far as it is conducted thru the agency of political parties, and ought to prove a useful supplementary aid to the usual school textbook on civil government. The present work consists of an elementary discussion of the laws and customs governing the holding of elections and the organization, methods, agencies and means of control of political parties in the United States. It contains a great deal of useful and well-arranged information expressed in simple language, regarding the nature of elections, the qualifications for voting, the nomination of candidates, primary elections, corrupt practices and the part played by political parties in our public life. It is a little book which deserves to be studied in the schools as a part of the instruction in civil government.

...*American Diplomacy Under Tyler and Polk*, by Jesse S. Reeves (Baltimore: The Johns Hopkins Press), contains the Albert Shaw lectures on diplomatic history at the Johns Hopkins University in 1907. These lectures relate mainly to controversies with Great Britain concerning the Northeastern and Northwestern boundaries, and with Mexico over the Southwestern boundary and the annexation of Texas. The study of the diplomatic history of this period has been difficult owing to the fact that most of the source materials are still in manuscript form, some being in the library of the Chicago Historical Society, some in the Lenox Library of New York, and some in the Library of Congress, while much of the printed material is scattered thru various executive documents and therefore not readily accessible. Concerning the responsibility for the war with Mexico Mr. Reeves expresses the emphatic opinion that it was not the result of the annexation of Texas, but was a war of conquest pure and simple, waged by Polk for the fulfillment of his designs on California. The author's conclusion is based on a careful study of the diplomatic correspondence preceding the outbreak of hostilities,

Pebbles

AN enterprising American has introduced ice cream soda in Japan. In many respects this is to be regarded as quite as bad as war.—*The Washington Herald*.

TEACHER—If a vehicle with two wheels is a bicycle, and one with three wheels a tricycle, what is one with only one wheel?

Pupil—A wheelbarrow.—*Illustrated Bits*.

WILLIE BROWN with frightful squalls
Tumbled down Niag'ra Falls.

"Willie," yelled his ma in wrath,
"Stop that fussing in your bath."

—*Journal of the Scenic Preservation Society*.

A TEACHER asked her class to name five different members of the "cat" family. Nobody answered till at last one little girl raised her hand.

"Well?" said the teacher, encouragingly.

"Father cat, mother cat, and three little kittens."—*Hebrew Standard*.

"HAVE you ever kissed a girl before?" she asked.

"Why do you put that question to me?" he replied.

"I only wished to know whether it was lack or experience or natural awkwardness that made you go about it in such a ridiculous way."—*Chicago Record-Herald*.

THE USES OF ADVERTISEMENT.

AN advertisement once appeared in the Lost and Found column of several daily papers. It ran:

"Found, yesterday afternoon, in Chestnut street, near post-office, a gold watch. Loser may recover same by calling at office of John C. Smith, 287 North street, and paying cost of this advertisement."

Well, John C. Smith sat in his bare office the next morning, and a little before 9 a rather shabby man entered.

"About that watch, sir?" he began. He had an anxious, furtive eye.

The unsophisticated Smith drew a large gold watch from his desk drawer.

"Is this it?" he asked.

"The very thing," said the other hurriedly. He looked immensely relieved.

"The advertising costs are two pounds," said Mr. Smith.

The shabby man's face darkened.

"Two pounds?" he muttered suspiciously.

"Two pounds," said Mr. Smith. "That notice has been running a week in seven papers."

The man with some difficulty paid the money. Then he hastened away with a few words of thanks.

Mr. Smith, after he was gone, smiled to himself.

"Ah," he murmured to himself, "this watch-finding is a mighty good business."

And, in preparation for his next visitor, he put in the drawer another gold watch from a large pine box of them that lay under the table.—*Pearson's Weekly*.

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, \$2.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, \$1.75 a year extra; to Canada, \$1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with \$1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

The Lawyers' Oath

LAW concerns everybody and ought to interest everybody. There are very few people to whom the profession of the law is not of serious importance. Lawyers do the larger part of making our laws, and the execution of law is wholly their duty. The sole business of law is justice, and that ought to be the sole business of lawyers, and yet we read somewhere that law is a sort of hocus-pocus that smiles in your face while it picks your pocket; and that its glorious uncertainty is of more use to its professors than the justice of it. Sir Edward Coke says it is "the perfection of reason," and Dr. Johnson declared that it is "the last result of human wisdom," and yet it is notorious how the sharp quilllets of the law are used to grind the faces of the poor. Indeed, from old times the deceits of the law, or, rather, the lawyers, have been notorious. Chaucer gives a high character for skill and learning to his Sergeant of the Law, and yet he cannot avoid a sly dig when he says:

"Nowher so bisy a man as he ther nas,
And yet he seméd bisier than he was."

Dealing in justice, the men of no other

profession have such temptations to injustice, and it is particularly important that they should constantly strive to raise the standard of their character. We have thought that we could hardly publish anything more important or really more generally interesting than the "Canons of Professional Ethics" for lawyers, and the proposed lawyers' oath for admission to the bar. Who will not read it and in his own mind comment upon it?

It is right that lawyers should have canons or professional ethics set before them, and be required to swear that they will obey them. Members of the other professions do this. At ordination the clergyman makes most solemn engagement publicly that he will devote himself faithfully and unselfishly to his spiritual calling. For the physician there has been from ages past the Hippocratic oath administered on entering his profession. To the physician we commit the care of our bodies, and they should be required to feel the tremendous responsibility for the life or death of their patients. To the clergyman we commit the care of the moral character of the community, that is, of the spiritual, which is the eternal life of the people; and no oath can be too solemn to impress on them their duties. To the lawyer we commit the constitution and preservation of society and all the rights and wrongs of humanity. No language can be too forcible, no oath too binding, to impress on the young man entering the profession his obligation to worship justice and with all his might to secure its honor, and not to treat his as a mere money-getting trade.

The temptations of the mere money-getting lawyers are measureless, and they are indicated in the Canons and the Oath. They are temptations to be faithless for the sake of greed, either to the client or to the State. The client may be robbed under form of law, or justice may be robbed by fraud or perjury. It is to prevent such crimes that lawyers' associations are created, and it is their duty to see that justice is maintained and lawyers disbarred for professional misconduct.

The reader will be interested in the answer given to the old question whether it is right for a lawyer to defend one whom he knows to be guilty. Under the

answer given it depends on how he defends him. It is his duty to give his guilty client all his rights under the law; but he has not the right to do one thing in behalf of his client that is against the law. That shuts out all the criminal arts of certain criminal lawyers. Beyond this it is the personal moral standard of the lawyer himself which will control him, for no code of ethics can estop a lawyer who lacks the true ethical sense from using the law to contrive ways for a man or a corporation to secure unearned gains. It is not suborning of perjury but tricks and evasions which are the lawyer's chief temptation. The honest lawyer needs to keep the spirit of a sound judge we knew, who required every candidate to be able to repeat the Ten Commandments, as the basis of all justice, and so of the character required of the legal profession.

Substitutes for Coal

THE address of President Roosevelt to the Governors, and the papers read by experts, called attention to the fact that we are within sight of the exhaustion of our anthracite coal, and at the increased rate of the use of bituminous coal its mines will not last more than a few generations. The question has necessarily arisen in many minds, What will we do then? It is not wise to say, No matter; after us the Deluge; for it will not be after the time of those now living. It is now time to prepare for the certain eventuality, and at least, by wise precautions, to put off the evil day of coal famine.

But with all economy—and there will be very little economy—the end of hard coal will come, and that of soft coal will follow later. What shall we do then for heat and power? Of course, the nearest available source for power and heat is the gravity of falling water. Before the use of coal many streams supplied power for grinding corn or sawing lumber, but has long forgotten its use. That resource can be recovered, and with vastly increased service thru better mechanical contrivances, such as the turbine, and the transformation of the force into the electric current, which will, as far as it goes,

supply either heat or power. This is an enormous force, yet not without limit, which will partly fill our loss. We must make the most of it by saving with reservoirs the spring floods, and utilizing over and over again the waters from the small streams near the rivers' sources as well as the larger rivers themselves.

But invention must go back of this easy and familiar method. We want heat in winter for our homes, as well as power for our factories and railroads. The sun is the one great source of heat. Thru countless ages the heat of the sun was stored up in the form of coal; it is still stored up in wood. But we cannot get wood enough; we need some other way to store up the sun's heat. The river stores it up. The sun's heat lifts the water from the ocean to the clouds, and it is dropt into the rivers to be used as power, but the power is only sun's heat stored up. How else can we store up summer's superfluous heat for use in winter? We must do it, or we shall die in winter.

If a pine tree can store up the sun's heat man ought to be able to find some way to do as much. It is the immediate and pressing duty of men to find a way. Think of the tremendous force of the tides, all wasted power! We have not yet learned any satisfactory way to transfer this force into power or heat. It is sun-power and moon-power exerted night and day, all the year around, enough to do all our work for us if we only had the intelligence to harness it instead of our lazy way of using the wood and coal at our hands.

Then there are the winds. That again is sun-power, for the sun creates the wind. We have a crude way, with wind-mills and sails, of using the smallest fraction of the wind's force, but we have not had wit yet to gather, concentrate and stow away any appreciable amount of this enormous wasted power.

But chief of all there is the direct heat of the sun itself, a small part of which creates all the life and growth on this, our world. And the major part of it is dissipated, wasted. It falls on the deserts as on the fruitful field, and is mostly radiated off again into vacant space. Can it be past the inventive intelligence of

man to gather the heat that falls on a square mile of desert and transform it into electric force, and put it away for use, as the sun's heat was put away in the coal mines for use of later generations? We must find some way to use these natural forces. We can now use the gravity of water falls to run mills and railroads, and to warm our homes, but that is not enough. What shall we do when our coal mines are used up? We are burning in a year what it took a thousand years of most prolific vegetative life to produce. Our chemists, our physicists, should be up and doing. The permanence of our civilization depends on it—otherwise we must revert to the simple life of the Bedawy.

The Menacing Mass

IT stands to reason that the only plan for disgorging city population and breaking up congestion is to send the people back to the country whence they came. This is not merely an economic movement, but a sentimental. We have got to create a country sentiment, and a taste for the simpler methods of living, that are brought about by putting every human being in contact with Nature's storehouse. When the American people first knew Massachusetts and New York it was not Boston and New York City, but a wilderness to be turned into farms. Each family made its way almost unhelped. There was swapping of products thru the neighborhood, but even a store was a rarity; and a hotel meant a tavern at the cross-roads, for those who were pushing westward, to stop over night. Its main furnishing was water and grain for horses, with corncakes for the traveler. It was understood that any one who could get possession of a fertile piece of land could clear off the trees himself, build his own house, and then raise his own food, including meat, fruit and vegetables; and after that shear his own sheep and weave his own cloth from the wool, as well as make his own shoes from the hide. This sort of life is just as possible today as ever—only that the land tiller has every advantage of machinery which his progenitor did not have.

But we are confronted with a state of affairs which is creating a vast mass of people unable to do any of these things, and dependent for daily food, lodging and clothing upon the public. Our cities contain a congested mass of human beings that are a shame to themselves and to the age in which they are bred. While we can boast of magnificent architecture, art, music, etc., we have to allow that the word *city* covers a sort of humanity that was not dreamed of when the Erie Canal was dug, or even when the Pacific Railroad was built. This congestion was brought about by the enormous development of manufactures in proportion to agriculture. What produced this disproportion we need not just now discuss, altho history will tell us. In 1855 agriculture was still 10 per cent. ahead of manufactures in the annual output of products; but in 1895 manufactures were 40 per cent. ahead of agriculture in the market—a change of 50 per cent. in fifty years. This was certainly not brought about by undisturbed forces.

However, the problem now is how to reverse this tendency, and get rid of the consequences. Mr. Rowntree tells us, in "Poverty," that in London those who live below a living wage, and are deprived of every reasonable comfort of life, are just about one half of the population. Thirty thousand are without homes of any sort whatever—sleeping at night either in the street or in public lodging houses. We have twenty American cities that must tell a similar story, while probably New York, with its annual inflow of impoverished foreigners, is even worse off than London. Ordinary charity, to get at this dehumanized population, has failed altogether. If Mr. Carnegie and the other five hundred millionaires of the country were to pour all the wealth at their command into this hopper of charity, it would probably only aggravate the mischief. The churches do a good deal in the way of relief, and so do relief societies; but the story repeats itself until we are sick at heart and sick at hand.

A good deal can be done by legislation in the way of preventing the depths of slum life, and the schools can do more in the way of leverage upon the young; still we have our astounding congestion.

which can only be described by the word *masses*. The individual is being lost. Religion, social amenities, even common morals, pass out, and we are compelled to face the question, Is it a hopeless problem? Is this sort of thing to go on forever? The Socialist comes to us with the proposition that we pool our resources, and distribute under governmental control. If anything should come from this proposition it could hardly be anything better than a sort of universal Russian village life. There they have communism complete; the trouble already being that the individual is lost, and with the individual is lost the family. There is no salvation for human kind apart from family life. As a family we have made all of our headway from the deepest barbarism upward.

We believe that Mr. Booth is right, and that he is the best qualified man now living to pronounce on this subject. He has settled down to the conviction that colonization is the only remedy for our new barbarism; that we can only get rid of city congestion by moving the masses outward, and creating a new sort of home life. There is room enough in the United States easily to place five times the present population, giving to each family land enough, under scientific culture, to produce food, besides a large part of raiment. We do not say that this can be done by devitalized and degenerate stock, such as constitutes quite a percentage of the dreadful slum world. It is true, however, that nine-tenths of the crowded herd is in a condition, with no more compulsion than that which takes their children to school, to earn their own living, and earn it well on the land.

The demand for help is astounding, and the wonder is that it is not promptly filled. That wonderment is greatly lessened when we study the component parts of our poorest class. They have been herded until they simply cannot stand the country. It is dolefully lonesome beyond endurance. They know nothing of trees or shrubs, and have not an acquaintance among the birds or beasts. To move these people into the country as individuals would not be worth the while. They would get back again as soon as possible. It is only pos-

sible to move them in families and groups of families. To do this is found quite possible, according to the testimony of the Salvation Army and of the German Government. Several of the other European governments are at work on the problem, and all report favorably.

This should become a national problem and a State problem, and the quicker the better. We cannot stand this congestion much longer. It is affecting the most sacred of all social convictions, the family; it is destroying morals; it leaves no place for economy, and none for betterment; it is making country labor impossible in harvest time; it is fouling politics, by creating a vast number of salable votes. If the State Legislatures would turn their attention in this direction, rather than to the importation of foreign laborers, and if they would legislate vigorously to dissolve rather than to increase the size of our cities, they would certainly be working on the right line. Every one of our States should have an organized colonizing system, and it should be the very central thought of every law-making body to make this movement operative. Vacant land should be taken up for these colonies, and they should be regulated with a firm hand. The United States Government should place this problem alongside improved waterways, a rational tariff, and reforestation as deserving the most sober thoughts of the ablest statesmen. Thomas Jefferson said that when the American people ceased to be in the main agriculturists, "the nation would begin to sink to the European level."

We have got to have a social readjustment. The city has become a menace. Its bulk is no longer needed. The country gives all the privileges of a refined and progressive life. Every one of our starving thousands might be in possession of a competence. Slum life is Hell; it is intolerable as an adjunct of civilization. We must do more than believe; we must abolish. N. O. Nelson says, with pith and wisdom, that "the only solution of the city is to transport it to the country." A holy impatience is on us to see this accomplished. Out with the shops, with the publishers, with the factories, and out with the people.

The Approaching Republican Convention

As the Republican convention draws near, all signs and figures point to the nomination of Mr. Taft on the first ballot. During the last few weeks no one of his competitors has gained anything. Each retains nominal control of his little group of delegates, but some of these are quite ready to join Mr. Taft's forces. There has been no movement for a combination in the interest of any one of the minor candidates. Their followers are "allies" only in name. An attempt to combine them against Mr. Taft would send more than half of them into his camp. For a nomination on the first ballot he must start with the votes of 491 delegates. At the beginning of the present week he had more than 500, perhaps 550. He may yet lose some of these by the blunders of the managers of his canvass. But if the nomination does not come to him on the first or the second ballot, there is no probability that it will be given thereafter to Hughes, Knox, Fairbanks, Cannon or La Follette. It is a reasonable prediction that if Taft shall fail to get the needed majority on the early ballots, Mr. Roosevelt will have an opportunity to decline a renomination.

At the beginning of the proceedings in Chicago the Taft managers have blundered. Mr. Hitchcock and two of his paid assistants took seats in the National Committee by means of proxies from Alaska, New Mexico and North Dakota, and voted there upon contests in which their employer was directly interested. This was unwise, and it was unnecessary from any point of view if Mr. Hitchcock's claim that his candidate already had 584 delegates was well founded and just.

It is true that the committee's decisions are not final, but sharp practice of this kind offends the moral sense and sometimes defeats its purpose. The effect of the action of the three proxy-holders upon Mr. Taft's canvass, in the convention or out of it, can scarcely be favorable. They should promptly withdraw from the committee. And it may be observed that the forty Taft contestants for the admission of whom they voted are almost without exception Federal office-holders. This does not make their

course less objectionable, nor will it commend their candidate to independent voters, whose support he, if nominated, will seek at the polls. We cannot believe that the three men took seats in the committee with Mr. Taft's approval.

If we assume that his nomination is a foregone conclusion, the second place is still to be filled and there must be a platform. For the second place on the ticket the names of Governor Hughes, Senator Dolliver, Vice-President Fairbanks, Secretary Cortelyou and Representative James S. Sherman, of New York, are in the minds of delegates and influential politicians. The candidacy of Mr. John Hays Hammond is taken seriously by very few persons in addition to himself. It will be seen that three of these men are residents of New York, and there are reasons why that great State should have a name on the ticket. It could have no better representative than Governor Hughes, who is well fitted for the first place. Taft and Hughes would be a combination of ideal excellence and political strength. But the Governor is unwilling to have his name mentioned for the Vice-Presidency, and it may be expedient and necessary for him to stand for another term at Albany. His decision concerning a renomination will probably depend upon the fate of the race-track gambling bills.

Mr. Sherman, of Utica, member of Congress for many years, has been prominent in the politics of his State, but his name on the national ticket could not have the weight of the Governor's. It is said that Mr. Cortelyou has the support of some who are called conservatives. We do not know that he is not in full accord with Mr. Taft. If he does represent any opposition to the policies for which Mr. Taft stands, it would be a blunder to nominate him. But, measuring him without regard to such considerations, we cannot regard Mr. Cortelyou as eligible for the Vice-Presidency. With due appreciation of what he has accomplished, we do not find in the record of his career the evidence that he is fully equipped for this high office.

Some are saying that the impending nomination of Mr. Bryan leaves the Republican party free to name for the second place a man from the Middle West. If this be sound doctrine, the eligibility

of Senator Dolliver cannot be questioned. He has been a good legislator, and is a forcible advocate of the progressive policies of his party. His exceptional ability as a campaigner is well known. Taft and Dolliver would be a strong ticket, but we should like to see Governor Hughes's name in the second place.

In making the platform there promises to be a difference of opinion concerning the extent and character of tariff revision. As for the leading policies associated in the public mind with Mr. Roosevelt's name, the inevitable commendation of his administration must carry approval of them. But his views concerning tariff revision have not been very definitely expressed. This is a subject which has not forcibly appealed to him. Therefore the convention will not be strictly committed on this question by what he has done or said. Those who would prevent revision if they could will strive to procure an evasive platform utterance. Mr. Taft and his nearest supporters will seek a plain declaration of purpose, and probably they will prevail. Even then, however, we must admit that advocates of a revision involving a reduction of excessive rates will probably find the platform quite unsatisfactory.

We have heretofore and repeatedly expressed our appreciation of Mr. Taft's exceptional qualifications for the high office for which, in all probability, he will soon be nominated. Undoubtedly he knows that conditions are not quite so favorable now for Republican success as they were four years ago. Business depression tends to impair the voting strength of a ruling party. The disaffection of organized labor and of negro voters cannot be ignored. Republican nominees and party leaders will have need of wisdom and earnest devotion to the interests of the people in the campaign that is to end in November.

The Dreyfus Affair Continued

"I ATTACKED Dreyfusism, not Dreyfus," was the justification of Gregori after his shot in the Pantheon. A Frenchman never goes into danger without having an epigram handy, and this not only looks well in the headlines of the paper—for Gregori is a veteran journal-

ist—but has the additional and rather unusual merit of being strictly true, too obvious, indeed, to be startling. For nobody ever had anything against Dreyfus personally. Altho he has been for fourteen years the most hated man of his race—which is saying a great deal—the only thing proved against him in the court proceedings was that he was not clubbable. This is not a crime, even under the Code Napoleon, but, nevertheless, it had much to do with making him the victim of national persecution and an emblem of political warfare. His greatness was thrust upon him, but he was not the material out of which a popular hero could be constructed. His chief virtue seems to be a kind of passive fortitude, which enabled him to keep a stony countenance when his sword was broken on the Champ-de-Mars and when it was restored to him on the same spot after many years. He showed his courage when alone on the Isle du Diable, as well as in the presence of 150,000 people the other day, when he was for the first time under fire.

The shooting of Dreyfus was a spectacular political protest against a spectacular political act. There was no good reason for opening the doors of the Pantheon to Zola until at least the customary ten years had past since his death. His bones would have rested just as well in the cemetery of Montmartre with Heine's as they will in the Pantheon with Hugo's. The apotheosis of Zola was not for the purpose of glorifying a writer who had influenced the literature of all nations, or to atone for his unjust condemnation, or to honor his brave deed in espousing an unpopular cause. It was done simply to make an occasion for gloating over the discomfiture of the opposition party. M. Clemenceau seized Zola's body as a political weapon, and the affair came out better than he had any reason to expect, for Gregori's shot has increased the majority for his income tax bill.

It is, however, a mistake to bury a man before he is dead. The laying of Zola's coffin in the vault beside Hugo's has revived the old feud between the romanticists and naturalists. Literature in France is a social and political force. In this country the novelist and poet are

rarely taken seriously, and when they are it is a question of what they say rather than how they say it. An abolitionist did not necessarily have to believe that "Uncle Tom's Cabin" was a product of the highest literary art, and a socialist does not feel himself called upon to defend the style of "The Jungle." Sedan was to France a catastrophe very similar to Waterloo, but the objectively critical and matter of fact description in *La Débâcle* are very different from the Titanic rhetoric of *Les Misérables*. It fell like a shower of cold water on the French mind, which had for a generation been trained by school and press to think only of revenge against Germany. And now, because of the disturbance of these bones, the battles of 1870-71 are all being fought over again, now when there is peace on the border and the world is getting used to the sound of the words Elsass-Lothringen instead of Alsace-Lorraine.

The Dreyfus affair should be of value to us Americans. It shows us the terrible danger of certain national traits which exist here as well as in France, altho, we hope, not to the same degree. We, too, try our criminal cases in public, before a grand jury composed of all newspaper readers, where any testimony is admitted and no judge lays down the law. We, too, are diligently cultivating our national hatreds, notably the insidious growth of the feeling that a war against Japan is natural, desirable and inevitable. We, too, are becoming infected with the virus of anti-Semitism, which is daily becoming more evident in petty insults and social restrictions against the Jews. All this is an accumulation of inflammable material that on occasion may result in a catastrophe that will bring national disgrace upon us, as the Dreyfus affair has upon France.

The Virtue of Alliteration

THERE is great power in a happy phrase. "Hoke and Hunger," "Brown and Bread," have been the slogans of the candidacy of Mr. Brown against Hoke Smith for the Governorship of Georgia, and they have done the work—or something has—for Hoke Smith, elected Governor two years ago by an overwhelming

majority on the cry of negro suppression and railroad suppression, has now been defeated by the railroad commissioner whom he removed from office; and that, too, altho Hoke Smith made a rattling campaign and spoke everywhere, while Brown stayed at home and wrote letters.

We do not say that it was wholly the alliteration that broke Hoke, but it doubtless had much to do with his defeat. It pleased the ear, and so pleased the brain behind the ear. It always does. The caption editor of the daily press dotes on it, because his readers do. Did not Shakespeare give us the title "Love's Labor Lost"? We choose the sunny smile and we tell of the flat failure. Authors choose an alliterative pen-name, such as "Oliver Optic," "Timothy Titcomb," "Fanny Fern." A gentleman once remarked to Mr. Whittier that the poems of his friend Lucy Larcom were excellent, but why should she wish to take such a ridiculous name; that "Fanny Forester" and "Grace Greenwood" meant something, but *Larcom* was utterly senseless. Mr. Whittier replied that *Lucy Larcom* was her real name, and that if he had such an objection to it, it was open to him to try to change it.

The ear loves repetition, and not the eye only. That is the secret of the passion for dancing. The repetition of the beat, the recurring ictus on the syllable or the measure, is the primary fascination in music or poetry. In music the melody varies, but the beat holds; and in poetry the words change, but the measure stands. The crudest sort of poetry, that of the Hebrew psalms, repeats by parallelism of two clauses of the same length and meaning. Rime is a device later than measure, that repeats the same sound at the end of corresponding lines, and the repetition is what we like.

Charles Churchill's poems are quite forgotten, but his one phrase, "Apt alliteration's artful aid," is a permanent gift to the language. Next to meter and rime it is the most obvious of the elements belonging to the mechanics of poetry. It is the repetition, near enough to strike the ear, of the initial sound of a succeeding accented syllable. It is somewhat obtrusive, and so must not be overdone, or it will suggest Peter Piper's peck of pickled peppers. The recurrent conso-

nant at the end of successive accented syllables is less obvious, but very agreeable; and the succession of accented vowels, called *syzygy*, is much sought by poets, but the reader seldom understands why the words sing so sweetly on the tripping tongue.

Shakespeare knew the value of this "artful aid": "Full fathoms five thy father lies"; "Blow, blow, thou winter wind." And Milton did not disdain it, especially in his shorter poems. An extraordinary example with the letter *s* is in "Lycidus":

"There entertain him all the saints above
In solemn quires and sweet societies,
That sing, and singing in their glory move."

But Tennyson is the past-master in the use of alliteration, as he is in that of all vocal assonance. "The Brook" is a study in the magic of sound. The two first lines,

"I come from haunts of coot and tern,
I make a sudden sally;"

have two alliterations in the first line and one in the second, and cases of *syzygy* are almost as numerous in the poem as those of alliteration.

So the Georgia spellbinder who elaborated "Hoke and Hunger," "Brown and Bread" was a piece of a poet. He hit the heart, and he bagged the ballots.

Socialism and Religion

AT the Nationalist Socialist Convention last month the following resolution was past:

"The Socialist movement is primarily an economic and political movement. It is not concerned with religious beliefs."

The truth of that statement ought to be axiomatic to any intelligent person. What is religion? It is the teaching and practice of the relation of a man to his God. What has it to do with a man's relations to his fellow men? Absolutely nothing, except as he believes that the God he worships requires him to do justice and love mercy toward them. What is socialism? It is that teaching and practice which requires the common ownership and administration of the means of industrial production. The two, religion and socialism, do not visibly collide any more than a low-flying dove interferes with a soaring lark. The Chris-

tian religion is neither socialistic nor anti-socialistic. Its history began with a little idealistic experiment in socialism which was soon given up, as the believers were not equal to it. It was Christianity with or without it. If it should ever be demonstrated that the justice and love which God ordains requires socialism, then, and not till then, will religion require the acceptance of socialism. Meanwhile its teachings are among those permissive doctrines left to the best intelligence of every devotee of whatever religion.

It is the danger of every fresh advance of thought that its advocates make a religious faith of it. They hold it with stressful and distressful strenuousness. The majority of those Nationalist Socialists in their convention were agnostics, or in some way antagonistic to the Christian faith. They saw that the Church as a whole is not with them, and that the Catholic Church has pronounced against them, and that sets them on edge religiously. On the other hand, there is a company of Christian ministers and others, with some followers of Tolstoy, who hold their Christian faith and their socialism in firm accord, and almost if not quite identify the two. There is room for both in the ranks of socialism, and room for socialists in the ranks of Christianity.

Our present system of law and ethics is based on the private ownership of land and of nearly all the means of production. That explains why the Catholic Church has condemned socialism. It lacks the idealistic vision of human society. And yet the Jewish theocratic state was semi-socialistic. The state held the land, assigned it to families, and did not allow it to be sold. Our present forms of government are semi-socialistic, with public ownership of roads, schools, parks, post office, army, navy, and, in the more advanced countries, of banks, railways, gas and water systems. We have no fixt theory against socialism, for we are moving that way, and we do not know where we shall stop. Religions cannot tell us; it is a pure question of political economy, which a future generation must solve. When solved, when it is settled what justice and mercy require, then religion will add its mandate to do the right.

Cheap World Postage

First we extended our cheap two-cent letter postage to Canada and Mexico. That was a presage and promise. Now it is announced that the two-cent rate is to be extended to Great Britain and Ireland, two cents for an ounce, instead of 5 cents for half an ounce. That will be a great relief and convenience, and will much increase the use of the mails. Cheap postage, like cheap travel, means more circulation and more money expended on the whole. Now, just as the extension to Canada involves extension to Great Britain, so this last extension involves yet farther extension to France, Germany, Holland and Italy, and any other countries with which we have the same close steamship communication that we have with Great Britain. It will be the same trouble or cost to send letters by steamer to Liverpool as it is to Havre or Hamburg. The enormous number of immigrants in this country from European countries, all of whom want to write home frequently and receive letters, and to most of whom the expenditure of 5 cents is more serious than that of 2 cents, makes it likely that it will be no loss on either side to make a general reduction, which will one of these days give us a single world rate, 2 cents to the next town, or 2 cents to the antipodes. Thus all the world will become neighbors. Already it is 2 cents to the Philippines. Why not to Japan, a country with which we have direct steamship connections?

"So Say All of Us"

On the face of it a most harmless, edifying pronouncement is that which President Butler, Mr. Choate and sixteen other men ask the Republican Convention to incorporate into their platform:

"We affirm our confidence in the integrity and justice of the courts, State and national, and we insist that the preservation of their independence and full constitutional prerogatives is essential to the maintenance of the American system of government."

There may be lunatics, possibly anarchists, who would dissent, but no one else we know of. They give as their reason for asking it that the Democratic candidate and platform twelve years ago made "an attack upon the courts," and

that they fear some such attempt. That platform of 1896 denounced "arbitrary interference by Federal authorities as a violation of the Constitution," which is a safe enough statement. It says, as does the plank proposed above, "an undisputed thing in such a solemn way." It also condemned the extension of "government by injunction" as an interference with the vested rights of people and States, and approved trial by jury in certain cases of contempt. That is not very dangerous. In fact, there is very little danger of any one department of government trenching on another. It is not true that President Roosevelt has invaded the legislative branch of government. The Constitution gives him legislative power, by the right of veto, by the duty of recommendation, and by the power of appointments. The latter has been used from the beginning, and especially since Jackson, to influence legislation, and never so little as under President Roosevelt. His urgency in recommending legislation is quite legitimate. And if he has criticised in general terms the judiciary at times, he has done what every citizen has the right to do. In his baccalaureate sermon President Taylor, of Vassar, shuddered with fear of "the dangerous tendency to absorb legislative and even judicial powers into the executive department of our Government." We wish he would specify. On what journalistic meat does he feed that he has grown so grewsome? We reckon that Congress and the Supreme Court between them are able to hold their own against the President's possible inroads.

A Vain Protest

"*The Manufacturers' Record* [of Baltimore] never endorsed the views of the *New York Tribune*, the *New York INDEPENDENT*, the *New York Evening Post*, the *Philadelphia Press*, the *Springfield Republican* and other such papers in support of the Ogden Movement."

That does not pain us. "Nobody axed ye, sir, she said." We like the company, and *The Manufacturers' Record* in a very long editorial goes on to attack Mr. Ogden and the General Education Board, and Carnegie and President Eliot, Dr. Lyman Abbott, and Booker T. Washington, and six Southern State universities and ten Southern colleges, and Presidents Alderman and Dabney, and a num-

ber of other Southern educators for their association with the "Ogden Movement," and so with negroes, and it concludes thus tearfully and helplessly:

"Again we beg them, our Southern brothers, to drop the thing and use their influence to induce our Northern brothers and our Western brothers to escape from the clutches of the \$43,000,000 Educational Trust, to turn back every cent of money that has come from its coffers or from the pockets of its chief promoters and supporters, and to smash it for good and all."

But they will not, and if Mr. Ogden and Mr. Rockefeller and all the rest of them believe the negro should have a share in the uplift, it is yet good money and *non olet*. And our Southern friends need not fear that too much of it will go to the negroes. Of the last Southern assignments, just announced, \$50,000 goes to Williamsburg, Ky., Institute, white; \$125,000 to William Jewell College, Mo., white; \$100,000 to Davidson College, N. C., white; \$80,000 to farmers' co-operative demonstration work in the South, white; \$20,000 for special high school agents in connection with Southern State universities, white—a total of \$375,000; while for colored institutions in the South we have \$10,000 to Hampton Institute, \$10,000 to Tuskegee, and \$12,000 to Spelman Seminary, a total of \$32,000, and none of it of the sort that need disturb Southern susceptibilities.

Open Air Theatricals

Miss Maude Adams has had two university experiences recently. At Harvard she was invited to give "Twelfth Night" in the Elizabethan fashion, and at Yale she appeared in an open-air performance of the same play. The two experiments were highly favorable to our present theater. The Saunders playhouse, patronized by the Harvard faculty and student body, was fitted up in replica style of the 1601 Swan Theater; there was the stage projecting into the pit; there were the entrance curtains, the balcony for the musicians, the side boxes, the crude scenery, and members of the senior class rigged up as Elizabethan blades. Over the auditorium hung a blue cloth to represent the open sky above. The players went thru the piece with scarce any interruptions, for the accessories were hardly to be taken into account. The consensus of opinion was that modern scenery, if judi-

ciously used, is far superior to the Elizabethan fashion. In these days, the excuse usually given for attempting to reproduce the old manner is that it shows on the part of the audience a greater exercise of the imagination. Undoubtedly the Elizabethans were more subtle in their imagery than we, and were more childlike in their enjoyment; and here, it seems, is just the reason why for a modern people scenery is not only justifiable but necessary in order to heighten and to assure the proper illusion. On the sward of the Yale Lawn Club, "Twelfth Night" was turned, as much as it was possible to make it, into a pastoral. Over 1,600 people sat beneath the broad canopy of a starlight night, and the real moon hung in the center of the group, putting the incandescent bulbs to shame, and looking as tho some prearrangement had been made with the stage manager to shine its silveriest. The players' voices were given that quality of spectral distance which the nighttime usually lends to human sounds; the violins sang forth their thin fairy tones, and the wind, scarcely noticeable in the open, was evident only when it caressed the folds of the actors' gowns. Now and then the far-off whistle of a passing train was heard, bringing the dreamer back to his own age. And here the artificiality of the pastoral impressed itself. Between the actual nearness of the rushing train and the quiet calm of a perfect night, betokening the holy aspect of nature, there was thrust a stage with mimic life upon it. A large group of real people has a soul of its own beside which the soul of the play in the open seemed small and thin. The theater must create illusion; it is not as large as nature, nor should it ever compete with it. In the open air, the song, the dance, the lyric and light comedy are all effective; but the poetry of "Twelfth Night," the rare humanity of Viola, were obscured at Yale by the effortless divinity of nature.

Edward's Visit to Russia

The anger, the passion, the protest which the Laborites in the British Parliament have exprest against the visit of King Edward to the Russian Czar we understand, and we have a certain sympathy with it; but nevertheless it is not dictated by sound reason. It is true that

the Czar represents a tyrannical system of government, and so long as he solely represented it King Edward did not visit him. But there is now a Duma which shares with him the responsibility of government. To be sure the share is not a very large one yet, but it is something, and that something is a tremendous change. It is the beginning of representative and constitutional government. It is better than the beginning of the British Parliament. Edward goes to what is not quite autocratic Russia. His visit is an approval not of autocracy but of constitutionalism. Revolution by violence, sudden and complete, has been tried and failed. All but extremists understand it, and their present hope is in the maintenance of this imperfect Duma, the best that can now be had, and in strengthening it by degrees. The visit of King Edward is in sympathy with this aim and hope. His advice can be only in the line of constitutionalism. Accordingly, while these ill-advised members of the British Parliament are protesting, the Advanced Liberals in the Duma, such as Milyukoff, are welcoming his visit, as a strengthening of their position against the reactionaries. King Edward is the peacemaker of Europe, and even Germany has no good reason to deprecate this sign of the approach of Great Britain and Russia.

Ex-Representative James W. Wadsworth is chairman of the State Racing Commission in this State, a commission that would not be needed but for the gambling, as it is not needed in other States. He is very anxious that the anti-racing bill should be defeated, and he is thus quoted:

"It is certain that these bills will be beaten. Beyond that I have nothing to say. The less we, who are opposed to these bills, have to say the better for our cause. The only headway the Governor has gained is by agitation."

Exactly. The less noise a burglar makes the better for his cause. The agitation by the police is what he deprecates. It is always the policy of criminals to work in the dark and in silence so as not to attract observation. It is the business of those who have the interests of the public at heart to promote publicity, to create agitation and set men to thinking. We quite agree with Mr. Wadsworth.

The problem of the Canyon Diablo "crater" in Arizona ought to be solved and will be. It is a depression in the desert three-quarters of a mile across and about 600 feet deep, and is not a crater of an old volcano at all; but the geologists who have investigated it think it is the mark where a huge meteor, which we may call the head of a comet, struck the earth at a speed of many miles a second, and broke thru the strata of rock to this amazing depth. But what became of the meteor? Well, the heat generated by the impact might have dissipated it and the soil and rock where it struck, just as "new stars" burst into activity from a similar cause. An extraordinary number of meteoric irons have been found in the neighborhood, which may have followed in the track of the meteor.

We do not think any the worse of Mr. Taft that he drew a sound moral lesson from the story of the weakness of General Grant. Everybody knows that in his early career he was addicted to drink and seemed to have ruined his career. It was constantly charged against him during the war, and President Lincoln made careful investigation as to his habits when in charge of the army. He found him temperate and competent; and he answered the critics by asking to be informed of the brand of whisky Grant drank, so that he might send it to other generals. Of course, those now opposing Mr. Taft will say that it was not nice or courteous to refer to Grant's early weaknesses, but it was courageous and true, even if it does give another handle to the critics.

President Julius Liebmann, in his address June 9th to the United States Brewers' Convention, made the usual suggestions for the purification of the saloon, and threw this advice at the foes of the saloon, after claiming that sterilized water makes more than 90 per cent. of all good beer:

"If our enemies in the ranks of the Prohibitionists would use some of their energy to secure for the communities in which they live a plentiful supply of pure water, or if they would devote some of their so-called educational literature, with which they flood rural communities, to enlightening people on the danger of typhoid and other epidemic diseases

caused by the pollution of their wells, they would be performing some real service to the State."

Yes, a second service.

The saloon people in Georgia hope that the defeat of Governor Hoke Smith spells the return of free liquor. We venture to guess not. The legislature will not go backward quite so soon. Georgia is now one of eight prohibition States in the Union, and South Carolina is likely soon to be the ninth. And where there is not State prohibition there is often local option. The success is secured by non-political methods. The Anti-Saloon League's press bureau counts up seven Democratic and seven Republican legislatures that have lately enacted notable temperance legislation. Of their members 788 are Republicans, 1,177 Democrats, 36 Fusionists, 6 Social Democrats, 3 Independents, and 3 Prohibitionists.

The way of the sectarian college that would become non-sectarian is hedged about with difficulties, as Vanderbilt University has discovered. Another case is that of the Central University, Danville, Ky. It was under the control of the Southern Presbyterian Synod of Kentucky, but the Synod accepted advances from the Northern Presbyterians, and they got a charter from the State under which the board of trustees was made a self-perpetuating body, with no sectarian limitations. That allowed the college the aid it received from the Carnegie Board. The thing is done and cannot be changed; but the Southern General Assembly has, by a vote of 111 to 45, rebuked the Synod of Kentucky.

It seems to have escaped notice that the recently negotiated arbitration treaty between Secretary Root and Baron Takahira is the first arbitration treaty Japan has ever entered into. Thus America has the honor of leading other countries in the conclusion of a Peace Treaty with Japan, just as we did half a century ago in the Treaty of Peace, Amity and Commerce, which opened Japan to the world and the world to Japan, and started these "Modern Greeks" on a career unparalleled in history, which in two generations

transformed a medieval feudalism into a great modern world power.

There are 52,000 negroes in Montgomery County, Ala., and less than one hundred registered negro voters. In Alabama are such schools for the colored people as Talladega College, Tuskegee Institute, the Agricultural College, the State Normal School, Payne University, Selma University and many public schools. There must be more than a thousand negroes in Montgomery County who are eligible to registration. Every man, white or black, that is eligible to registration and does not try to register and then keep up his taxes is false to his manhood and his race.

It is to be noticed that Mr. Carnegie has lately remembered in his gifts the needs of institutions for the colored people. He had before built a library for Talladega College, and we have the late announcements of \$50,000 for a library for Howard University, and the gift of \$200,000 for the proposed colored annex of Berea College on condition of a similar amount being raised elsewhere. We trust that other streams may flow to similar institutions which greatly need them from this perennial fountain.

We are pleased to see the announcement that the \$500,000 needed to pay the debt on the St. Patrick's Cathedral in this city is likely to be raised as the result of the centennial celebration of the erection of the diocese. Then we may expect a grand dedication, for the Catholics have the good rule that a church shall not be dedicated until it is finished and paid for.

It is no joke, but a serious and sensible proposition, made by a commission of the Russian Duma, that the imperial eagle hitherto placed on labels attached to bottles or barrels of vodka, which is a State monopoly, be replaced by a skull and bones, indicating its poisonous and dangerous character. That is a suggestion for American legislation.

Hoke Smith defeated in Georgia, Jefferson Davis turned down in Arkansas—the skies are brightening.

Danger From Revolving Doors

THE revolving door menace has been recognized in Paris, and cable dispatches from that city announce that the Prefecture of Police has issued a peremptory order abolishing such doors at all cafés, restaurants, hotels and other places capable of containing more than 100 persons at one time. *The Scientific American* recently called attention to the danger of these revolving doors, but no order similar to the French Prefect's has yet been issued in New York. In case a fire took place, and their danger was demonstrated by means of several deaths because of them, some action might follow along the lines of the Paris initiative.

Small Vote in the Mutual Life Election

THE annual election of trustees of the Mutual Life Insurance Company was held on June 1st. It was very quiet. Ninety-three votes were cast for the twenty-three trustees on the administration ticket, which was without opposition. The candidates were declared elected notwithstanding the small polling. It is interesting to recall the fact that, because of the activity of the Policy Holders' Committee in its quest after the control of the company's board of trustees, something like eighteen months ago, 360,000 votes were cast in the election of 1906. The apathy of the voters noted in regard to the election in the New York Life, to which some reference was made in our issue of April 23d, was almost as pronounced in the present election, there having been only twenty-seven more votes cast in the Mutual Life election than in that of the New York Life. The members of the Mutual Life ticket elected were as follows, viz.: Dumont Clarke, Julien T. Davis, Frederick H. Eaton, William H. Lambert, George P. Miller, Emile Philippi, Alfred M. Shook, Cornelius Vanderbilt, E. W. Clark, William B. Dean, William F. Harrity, Alfred E. Marling, Herman Ridder, Leroy Springs, Joseph H. Wilson, C. H. W. Curtis, H. Rieman Duval, A. D. Juil-

liard, J. Rogers Maxwell, Thomas H. Mulry, Stewart Shillito, Henry W. Taft, and Robert B. Woodward. Of these Messrs. Eaton, Philippi, Shook, Clark, Ridder and Shillito were candidates for election as trustees of the Mutual on the International Policy Holders' Committee ticket.

This election is under the special elections act past by the Legislature in the winter of 1905, in connection with the reform legislation framed by the Armstrong Committee.

IN view of the constantly growing popularity of travel via the subway between Manhattan and its suburbs, the following paragraph in the *London Insurance Spectator* relative to danger in tube railways becomes of more than passing interest. The *Spectator* says:

"At an inquest held on March 19th on a boy who died suddenly in a tube railway lift, the medical testimony was to the effect that the carbonic oxide and carbonic acid gas in a tube lift might produce syncope. It was further stated that the tube atmosphere was vitiated. That was a thing we imagined, however, that everybody knew well enough. It was also stated that the foreman of the jury had once fainted in the tube. Of course, the verdict was death from natural causes, but the evidence pointed quite another way, and sufficiently indicated what a heavy price is paid for just a small economy in time, which, after all, is with very many quite swept away by the extra days of illness resulting, to say nothing of the inefficiency, mental and otherwise, that twice a day in a thoroly bad atmosphere produces now in many thousands of those, both men and women, who go to the city by the tube railways."

The Chronicle recently referred to the old story of the geese whose cackling saved the capitol of Rome from the enemy, and stated at the same time that the classic geese had found a sort of modern counterpart in a flock of domestic ducks, whose quacking early one recent morning awoke Mr. and Mrs. David M. Cowhill, living on the Portland road, near Saco, Maine, to find the building in flames and just in time to escape with their lives. Loss on building and contents about \$2,300, covered by \$2,600 of insurance. This is one more piece of evidence that history repeats itself.

Bank Receivership Expenses

IN that group of excellent laws for banking reform which were enacted at the recent session of the New York Legislature was one designed to prevent the payment of large fees to receivers by the depositors and stockholders of failed banks. It empowers the State Superintendent of Banks to take charge of such institutions and liquidate their affairs. He, or his representative, takes the place of the receivers heretofore appointed upon the recommendation of the Attorney-General. In the case of the Home Bank, of Brooklyn, this law was applied for the first time. Superintendent Williams placed the bank in the hands of George S. Leonard, one of the State's bank examiners. Last week the bank resumed business, and Mr. Leonard's bill for forty-two days' service was \$666, or his salary as a special deputy superintendent. The entire cost of the management of the bank's affairs by the Bank Department was only \$1,190.

The former practice in such cases opened the door for extravagant allowances, and the apportionment of receivership patronage has sometimes been accompanied by scandal. At the present time there is a tendency to reduce the fees allowed under the old law. A day or two after the Home Bank's expense account was published, the Appellate Division of the Supreme Court by unanimous decision reduced the fees of the three receivers of the Knickerbocker Trust Company from \$75,000 each (which a Supreme Court justice had allowed) to \$20,000. To the receivers' counsel \$75,000 had been granted; this also was cut to \$20,000. "The sum allowed," said the court, "was so grossly excessive as to amount to a spoliation of the assets of the trust company. To allow it to stand would implant general distrust of the administration of justice." On the following day, Justice Kelly granted \$40,000 to the two receivers of the Williamsburgh Trust Company and their counsel. The receivers, thru their counsel, had asked for \$200,000. When the cost of other recent bank receiverships in New York is compared with the Home Bank's expense

account of \$1,190, the possibilities of reasonable economy under the new law are clearly seen. The law was proposed by Superintendent Williams, and the enactment of it was due largely to the earnest support which he gave to it before the Legislature.

Iron and Steel Prices

A REDUCTION of 12½ per cent. in the price of steel bars has been followed by one of 10 per cent. in bar iron. Probably a general readjustment of iron and steel prices is at hand. In the long run this could be prevented only by a return of the general prosperity prevailing eight months ago. It has been the policy of the leading manufacturers to maintain the prices which were ruling then, but the reductions of comparatively small concerns have at last compelled them to yield. There are arguments in favor of the policy which was adopted, but in the light of present conditions it appears to have been unwise to make no concessions. It may be that those who decided to keep up the rates were confident that a restoration of the old conditions would not be so long delayed. If there must now be a general readjustment, it should be made at once and upon a basis that can be maintained.

....Government expenditures exceeded receipts in May by \$11,958,991, making the deficit for eleven months \$63,603,605. In May of last year there was a surplus of \$8,500,000.

....According to the Census Bureau's revised and final report, issued last week, the cotton crop of 1907 was 11,375,461 bales, valued at \$700,956,011. The crop was less than that of 1906 by 2,220,037 bales, or 16¼ per cent.

....On May 31st there were 6,810 active national banks, with an authorized capital of \$925,697,775 and \$624,714,147 of outstanding bond-secured circulation. Since the act of March 14th, 1900, became effective, 3,889 national banks have been organized, 2,520 of them under the provisions of that law, their average capital being about \$26,500.

The Independent

VOL. LXIV NEW YORK, THURSDAY, JUNE, 19, 1908.

No. 3107

Survey of the World

The Republicans at Chicago

Hearings before the Republican National Committee, at Chicago, in the cases of contested delegations were finished on the 12th. The contests had involved 219 seats, and 216 of these were given to supporters of Secretary Taft. The remaining three (two in Virginia and one in Ohio) went to delegates who will vote for Senator Foraker. After the committee had completed its work it was admitted that Mr. Taft had delegates enough to nominate him on the first ballot. The number needed is 491. According to the Associated Press, he had 387 instructed delegates before the contests were taken up, and 603 such delegates after the decisions had been made. To these are to be added about 100 who are counted for him but who were not instructed. Mr. Hitchcock, the manager of the Taft canvass, asserted that his candidate's vote on the first ballot would not be less than 704. The delegates of both factions in Louisiana were admitted, each with half a vote, but it was understood that all were for Taft. A similar compromise was made in one district of Tennessee and in one of Ohio.—After forty Taft delegates had been admitted, the "allies," who had protested against the use of proxies by Mr. Hitchcock and two of his assistants, decided to make no further argument before the committee, but to reserve their pleas for the convention's committee on credentials. Twenty-four hours later this decision was reconsidered, and the work of the "allies" before the committee was resumed. Owing to the arrival of the New Mexican delegate whose proxy he had held, Mr. Hitchcock withdrew, but his

two assistants kept their places. It was asserted that his course had been emphatically approved by both Mr. Roosevelt and Mr. Taft, with whom he was constantly in communication.—At the beginning of the present week there was no agreement of a majority concerning a choice for the second place on the ticket. A story had been sent out from Washington to the effect that the nomination of Secretary Cortelyou was desired by the President, who appreciated his loyalty in discontinuing his efforts to obtain delegates in the South for himself and in consenting to the employment of his friend, Hitchcock, in the interest of Mr. Taft. This was followed, however, by denials and by indications that it was displeasing to the President. Republicans from Iowa asserted that the nomination of Senator Dolliver would cause great political disturbance in that State by reviving factional bitterness and assisting Governor Cummins to enter the Senate. Immediately after the passage of Governor Hughes's anti-race-track betting bills there was a demand for his nomination, but his positive assertion that he would not accept the second place seemed to leave no room for argument. Some of the New York men then suggested that the withdrawal of his candidacy for the first place might open the door for the nomination of Congressman Sherman and thus give New York representation on the ticket. On the 14th, in New York, the Rev. Dr. McArthur said he knew the Governor did not desire to be nominated for a second term at Albany, his expenses during his first term having been more than \$60,000 a year. At the beginning of the present

week it was reported that the second place might be given to Mr. Fairbanks. —It was asserted that the "allies," partly because the action of the committee had been so unsatisfactory to them, would ask the convention to reduce the number of delegates from the South. Representative Burke, manager of Senator Knox's canvass, made public a resolution which, he said, the "allies" would offer, providing that each State should have four delegates at large and one additional delegate for every 10,000 Republican votes cast at the latest preceding Presidential election. This rule, it was said, would reduce the number of Southern delegates by 100 and add 150 to the number of delegates from the North. Mr. Burke remarked that South Carolina now had one delegate for every 136 Republican votes, while Pennsylvania had one for every 12,367, and Ohio one for every 13,046. It was said that such a rule would be opposed by the Taft forces. —There was much interest in what the platform writers would say about injunctions in labor disputes. Reports published on the 15th predicted that the declaration on this subject would be conservative. —Twenty-two members of the Diplomatic Corps at Washington have accepted invitations to attend the convention. Among these are the British and French Ambassadors.

Governor Hughes's Victory

✱ Governor Hughes has won his long fight against betting at the race tracks. The two bills which he has supported so earnestly and vigorously were past at Albany on the 11th, but only by the vote of a Senator who was recovering slowly from an operation for appendicitis and who came to the Senate chamber at the risk of losing his life from exposure and strain. It will be remembered that altho the Governor's bills were past in the House (or Assembly) at the regular session by a large majority, they were lost in the Senate by a tie, 25 to 25. One seat was then vacant, owing to the death of the Senator from the Niagara Falls district. The Governor called a special session of the Legislature and ordered an election in that district, where a Senator was chosen

(by a small majority) who would vote for the bills. Much pressure was applied by churches and mass meetings at their homes and in their districts to several Senators who had opposed the bills, and the Governor made public addresses in many cities of the State. It now appears that no Senator was induced by all these efforts to change his vote. As the time for action in the special session drew near, there was great danger that the Governor would lose one of his votes, owing to the dangerous illness of Senator Otto G. Foelker, representing one of the Brooklyn districts, who had undergone a perilous operation for appendicitis and was in a precarious condition. In the absence of Mr. Foelker, the vote of the new Senator from the Niagara district would not break the tie. After some delay, it was agreed that final action in the Senate should be taken on the 11th. In the House, the bills had been past by a vote of about 4 to 1. Foelker was confined to his bed at Staatsburg, sixty miles from the capital. He insisted upon making the journey. On the evening of the 10th, against his physician's advice, he was carried to Albany and lodged in a friend's house near the Capitol. That night he was very ill. But in the morning he rallied, and at noon he was borne to the Senate chamber, arriving just in time to vote on the first of the roll calls. His physician and a clergyman were by his side. The final proceedings consumed nearly an hour and a half. At times the Senator was extremely feeble and in imminent danger of collapse. But on the last roll call his vote was given distinctly. Then they bore him back to bed. His presence had saved the bills. Since the regular session no one's attitude had changed. The vote was 26 to 25. Mr. Foelker is 32 years old. In his boyhood he came from Germany, penniless, and while earning his living as a baker's apprentice he studied at night. It was also by night study, in later years, that he prepared himself for admission to the bar. His physician says that the visit to the Senate chamber did him no harm. —The bills were promptly signed and went into force at once. On the following day there were 300 policemen and forty deputies at the

Gravesend course races. Fourteen persons were arrested for violating the new laws, but there was practically no public betting. It was reported that several owners of racehorses would transfer their racing establishments to France. J. B. Haggin gave notice that breeding of thorobreds would be discontinued on his great stock farm in Kentucky. In some of the daily papers it was alleged that property valued at \$80,000,000 would at once suffer great depreciation and that thousands of men would lose employment. The published estimates of losses appeared to be based upon the assumption that neither racing nor the breeding of fine horses could be continued if public betting at the tracks should be prevented.—Politicians had said that if the bills should be defeated, the Governor would stand for another term. The passage of them appeared to clear the way for his nomination for the vice-presidency. But on the 12th his secretary gave the following statement to the press:

"While he appreciates the distinction of the office and the honor which the nomination would confer, the Governor directs me to say that he cannot and will not, under any circumstances, accept a nomination for the Vice Presidency."

Railroads and the Laws The Chesapeake & Ohio Railroad Company and its general freight agent were indicted at Richmond, Va., on the 9th, for giving rebates.—It is expected that the indictments recently found against the Southern Pacific, at Los Angeles, will be followed by others against the same company. The facts were brought out during the investigation made by Commissioner Lane, and the offenses in question were committed since the enactment of the new Rate law, which permits the penalty of imprisonment.—It is alleged in charges filed with the Commission last week, that the Missouri Pacific has granted \$500,000 in rebates to a certain company in the grain trade, and thus enabled the company to control this trade in Arkansas and Louisiana. The complainants ask the Government to prosecute the Missouri Pacific.—At Rochester, N. Y., on the 12th, the Standard Oil Com-

pany was convicted of receiving rebates on shipments from Olean to Vermont. There are forty counts in the indictment, and the fine may be as much as \$800,000.—Nine railroad companies give notice that they are about to ask for an injunction to restrain the authorities of Missouri from enforcing the 2-cent fare law of that State.—There will be no legislation in Massachusetts this year concerning the New Haven Railroad Company's holdings of Boston & Maine stock. The Senate's bill, permitting the company to retain the stock for two years, and giving the voting power of it to the Railroad Commission, was rejected by the House, which insisted that the stock should be sold within the two years. This leaves a settlement of the question to the Federal and State courts. On the 13th, the Massachusetts Attorney-General asked for an injunction to prevent the New Haven company from voting on its Boston & Maine stock and from exercising any control over the Boston & Maine Company.—In their defense against the Government's suits relating to the commodity clause of the Rate law, the anthracite railroad companies say the clause is unconstitutional because it does not regulate, but prohibits, interstate commerce, because the penalties are excessive, because it discriminates unjustly in excepting lumber, and for other reasons.

Warning Given to Panama

It is now clearly seen that our Government regards the political situation in Panama with anxiety. There are 280 marines on the isthmus; 200 are on their way to Colon, and orders have been given that 1,200 more shall be held in readiness for use in the little republic. Some predict that a revolution will follow the election of July 12. Letters from Secretary Taft to President Amador were made public in Washington last week. On May 12, Mr. Taft reminded Amador of the charges of fraud at the election two years ago. The United States, he said, guaranteed the integrity of the republic, and this involved a recognition of the lawful Government:

"If fraud is to intervene in the election, so that a dispute arises as to who are the lawfully

elected authorities, then it becomes necessary for the United States, in the discharge of its treaty and constitutional duty, to determine who are the lawfully elected officers, in order that it may recognize them and deal with them as such. More than this, every fraudulent election involves force and violence in the election itself, which necessarily endangers the peace of the Canal Zone, and is exceedingly likely to arouse in the party defeated by fraud and violence a disposition to resist the fraudulently elected officials, and to institute a rebellion. The United States cannot look upon any election which is not conducted on fair lines and is likely to lead to violence with anything but the utmost concern, and it has a direct interest in case of threatened fraud in an election to interfere to prevent it, and in case the fraud is carried out, to intervene to prevent the succession of those officials in whose election there was not the free choice of the people."

With this letter was the following despatch to Mr. Taft from President Roosevelt:

"You are authorized to say to President Amador that the Government of the United States will consider any attempt at the election of a successor by fraudulent methods or methods which deny to a large part of the people opportunity to vote, constitutes a disturbance of public order, which under Panama's constitution requires intervention, and this Government will not permit Panama to pass into the hands of any one so elected. The failure, which you describe, to comply with the laws assuring to the people of Panama the opportunity to have their names entered in the registry of voters appears in advance to be sufficient to invalidate the election, and if the facts are as they have been represented to you, wrong already done must be redressed and fair registry lists made up. In case we find occasion for intervention, it will be necessary for this Government to consider what steps it will take for redress of the wrong done and to prevent repetition in future."

At first Amador refused to take any of the steps suggested. After a time he consented to registration and to the appointment of a commission of electoral inquiry, in which our Government is represented. But then he removed from office the provincial Governors who desired the election of Señor Obaldia, arbitrarily decreased the electoral votes of Colon, in which Obaldia has a majority, and increased the votes of places favorable to Señor Arias, who is Amador's candidate. It is said that other action hostile to Obaldia has been taken, and that the correspondence was published because our Government was convinced that in all probability intervention would be required.

Powers and Howard Pardoned

Governor Wilson, of Kentucky, on the 13th, pardoned Caleb Powers, accused of complicity in the assassination of Governor-elect William Goebel on January 30th, 1900. At the same time he pardoned James B. Howard, a mountaineer, who had been found guilty of firing the shot that killed Goebel and was serving a sentence of life imprisonment. Powers was at once released from the jail in Georgetown, where he had been confined since the disagreement of the jury at the close of his fourth trial. Howard was released from the penitentiary at Frankfort. Each of these men had been convicted three times, once sentenced to die on the gallows, and twice sentenced to be imprisoned for life. The Court of Appeals had sustained Howard's last sentence. At the fourth and last trial of Powers there were ten jurors for acquittal. He was Secretary of State at the time of the assassination. In a long statement, the Governor shows that petitions asking for the pardons have been received by him from all parts of the country, and that nearly half of the 500,000 signers are Kentuckians, many of these being Democrats. Reviewing the history of the memorable crime, he says he is convinced that Powers "is, beyond all reasonable doubt, innocent, and that any further prosecution of him would be a great wrong." He asserts that at the trial of Henry E. Youtsey, the State proved that the latter fired the fatal shot. Youtsey accepted a life sentence. Careful examination of all the evidence, he adds, satisfies him that Howard had nothing to do with the assassination. Powers says that if he had had the \$15,000 needed for a proper presentation of his defense in court, with the strength to endure the strain of another trial, he would not have asked for a pardon. Ex-Governor William S. Taylor, who is under indictment, but has been for eight years an exile in Indiana, says that he does not intend to return to Kentucky.

Woman Suffrage in England

The promise made by the Premier that votes for women might be included in the franchise reform law to be brought up in Parliament next year,

provided the women showed themselves sufficiently convinced of its desirability, has stimulated the movement to greater activity, which found expression in an imposing and orderly demonstration in London last Saturday. A procession, estimated to contain about 15,000 women, marched from the Victoria Embankment to Albert Hall, where addresses were given by British and foreign leaders. In this demonstration all factions and classes for once united, Conservatives and Radicals, titled ladies and working girls, professional women and the uneducated. The procession was led by Mrs. Harry Fawcett, Lady Frances Balfour and Lady Henry Somerset, who have been strongly opposed to the sensational methods which have recently prevailed, but the Suffragettes were represented by a large contingent, including a squad of Holloway ex-convicts who had been imprisoned for public demonstrations. There were many doctors of philosophy and medicine and college graduates in cap and gown, carrying banners inscribed with the names of famous women of the world. Authors, artists, actresses, musicians, trained nurses, stenographers, shop girls and factory operators marched together in the procession, grouped according to their occupation and bearing appropriate banners. Among the American ladies were Dr. Anna Shaw, Miss Lucy J. Anthony and Mrs. Catherine W. McCullough.—To oppose the movement a National Women's Anti-Suffrage Association has been formed, with Lady Jersey, Lady Dorothy Nevill, and Mrs. Humphry Ward as leaders. They insist on the "recognition of the fact that the respective spheres of men and women are neither antagonistic nor identical, but complementary." While supporting the concession of the municipal vote, they hold that to confer the Parliamentary franchise on women of property would inspire such discontent in the unenfranchised women that a wholesale enfranchisement of women would inevitably follow, "with the result that (under adult suffrage) the voting women would outnumber the voting men by a majority greater than often decides the relative

position of parties after a General Election." They further point out that political equalization of the sexes would involve the qualification of women for Parliament and various offices under the Crown,—holding this to be inconsistent with the physical conditions of female life, and calculated to impair woman's influence in the home sphere.

The Reval Meeting

The meeting of the rulers of Russia and Great Britain took place in the harbor of Reval with the usual formalities and functions. King Edward, in the uniform of a Russian admiral, visited the imperial yacht "Standart," and Emperor Nicholas, as a British admiral, dined on the "Victoria and Albert." The railway journey to Reval was the longest which the Emperor had taken since 1904, when he went to Samara to review his troops before they left for Manchuria. He was accompanied by the Empress, the Empress Dowager and other members of the Imperial family. The toasts exchanged at the state dinner were of too formal a character to be worth reproducing here, the only point of interest being the allusion made by King Edward to the prospective return visit of the Russian Emperor and Empress to England. The King had long private conversations with Premier Stolypin and the Russian Minister of Foreign Affairs, Mr. Iswolsky, who also conferred with Sir Charles Hardinge, Permanent Under-Secretary of the British Foreign Office. It is reported that the conversations related chiefly to Macedonia and Persia, and that Russia has accepted in a general way the proposal of England that the revenues of Macedonia be primarily devoted to local needs. Russia's plan of future action in Persia is also said to have been explained and to have met with approval. It was reported from St. Petersburg, and denied from Berlin, that the German Government made a vigorous protest against the conclusion of a triple alliance of Great Britain, Russia and France, declaring that such an arrangement between the three Powers would be regarded as a hostile measure.

The Troubles of Persia

The northernmost province of Persia, that of Azerbaijan, west of the Caspian, is suffering from invasion on two sides by foreign foes and receives no effective help from the weak and divided Government at Teheran. It is no wonder that the people should feel that they owe no allegiance to a ruler whom they cannot trust or depend upon for defense. When the present Shah was Governor of Azerbaijan he was driven from Tabriz by the people and they suspect him now of secretly betraying them into the hands of the Russians in order to strengthen his own hold on the throne. It is reported from Tabriz that the local council of that city has declared itself in favor of secession and independence. They obviously could not hope, in that event, to defend themselves against their three enemies, the Turks, the Russians and the Persians, without the support of one of the European Powers, and Germany is the only one from which protection could be expected, now that Great Britain has relinquished in favor of Russia all her interests in Northern Persia. Apart from the fact that the insurgents of Azerbaijan are armed with German rifles and ammunition, there is no evidence that Germany would be inclined to intervene in their behalf. The Kurds from the Turkish border continue their depredations in this province and have ravaged the country as far as Lake Urumia. Bodies of Turkish regulars, who have followed the Kurdish tribesmen, have begun to collect revenues. A custom house has been established at Kehlur, some miles inland from Urumia. The Turks have seized salt mines belonging to the Persian crown and have expelled the Shah's officials. According to the Persian version the trouble on the Russian frontier arose from the escape of a horse which a band of Cossacks pursued across the border. As this is contrary to treaty rights they were attacked by the native troops, and both parties retaliated by the burning of buildings. In compliance with the Russian ultimatum an indemnity of \$100,000 was paid by the Persian Government to the Viceroy of the Caucasus at Tiflis. General Snarski's punitive force, however, remains on the frontier, and if the anti-Russian feeling

in Persia continues to grow there will be no lack of plausible opportunity for its use, resulting possibly in the annexation of a strip of Persian territory along the Aras. The struggle between the Shah and the Parliamentary party practically amounts to open warfare. The Amir Bahadur, whom the Parliamentary party insisted that the Shah dismiss from court an unpatriotic adviser, has taken refuge in the Russian Legation at Teheran.

Samos and Macedonia

The disturbances which we have learned to expect at this season of the year in Turkey and its dependencies are already in evidence. The peace which has prevailed in the island of Samos since 1832 has been broken by an attempt at insurrection, which, tho temporarily quelled, may yet develop into a serious and embarrassing situation. According to the arrangement effected by the three protecting Powers, England, France and Russia, the island is practically independent, but the Sultan receives from it a tribute of \$12,500 and appoints the Prince-Governor, who must be a Christian. The present incumbent, Kopassis Effendi, appointed last February, was suspected by the people of maneuvering for the purpose of increasing the power of Turkey in the island, and Premier Sophoulis headed a parliamentary party in opposition to him. As they threatened and even attempted violence, the Prince telegraphed to Smyrna for troops, and the island received an unexpected visit from a Turkish squadron. The troops on their first landing at Vathy got into trouble with the people; it is uncertain which side fired first. The insurgents, believing that the landing of the troops was an attempt to overthrow the autonomy of the island, offered a stout resistance and many lives were lost on both sides, including some women and children of the city. Finally the three iron-clads and eight other vessels in the harbor bombarded Vathy, and drove the insurgents from the capital. Sophoulis escaped to Athens in a small boat, where he appealed to the Powers to prevent the policy of the Prince, which he claims is intended to convert the island into a Turkish province. Reouf Pasha, the

Vali of Salonika, was sent to Samos as an imperial commissioner to investigate the causes of the disturbance. Assurance has been given that the autonomy of the island will not be infringed, and it is reported that the people are returning to Vathy and business is being resumed. As soon as possible new elections will be held and a new Government formed. The trouble is believed to be due to Greek agitators, who dislike seeing any of their race under even a nominal domination of the Turk.—Greek bands are taking advantage of the deadlock of the Powers on the question of Macedonian reforms to pursue their policy of terrorizing the inhabitants of that province. They have carried their depredations to the very gates of Salonika, where a number of Bulgarian laborers loading hay were recently fired upon by Greeks concealed in a wood, and seven were killed. The Bulgarian village of Ruzeenec, in the district of Koritza, was attacked and partly burned by a band of 100 Greeks. Seven of the villagers, including one woman and a child, were killed. The Porte has complained to the Greek Government against the freedom with which the bands are allowed to cross the frontier, and attention has been called to the fact that the secretaries attached to the Greek consulates in Macedonia are in friendly communication with the invaders.

Foreign Notes The Government bill for the reform of the French electoral law has past the Chamber and the Senate in the face of considerable opposition. The object of the law is to provide for complete secrecy in voting. Booths will be provided at the polls in which the voter can prepare his ballot, seal it in an envelope, and place it himself in the box. Under the present system of practically open voting coercion by employer and public opinion has been common.—The Emperor of Germany received the new American Ambassador, Dr. David Jayne Hill, in the garden of the royal palace in Berlin in an informal and friendly manner. The audience was granted as soon as possible after the arrival of Mr. Hill in order to forestall any reports that he was reluctant to receive the American Ambassador.

—Count Apponyi, Minister of Public Instruction, has introduced a bill in the Lower House of the Hungarian Parliament providing for free instruction in the national schools. The schools under the management of religious bodies and other organizations will receive compensation from the Government which it is estimated will amount to \$700,000 a year. Agricultural secondary schools will also be established for children from thirteen to fifteen years of age.—On account of the opposition to the teaching of Professor Wahrmund, who holds the chair of Canon Law in the Innsbruck University by the clerical students, an opposition which took the form of strikes and violence, the university has been closed. Holding that the suppression of Wahrmund's lectures and his prospective removal are infringements of the freedom of instruction, the students of all the principal Austrian universities have declared a strike, which will involve 15,000 or 20,000 collegiate and high school students.—The conference of the representatives of all branches of the Slav race, which recently met at St. Petersburg, considered many measures for the promotion of racial unity and the development of the political power of the Slavs in various countries. Dr. Kramarzh, the Czech leader, and one of the promoters of the conference, proposes the following measures for the development of Slav solidarity: First, the organization of a general Slav exhibition at Moscow, in 1911; secondly, the establishment of a great Slav bank; thirdly, the convocation of a conference of Slav delegates at Prague on July 12th next, at which both Polish and Russian delegates from Russia will be present; fourthly, the organization of a better relationship between publishers and booksellers in Slav countries; fifthly, the extension of Slav gymnastic or "Sokol" societies, especially in Russia; sixthly, the federation of all Slav associations for popular education.—An anarchistic plot has been discovered in Lisbon to blow up the members of the royal family at a public ceremony to be held on June 18th. The Society of the Black Cross, which organized the conspiracy, is in close relation with the anarchists of Barcelona and Madrid.

Uncle Sam's Woodlot

BY GIFFORD PINCHOT

CHIEF OF FOREST SERVICE, DEPARTMENT OF AGRICULTURE.

THE United States now holds in National Forests (formerly called forest reserves) about 165,000,000 acres of land. This is a vast area—greater than all of France, and more than double that of the British Isles. It is, however, but 7 per cent. of the total area of the United States. As a permanent source of wood supply it is altogether inadequate, by itself, even for our present needs. Tho most of the forest upon it is still virgin, the timber now standing would hold out against a rate of consumption equal to that of 1906 (the last year for which the figures have as yet been compiled) for not more than four or five years. Yet at the average price which the Forest Service is now getting for timber from the National Forests this timber would bring, just as it stands in the woods, nearly enough to pay the national debt.

European publicists have held that from one-fifth to one-third of a country should be in woodland. No such sweeping rule can, of course, be applied exactly; all the economic conditions must be taken into account. A country of high fertility and dense population, like Belgium or Holland, will do best to draw most of its wood supplies from abroad. The United States, however, must expect always to grow most of its timber supply at home. Indeed, as the world-shortage of timber, which is certainly approaching, becomes acute, we must expect the competition of foreign markets for the products of our own forests. It is commonly supposed that we shall be able to fall back on Canada, but Canada can give us nothing more than temporary relief. The Canadian forests hold far less merchantable timber than has been supposed; growing in the North they grow slowly; and their output will, as the country develops, be in increasing demand for home use, to say nothing of the needs of England and of the Pacific trade. Rightly used, the land in the United States better suited to growing

forests than to any other purpose should fully supply our needs; but it is important to remember that more than three-quarters of this land is in private hands, and not in the National Forests.

Even within the National Forests not all of the land belongs to the Government; and of that which does, not all is timbered. These forests were set aside from those parts of the public lands wholly or partly covered with timber or undergrowth, whether of commercial value or not, provided that they were not more valuable for mining or agriculture than for forest purposes. They cover, therefore, generally speaking, the more mountainous parts of the West, where there is rainfall enough to permit trees to grow, but where the land is too rough or too high for farming. Before they were set aside as forests they were open to entry under the public land laws of the United States, and most of them were sprinkled with land claims and patented lands. Many of them also were traversed by railroads which held land grants from the Government. Even after they became National Forests they remained subject to mineral entry, just like any other part of the public domain. Hence the National Forests are broken by interior holdings which, in a few places, amount to as much as one-third the total area. Just how much deduction should be made for these claims and perfected titles in all the National Forests is not yet known exactly, but it is probably as much as 15 per cent.

Again, the forests include a good deal of land which does not now grow trees. Some of it never will. This is the land which lies above timber line, and might just as well be left out of the forests if it were not invariably surrounded by National Forest lands, and if it had any value for any other purpose. There is also the land from which the forest has been burned away, but to which it will be restored again in time—a much larger amount than the naturally barren land.

Further, in certain parts of the West, notably in New Mexico, Arizona and southern California, much land has been put into National Forests which is merely brushland, but on which the protection of even this inferior growth is absolutely essential to the water supply. There is hardly any other forest in the country which is so well worth taking care of, from the point of view of the value of its return to the community, as the dense chaparral of some of the southern California mountains.

It may not grow one respectable bean-pole to the square mile, but it pours millions of dollars into the pocketbooks of the fruit growers on the plain.

So, after all, Uncle Sam's woodlot narrows down considerably from the one hundred and sixty-five million acres nominally embraced in it, when we begin to ask what we can count on from it in the way of providing for our future need of timber. It is fortunate for us that we have other sources of supply. The entire country contains perhaps seven hundred million acres of land classed as woodland. In its present condition, however, much of this land is wretchedly poor. In truth, a good deal of it is hardly better than waste. Its average yearly growth of wood is from one-fifth to one-tenth of what it might be under the intelligent practice of forestry. Our main hope for the wood so essential to our industrial life must rest on improved methods by private owners. Uncle Sam's woodlot will not keep the country from a timber famine.

Grazing is another productive use of

the National Forests. Last year there were grazed on the National Forests over 1,200,000 head of cattle and horses, and nearly 6,700,000 sheep and goats. This stock represented a total investment of perhaps \$44,000,000 and a probable profit for the year to the owners, under the conditions of the recent past, of \$8,000,000. Thru their use for grazing the forests help sustain one of our greatest productive and one of our greatest manufacturing industries—the live stock and

the slaughtering and packing industries. The Western farmer depends to a large extent on cattle from the range, feeders brought to him to be fattened on the corn which his plowland has grown. Thus he gets his crops to market. In summer the stock from the open range seeks the forage of the mountains within the National Forests. Thus the use of the whole range country is largely dependent, under present conditions, upon the power to graze within these forests. This, if properly controlled, can be allowed without

GIFFORD PINCHOT.

harm to the forest, and with great benefit to the public. It would be altogether wrong to waste the great forage crops produced annually in regions where timber grows sparsely, with much grass on the ground between the trees, and where the forests are broken by stretches of mountain meadows and open parks.

For the right to graze within the forests a small fee per head is charged. To prevent overgrazing—an evil which has seriously reduced the power of the range to support stock thruout the West, in-

cluding, before the adoption of the present method of regulation, the National Forest range—the number of stock to be admitted each season is carefully limited. Where more stock seeks the range than should be admitted, choice is made between the applicants, not by auctioning off the permits, but by deciding who has the first right. The Forest Service recognizes as having the first right the settler, the nearby man, and the man who has customarily used the range in the past. Thus preference is given to those who are building up the country.

But the National Forests have other uses than those of timber and forage supply. The private owner of a woodlot cuts down his trees when he can make the most by doing so, without stopping to think whether his neighbor's spring below him will dry up or the wash from his gullying slope will fill up the village millpond. Uncle Sam's woodlot is not handled in that way. The interest of every one is considered. Since water in most of the West is scarce and exceedingly valuable for irrigation, forest preservation for the sake of control of streamflow is the most important thing of all. Under proper methods of management such preservation is entirely compatible in most parts with restricted grazing and the cutting of the mature tree crop. Forestry is nothing more than the continuous use of the same land for growing successive timber crops. This makes it possible to take from the forest the material needed by the mines, the railroads, the sawmills, the stockmen, the cities and ranches of the West, without injuring the users of the water fed down from the forest-covered mountains. In short, the National Forests are basic in the industrial life of the whole West. They are maintained as great economic resources for the benefit of the people. They not only guarantee the permanence of every form of activity directly or indirectly dependent upon a supply of wood (and this means practically every activity), but also furnish the irrigator his water, the stockman his summer range, the electric companies their power, and commerce a most important protection against the shoaling of streams and obstruction of harbors thru deposits of silt.

The Forest Service is charged with

the care of a wild and mountainous forest region greater in total area than all the North and Middle Atlantic States down to and including Virginia and West Virginia, the protection from fire and theft of an amount of standing timber which would be worth, if delivered at the mill, at present prices, more than all the navies of the world, and the transaction of a vast amount of business, which, altho but just beginning, yielded in cash to the Government last year over \$1,500,000, and is growing at the rate of half a million a year. All this involves an immense amount of work. In the single matter of the prevention of loss by forest fires, the saving of property thru the work of the Forest Service is enormous.

With an average patrol area last summer of 200 square miles to each man employed, slightly over \$30,000 worth of timber was destroyed by fires which burned over slightly less than 30,000 acres of timberland. Altogether, 1,355 fires were reported. Over 1,100 of these burned over less than five acres each before they were put out. Other administrative duties include the marking of all timber to be cut, tree by tree, supervision of all lumbering operations, control of the methods of handling stock and protection of the forests against unauthorized grazing, and the attention required by a large number of applications for free use of timber from the forests—a right given to settlers, miners, residents and prospectors who have no timber of their own and cannot purchase without hardship. What does all this cost the Government?

Last year it cost the Government very little, and less than the year before. Tho the expenditures for the support of the Forest Service have been increasing steadily, the net cost has been decreasing for several years. Administration of the National Forests began in 1899. At that time the forests were under the control of the Department of the Interior. What is now the Forest Service was a small division in the Department of Agriculture, engaged in investigations, educational work, and the promotion, to some extent, of the practice of forestry by private owners. The appropriations for the fiscal year 1898-99 for the support of this division were \$28,520, and for the

administration of the National Forests by the Department of the Interior \$175,000; and the receipts from the National Forests were \$7,534. The total area of the forests was something over forty-six million acres. In the fiscal year 1906-07 the receipts were over \$1,571,000, and the total expenditures for all the work of the Forest Service, including both administration of the National Forests and general investigations of educational worth, were slightly less than \$1,791,000. In other words, the net cost to the Government for administering and protecting 150 million acres of forests, and for extensive work of other kinds, was greater by only \$24,000 than the total expenditures for 1899, when the area was forty-six million acres. Since 1899 no other year has shown so small an excess of expenditures over receipts as that of last year. If we omit from our calculation the expenditures for other purposes than the administration of the Government forest property, we find that the National Forests themselves are earning a small net balance in the Government's favor. In other words, the National Forests in the year 1907 were more than self-supporting.

This merely illustrates what the ex-

perience of European countries has amply proved—that the larger the expenditures made upon a forest, the larger is its productiveness. Saxony spends annually \$3 an acre upon her forests and receives a net revenue of \$5.30. Prussia spends \$1.58 per acre annually and clears \$2.50. France spends \$0.95 and clears \$1.75. The United States spent in the last fiscal year a little over nine mills and cleared not quite nine-tenths of one mill.

The reason for this is not hard to see. In its natural state a forest is an inaccessible and undeveloped property, of a very low per-acre value, and capable of making very low returns. As with any other undeveloped property, if we invest money in its improvement, develop its resources, attract population to its neighborhood, and provide the means for getting out its products cheaply, the returns will be enormously increased. The returns from the National Forests are contributions to the general welfare. The important thing is not that our forests should be made to pour great sums into the National Treasury in the form of cash, but that they should add to the national wealth, thru the wise utilization of all their resources.

WASHINGTON, D. C.

The Pond Lily

BY BOLTON HALL

AUTHOR OF "THINGS AS THEY ARE," ETC.

ONCE a pond lily, sturdy and fragrant, looked down into the mud from which she was growing. "Hideous slime," she murmured, "how disgusting to think that *I* came out of such repulsive stuff! I will remove myself to yonder clean boards on the bridge."

But tug as she might at her long, tough stem she could not dislodge her roots.

The more she strove the more her head went under the water and the more the whiteness and her fragrance faded.

One morning the sun broke thru the clouds, and rested upon the bosom of the lake. He caressed the pallid lily, who forgot her slimy stem down in the depths and opened her heart to him. Lo! it was of pure gold and so fragrant that he lingered there. That night she let fall into that very despised mud some tiny seeds, saying, "There, dear children, rest in the cool darkness until it is time for you to come forth into your mother's happy life."

NEW YORK CITY.

The Story of the Waitress

[The relator of this tale, who insists upon the concealment of her identity, is a slim Irish-American of more mind than body. She is and has been for some time working and sacrificing in order to better conditions for herself and her fellows.—EDITOR.]

I AM one of those New York girls who are greatly interested in the attempt to organize a waitresses' union that will be strong enough absolutely to improve conditions in the trade. I am especially interested because of my own experiences as a waitress, for I know how great the necessity is that the girls should get together and stand up for their rights, as in many instances at the present time they are terribly ill treated.

I became a waitress when I was about nineteen years of age, previous to which time I had been a milliner up in the North. I learned the millinery business there, but found reason to go from my parents' house to the house of my brother in Massachusetts, and there I discovered that the milliner's art, as it had been taught to me, would not at all do for the more critical customers of my new home. So I had to try a new business, and the best thing I could think of was waiting.

Accordingly I started in a private boarding house and found myself fairly comfortable. I received \$3.50 per week, board and room. The hours were from 6 o'clock to 9, and in addition to the waiting I had to launder all the linen connected with the dining room. After a year and a half of this I went on to Boston and got employment there at \$6 per week, working six days a week, nine hours a day. That also was comfortable and fairly well paid when I compare it with conditions as they exist in this city. The room that I had in Boston I paid for at the rate of \$1.25 per week, and it was such a room as a girl could not secure here even if she paid \$2.50 per week. I got my meals in the restaurant and also had the privilege of doing up my own laundry in the kitchen. I stayed in that

place for a year and a quarter and then secured work as a waitress in the Quincey House, where I was one of fifty girls, all in the same business. That also was pleasant; I got \$4.50 per week, the hotel did our laundry for us, our rooms were nice, only two girls in a room, and the tips were quite generous. So, take it on the whole, it was a very desirable place.

However, there was something that seemed still more desirable, and so I married and gave up business for five years. My husband started a little restaurant in Boston and things looked quite smiling for a time, and then the clouds blew up and we had storm after storm. My husband fell sick, his partner robbed him, our two children died and we were completely broken up. My doctor advised me to leave Boston, because, he said, that otherwise I would always be melancholy. So then we came to New York—I and my husband. That was about six years ago. For about a year I did nothing, my husband having secured work at a fair salary. At the end of that time I got employment in a well-known white restaurant on East Twenty-third street. They have three schedules of pay there, \$5 per week for half time, which means from 10.30 to 3 o'clock; \$7.87 for working from 11.30 to 7.30, and \$10 a week for what they call the twelve-hour watch. I was one of the \$7.87 girls. Take it on the whole, that is one of the best places in the city for a girl to work. They have a system of shops scattered throughout New York and Brooklyn, and the general management seems to desire to be fair to the girls. Nevertheless, there are a number of impositions; for instance, we were compelled to buy three white waists at a

high price, sometimes 99 cents each, while we ourselves could have bought the materials and made those waists, all three of them, for about 90 cents. Then, again, the laundry bills were heavy and we had to pay them. The waists cost us 45 cents, three aprons cost us 30 cents for laundry, and three sashes cost us 24 cents, so that each week the laundry bill, which we could not avoid, made a noticeable hole in our salaries. Another thing was the charge for breakage. This was fixed by the head waitress, and we never could tell how she made up her mind as to which girl broke which dish. She may have hired a trance medium to tell her, or she may have arrived at conclusions by examining the leaves in her tea-cup after drinking her tea. Certainly she had some extraordinary means of information and the results were exceedingly erratic, and very surprising to the victims. Besides that, an excessive charge was always made for the broken dish; thus a dish which could be bought for 5 cents or 10 cents would be charged at 25 cents or more, and there was no appeal. If a girl lost a check from the slips that are given her in the morning she was fined 10 cents and if a customer stood up before he received his check there was another fine of 25 cents.

So the girls were at the mercy of the head waitress and the cashier. I am certain that the head waitress many times used her power of assigning responsibility for broken dishes in order to secure her little revenges. While all the cashier had to do in order to get even with the girl who had offended was to destroy some of her checks and then declare that they had never been turned in. The girls' protests made no difference. The cashier's word was always taken, and the waitress had to pay for the missing checks. Such things were done.

I was there for two years and then I quit because they charged me for breakage which was not mine. Afterward I found reason to feel sorry for my haste, for, taken on the whole, that was a very much better place than the others into which I have since found my way. The food was good, the girls were pleasantly treated, and were allowed time to sit down during the day; we were allowed to go downstairs and sit down for half

an hour. That is a great relief for a girl who has been on her feet for three or four hours. We had fifteen minutes for breakfast and half an hour for lunch, while we took our supper in our own time.

My next place was downtown, long hours and exceedingly heavy work. The pay was \$4 for half time, and \$7 a week for full time—full time being nominally from 7 to 7 o'clock, but actually beginning at 6.45, because that particular place opens with religious service.

There is a marble floor there, and walking about on that marble floor for twelve hours is tremendously hard on a girl. Besides, we had to carry heavy trays of dishes, and our work in pushing about the bottles and the sugar bowls, etc., was very exhausting. No time was allowed us to sit down and rest, and we only had fifteen minutes in which to take our meals. We were fined for breakage, and all fines imposed in the other restaurant were also imposed here, so that during the six weeks I worked in the place I did not draw one full week's pay. The butter is cut into blocks and a big lump of ice is put on each lump of butter. The electric fans melt the ice fast, and if a girl doesn't watch out, the water from the ice will overflow the plate which receives it. Then there is a fine of 25 cents. I had been getting more and more angry all the time on account of the conditions, and when my envelope came to me on Saturday with the total of 85 cents deducted for fines I refused to submit to it and made a protest to the manager. Usually it wasn't any good talking, and another girl wouldn't have dared to persist, but I could afford to be independent and I intended to leave, so I fought with the manager for an hour, and at last I got my full week's pay and left the place.

After that, for a considerable time. I took a rest, but got very tired of doing nothing. Besides, there is really an attraction about the business, when the place is fairly good. There is a great deal of excitement and one meets and talks to many people. I wouldn't like anything better than waiting if the conditions were all right.

So I went back to work again. This time to a very large restaurant connected with a very large store. There are 150

waiter girls there who get \$3 per week for working from 10.30 to 3 o'clock, or \$4 a week for working from 7.30 to 5.30 o'clock. I took the long day and the \$4.

The fiction of the managers is that this is a good place for tips, and tradition also declares that this was a good place for tips, but that isn't so now. They used to serve dinner for 39 cents; now it costs 44 cents. When it cost 39 cents a customer would give the girl 50 cents and tell her to keep the change. Now, if she gets a tip at all, it's only the odd penny from 44 cents, as the customer feels that she is paying quite enough for her dinner, and so slips the odd nickel in her pocket.

All the fines that I have spoken of are in operation in this place, and about the only good thing that the waiters get there is good air. It's up on the eighth story, and the air is the best that the locality affords. The food given to the waitresses is unfit for any human being to consume. It consists of all that has been left over after the customers, the cooks, the dish-washers and all others except the waitresses have been served. I have seen things done with that food that made me feel sure that it was something good to leave alone; for instance, I have seen members of the dish-washing aristocracy help themselves from one of the left-over plates, take a bite and throw the food back on the plate, and then I have seen that same food served to the waitresses. Often the food that is thus served up is spoiled and in a condition which makes it actually dangerous to health. A friend of mine regaled herself with deviled lobster, with the result that she had to call in a doctor at 2 o'clock in the morning.

The chef and the manager are responsible for the condition of affairs in regard to the food; the chef, of course, gives what he can, while the manager is a famous economist in such small matters, tho under his *régime* there has been a notable falling off in sales.

The waitresses have the choice of three alternatives: They can eat what is provided, they can starve or they can steal. Some do one thing, some another. It's pretty hard to go all day long carrying good food, with the savor of it always in your face, and you not to touch any. One girl told me that she stole a sandwich,

and her friend commented that she was a fool not to steal a chicken.

The chief owner of the store is a celebrated philanthropist, and we girls do not believe for one moment that he knows how we are being treated.

One day, when I could not eat any meat, I went in the kitchen and asked for French fried potatoes, and the cook took my number, and complained to the manager that boiled potatoes were not good enough for me. The manager promptly took up this case and laid down to me the law of the establishment, which was that never again under any circumstances must I demand French fried potatoes. Even our head waiter, a man, is not allowed any relishes, such as tomato catsup or pickles.

Another grievance which the girls have is in regard to the treatment. They are quite often sworn at. If a girl breaks a dish she is sworn at and fined; if she breaks three dishes she is discharged.

Fines are so numerous that a friend of mine, who worked six days, only received \$1.18 at the end of the week, while it had cost her 26 cents a day for carfare.

A year or two ago I would have thought that this place where I now am was the worst possible, but the agitation which has been stirred up by reason of the effort to organize here a strong union of waitresses has shown me that there are others far worse off than I am. One system of restaurants in this city, in addition to working its girls twelve hours a day, deducts \$1 a week from their pay for the first seven weeks, and holds that against them, so that if they leave without giving a week's notice they are fined that week's pay. Nevertheless, the management doesn't give the girls a week's notice when it concludes to dispense with their services.

Some of the restaurants where girls are now employed are altogether unfit places for them morally.

The question is sometimes asked, "Why do not we abused waitresses go into domestic service?" Well, the waitresses are a pretty independent body of working girls. They want their evenings and they want their Sundays. They also fear to be put down in a lower class, for the majority of American women do

not look upon a working girl as their equal. So far as I am concerned I'd sooner starve than work for some people.

If those who are attempting to organize a strong union can have their way, the waiting business will be put on a sound and respectable basis, with \$12 a week as the minimum wage and all tips abolished. The reason that our wages are now so low for such long hours is that we are supposed to receive so much in tips; in many cases this supposition is not borne out by the facts. In any case the tip is a degradation. When I accept a tip I feel that I am not the equal of the person who gives it to me. It's a bad thing. We are hard working, we earn our living, and we would like to be self-respecting.

The union has been going for about three years and has encountered many difficulties. One of these is due to the feeling among girls themselves. A great many of them do not want to be known as waitresses, and they are afraid that if they join the waitresses' union their friends will perhaps gain the impression that they are not stenographers or book-keepers or school teachers, and so will respect them less. Why, I have seen girls who would much prefer to have people believe that they were salesladies rather than waitresses, but that seems to me a very stupid thing, because certainly the waitress, with the large territory to cover between the tables and the kitchen, and the fifteen or twenty possibilities of fines to be avoided constantly in her mind, is a person of much more personal responsibility than a girl who stands in one place behind a counter and just hands out from a small stock of goods whatever the customer desires.

In the West waitresses' unions are strong, the business is on a high plane,

the hard work is fairly paid, and the working women who are engaged in it are self-respecting and respected by all who know them. They are distinctly high class, and so it can be here, if the girls will get together and work.

I believe that there are in the neighborhood of 6,000 girls engaged as waitresses in this city, many of them employed under most miserable conditions, which exist in violation of the law and defiance of the Board of Health, and which cannot be altered until the girls themselves unite and are willing to support a movement for remedy.

The union here has had bad luck, as the first organizer ran away with the funds, and the second organizer, a young woman, tangled things up in an extraordinary manner, depleted the treasury, let the membership go down, and made default in as great an amount as she could.

However, the girls who are back of the movement are full of pluck; they have a good cause, and are beginning now to make headway. Those whom they are getting into the union are the best girls in the city. They maintain a death-benefit fund now, and they are trying to establish a sick benefit fund, and also to pay off the debts with which they were saddled by the dishonesty of their organizers. They have a hard row to hoe, but are sticking it out and bound to win in the end.

I have spoken of the waitresses as girls, but I believe that the majority are really married women. I know that of 160 who were questioned on the subject, 100 were found to be married, and frequently young-looking waitresses bring their children to the meetings of the union, which take place at the rooms, 220 East Fifth street, on the first and third Thursdays of every month.

NEW YORK.

St. Andrews Links

BY ANDREW LANG

BENEATH my study window lies, in the bright sunshine of a January morning, a long expanse of short green grass, swelling into little knolls, with golden patches of sand; it is bordered and protected from the east wind and the sea by a low, irregular range of sand banks prickly with "bent," long, sharp grasses, and bounded toward the north by a range of faintly tinted hills, the knees of the Grampians, whose snowy crests are dimly discerned in the extreme distance. To the east lies the Northern Sea, on the left are the woods of Strathtyrum, an old house once owned by Archbishop Sharp, who was murdered in the neighborhood by a dozen Covenanters. (1679.)

The stretch of green is the Links of St. Andrews, where golf has been played

from time immemorial, tho we do not find mention of it here much before the Reformation (1560), a period when everybody played. Perhaps visitors who know the place will think my description too poetical, for I have avoided mention of the club house of the Royal and Ancient, which stands on a rising ground behind the first tee, and is a monument of mixt architecture. Nor have I alluded to the houses and clubmakers' shops on the south side of the first hole, or to the railway buildings and the railway on the left of the second hole, or to the serpentine Swilcan burn which forms a hazard just before it contributes its tiny waters to the main. The burn is by no means a rural feature on the links, for it is confined by a practical embankment, tho it is crossed by a very ancient

stone bridge with a low parapet, across which came the horses, or mules, of old, laden with provisions for the townspeople and the Augustinian canons of the Abbey. The green track of the old bridle path from Cupar is still visible on the links.

The majority of golfing visitors to St. Andrews know next to nothing of the town, and its antiquities. From the last hole they cannot help seeing the towers which are almost all that remains of the Cathedral, and the tall, campanile-like tower of St. Regulus, probably of the twelfth century, and the crumbling sea-tower of the bishop's castle, hanging above the sea. But apparently they take no notice of these features in the land-

scape, for a very intelligent American golfer asked a friend of mine "whether there was anything beyond the post office," meaning the tobacconist's shop near the club. I must repent having bored another young American by taking him about the town, and prosing to him about St. Regulus, and the Duke of Rothesay, George Wishart, Cardinal Beaton, who was murdered in the castle; John Knox, who, with the murderers, was captured therein by the French: Archbishop Hamilton, who lived in the castle, and was hanged; Archbishop Sharp, who was cut to pieces; Robert Bruce, who was present when the Cathedral was finally consecrated; Queen Mary, who dwelt in an old house near

A SAINT ANDREWS TEE.

the Cathedral; George Douglas, who rescued her from prison in an isle of Loch Leven, and has left his arms engraven on the wall; George Buchanan, who abode in St. Leonards; the great Montrose, who won the medal for archery, and left it to his college; Bishop Kennedy, who built the college, and other "dead persons" for whom my friend, like Huckleberry Finn, "had no

good old golfers, King Jamie, James Melville, Queen Mary, and Montrose, and the young minister to whom the devil, meeting him on the Jubilee course, gave an excellent sermon, in exchange for his signature to an important little document, if we believe the Rev. Mr. Woodrow, the friend and correspondent of Cotton Mather. All these people are only the ghosts that haunt the links, and

THE OLD FOOT BRIDGE.

Used by Saint Andrews golfers for over 200 years.

use." He did not interest himself in Chastelrad, who was executed in Market street for making too adventurous love to Queen Mary; or in the Lyon Herald, who was burned for sorcery; or in Patrick Hamilton, who was burned as a Lutheran outside the gate of the college.

In short, the Reformation did not occur in America; and my friend was frankly ignorant of all these Old World personages and adventures; of all these

are visible to the eyes of my memory; indeed, a lady of my friend's saw the cardinal hanging out of the window whence his dead body was suspended. But *she* has very unusual powers of vision!

To leave the past (in which I am too apt to live), and return to the golfing present. The players strike off from a tee close to the club, and the first hole ought not to be done in more than five

strokes, and is occasionally done in three. Everybody should be able to cross the first hazard, the road to the sea, and with his second should at least be near enough the burn to cross with his iron, after which there is only putting to be accomplished in two or three strokes. If the holes are arranged on the left side, the player has next to cross "the scholar's bunker," in which nobody should fail, and has then a long drive beleaguered by bunkers, with a fair chance of coming to grief on a cart track on the extreme left, or over the wall of the old station. If these are escaped there is an awkward approach over bunkers (that is, here and always, deep, irregular sand pits), to the second putting green. Five is a respectable number of shots for this hole, four is very good.

The dangers in the course to the third hole are the railway skirting the left side; a man who "hooks" will get into the football field on the further side of the railway, where "there is very snug lying," but, on the railway line itself, several strokes may be needed. A straight drive from the tee ought to carry "the Principal's Nose," a hillock containing three bunkers, and thence there is an approach shot to the third putting green, a difficult shot, as there is a yawning bunker to the right. If you evade the hazards, and putt decently, the hole should be yours in four.

Hitting off to the fourth hole, your danger is that a long shot may be punished by Sutherland's bunker, a small, dangerous pit. Avoiding that, you encounter a long, deep bunker stretching almost across the course; in wet weather it becomes a small loch. There is a great deal of rough hummocky ground beyond it, whence an iron or mashy should land you on the green, and you may do it in four, tho five is not very bad.

Hitting to the fifth or "long hole" (some five hundred yards), you have to cross "Hell," but that famous old bunker has lost most of its terrors in the course of time. To the right of it the "Kitchen" is dangerous, and you may fail to cross rough ground and a declivity, and to be on "the Elysian fields," a long, smooth tableland of beautiful turf. Once there, if you do not hit over a low wall into a field, or slice into a set of deep bunkers

called "the Beardies," the way is clear to the putting green. This hole is seldom done, by most players, under five strokes.

A topped shot from the next tee is badly punished in the rough grass of broken ground, and then a deep little valley, barred by a long, narrow tableland, has to be crossed, while a sliced shot may fall into "Walkingshaw's grave," so-called from an old player, of the family of Clementina Walkingshaw, the mistress of Prince Charles. When you have crossed the tableland, you may drop into one of several bunkers, and the rest of the hole has won for it the name of the Heathery Hole, being rough, with remains of heather. Four strokes for this hole may satisfy the ambition of the best. In striking to the seventh hole, a stroke to the left is apt to fall into bent grass, and a straight drive, if topped, is received in a bunker—there are two, one behind the other. There is next needed a long drive to the seventh or "High Hole," on an eminence above the wide estuary of the river Eden. On the left you may fall into the estuary; and, if you fail to reach the hight where the putting green is, you are apt to get into "Strath's" or any of several bunkers, while, if you go too far, more bunkers await you. This is, indeed, a perilous hole, and the ordinary player may be content to do it in five. The next hole, the short hole, is played from the tee with a cleek, and Mr. Everard has four times done it in one stroke. But a topped tee shot gets into terrible grief of bunkers and rough ground, and to take the hole in three is reckoned satisfactory, tho to do it in two is common enough.

The ninth, or End Hole, has rough ground to the left, several bunkers to catch a short stroke, and a large round bunker which may trap a very long drive, or a fozzled second. Four is quite good enough for the End, or ninth hole. From the eighth there is a beautiful view of the river estuary, brimmed with bright blue water, or a colored expanse of sand and seaweed at low tide. The hills of Angus, faint blue or violet, and the long sand spit of Tentsmuir, rich in relics of neolithic man, and haunted by innumerable sea-fowl, limit the estuary, the sand hills there glow like fairy gold; with good eyes you may see the old tower of the persecutor of the Covenanters, Gordon,

of Earl's Hall, and above the smoke of Dundee rises the hight of Dundee Law. Looking backward you see the ridged cliff crowned by the ancient spires and towers, "murmuring (to inattentive ears) the last magic of the Middle Ages."

On the homeward course you play to the holes on the left, and all the hazards meet you with changed faces. Often a man who "goes out" in from thirty-seven to forty, tells you *that*, but does not tell you the score of his backward journey. Most men are very well content with a score of eighty; many are pleased if they come in under ninety; but dear Freddy Tait was habitually round in from eighty to seventy-two, which was his best. I was with him, and he had a difficult putt for seventy-two, then the record. "That putt took a year from my life!" he said. Only two or three years were left to the life of this great golfer,

brave soldier and friend of all mankind who knew him. Recovered from a wound received at Magersfontein, he died in his next fight—a skirmish of no note, on the extreme right of the Boer position—just before French, sweeping round their left, galloped into Kimberley. Freddy's portrait hangs on the wall of the great club room, next to that of another ill-fated golfer, Charles I, who was playing at Leith Sands when news came to him of the great Irish rising.

In addition to "the old course," which has been described, is "the new course," between the old links and the sea. It extends much further to the north than the old course, reaching the limit of the spit of waste land, and is somewhat more difficult, to all but very long drivers like Mr. Blackwell, than the historic links. The ground, not worn by the feet of the players of five centuries (at least), is rougher, and the course, which winds

OLD TOM ANDREWS.

"The Grand Old Man" of the golfing world, in front of his shop facing the Saint Andrews Links.

about like that of Sandwich, is rather longer than the old course.

"The Jubilee Course" is mainly played upon by unambitious ladies, children, and old duffers. If *all* duffers would condescend to "sclaff" and "foozle" there it would be well for their betters. The links belong to the town, and are kept in repair, at considerable cost, by the members of the club. From July to October the links are inconveniently crowded, which may enrich the townsmen, but

does not favorably affect the temper of the earnest players. There is some talk of laying out a fourth course, but the worse people play the more ardently do they prefer to chop up the green of the historic links.

The best book about golf at St. Andrews, and the old players, is Mr. Everard's illustrated "History of the Royal and Ancient Club," with remarkably good colored reproductions of old portraits.

ST. ANDREWS, SCOTLAND.

The Physical Condition of Our School Children

BY JOHN SPARGO

AUTHOR OF "THE BITTER CRY OF THE CHILDREN," ETC.

ALMOST three years ago I called the attention of the readers of THE INDEPENDENT to the fact that a large number of the children in our public schools are underfed to a more or less serious degree, being therefore handicapped, both physically and mentally. It will be remembered that I described the methods and results of certain investigations which had convinced me that Mr. Robert Hunter's alarming guess—for it was only a guess—that something like 70,000 children in the public schools of Greater New York were underfed was terribly near the truth. Later, in my book "The Bitter Cry of the Children," I went into the subject at greater length, treating it as one phase of a great national problem.

In the article referred to I concluded by making a plea for an adequate, scientific investigation of the whole subject by the Board of Education. No one is more conscious than I am of the crude and wholly inadequate methods of investigation which were perforce adopted. No individual can ever begin to make a thoro and scientific investigation into so vast a problem. The Board of Education, however, instead of facing the problem and getting together a commission of

experts to go into the matter scientifically, satisfied itself, and, alas! the easily fooled public, by simply collecting a mass of "opinions," most of which were quite worthless, even if interesting.

I was fortunately able to revive interest in the matter upon a national scale thru the publication of my book. From all parts of the country there came to me evidences of the general correctness of the position I had taken. Realizing, as stated above, how entirely inadequate my data and how limited my observations were, as well as how superficial my examination of the tens of thousands of children I had observed was, I felt justified in estimating that "not less than 2,000,000 children of school age in the United States are the victims of poverty which denies them common necessities, particularly adequate nourishment." I used the term "poverty" in its widest sense, regarding as poor those families whose income, while sufficient in amount to protect them against want, is earned under conditions which inevitably cause the neglect of the children, as thru the employment of mothers, for example.

I have never claimed, nor fooled myself into believing, my estimate to be other than a guess. A careful guess,

based upon the most extensive study ever made so far as I know, but still a guess. There were some of my friends who thought that I had not taken the rural villages into account, but as a matter of fact I had gone very carefully into rural conditions and satisfied myself that conditions in rural communities are not very much better than in the cities, despite popular opinion to the contrary. Some of the worst cases of poverty I have ever seen, many of the most pitiable specimens of childhood, were in rural villages.

It will be observed that the estimate of 2,000,000 children of school age underfed is very different from "two million children famishing," as some papers interpreted it, or "two million dying of starvation," as another paper interpreted it. That many of the underfed children were suffering from malnutrition in a pathological sense, that the deprivation of food was so great as to cause a wasting of tissue and a general physical deterioration, observable by any competent physician, there was never any doubt in the mind of anybody. But, I confess, that had anyone suggested to me that there were a million children in our schools in that condition, 50 per cent of my estimate of the underfed, I should have been greatly alarmed at the thought.

When the work of the physicians employed for the purpose of examining the physical condition of school children by the Health Department of New York City proceeded under the direction of Dr. John J. Cronin, I was surprised and saddened to find that the percentage of children suffering from physical defects of various kinds was even greater than I had suggested in my book. So far from there having been any overstatement of the evil, the returns showed that there had been a very considerable understatement. The medical inspectors proved, beyond a shadow of a doubt, that the physical condition of large numbers of school children was even worse than I had stated. They also proved very conclusively that practically all the backward and incorrigible boys and girls were in need of medical or surgical attention.

In the autumn of 1906 the physicians of the Department of Health examined

some thousands of children and there was a re-examination of many of the same children in the early part of 1907. The second examination was, it is probable, more thoro than the first and more carefully made. At any rate, results noted were much worse in every instance, the percentage of cases of malnutrition, enlarged glands, defective vision, nasal and throat troubles being very high.

For example, out of 1,400 children of various nationalities, who had been examined in the first instance in 1906, 10.4 per cent. were returned as suffering from malnutrition, 45 per cent. from enlarged glands, 30.9 per cent. from throat defects. In the second examination only 990 of these same children were included and the records compared. Out of the 990 the percentage recorded as suffering from malnutrition was 12.9, from enlarged glands, 70.2, and from throat defects 45.6 per cent.! The figures relating to malnutrition lose some of their tragic force unless it is remembered that "underfeeding" and "malnutrition" are not quite synonymous terms. As one of the examining physicians said to me: "A child may be full of nothing more wholesome than cheap candy or decayed fruit and yet not be included in the list of children suffering from malnutrition. If the stomach seems fairly distended, the child is passed, unless, of course, malnutrition as a disease is evident."

In May, 1906, there was organized in New York City a body called The New York Committee on the Physical Welfare of School Children, and I am happy to think that the work of Mr. Hunter and myself had much to do with bringing that committee into existence. Since their report, recently published by the American Statistical Association, might seem to convey the impression that we were in part responsible for the work done and the manner of its doing, it is only fair to say that such is not the case. Neither of us served on the committee, nor, beyond a few minor inquiries prior to the formation of the committee, were we consulted. Had either or both of us been placed on the committee, or given a hearing before it before the actual work was begun, I think it more than probable that the work would have been more

efficiently done, some very foolish mistakes would have been avoided, and some serious omissions provided against.

At it was, there was a distinct tendency to discredit the estimates made by Mr. Hunter and myself. Both of us had placed ourselves upon record as favoring the establishment of some system of school meals. Leaving Mr. Hunter to answer for himself, so far as I am concerned, it is necessary to say that I did not advocate "free meals," but rather the Parisian system, that all able to pay should pay, pointing out that the number absolutely unable to pay is, in normal times, small. What I desired was some means whereby the pennies spent for unwholesome things might be spent for wholesome meals. Furthermore, I am not enamored of school meals. I regard it as at best a makeshift. What is needed is that home conditions be such that children can be properly fed at home. We need the strengthening of family life in this particular. Far from being so enamored of State action, I want to see the need for all such paternalism removed. I am a socialist, not by reason of my belief in paternalism, but by reason of my conviction that in a decent state of society the need for nearly all such activities on the part of the State would disappear. But nothing has occurred to change my conviction that school meals are now necessary.

If the opponents of school meals, those who say that we must "reach the homes" in order to solve the problem, will find some means to so raise wages as to enable the mothers to stay at home to care properly for their children, and of keeping the mothers-to-be out of the factories and shops during the most important years of their lives, so that they will not go ignorantly into wifehood and motherhood, I will join them and drop the demand for school meals. But that means the solution of the whole industrial problem; it is far off. Meanwhile the children are suffering and relief is urgent. Until home meals for all the children are made possible, I want the school meals as a makeshift.

The New York Committee on the Physical Welfare of Children, in spite of the voluminous literature on the subject, and the lessons of numerous for-

eign investigations, failed to make any records of the heights and weights of the children examined, their chest measurements, power of grip, and other indications of physical development and strength. Unwarned and untaught by the experience of other workers in the same field, they foolishly spent valuable time and money trying to collect such impossible information as the duration of the labor pains of the mothers at the birth of the children they examined! Judged by American experience, it was, perhaps, the most scientific investigation of the subject yet made, but judged by the many excellent foreign examples, it was most unsatisfactory and unscientific. It is not easy to find a satisfactory excuse for much of the bungling for which the committee was responsible.

The report of the committee, as published by the American Statistical Association, confidently asserts that, with the possible exception of defective vision, there are fewer cases of physical defects among the children of today than among the children of fifty years ago. This, however, is pure assumption. There is no evidence as to conditions fifty years ago with which present day figures can be compared. It may be so; no man knows. I think, however, that it is exceedingly improbable. Universal experience points to a very marked deterioration, and it is not probable that the United States is an exception to that rule. Defects of vision undoubtedly are on the increase, and the committee very wisely paid attention to the construction of school buildings as to lighting and other conditions. That was a beginning in the right direction. It is inconceivable, however, that they should have overlooked the home conditions in this connection. For a long time I have been convinced that much of the eyestrain among our school pupils is due to the fact that they do a great deal of studying at home in the evenings, under the most trying conditions. To see the tenement child doing his or her home lessons, straining the eyes in a miserable light, is to realize that eyestrain and home lessons are closely associated.

The investigations of the Committee on the Physical Welfare of School Children, inadequate and unscientific as they

were, have still a great value. If New York school children are typical in these respects of the children of the nation, there must be something like 12,000,000 school children in the United States suffering from physical defects more or less serious. If the 1,400 children observed and examined by the committee are to be taken as typical of school children throughout the United States there must be something like the following conditions:

| | |
|--------------------------------------|-----------|
| Suffering from malnutrition..... | 1,248,000 |
| Suffering from enlarged glands..... | 5,460,000 |
| Suffering from bad teeth..... | 8,988,000 |
| Suffering from defective breathing.. | 7,092,000 |

Some of the children suffer, of course, from more than one defect; some, indeed, from all four. It is impossible to separate them accurately, but the figures cited are terribly significant. I confess that I cannot comprehend the attitude of mind which can remain passive in face of these awful figures. How is it possible for any human being to remain indifferent to the fact that the investigations made go to show that there are probably 41,600 children in New York City, victims of a disease produced in the vast majority of cases by lack of food, victims of terrible starvation similar to that which annually claims so many victims in India? How can we ignore that awful total of 1,248,000 such victims in the nation?

At the present time, when the tide of poverty is rising higher than ever, when

great armies of unemployed men and women workers throng our streets, the number of child victims is very greatly increased. What are we going to do about it?

In Bradford, England, they have recently adopted the act which permits local school authorities to feed their pupils. More than eight hundred children are being fed daily (they feed only the poor and necessitous, practically the starving), and, I am informed, the results are astonishing. Children learn when they are fed who cannot learn when they are hungry.

Aristotle knew that more than two thousand years ago. The anthropologists have taught us that races and individuals alike reach the highest point of mental energy and moral vigor when the maximum of physical development is reached. Darwin showed that in his "Descent of Man"; common everyday experience proves it. It is of small use to waste our time and resources "educating" children who perish while we "teach."

The proposal of Professor Fisher and others that a Federal Bureau of Public Health be established, with its chief in the Cabinet, is a good one. There is hardly a more urgent need today than attention to the national physical welfare. But in the meantime, at once, it seems to me to be the duty of our local governing bodies to take up the question of feeding the school children.

Success in Failure

BY CURTIS HIDDEN PAGE

'Tis failure then? So be it. I have toiled
And given my best of self, and not recoiled
Before the bitter way, the rock-steep road,
Till here I pause, of hope and strength de-
spoiled.

Shall I turn back, and be success's thrall?
No! Let me rather far be known thru all
My life as one who would be great and
failed,
Than one who was contented to be small.

Then on again! And where thick mists defend
The summit's self from sight my way shall tend;
I love the cliffs and walls that block the path—
Steeper the mountain, faster we ascend.

COLUMBIA UNIVERSITY, NEW YORK CITY.

Human Experiments in Bee and Bird Life

BY EDWARD P. PRESSEY

[The reader will connect this article with one descriptive of the beginnings of the New Clairvaux settlement in the hill country of Massachusetts, at Montague, printed in THE INDEPENDENT of March, 1905.—EDITOR.]

Bee and ant life always fascinated me. By the old pasture bars, when I was cow-driver, the ants in a hill gave me my first lessons in natural history. But I am interested now not so much in insect ways as in the parable their life presents in simplicity to humans. Ages ago the sage of nature who "spake of of trees, of beasts and fowls, of creeping things and fishes," exclaimed: "Go to the ant; consider her ways and be wise."

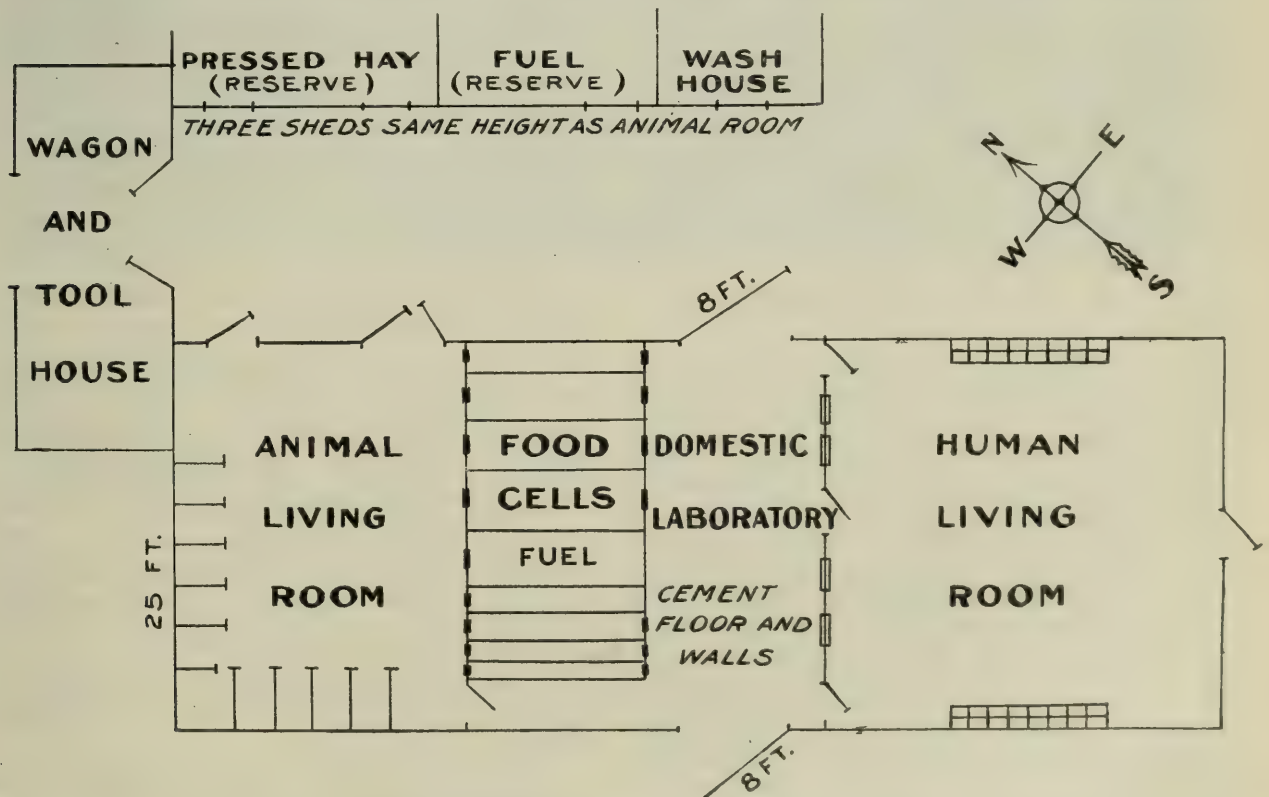

Bees, for instance, accepting, as they

THE VILLAGE SHOP.

have done, heroically certain limitations of their conditions, have perfected a form of social life with its necessary arts of building and good production. The limitation, the tragedy of the hive, however, is the omission of self-expression from their scheme. This fatal omission necessitates cold-

blooded sacrifice of the entire male population periodically; and rule of the most favored caste by a legalized system of assassination of its own royal family of grand duchesses. Yet the serene per-

GROUND PLAN OF HUMAN BEEHIVE.

fection of their wholesale slaughter does not jar for a moment of bee history the efficient routine of ideal love and duty.

To make a complete parable for human application I cover the fatal limitation of the bee by taking example of the birds. With them we have self-expression in its perfection.

"Oh, for the wings of a dove!" carries our sacred dream of freedom, of individuality. And just as the bee comb is the perfection of architecture as bee fanciers will explain to your mystification, and as the whole bee life is the ultimate word or "logos" on economic order, so is the bird song the ultimate self-expression. Sunrise, spring, infant loveliness and a bird song are four ultimate things. These are pin-points in nature where evolution has stretched forward to the goal.

Our parable then is the parable of "Ultimate Things in Human Life." The song of the lark and sparrow are lovelier than human song; and are always the same because ultimate. Humans change their tune, because always still striving sadly for the goal of self-expression. We are sent to the ant because her economic order is ultimate. Infancy is lovelier than middle age because it has been perfected. We can still imagine infinitely better men, but not finer babies. An ultimate humanity is coming whose song will not affright even the bird, because there will be no tragedy behind; and in whose economic order there is to be the serene precision of efficient love and duty.

At New Clairvaux we have sought the ultimate units of the human architecture, the ultimate brood-chamber and honeycomb, and the ultimate manner of co-operative life and labor.

The dwellers in the bee-house build the house. So do we believe every group of humans should build its own house. That is what we have been doing. This method eliminates the labor problem. It makes the home more interesting. The bee in her morning flight gathers resin and nectar and transforms these into plates of cement to build her home. She does not build by devastation of nature. We are learning the reverence of the bee frugally to glean our forests and leave them more beautiful, more fruitful for our building; and to utilize the stones of the field, leaving it more fertile. Our

mansion is ourselves as the shell is the nautilus. It is concreted of our own lives. Other people who do not so build we regard as hermit crabs borrowing cast-off shells.

The conventional house of civilization compels ceaseless struggle or a servile class to keep it clean. When it is old it is likely to survive hundreds of years a death trap. The bee in her home has sealed every corner and foreign body with silken surfaces. We take the lesson for our human hive of the future. We build our furniture *in* and seal to dust and water. All unsealed foreign bodies, as movable chairs and tables, hanging pictures and bric-a-brac, we reduce to lowest terms.

The many-roomed modern house to any simple, unspoiled sense is repulsive in form and confusion as to its uses. Probably no two families ever use the rooms of a house for the same things, or could form any distinct idea of the previous occupants' usages. The occupants of the New York "model tenements," who used the bathrooms for coal holes, are no exceptions. The more I study our civilized houses the less confidence I have in my understanding of the uses of its various rooms. We do not know apparently what we want of our houses or what we want to do or be; consequently indefinite is stamped all over the multiplied cells of our dwellings. Now the bee again teaches us to determine the simple essentials of a dwelling, to store our food and to brood our young. Adapting their perfect domestic economy to human necessity, our houses should consist of five sections distinct in architecture and purpose: low-roofed storage cells or bins uniform in general style should be conveniently ranged together, with stalls for animals on one side of the range and laboratories for preparation of food on the other. The fourth section is the living room and the fifth is a dormitory. Clothes washing, bathing, etc., should have a little building or room at one side, near the stable or in the yard, where refuse is best handled. The following profile and diagram are suggested as a simple country house of definite uses:

As in the beehive housekeeping, like house-building, has become with us a common function of the hive and is no

longer a special function of the household drudge. By this means everything is done with dispatch and real interest, even zest. Democracy is not murdered.

The house itself is builded to a democratic, free ideal. With mystical insight transcending the architect's purposeless traditions the new domestic shelter arises with results both adequate and economical, neither of which the houses of the near past have attained. There has been no human house exhibiting the ultimate adequacy of the house of the bee. We have many domiciles which have dis-

mined to repossess our lives, our whole souls. Not something that will do, but something that will fulfil our lives. Something up to type and under such conditions, economically, as to be universally possible, costing just labor, the simple conditions being just universal access to the earth.

The interpretation of our parable of the honeycomb may be briefly recapitulated. The ultimate human house we conceive will be of a beautiful seamless surface thruout, built so firmly all in all that nothing will bend or jar. It will

THE NEW CLAIRVAUX HUMAN BEE HIVE.

played an interesting fancy working its spells. We have borrowed from everywhere conveniences and luxuries which we have no means or even idea of enjoying, while the vast populations of our cities have no houses at all, but are bunked as for an eventless voyage thru time in tiers and rows of numbered berths in alleys smelling of the bilgewater of destiny. Either fancy or fatality have determined our abodes.

We have determined at New Clairvaux that the ultimate human need should be our ideal in houses. We have deter-

meet these simple ends, shelter from the elements, sanctuary from the world, fulcrum of social influence and all in perfect sweetness. It must be so ordered that neither cares nor microbes nor deficiency of air and light slowly kill. Lovely in proportions, workmanship and idea, without extraneous ornament or illogical angle, it is an extension of the inner and outer life of sound, sane men.

Specifically our *Great Room*, now in construction at New Clairvaux in illustration approximately of these ideas, has an ample fireside with contiguous built-

in seats out of the draft of doors, built-in bookshelves, toy boxes and time-piece in one quarter, the family board in

The windows are made in one sash so as to afford freest passage to the air. Encircling air is made instantaneously

MOUNT TOBY FROM THE MONTAGUE MEADOWS.

a second, a kitchen, partly screened, in a third, and a coat hangery, etc., in the fourth quarter. There is wide floor space around the central post or roof-tree, as shown in cut No. 1. The entire room is something over 25 feet square. The roof-tree is $8\frac{1}{2}$ feet high, branching into great hand-hewn beams from our own forest patch, just such trees as we could find, done with just such skill as we could bring with our own hands. There are defective joints, there are some bungs. We are concerned first with an idea, a distinct concept, and second with founding a new tradition competent for infinite growth, and after these with right workmanship. Paint is to be freely used on the wood-finish interior. The floor of our own pasture oak, tightly driven together, will probably be covered with deck paint semi-annually, the fire-side warmed with one of our beautiful cottage-craft rugs. Care is taken securely to bar rats and mice out from the walls. All available outer walls are windows.

available to the kitchen corner in particular.

A vestibule 8 feet wide and 26 feet long backs this living room, and is entered by either end besides having various double faced cupboards and pockets for the passage of fuel and stores to the interior. The floor of this vestibule is cement. It has the main entrance to the cellar and other stores and is the nearest part of the house to the kitchen garden and the barn, orchard, etc.

The chamber is divided into a bath and sleeping places, with conditions as near as possible like an open tent.

The organization of our beehive, as I have intimated, is pure democracy. Hirelings, if we have any (as in special emergencies), are self-respecting comrades, no servants. There is extremely little of the cash nexus found necessary. The work which degrades the servant one may do honorably for oneself. The little boys and girls learn to empty their own slops and to take care of their own

things, and gradually to join in the larger work. They set the table, fetch kindlings, run errands, make domestic animals happy, plan and tend a little garden of their own, gather wild flowers for the table. As for the grown-ups, one "does" the dishes with the aid of an automatic dryer which we make in the "village shop," another sets the breakfast and sweeps the floor, and so on all around. Mother and father tend the little children together. Mother has all day after planning the one household spread of the evening to live with the children, to gather things from the garden and to help keep it, to be in the sunshine, to create a spiritual home. The division of labor is more just.

Finally, in the manner of gathering and storing the honey of our human *apis mellifica*, we again do well to draw from our parable of the bee. We no longer sweat for a wretched price and an uncertain market. We have become too wise to sell our wheat at 1 cent a pound and buy it back in the form of crackers at 12 cents a pound. We do not, for a few shillings, sell our potatoes and milk and corn and summer fruits and winter fruits and maple syrup and honey and fat of the land and all the good things of a living and mortgage the houses and land to the butcher for a mess of Swift's or Armour's pottage. We put our honey in the honeycomb, a rich and varied diet. Last season we set up the maple syrup cells. And this is a land that flows with milk and honey, a land of pastures and wild flowers. And we are developing terraces of cultivated flowers in front of the orchard with an apiary to come between. We have a beautiful granary in mind by converting one of the old buildings, with cells for Indian corn and wheat and rye and buckwheat and oats and millet and beans and field peas and popcorn, all of which our surrounding acres are already producing in abundance. In this granary will also be cells for all kinds of seeds, also for sweet herbs, sage, pennyroyal, carraway and coriander. In our frost-proof cells underground we have scores of barrels of all kinds, colors and savors of apples, with winter pears and potatoes, and all garden vegetables, a dozen kinds, and hundreds of bushels of succulent roots, as mangels,

sugar-beets and rutabagas for the animals. In other cells are hundreds of quarts of crisp pickles, appetizing catsup, made of the fairest ripe tomatoes and cayenne, cauliflower, grape and currant and red crab-apple jellies and blueberries from the mountain, red raspberries, honey-sweet pears, luscious-looking cherries, strawberries, tomatoes for bisque soups, and all the other special juices of summer and the sun. In short, there are rich acids and pure sweets, nuts and fresh grains from our own threshing floors, cream, eggs, pork and fat mutton and butter, just as we like it. Season after season we have eaten our content of the good things our hands have gathered increasingly with decreasing effort. The surplus pays taxes of several sorts.

Nature has both fondled and sharply disciplined us. Some of us have observed our affections growing tenderer toward all the flowers, flocks and babes amid which we have our being and the life of which depends upon our constant gentleness and faithfulness. We have had faith in the vision of the lion and the lamb lying down together, of the wedding of brute strength and gentility of heart, of the existence of a plane of life between the patient ox and the soaring skylark which shall be better than either. And we do certainly feel that we have come a long way toward fulfilling the purposes of God with us.

Now self-expression is the last accomplishment of all great toil. It is right here that begins our parable of the birds. There is a sympathy between the birds and the poets. Chaucer is full of the inspiration from the singing birds. Wordsworth and Shelley hymned the soaring singing lark. All poets cross-question the nightingale and many other birds. The quest of all poets of all time has been to phrase the ultimate human song that will express in few measures the whole human heart as the thrush's song expresses his. There are many types of music and many critics of each type because all have really failed, tho many have registered some broken bars or suggestions of the immortal music. And so far there exist only gropings after the ultimate human song of the undivided soul, the successful, brotherly man universal.

We cannot see life otherwise than as a

simple, single problem and not as a great warp and woof of problems, social and industrial. It is all the problem of the worker wrestling with nature for his daily bread, with one eye always on Providence for every good and perfect gift as it comes down from the land of light.

There is no real reason why man and the expressions of men should not some day take their place with things accomplished, things perfected, with the sun-

rise, the June morning, the lark's song, the revelations of God.

When that occurs, then he will see how the monk and the Shaker in their exquisitely wrought cells were by fine intuition following, on higher ground, parallel lines to perfection with the bee. The family on the farm today may follow still higher parallels to the perfection of social and individual man, where problems disappear in the perfect mystery of full life.

MONTAGUE, MASS.

The Intercollegiate Peace Association

BY GEORGE FULK

[Mr. Fulk, the secretary of the Intercollegiate Peace Association, is a graduate of De-Pauw University. He was professor of Greek and Latin in Ashland College (Kentucky) one year; studied law three years in the Chicago-Kent College of Law and Northwestern University Law School; and was associated with Edwin Burritt Smith, of Chicago, during the street railway litigation (1905-1906). Mr. Fulk became actively interested in the peace movements in the colleges last year. He organized peace societies in several colleges and universities; attended the National Peace Congress at New York, in April, 1907; attended the convention of the Intercollegiate Peace Association at Cincinnati; and spent the summer at The Hague, where he carried a memorial from twenty-three American colleges and universities. After attending the International Peace Congress at Munich, he spent four months traveling in Europe visiting educators and students interested in the international peace movement.—EDITOR.]

THE Intercollegiate Peace Association consists, technically, of forty-seven colleges and universities of the Middle West, united for the promotion of organized activity among students and educators in support of the International Arbitration and Peace Movement. The organization had its beginning three years ago in a convention of college men, embracing both students and professors, initiated by President Noah E. Byers, of Goshen College, and held at Goshen, Ind. Eight colleges and universities, all of which were controlled by religious denominations fundamentally opposed to war, were represented.

The following college year, 1906-7, twenty-eight more institutions were added to the association, none of which were opposed to war on fundamental religious principles. Oratorical contests among students on International Arbitration and Peace were promoted, in which more than one hundred students took part. The best eight manuscripts were

selected and their authors allowed to participate in an interstate oratorical contest held at the University of Cincinnati in connection with the second annual convention of the Intercollegiate Peace Association, in May, 1907. During that year local prizes were offered for orations and essays in twenty-one institutions. Essays or orations were prepared by students in twenty-two institutions. Peace bibliographies were added to the libraries of thirteen institutions. A memorial representing 22,968 students and 1,668 professors was sent to the Hague Conference. Two thousand one hundred and sixty-nine dollars and thirty cents was raised for the work.

This year eleven institutions have been added to the association. The plan of holding oratorical contests has been enlarged upon. In Illinois, Indiana and Ohio State contests, as well as local contests, have been held. In Pennsylvania and Michigan special arrangements were made whereby these States were repre-

sented in the Interstate Contest, together with the States of Illinois, Indiana and Ohio.

The third annual convention of the association was held the 15th and 16th of last month at De Pauw University, Greencastle, Ind. The program consisted of the Second Interstate Oratorical Contest on International Arbitration and Peace, a business session, a meeting of college men and women, addressed by educators, including Dean W. P. Rogers, of the University of Cincinnati Law School; Acting Dean Roscoe Pound, of Northwestern University School of Law; Prof. Amos Hershey, of Indiana University, and others, and a public mass meeting addressed by Rev. Jenkin Lloyd Jones, of Chicago.

The work of the association has been considerably enlarged this year. State committees are now being organized in the five States above mentioned and in Wisconsin. These committees will control the work of their several States next year. The chairmen of the different State committees, together with the president and secretary, constitute the executive committee of the association. The policy of the association is to promote local peace societies, consisting of both students and professors, in the institutions where this is feasible; where it is not, to have existing students' associations, such as history and political science clubs, foster the local interests of the association. Each institution is represented in the association by a vice-president, who is required to be a member of the faculty. Several local students' peace societies are now in existence. Others are being planned for next year. These are being affiliated with "Corda Fratres" International Federation of Students, an organization of European students. This organization was founded at Turin, Italy, in 1898, and now has branches in sixty-three of the principal university centers of Europe, with a total membership of about fifteen thousand students.

The Intercollegiate Peace Association, thru its local societies, is being affiliated with "Corda Fratres" with a view to putting the organized student movement for international arbitration and peace on a truly international basis. The leading

articles of the constitution of "Corda Fratres" read as follows:

"The principal object of the International Federation of Students is to protect and promote the idea of solidarity and of fraternity among the students. . . . Each member, upon his entrance into the Federation, pledges himself upon his honor to employ unceasingly such means as his social position, his intelligence and his activity afford to promote the spirit of international union among the youth, and to second all the manifestations which he may believe useful in order to dissipate from any class of persons whatsoever the prejudices and hatred which render states reciprocally hostile and always on a war footing. The International Federation of Students proposes also to second by all the means in its power the work of peace and arbitration between nations. It is also the object of the Federation to put in correspondence the students themselves, and in particular those who devote themselves to the same branch of learning, in order to facilitate means of information and scientific research, of which they may eventually have need, both before and after the doctorate; to insure reciprocally hosts and friends in the large cities, distantly located, upon the occasion of travels, individual and collective, in foreign lands—travels which will thus be more easily undertaken and accomplished."

Six international congresses of the Federation have been held, as follows: At Turin, 1898; at Paris, 1900; at Venice, 1902; at Liège, 1905; at Marseilles, 1906; at Bordeaux, 1907. The next international congress of the Federation will be held at The Hague in July, 1909. A special appeal will be issued to the students of every university in the world to attend this congress.

It is a coincidence that the students' peace organizations sprang up in Europe and America independently of each other, and neither knew of the existence of the other until their representatives met at The Hague during the Second Hague Conference. It does not seem idle to predict that these organizations have not sprung up and grown to their present extent to die a premature death. Neither is it unconservative to believe that their possibilities are practically unlimited. There are most promising plans for the future development of the movement in the minds of the students of both hemispheres. One, in particular, is the publication of a students' journal in several languages in the interest of the work. The European students now publish bulletins from time to time as a means of communicating matters of special im-

portance to the members of their organization. They feel that when the American students join them they can publish a regular journal and fix the "Central Bureau" permanently at Paris. It is now at Budâpest. Both in Europe and Amer-

ica the students say they do not have the money successfully to promote the movement. This is the most serious obstacle in the minds of the leaders, yet they are working heroically with the reasonable hope that merit will be rewarded in time.

CERRO GORDO, ILL.

The Mind of the Child

BY MRS. L. H. HARRIS

IF we could be more like the little children instead of training them to be like us, we would all come nearer the Kingdom of Heaven than we do. After a while one of us will remember that his millennium time was when he was a child and took his days straight from the Maker of days, when the important thing was not to win and to hold, but it was the dawn-song of a bird, the little whispers of the wind, the definite but unspeakable communications he had with tiny flowers, the far and wide loveliness of every field.

And so we shall begin to study the mind of the child in order to discover its sources of happiness and to preserve them just as now we are engaged in destroying them. For it is the nature of a child to believe, not to learn and then believe.

This is why they are happier than grown people. They can hope so much more. They have a divine anticipation of life which is legitimate, but which we outrage, because, if our system of education does not inveigh against such anticipation, it destroys too much of the capacity for faith. And what we need for life is more imagination and fewer penny facts. And when we come to study children, not as the crass, modern psychologists study them, in order to take a mean advantage and a sort of mathematical possession of their winged faculties, but wonderingly, as we study the Word and the Heavens, we shall have entered upon the last great period in history, and the home-coming of man. What it will be like, no one can tell, for while the law is plain that we must be as little children, we do not know enough about them yet to imitate them. Their minds and the great reasons for their

faiths are hidden from us. We have no means by which their confidence may be translated and betrayed. The tenderest mother never wins it. No child loves enough to avow it, and not one of us remembers well enough to tell what we really thought and believed when we were children, and the world was still our dream. We only recall the awakening, the breaking of some ineffable spell.

Usually it was when our elders began to exercise their misguided consciences in our behalf that the pages of our happy minds were first tear-stained, thumb-marked and pencil-scratched with information that was foreign to our May-time spirits. In short, we became students, limed birds upon the ugly tree of knowledge. To be sure we had some information already, things that no child ever tells. And in the way of experimental knowledge we knew, for example, that all bumble bees were old and ill natured, that grasshoppers were homely and probably insane. We were personally and intelligently acquainted with sundry bluebird families. We knew where the first wood violets were to be found, and at a pinch we could have told who made us. But our world, the world of the child, began to fade upon that day when we were obliged to learn the surnames of all the letters in the alphabet. Every one declared that there was the greatest possible difference between *a b*, and *a d*. *A b* was no less *a b*, no matter upon which side it carried its tail and hump. And what a stretching of nerves it was to proclaim at last in a high treble voice that "The cat has the rat!" This was called reading, and we sat down with a brow burning as it had been stung by a laurel wreath. How many men and

women who read these pages recall those first days when they were exiled from the pleasant tree shadows outside, and made to sit within the dull prison room of learning, conning that horrid formula of the cat and the rat so typical of their own state at the time. But other troubles of a far more serious nature were upon us now. We had learned to "cipher," and had come to that place where it was a kind of moral duty to "set down the right hand figure and carry one." The sum would be "Add 5 to 55," and we would set down the 0, after a mental struggle between our right and our left hand, and carry the 1 on to the other 5, which was plainly not entitled to it. "Let each column have its due," we said in the small integrity of our minds. If 5 and 5 made 10, why not write it so? It seemed dishonest to halve the dividend with the next 5 only because it was a near neighbor, and our whole moral nature cried out against it. Meanwhile, as from day to day the figure to be carried and thrust into the next column became larger, our sense of weariness and responsibility increased. That was our first business obligation in the world, to "carry" when we ought to carry, and to pay back when we "borrowed" in subtraction, and we were never the same afterward. If virtue had not gone out of us something of the spirit had. Those first impressions that we held so lightly upon the wings of fancy faded. We became strangers to the bluebirds and suffered such little amorphous, academic thoughts as "Why should a bulldozing transitive verb govern the objective case?" We still had the heart to be sorry for the objective case. Or, why were "a" and "an" called "indefinite articles," and what was an article of language anyhow?

These are natural questions for the child to ask; they represent the pathetic confusion of his mind, too young to reason or apprehend definitions. We have, indeed, better, surer methods now of teaching the personalities of language, but the *burden* of knowing is the same to the child. And it is the burden that is so cruel. Besides, even in these days of amazing public school systems, where so much practice has been had in torturing the minds of young children, not one

in a dozen can tell *why* he sets down one figure in addition and carries the other. The writer recently interviewed four, varying from the age of seven to twelve, and found them all sullenly ignorant of the mystery. It was a kind of mathematical crucifixion thru which they past with uncertain success.

Now, it is not well for children to grow up in ignorance, but it is abominable the way we shorten their faculties and destroy their spiritual qualities by teaching them last things first. And it is curious that men and women who petition legislatures to save young children from work in the mills and factories can see no harm in sending a baby to school. More children are martyred every year in the first six grades at school than have ever been destroyed in the cotton factories. The fact that they do not die, but grow up to be careworn men and women, of even great mental accomplishments, is no sign that they were not bereaved of the highest qualities when they were in the primary grades. Nothing in this world is more barbarous than the teaching relation we sustain to them. We do not respect them enough, and it is no wonder they respect us so little. They do not know how to say it, and there is an instinct still beautiful in them which forbids the sacrilege, but every child knows that its average elder is a fool with his accent in the wrong place. They yield to us and finally become like us, but in the beginning they knew better. And hereafter when the child enters into his own, we shall understand better than we do now how to prolong those first millennium years of joy and innocence. There will be no house school for children, but they will take their primer lessons as they are published upon the hills from day to day. There will be no sentimental catechism of arbitrary rights and wrongs strung by a creed, but they will learn naturally the great lesson of right obedience to God, not because there are churches or dogmas, but because the heavens and the earth declare Him. The reason we have lost so much the sense of God is because we have made too many little diagrams of His providence according to our own minds. We are forgetting to count the stars, and it is the nature of all children to count the stars.

Literature

A Political Novel

FEW of Mr. Churchill's readers understood that "Coniston" was really a political novel, partly because the love interest in it had the right setting for love in the character of Cynthia, in the wild beauty of Coniston and in the patient sorrow that love is as apt to brood as happiness, and partly because the men and measures portrayed in politics belonged already to the past, and the tender forgiving spell of the past was cast over the character of Jethro Bass so that the unscrupulousness of the political boss of twenty years ago had the attraction of romantic adventures in guerrilla government under the very eaves of the capitol. But his new novel* is meant to be a sequel to the political methods described in "Coniston." The scenes are laid in the same State, but not with such fairness of meadows and hills. And love is almost a social convention, a by-product of a rich young woman and a "rising" young man. The author has confined himself to interpreting conditions of modern political life rather than love and natural scenery.

In the days of Jethro Bass there was competition between railroads. There were small railroad kingdoms, so to speak, dependent upon the favor of the political bosses, but now, twenty years later, we come to the consolidation of railroad kingdoms into the railroad empire—an empire no longer dependent upon section bosses in politics, but with its standing army of five hundred legislators, its packed committees and subsidized press. Democracy with its toot and Stars and Stripes is upon the stage, a mere quack advertisement of the government to deceive the people. Behind the scenes is the feudal system, the dukes and earls of the railroad empire—and the real play, the absorbing interests, the high stakes. And the workings of this feudal system are more than proclaimed, they are dramatized with a cynical verac-

ity that makes the story of great value for enlightening the great mass of people who are not sufficiently interested in their citizenship to insure honest government, but who are sufficiently interested in the romance to take lessons in political economy from the pen of a novelist.

Three classes of politicians are represented, the railroad tool politician who swears by the Republican party and belongs to the "machine," which is itself a part of the "rolling stock" of the railroad. This class includes the counsel for the road, and in the character of Hilary Vane we recognize the evolution of Jethro Bass. The reform politician is indicated by Austin Vane, a young, free lance attorney, who plays a potential rather than an important part; his restraint, and the reasons for it, being the only romantically heroic element in the story. And last, the fool politician. Mr. Crewe's career is simply the clown's ring, which has been cleared for the diversion of the author's readers in the midst of graver affairs. That he actually does represent a new and ridiculous type in American politics goes without saying, but Mr. Churchill is the first to paint his State house portrait for readers of fiction. Mr. Crewe is a multimillionaire with an invincible dollar-marked conceit which nothing can abash, an uninformed egregious energy that makes his very intelligence a mockery. He is a sophomore statesman who is concerned to act his part rather than to fill any position. His nature is to pose. He is a reformer only in name. He is really after a State pedestal at any price. His wealth, as is so often the case with the egregious rich, has bereft him of that human telepathy toward humans without which a politician in particular is halt, lame and blind.

If Mr. Churchill has portrayed the character of any of his own political opponents, he has richly avenged himself for being defeated in his race for Governor of New Hampshire, and in any case he has produced one of the most remarkable political novels that has ap-

*MR. CREWE'S CAREER. By Winston Churchill. New York: The Macmillan Co. \$1.50.

peared in this country. The book has the accent of reality rather than fiction. He shows a generous power in drawing strong diverse types, a breadth of understanding that will give his representation weight with serious people. And he has done what most political novelists neglect when he interprets the political mania of the rural mind. All farmers are politicians, but their views are as hidden from men like Humphry Crewe as if they were the constitution and by-laws of a secret order. The awakening into action of this esoteric quality in the rustic politician is one of the future phases of national life.

Worlds in the Making

It is not often that a scientific writer offers at one time explanations of so many phenomena as are presented by Dr. Arrhenius in his highly suggestive book. It contains a considerable number of novel views, some having a good basis of astronomical evidence and the concurrent support of physical and chemical laws; others being merely more or less plausible speculations, standing upon rather insecure footings, and liable to failure when future investigations are brought to bear upon them.

Radiation pressure plays an important part in the theories advanced, and in astronomy the author's name is chiefly associated with this subject. By the application of a single principle, viz., that light exerts a pressure in the direction of its propagation, he was able, about eight years ago, to explain many features of the solar corona, the zodiacal light, the repulsion of comets' tails, and also to indicate the nature of the relations which exist between sun spots, magnetic storms and auroras. The correlation of so many puzzling phenomena was a decided forward step, and the reasonableness of the assumptions made and the force of the arguments presented in support of them caused astronomers generally to accept as highly probable the doctrine that radiation pressure plays an important role in all of these phenomena.

The acceptance of this thesis came the more readily, for light pressure had long

been known as a possibility from the mathematical investigations of Clerk Maxwell. Moreover, shortly after Dr. Arrhenius presented his views, the physicists, Lebedeff, in Russia, and Nichols and Hull, in America, succeeded in realizing radiation pressure experimentally in its theoretical amount, and thus established its effectiveness as a physical agent.

In his present book Dr. Arrhenius has extended his astronomical theories, offering explanations especially in respect to variable stars, new stars and nebulae. He also considers volcanic and seismic phenomena, the condition of the earth's interior, the celestial bodies as abodes of organisms, the constitution of the sun and nebulae, and other subjects. All of this, however, is subsidiary to the main purpose of the book, which is to present a new cosmogony, which aims to avoid the conclusion that the whole universe is tending, thru the radiation of heat from the hotter to the colder bodies, toward a uniform distribution of energy, and therefore toward an absolute end of the development of the universe. According to the new theory, energy is degraded in bodies of the solar type, such as the sun and the stars, and elevated in those of the nebular state. Gravity and radiation pressure are regarded as the chief physical agents, the former tending to concentrate all matter, the latter to scatter it. By using them as opposing factors Dr. Arrhenius has knit together a theory of evolution of world systems which, he thinks, "can continue in an eternal cycle, in which there is neither beginning nor end, and in which life may exist and continue forever undiminished."

The argument is briefly as follows: The stars radiate their heat; their surfaces cool; their vast remaining stores of heat are largely imprisoned beneath the solid and slowly conducting crusts that form upon their surfaces. In addition to the hundreds of millions of visible stars there are probably thousands of millions of other bodies moving thru space with high velocities, unshining, unseen. It is assumed that occasionally collisions occur between the stars or other bodies, resulting in the production of enormous masses of gas and vast clouds of dust,

¹WORLDS IN THE MAKING. By Svante Arrhenius. New York: Harper & Brothers. \$1.60 net.

making a new star and enveloping nebulae. Then begins the long course of development from nebula to sun, from sun to a cool, wandering body, until a new lease of shining existence comes thru a further collision, perhaps after many thousands of billions of years.

The author regards life as having always existed, just as matter and energy have always existed, springing up on a world as soon as conditions become favorable for its development, not spontaneously, but thru life germs transported by radiation pressure from other worlds where life already exists. This is a modification of the old doctrine of Panspermia. Two assumptions underlie this theory. In order that radiation pressure may act in the postulated manner the life germs must be smaller than any known to science today, and they must be capable of retaining their vitality when subjected for long periods to the exceedingly low temperatures which prevail in the interstellar spaces.

Astronomers admit the possibility of many worlds being in a condition favorable to the reception of life. They are also of the opinion that life is known positively on the earth alone, and that there is very little hope of our demonstrating its existence on any other world. They will, however, look with interest on the present book, on account of the many purely astronomical problems which it considers. But it is not to be expected that they will accept all of the author's theories without further investigation. In many cases alternative explanations are equally available. They will question his conclusions at many points, here and there holding his data insufficient and his assumptions unwarranted. Who, for example, that realizes what the Milky Way really is, would for a moment seriously consider the author's suggestion that it had been formed by the collision of two gigantic stars such as Arcturus? The Milky Way contains many millions of stars, each of them a sun; it completely encircles the solar system, and yet is so remote that light from its nearest parts takes thousands of years to reach us. It is altogether too great in extent and in the quantity of matter that it contains reasonably to be supposed to have

been formed from a nebula resulting from the collision of two stars, however gigantic they may have been.

*The Solar System*² had its origin in a series of university lectures, intended to give a general account of the solar system, in untechnical language, without the use of mathematics. It is descriptive and authoritative, recording salient facts in a simple and direct manner. It is not exhaustive even in those subjects which may be presented without mathematics; enough, however, is given to enable the general reader to form a clear notion of the present state of this department of modern astronomy. Tidal action and Mars receive a larger proportion of space than usual, the former because this important subject is inadequately treated in most astronomical books, and the latter on account of the prominence given it in the periodical literature of our time. Mars is a favorite subject for speculation. Nearly all popular articles concerning it assert much that is unproven, and, in the present state of science, unprovable. The favorite thesis is that life exists there in a more advanced development than upon the earth. The main proof offered in support of this theory is the existence or supposed existence of a multitude of fine straight lines upon the planet (the so-called canals), forming a network over its surface. The existence of such lines, and even seasonal changes in them, such as the observations seem to indicate in the more prominent ones, would not necessarily prove them to be of artificial origin, and it is largely upon this point that the whole question hinges. In this work the author presents the conservative view, holding, with the majority of astronomers, that very little is actually known in regard to the conditions existing on Mars. There are a great mass of observations and many drawings and some photographs, but no interpretation of the observed phenomena has been given which receives the general acceptance of scientific men.

It has been the aim of Mr. Bryant to place before the general reader an account, neither too long nor too technical,

²THE SOLAR SYSTEM: A STUDY OF RECENT OBSERVATIONS. By Charles Lane Poor, Professor of Astronomy in Columbia University. Illustrated. New York and London: G. P. Putnam's Sons. \$2.

of the History of Astronomy,* tracing the progress of the science from the earliest times to the present day. In the beginning he considers briefly the astronomical notions and discoveries of the ancient Eastern nations, and especially those of the Greeks and Arabs. During the Dark Ages there was no astronomical progress, but on the revival of learning it began to flourish again. At this time the narrative assumes a biographical form, which is continued from Copernicus to Herschel. In this section we have a lucid record, in condensed and attractive form, of the achievements of those great men who laid the foundations of modern astronomy. Thus six pages suffice to convey a clear notion of the great importance of the investigations and discoveries of Sir Isaac Newton, and of the debt that science owes to Halley for the speedy publication of Newton's early results.

From the beginning of the nineteenth century astronomy has been continually expanding. From time to time new departments have come into existence; many workers have contributed to progress, and great names abound in every line of achievement. Nevertheless, during this period the biographical element was less dominant, and the author has accordingly altered his plan and continued the history by subjects. Nearly all departments of the science are represented by concise chapters, furnishing reliable general views, but not entering far into details. The work is descriptive, and is characterized thruout by clearness and directness of statement. It is evident that mathematical knowledge stands back of the author's judgment, and prevents his yielding to the seduction of unsound theories, however plausible or popular. Altho he looks at facts and hypotheses in the light of the mathematical investigations pertaining to them, he does not burden the book with technicalities.

The advance of the science of astronomy has been so rapid in recent years that people in general, being unable to use or even to understand its mathematical and mechanical methods, have lost interest in the objects of its study. Mr.

Serviss, in his "New Geography of the Heavens," says "that the proportion of mankind acquainted with the starry heavens and listening to their voices is smaller today than it was two thousand years ago." He might have made it fifty instead of two thousand without fear of contradiction. In a former generation the ability to name the principal constellations and to make appropriate esthetic, sentimental and theological remarks about them was a part of the education of every young man and even, or especially, of every young woman. If anyone could turn thought again into these channels it would be the author of the popular "Astronomy With Opera-Glass," and, if he does not succeed, it will not be his fault but because we have past beyond that stage of thought. In this new volume he gives fourteen double-page charts and describes in turn the constellations on the meridian for each month in the year, giving the mythological, poetical, historical and scientific items of interest concerning them.

What Is Religion? By Wilhelm Bousset.
Translated by F. B. Low. New York: G. P. Putnam's Sons. \$1.50.

Not many decades ago we were complaining of the Germans that their books were dry and unreadable because of confused and awkward style, with multiplicity of detail, and without pains to be clear. But a generation of German scholars is now to the fore who are masters in the difficult art of presenting abstruse subjects, in whose examination survey of vast numbers of phenomena is necessary, in a form which is at once clear, forceful and pleasing. Professor Paulsen, who serves up philosophy as entertainingly as Professor James, is an example of this sort of modern German, and Professor Bousset, of Göttingen, is one of the theologians who have the same ability. His treatise on religion is a brief, popular sketch of the principal types of religion as they have appeared in history, from the religious ideas and usages of savages to the highest forms of Christianity. In flowing and easy style he brings out the principal features of the varied forms of religion, often

*A HISTORY OF ASTRONOMY. By Walter W. Bryant, Superintendent of the Magnetical and Meteorological Department of the Royal Observatory, Greenwich. New York: E. P. Dutton & Co. \$3.

*ASTRONOMY WITH THE NAKED EYE. By Garrett P. Serviss. New York: Harper & Brothers. \$1.40.

passing over debated questions in a paragraph, but leaving the reader always with a clear impression, and certainly keeping him interested. The book is not a thoro treatise, either in the philosophy of religion or in its history, but as an introduction to the modern science of comparative religion it is of much value. The reader who lays it down to ask himself the question, "What, after all, is religion?" will perhaps reply, "As a matter of fact, historically, religion has been a great many things, some of them good but many of them bad; it has certainly affected human life most powerfully, and never more for good and less for evil than in the form in which it was taught by the founder of Christianity: it is due to the necessity of man's being to strive for blessing and his native impulse to believe in higher powers, and at its best it is faith in a good God and sincere endeavor to learn and keep His commandments."

William Jordan, Junior. By **J. C. Snaith.**
New York: Moffat, Yard & Co. \$1.50.

Mr. Snaith might have named *William Jordan, Junior* "The Biography of Any Genius." The shy, sensitive, unworldly boy with his great eyes and his agony of shrinking from "street-persons," all who throng the market place of labor and achievement, suggests Shelley and Chatterton and Poe, not to name any living "World-Poet." The development of William Jordan's power to write his great epic runs thru three phases: bewilderment, terror, pity. The "street-persons" speak a foreign language which he is at infinite pains to acquire, nor do they understand his. The bitter experience of the boy o' dreams trying with all his conscientious little soul to adjust himself to the practical life about him is hard to read. It would be harder were it not for the dim light of symbolism, which touches the characters of the book with mystery and aloofness. "The little room" in which the poet ponders the ancient books and which he fears may be taken from him—is it the old and classic learning? The "open wound" upon the child's cheek—does it symbolize the touch of imperfection in all things human? The symbolism is sometimes obscure, but, in general lines, it figures forth the anguish of adjustment which a

dreamer must undergo in order to do any work in a world which is wide awake. The genius is a visitor from the stars, and we so little understand his speech that he often seems to us to babble idiotic nonsense. Our grandchildren may reverse our decision. The style of Mr. Snaith's story has simplicity and charm. As in Ewald's "The Old Room," its symbolism does not spoil the beauty of the simple narrative.

The Story of a Beautiful Duchess. By
Horace Bleakley. New York: E. P. Dutton & Co. \$5.00.

Those who enjoy light gossip tinged with an aristocratic flavor of scandal and touched here and there with an appropriate bit of pathos will delight in the *Story of a Beautiful Duchess*. It is not perhaps as romantic a life as could be devised for some fictitious personage and yet there is enough color to satisfy the average historical student, especially in the incidents of infidelity described with such finesse and detail. The fair creature whose life is here revealed is Elizabeth Gunning, Duchess of Hamilton and Argyll, who rose from an impecunious childhood in a small Hibernian village to the proud position of a royal and social favorite during the Walpole period and was the instigator on behalf of her young son of one of the greatest lawsuits of the eighteenth century. Her personal and mental gifts have won for her other biographers, but none of them has admired so wholeheartedly as the present writer, who deems her the finest type of a lady of quality in the Georgian era. It is the Duchess as a mother that Mr. Bleakley particularly glories in, but, of course, his model mother is the noble woman eager primarily to see her children win and maintain social distinction and position. The fact that she was devoted to them, even in her last years when they disgraced her by sharing in the prevailing faithlessness to marriage vows, is noted as one of her marked virtues. In the same way that she stood by her children, she remained loyal to friends even at the risk or certainty of royal disfavor. She was neither inordinately frivolous like her daughter Betty, nor a persistent coquette like her sister, the Countess of Coventry. Whether this is sufficient justification for a fresh attempt to rescue

her from oblivion, however, is the query. The book is a very handsome one from the standpoint of typography and beautiful illustrations add to its charm.

Literary Notes

....Students of missions in Japan are familiar with the annual volumes edited by Rev. D. C. Greene, *The Christian Movement in Japan*. The fifth annual issue, invaluable for its abundance of information, comes from the press of the Methodist Publishing House in Tokyo.

....The second volume of President A. H. Strong's *Systematic Theology* (Philadelphia: the Griffith & Rowland Press) is devoted to the "Doctrine of Man." Dr. Strong is the dean of American teachers of doctrinal theology, whose ability and type of thought are well known.

....Under the title *Giving a Man Another Chance*, the Fleming H. Revell Co. publish a dozen sermons of the Rev. Dr. Wilton Merle Smith, of this city. The discourses are earnest, practical, orthodox, manly, and not too long. Each one makes a point worth making and fastens it in the memory.

....If St. Paul, who had somewhat to say about women speaking in meeting, had read the sermons to girls in Mrs. Van Koert Schuyler's *Road to Happiness* (Doubleday, Page & Co., \$1.25), he might possibly have arrived at a different opinion. To those who are still of the old opinion we recommend the reading of the sermons.

....The classified catalogs of the Carnegie Library of Pittsburgh are useful to readers and buyers anywhere because of their descriptive and annotated titles. The second series, including the accessions of 1902-1906, is now nearly finished, and together with the three volumes previously issued will form a complete catalog of the library.

....Good advice to young people, conceived in wisdom and delivered in a manly spirit, is contained in Rev. Dr. Jenkin Lloyd Jones's *Love and Loyalty*, a collection of twenty addresses to graduates of confirmation classes, the text of each discourse being the motto chosen by one of the classes of All Souls' Church, Chicago. The University of Chicago Press are the publishers. (\$1.50 net.)

....The recent attempt on the life of Captain Dreyfus gives point to the reissue of Rev. Madison C. Peters's *Justice to the Jew* (McClure Co., 75 cents), which appeared first nine years ago. How much good the book will do may be questioned, since it is a prejudice, not a theory, that confronts us, and prejudice does not read books it does not believe in, or, if it reads them, becomes only the more prejudiced.

....For the young mother to whom her new baby is more than merely a pretty plaything, we have seen no book better than *The Mother's Year Book*, by Marion Foster Washburne. (The Macmillan Co., \$1.25.) The ad-

vice concerning the care of a baby thru the first twelve months of its life is sensible and not too technical, and there is a little infant psychology, based upon Preyer, thrown in for good measure.

....Some years ago Rev. Dr. D. W. Faunce wrote a book on "A Young Man's Difficulties with His Bible." He now issues *The Mature Man's Difficulties with His Bible* (Philadelphia: American Baptist Publication Society, 75 cents), which contains much sensible counsel concerning Scripture. Dr. Faunce's conclusion is the modern one of Pascal, "There is light enough for those who wish to see; none others need ask for more." The author is not to be confounded with the president of Brown University.

Pebbles

"I HAVE never loved before," he said.

"Well," she replied, "I am not running a kindergarten."—*Bohemian*.

MALE VOICE—Hello!

Female Voice—Hello!

"Is this you, darling?"

"Yes; who are you?"—*Yonkers Statesman*.

A COUNTRY editor was about to step into his new \$2,500 automobile when three of the bed slats dropped him on the floor and he was awakened.—*Kansas City Star*.

"SUITS to protect cattle," she read aloud; "now isn't that nice of the Government! I suppose they will furnish each of the poor, dear cows with a blanket."

Satisfied with this glimpse at the news of the world, she turned to the realities of the fashion column.—*Philadelphia Ledger*.

A DELPHIC RESPONSE.

"It is hard," said the sentimental landlady at the dinner table, "to think that this poor little lamb should be destroyed in its youth, just to cater to our appetites."

"Yes," replied the smart boarder, struggling with his portion, "it is tough."—*The Congregationalist*.

A GENTLEMAN bought at the post office a large quantity of stamped envelopes, newspaper wrappers, etc. Finding them difficult to carry, he asked one of the clerks if he could supply him with a piece of string. "We are not permitted by the department to supply string," was the reply. "Then give me a bit of red tape," was the sarcastic retort. The string was supplied.—*Sketch*.

HARVARD TO YALE.

SAIL on! Sail on, thou Ship of State!
Sail on, thou Union strong and great!
And watch the sail, thou fat old Skipper Taft,
And clear the decks for action fore 'n' aft.

Sail on! Sail on, thou Ship of State!
Sail on, thou Union strong and great,
Huge clouds of Nomination on the skyline loom,
She's jibing! All hands watch the boom!

—*Harvard Lampoon*.

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, \$2.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, \$1.75 a year extra; to Canada, \$1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with \$1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

The Deed and the Man

A NEW name for a new deed of heroism is writ high on the column of fame, a name hitherto ungraced with chief distinction, the name of the man whose heroism to the point of death saved the day to the cause of righteousness and decency, to political and social honesty last Thursday noon at Albany, the name of Otto Foelker. His name will long stand worthily by the side of that of Governor Hughes.

The victory needed him. Without him was defeat. He was a very sick man. He had not recovered from the surgeon's knife after a deep and most critical operation. The physicians told him he would leave his bed to be taken to the Senate Chamber at Albany only at the imminent risk of death. He was in the condition when it was most imperative, as doctors look at it, that he should be saved from all accident of disturbance and be given absolute quiet. But his one vote was needed. Without it a heroic attempt to foil the forces of greed and wealth and save the good name of the State would fail. So he took his life in his hand and was carried nearly two hundred miles that he might at the

critical moment say Yes and No, and make the majority of one that saved the Senate from shame and gave success to the chief moral measure that has been before the State for many a day, and the success of which has concerned the whole country. We give honor to the soldier who, in the flush of courage and health, risks his life on the field of battle, altho he knows that the chance of death is not one in ten; but here was a man, his veins collapsed with loss of blood, his strength all spent, his nervous force wasted, who had all human excuses to spare the least exertion, whom no one could blame if he obeyed his doctors' orders, but whose soul's courage yet rose higher than his body's weakness, and who insisted on being taken from his bed and borne where his own strength could not carry him, even tho it was scarce to be hoped that he should ever be able to return to his home. That was sublime courage, not the spectacular kind that wins huzzas, of applause and glory, but truer, nobler, such as that from which one might "look proudly to Heaven from the deathbed of fame."

Praise, too, great praise, is due to Governor Hughes, to all the twenty-six Senators, even to those who would, if they dared, have voted for the gamblers, but who respected the protests of the people and dared not go back on their previous recorded vote.

We have here another illustration of the power of the moral sentiment of the people when once sharply appealed to. The people can be trusted if they understand that right and wrong are involved. Truth loves publicity; error revels and succeeds in sneaking darkness. Governor Hughes made a campaign of publicity address to the people. The religious and moral organizations of the State joined strongly with him. The federated Churches were in politics for the business that belonged to them; for it was "Sunday-school politics" that was busy and had the right to be busy. We notice that saloons and gambling organizations don't want the Church to meddle with politics; we welcome, we demand the Church's aid on every question of righteousness. The forces that fatten on vice laugh at the Churches; they imagine they own and run politics, and

that others must keep their hands off; but now and then they learn something that startles them. They believe and tremble.

This victory is then an example and a hope for the future. To two men, whose names will go into history together, we must give special honor, that of Charles E. Hughes and that of Otto Foelker. The one dared to risk the hostility of the combined political forces in his party and his future political success for the cause he deemed right; the other did not count his life dear to him if the Republic might not suffer damage by his neglect. And why should a man count his life dear? It is worth dying for to protect one's country, to defend the homes of the people, to guard our youth against moral danger, and to teach the lesson of unselfish service.

The June Bride and Her Trousseau

AN interesting example of a dominant feminine characteristic is the fact that the last maiden struggle of the bride-elect is with her clothes. She has surrendered everything else, her heart, her hopes of happiness and the future generally to the prospective bridegroom, but her feelings about clothes belong to no man and she begins to exercise them with almost tyrannical vigor the moment the date of the marriage is fixt. Up to that time she may have been the most idle and bewitching of companions, a lady upon whom a man could call early and remain late without feeling that he was a bore. But from the identical moonlit night, when, with much coaxing, he persuades her to name the day, her whole nature changes. She is no longer idle and makes no attempt to be bewitching, but she is preoccupied and practical in her mood. Nor is the silence he regards as sacred so delicate as he imagines. It is the silence of a woman exhausted from "trying on and fitting things." That far-away look in her beautiful eyes is not love's sweet pilgrimage into the future that he thinks it is, but she is trying to "match shades" in her imagination for her second day's dress. The truth is, her mind has balked with prim reserve

at any further contemplation of the future at this time, and all her anxieties are centered upon the mantua-making present. The wedding dress is one of the goals of her ambition, and if the lover only knew it, she is more concerned now about the fancy flounces on her petticoats than she is about his visits. Indeed, the latter become a distinct annoyance as the wedding day approaches with a thousand things to be done to innumerable garments, such as buttons to be sewed on, buttonholes to be worked, threads tied, and ten thousand yards of lace to be whipped on in every conceivable direction. If John would only have some consideration, stay away more and give her a chance to finish things without working herself to death up to the last moment! She sighs and feels already the burden of doing her duty by John and attending to other weightier matters at the same time. For now her mind is only tied to him by the trousseau, he simply stands as a period in the sentence where the beautiful bride parades all the adjectives of her wardrobe. How the next sentence in her life after marriage will begin and end she does not know. Aside from a few romantic pledges that she has extorted from him (who would gladly promise her the North Pole if she demanded it as a condition of their union) that he will always love her as much as he does now, and will be even more attentive, she has made no provision for their married lives together beyond at least one dozen of everything and six Marguerites extra, with her monogram beautifully embroidered upon each piece.

Now if we should tell this bride to be that she is sowing the first seeds of discontent and unhappiness in this same trousseau of exquisite linens and laces, she would open her pretty eyes incredulously and dismiss us with some observation about the self-respect of a young married woman being assured in her husband's family by the quality of her lingerie, and in society by the number and elegance of her gowns. But if the husband's family are foolish enough to judge her by these external evidences, they will have a long time afterward to revise their judgment. And nothing is more ephemeral than a bride's gowns in

society. If she wears them more than one season, they are recognized and actually become a reflection either upon her husband's financial condition or his generosity. Nothing is more pathetic than the faded young matron who continues to have her perfectly elegant wedding dresses remodeled from year to year without quite banishing their first festive bridal appearance.

But the worst feature of the most fortunate woman's bridal trousseau is its completeness. When the honeymoon is spent and her husband returns to his business, she has nothing to do, nothing to plan or make after the manner of women. She has the needle-ache anyhow from having sewed so much before her marriage, and even if she did not have, she does not need a thing in the world. Besides, poor John's clothes are all so brand new that there is not so much as a sock to be darned! It is a funny predicament, of course, and never happens but once in any woman's lifetime unless she marries again, but the effect upon her disposition is not salutary. Every bride should have at least three corset covers and five shirtwaists to finish after she is married, to say nothing of two dozen napkins to hem, and of continuing to work her new monogram everywhere she can. Then she will have less time to brood and weep over the changes that nature is working in John, the married man. And she will not look so strangely idle and superfluous to busy John.

Men are curiously shortsighted in their jealousies of their wives. Few of them have reason to be jealous of any other man. But many married women form attachments to *things* that effectually and innocently exclude their husbands from their consciousness. In such a case the obtuse man rarely realizes what the trouble is. He knows that his wife has come to accept him mechanically as she does the clothes-press or the pickle stand, but why? It is because she has got a master passion for housekeeping, or for making the children's clothes, or for cooking things. And this ability to exclude him really began to develop before marriage, when she learned to concentrate so much of her mind and heart upon her wedding trousseau. Men have the

same fault, but few of them develop it so trivially, and there is more excuse for a man to become absorbed in his business, since the livelihood of his family depends upon him. But the world, the married world in particular, depends upon the women for happiness, and it is the more pity, therefore, that they should start wrong. If, for example, the coming June brides will place the emphasis upon their Johns rather than their clothes, their courtships will at least last longer, and they will be wiser if not prettier. Besides, it is not absolutely essential to have a dozen of everything. There is a certain young woman living now in an old-fashioned town who sometimes weeps because she has never had a petticoat of her own. "You see mother's mother insisted that she should have three dozen of everything, all made of the strongest linen," she sometimes wails, "and they are going to outlast two generations of us!"

If you must spend an extravagant sum for raiment to gratify your bridal instincts, spend it for household linen, the fashion of which does not change enough to make it an affliction to the next generation that inherits it.

The Interdict

THE Pope forbids the French clergy to protect their poor-priest funds and their funds for masses under the law which established organizations for that purpose. That loses to the Church some ten million dollars and greatly disappoints many of the clergy. But the Papal brief was not retroactive. It banned present and future. Hence Cardinal Lecot's Association for Public Worship in Bordeaux, which antedates the Papal letter, is in a healthy state, enjoying benefits under the law, altho known by a special title, "Diocesan Association." Bishop Lacroix, of Tarentaise, undertook to model one after lucky Bordeaux. He was too late. Rome ordered it to be dissolved. The bishop thereupon resigned his see, surrendering at the same time any claim to support therefrom. Thus cut adrift from his moorings, the good monseigneur was not allowed to remain so long. The Minister of Public Instruction has just named

him Professor of Church History at the Sorbonne. He begins his lectures in October, and will give the story of the Church under the Concordat of 1801, the space of 104 years, 1801—1905. If he will only give out all he knows! The Republic forgets not its episcopal friends.

Pius X approves not this last offer of France, to save the endowments for masses. By way of partial reparation he has provided that 2,000 masses be said yearly for the intentions lost by his non-approval. As one mass, in Catholic teaching, is more than enough to save the world, the spiritual value of this gift is not small. On the other hand, as a stipend in Rome is one lira (20 cents), the economic value of the Pope's fund is about \$400 yearly, representing a capital of \$8,000.

The six Cardinals of France have sent their acknowledgements of the letter of Pius X, with his non-approval of the "ecclesiastical mutualities." It is dated at Bordeaux, the see of Cardinal Lecot, who had favored the plan. They declare that they received the papal letter "with filial respect." They recognize the Pope as "the guardian of the principles which should maintain, pure and intact, the divine work of Christ." They thank His Holiness for "generously taking upon himself the satisfaction of a part of the suppress masses." They remark that "practical questions may be looked at from many sides, but as to fundamental rules it is for the Head of the Church to indicate the points to be sacrificed in order to safeguard principles." The letter ends:

"Deign, Your Holiness, to receive these protestations of fidelity and of sincere love for Holy Church."

It is a remarkable document. We observe (1), no opinion is expressed for or against the Papal non-approval; (2) the answer of the Cardinals is a profession of absolute obedience at the command of Christ's Vicar; (3) the Pope is thanked for looking after some of the lost masses; (4) lastly their faithfulness and love is for the Church. It will be hard for the Curialists to find many grains of comfort in this reply of the French Cardinals.

Three Great Experiments

AFTER more than a generation of exposures of municipal dishonesty and inefficiency, and volumes of reform discussion that often has seemed to get nowhere, some actual knowledge of the respective merits of different plans of city government is about to be obtained experimentally. Three distinct schemes for achieving what Herbert Spencer once said had never yet been achieved, namely, "Educing golden conduct from leaden human nature," are now in full operation. It is only fair to say that their success may indicate that hitherto human nature of fairly good quality has produced extremely bad municipal government because of quite unnecessary waste and misapplication of force.

The three great experiments are those of Galveston, Tex.; Des Moines, Ia., and Newport, R. I. The Galveston plan, as originally conceived eight years ago, was intended to substitute State-appointed administration for local self-government. That device having been declared unconstitutional, the commission plan in its present form went into operation five years ago. Five commissioners, one of whom is designated Mayor-President, are elected every two years on a general ticket. No ward lines or other local divisions are regarded. The commissioners pass all municipal ordinances, draw up and pass the annual budget, award all contracts, and make all appointments—in short, run the town.

This Galveston plan is one of centralized responsibility in extreme form, but it is undeniably successful so far. The financial condition of the city has been greatly improved, and all municipal services have been brought up to a high level of efficiency. So great is the repute of it that five other Texan cities, namely, Houston, Fort Worth, Austin, Dallas and El Paso, are now imitating it.

The Des Moines plan is the Galveston commission plan so far as administrative mechanism goes, but it is pure democracy so far as ultimate initiative and decision are concerned. The mayor and four councilmen, nominated at a non-partisan primary and elected at large, hold office for two years, but any one of them may be recalled, and his place other-

wise be filled by popular vote. Any ordinance or executive order is subject to the "protest," which holds it up until the people by vote ratify or reject it. The people, moreover, can take the initiative and cause any measure desired to be past upon by popular vote. All franchises have to be submitted to the people. The Des Moines plan became operative on April 1st last. If the people get tired of it they can go back to their old ways at the end of six years.

The Newport plan is an ingenious extension of the representative principle in government, and, as such, is in character intermediate between the Galveston and the Des Moines plans. A representative council of 195 members is elected, each member for three years; 39 members from each ward, one-third of them renewable yearly. The electorate for the council, by a proviso of the Rhode Island Constitution, consists of those voters only who pay a property tax on not less than \$134. Of the 5,400 voters of Newport, about 1,400 are by this rule disqualified for voting for members of the council, or upon any proposition to impose a tax or to spend money. The representative council is a legislative body having in general the powers of a New England town meeting. The executive power is invested in a Mayor and five Aldermen, elected for one year and having in general the powers of a Board of Selectmen. A committee of twenty-five members of the council prepares the annual budget, which must be printed and distributed to all tax-paying voters at least a week before its consideration by the council. The council can be called together at any time upon the written request of twenty-five members, or upon the request of the Board of Aldermen. Its meetings must be open, and all its records must be open to public inspection. It elects city officials, fixes salaries and defines duties. By a two-thirds vote of all its members it may remove an officer for misconduct or incapacity.

These three plans of municipal government are great experiments, and they will be watched by the nation with keen interest. At the present moment the most interesting thing about them is that in the eight year interval since the Galveston plan was proposed, public opinion

has swung far from the philosophy which it reflected, and toward democracy. The Des Moines and Newport plans are schemes of true popular government. We anticipate that in the long run Des Moines and Newport, rather than Galveston, will be widely imitated by American cities.

The Education of a Minister

CLARK UNIVERSITY, of Worcester, Mass., has taken great interest in the investigation of religious experience, and has conducted some interesting investigations by the easy questionnaire method. We doubt if a paper on the "Education and Problems of the Protestant Ministry," by David S. Hill, a Fellow of the university, which we are asked to review, gives a fruitful discussion or a healthy conclusion.

Here is what Mr. Hill's intelligence tells us as to what theological seminaries should teach:

"The objection to these courses of study is the preponderance of theology in its various divisions, of languages, Hebrew, Greek, exegesis and of history. . . . The student, if fresh from a first-class college and scientific preparation, aglow with inspiration, suffers a shock. Instead of full treatment of the subjects of vital or fascinating interest, biology, psychology, sociology, literature, political economy and philosophy, he is forced to grind at the elements of dead languages."

Does Mr. Hill imagine that in going to a theological seminary a young man is going back to college? He is going to a professional school, to learn his profession. Why not ask the law school or the medical school to teach psychology, sociology and literature? We warrant the student who chooses the seminary is not half so much aglow with the fascination of biology and political economy, or hypnotism, to the importance of which Mr. Hill gives several pages, as with that of the interpretation of Scripture, the problems of theology and the history of religion. The men who feel that other fascination are in the postgraduate courses studying for a Ph.D. And the theologians do not have to study Hebrew if they don't want to; and they already know their Greek. The studies recommended by our critic had all been pursued in college, and students are pre-

sumed to be familiar with their principles, and can pursue them as they choose. President Eliot ten years ago specified Greek, Latin, Hebrew and German among "preliminary subjects which every student of theology should be required to master," together with the other sciences which Mr. Hill supposes he will still be devoted to, but President Eliot, with a clearer knowledge of what a professional school should do, assigns the special studies to the seminary, such as Semitics, New Testament exegesis, ecclesiastical history, psychology and ethics, systematic theology, comparative religion and charities and reforms. What sort of training and what sort of inspiration the students of a theological seminary should have is thus described by President Mackenzie in an address to Hartford Seminary alumni:

"They have equipped themselves thru long years of labor in various institutions, have breathed the university atmosphere till their lungs were filled with it, that they might know the utmost that men come to know, and test the severest attack which men have made upon the gospel which is their life. These men have in them the spirit of the preacher, the propagator of Christianity, combined with the spirit of the student and the teacher; and that combination gives to them, as it gives to all true members of all worthy professional schools, their place and their power."

But Mr. Hill's advice is:

"Reduce to the minimum the study of Hebrew and of Greek texts and of worn-out courses that have relatively low claim to educational value in the light of modern thought. Substitute for these thoro training in the foundations of the physical and the biological sciences, in sociology culminating in the new psychology,"

by which he means hypnotism, *et al.*!

Graduating Days

IN these days by the tens of thousands our boys and girls are concluding their period of education at high school, college or professional school, and commencing a wider life or a further period of study. Fifty years ago the college boys—there were no college girls—went, nine out of ten of them, into the professions of theology, law, medicine or teaching. Now half of them go into business. This more general desire for a broad education of business men doubles the students at college. Equally not half the

girls that go to college expect to be teachers.

It is usual to say that in the old days the boys studied, but that now they loaf or go in for athletics instead of study. This is no fair statement. In the elder days there was nearly the same proportion of rowdy, riotous, lazy students, probably more rowdy and riotous, for there was less athletics. Every old college man remembers them. To be sure now a smaller proportion have a definite aim in a profession, and there is a somewhat larger proportion who simply go thru a big university as easily as they can, because it is the thing to be an alumnus, and they have no special plan of earning a living afterward. This is no sign of decay, but only of the enlargement of the clientele of the college. The others study as well as they ever did.

It must not be supposed that hard study is a lost art in our universities. In the postgraduate schools the men never studied harder; they know what they are there for. In the four college classes the half that came to study and fit themselves for a career in life are as faithful and hard working as of old. Of those who come for the name of it and not for what they can get out of it not much can be expected. But they are in as good a place as there could be found for them. They would be likely to lead a more useless, vapid life out of college. They get some good out of influences that, on the whole, are elevating. Not a few of them learn about senior year that life is not all play, and they take hold of work faithfully after they have graduated. The experience of mixing with intelligent men is good for them, even if gained mainly by absorption. We are told that some of the most successful city lawyers are of those who were known in college as athletes and not as students. At least they had learned self-control, ambition for themselves and for their community, and in the training a great deal of diligent, steady hard work. That is better than bumming about at home, better for body and mind, and a surer hope for future success.

But the question arises whether the changes prophesied for our colleges and universities will tend to eliminate the less energetic student, and send him earlier to

the more ambitious professional school. President Jordan, of Leland Stanford, Jr., University, tells us that within five years that institution will transfer its freshmen and sophomore classes to junior colleges, like those allied with the University of Chicago, and devote itself to the elected studies of the classes above these. That will practically remove the junior and senior years, as such, and put them into the university class. That is the tendency at Harvard, the college crushed out between the developed preparatory school and the university. Nevertheless, we think that, despite Johns Hopkins, Harvard, Chicago and Stanford, the four year college course devoted to general culture will maintain itself, even with the multitude of wealthy or lazy students who go to college for the name of it, and what they can absorb with the least possible effort. Such men are numbered, not weighed. They are negligible quantities, and neither increase nor diminish the value of the college to the country.

Armaments

When the Czar of Russia called together the First Hague Conference his fondest hope was that some way might be found to limit the overgrowing and the evergrowing armaments that oppress the people of Christendom. But all the First Conference could do was to opine that "the restriction of military charges, which are at present a heavy burden on the world, is extremely desirable for the increase of the material and moral welfare of mankind." The Second Hague Conference, after voting that "military burdens have considerably increased in almost all countries since the last date," declared that "it is especially to be desired that the governments should undertake again the serious study of this question." Thus far, we regret to say, no official commissions have been appointed by the governments to deal with this perplexing and momentous question. In the meantime the International Peace Bureau at Berne is organizing unofficial commissions of able men in each nation to investigate the problem and make due recommendations to the governments, and already such commissions have been created in England, Germany, France and the United States. It was felt that

the clear logic of the Hague conventions prescribes the steady decrease of the machinery for the arbitrament of international differences by war corresponding to the steady and now so great development of the machinery for their arbitrament by law; and it is hoped that the recommendations which will result from the united studies of these able voluntary bodies in the several nations will furnish a practical program of high value to the governments. The American commission held its first session in this city last week. Representative Theodore E. Burton, of Ohio, was elected chairman, and the other members are: Hon. Samuel W. McCall, Gen. Nelson A. Miles, Gen. Louis Wagner, president of the Third National Bank of Philadelphia; Hon. John H. Stiness, ex-Chief Justice of Rhode Island; Hon. Charles S. Hamlin, of Boston; President E. D. Warfield, of Lafayette College; Dean George W. Kirchwey, of the Columbia University Law School; Dean William P. Rogers, of the Cincinnati University Law School, and Prof. William I. Hull, of Swarthmore College, the author of the work upon "The Two Hague Conferences." Tho the findings of such a commission cannot have the binding force of one appointed by a Government, yet it can manifestly go farther along the path of peace and thus blaze the way for the cumbersome governments who cannot much longer keep the armament question out of practical politics.

The Breed of Horses

The racing associations are greatly concerned about the breed of horses, and fear that the suppression of public gambling at races will injure the improvement in the breed of horses. Leaving aside the point that it is the breed of men that the new law in this State has in view, some other things may be considered. One is that improvement in the breed of automobiles is just now more important than that in horses. Another is that in horses we need good trotters more than good gallopers, and the raising of trotters is of no great concern to the gamblers. The speedways will develop trotters with no public betting. Further, if the public really love the racing and not the betting they will patronize the races just the same, and breeders

will find purchasers. Horse-racing is not in itself a bad sport, even if inferior to football and baseball, for it matches horses instead of men. It is a fine aristocratic sport for rich men, and is interesting to the lookers-on. We have not observed that there is any failure to develop fine breeds of draft horses or hackneys, and horse shows seem to prove that breeders of various types of horses have nothing to complain of. The fact is that the breeders' argument is mere humbug.

Trolley Roads in Restraint of Trade

In the comments of the New England press upon the Government's suit for a separation of the New Haven road from the urban and interurban trolley lines it has acquired, we find no evidence that the purchase of the trolley lines was followed by suppression of competition, deterioration of trolley service, or the extortion of higher rates from passengers. How, then, is the Government to prove that the people have been wronged and oppressed by this combination, which it attacks under the Sherman Anti-Trust law? The Government has complained that this statute prohibits all combinations in restraint of trade, whether reasonable or unreasonable, injurious or beneficial. But if the amendments suggested had been made, the Department of Justice would not, it seems to us, have gone to the courts with a complaint against this purchase of street railway lines by the company whose main road extends from New York to Boston. We observe that no suit has been brought against the New York Central, which has become the owner of urban and interurban trolley roads of such extent and value that they are capitalized at more than \$60,000,000. It is true that the Central's trolleys are all in one State, but the local trolley systems of the New Haven Company, altho they are found in three States, can scarcely be called instruments of interstate commerce.

Iron and Steel Prices

If the Steel Corporation had controlled the entire iron and steel industry, it might have continued to maintain, in a time of general depression, the prices which were easily paid before the panic,

but this would not have been a wise policy. Because it does not control the industry it has been constrained to meet the reductions made by competing manufacturers. The almost immediate effect was an increase of orders which, according to reports from Pittsburg, will give work on July 1st to 45,000 men who have been idle. It is unjust to say that in keeping up its rates the Corporation was moved by greed. There is evidence that it sought to treat fairly those who in various branches of the industry were burdened with material taken at high prices. But its managers must have seen that reduction was inevitable. This was shown clearly by the pig-iron output, which has been cut down one-half. In the five months ending with October last it was 11,258,104 tons; in the first five months of the present year it has been only 5,665,863. The following figures are instructive:

| | 1908. | 1907. |
|----------------|-----------|-----------|
| May | 1,163,997 | 2,294,005 |
| April | 1,148,691 | 2,216,558 |
| March | 1,228,204 | 2,226,457 |
| February | 1,079,721 | 2,045,068 |
| January | 1,045,250 | 2,205,607 |

The reductions ordered last week range from 5 to about 11 per cent., and they begin at the base, with ore. It may be that the cut is not deep enough. The manufacturers express a hope that it "will not necessitate a general or radical readjustment of wages." But what does the great reduction of iron output and consumption during the last six months indicate, so far as labor is concerned? The idleness of a great number of employees, and short time for many others, altho the wage rates of those who have had work have not been changed. Already there has been a readjustment of wages.

Chancellor Day's Dictum We do not pretend to know whether Dean Kent's personal equation makes it impossible for him to continue peaceably in Syracuse University, as Chancellor Day asserts, but we are interested in the correspondence which *Science* publishes on the subject, particularly in the letter which the editor has written to Chancellor Day. He had asked the Chancellor some pointed questions as to the propriety of dismissing a professor who is acceptable to his colleagues,

and the Chancellor marked his reply as "private." But Editor Cattell takes the liberty to quote one sentence:

"Our professors have nothing to do with the hiring, continuing or dismissing of professors or students."

Then Syracuse University is in a bad way. To be sure, trustees are the final court, but the faculty should have a great deal to say and do as to the selection, engagement and tenure of professors, and equally, or more so, of students. The president, or chancellor, not as a trustee, but as head of the faculty, should nominate the new professor on the recommendation of the other teachers in the department, and their recommendation should usually be final with the trustees. Any other course makes the president a dictator if not a tyrant.

Until within a very few years our political and personal relations have been with England, France and Germany, and only the languages of those countries had much commercial value. Now the Spanish-speaking countries and our Spanish dependencies are of closest relation to us, and the Spanish republics are our closest sisters. We therefore welcome the new monthly, *The American Colonial Review*, issued both in English and Spanish, whose aim it is to make us better acquainted with each other, and particularly to show our people what we ought to do for our colonies. It asks citizenship for the Porto Ricans, and recognizes our purpose and success in developing self-government. One can read with some pride the story of the success of the United States and Mexico in assuring peace in the Central American republics.

Of all candidacies offered to the public the most surprising just now is that of John Hays Hammond for the Vice-Presidency. No one thought of him, and he offers himself, as freely and openly as does William J. Bryan. We have the proffer of himself sent to the press, which tells of his success as an engineer, and his extraordinary rise into prominence. But we see nothing beyond general ability which commends him. He has had no experience in public life, and presiding over the Senate is no gold mine. We suggest that he first try a term

in Congress, if his district will elect him, or run for Governor of Massachusetts, if Mr. Guild will make way for him. We wonder who has persuaded him to take this step. We have great respect for him, but this claim does not show wisdom.

There is nothing sacrosanct about the rule which gives in a Presidential convention big votes to a mere handful of voters. It is absurd that to a Republican convention Southern States, which do not pretend to make a contest for election of President, should send 250 delegates. We approve the plan to apportion the delegates according to Republican votes, not according to population. That may help bring out the voters.

Porto Rico sends four delegates to the convention in Chicago, but its people are not allowed to be even citizens of the United States. This is outrageous. We should think the children would cease to salute the flag. It is not enough that Congress should give them citizenship; Porto Rico should be made a Territory.

Governor Hughes says that under no circumstances will he accept the nomination for Vice-President. We are very sorry, unless it means that he will accept the renomination as Governor of New York, to complete the work so well begun. No citizen should refuse to be drafted for public service.

They are starting "personal liberty clubs" in this State, of those who favor racing, they say. But there is no law against racing; it is only against gambling. Doubtless the yegg-men would like a personal liberty law of their own.

In an editorial last week a line from Tennyson,

"I come from haunts of coot and hern" contained the misprint of *tern* for "hern." This spoiled the force of the comment on the two cases of alliteration in the line.

Maxim has invented a noiseless gun, but there is no hope of a noiseless fire-cracker in time for the Fourth.

Our Barbarous Celebration of July 4

Two years ago we called attention to some of the hazards of July 4th. As Mrs. Isaac L. Rice has pointed out in the *June Century*, "It is a reflection scarcely calculated to gratify our national pride that the United States is the only civilized country which observes the greatest of its fête days in such an uncivilized fashion." France, Switzerland and Brazil have each and all set us a worthy example, embodying sanity, safety, wholesomeness and happiness, as to the proper celebration of national holidays in sharp contrast with our barbarism that too generally obtains.

The events which took place on July 4th, 1776, were far too important to us and to all men to permit of these events ever being forgotten. It is meet and right for us to celebrate them. It is, in point of fact, our bounden duty to do so, but our celebrations need not be colored by barbarity; they need not cost New York City alone an outlay of \$4,000,000 and the country at large something like \$20,000,000 for fireworks that go up in smoke, exclusive of the destruction of property burned up as a mere incident.

Spasms of horror swept over the country but a few short weeks ago when 174 children were caught in a fire-trap at Collingwood and killed. Yet by means of licenses and otherwise we go calmly about the barbarous preparation for the destruction, the wounding, the maiming, and the injuring of at least 5,000 children just as we did last year and the year before, or as we have done for many years. In the stress of modern life we have forgotten that our "Glorious Fourth" is barbarous. That it is so will appear when we realize that last year there were over 300 deaths from lockjaw, 440 persons lost one eye, and over 100 children were reported as having both eyes blown out by explosives, not to mention the loss of fingers, on the day we celebrate so barbarously. As one means of ushering in the Fourth of July,

shouting and disorderly crowds are provided with noise-producing devices that range from trumpets to the dangerous toy and other pistols, torpedoes, bells, whistles, etc. The hospital sick are from these and similar causes incalculably set back in their convalescence.

The cost of patriotism is a constantly growing one along the line of casualties. It is anything but soul-inspiring to read of our tribute to Independence Day last year as "the bloodiest Fourth yet."

The Anti-Noise Society is engaged in a campaign movement toward making the national celebration of the Fourth of July less noisy, less barbaric and more sincere and patriotic. In this the organization ought to have the countenance and support of city, State and Federal authorities, including the President of the United States himself. It seems to THE INDEPENDENT that the prolonged and disorderly discharge of firecrackers, mines, firearms, cannons, lyddite and even dynamite is at once senseless as well as useless, not to say extra hazardous, from the underwriters' point of view. All these have become inappropriate and meaningless. The occasional rereading of the original Declaration of Independence on July 4th would be exceedingly academic, nor would it ever be likely to set the house afire. Perhaps it would be a happy idea to try this instead of placing 38-caliber ball cartridges on the car tracks to be exploded by passing trollies with the chance of killing or wounding persons by the wildly flying bullets.

THE hazard of the parlor match is recognized as being so great that one would think that some speedy means might well be found to prohibit the sale of such matches. It is so easy for the smoker or even the housewife to throw away a glowing parlor match without looking to see where it falls, that it is small wonder that it sometimes, only too often in fact, alights upon inflammable material, and then comes the fire loss. You can't be too careful with parlor matches.

Promise of Large Crops

It is quite natural that the promise of the crops should be studied this year with more than the customary interest, because of the hope that bountiful harvests will restore the general prosperity which prevailed before the panic. At the present time the prospect is highly favorable. Last week's Government report points to 443,290,000 bushels of winter wheat and 293,980,000 of spring wheat, or a total of 737,270,000, against 634,087,000 harvested last year. An enormous crop, 1,101,000,000 bushels, of oats is indicated (only 754,443,000 in 1907), and when allowance is made for mishaps it seems safe to count upon reaching the billion mark for the first time. An increase of the barley yield, from 153,500,000 to 187,500,000 bushels, may be expected if the present condition of the plants is maintained. Winter wheat is almost out of danger. Of course it is too early now for a confident prediction that the promise of the June report concerning all the grain crops will be fulfilled, but it is undoubtedly true that the June indications are very encouraging.

Under the New Currency Law

STEPS have been taken promptly by the national banks of this city for the organization of one of those national currency associations for which provision is made in the new currency law. Twenty-eight of the national banks which are members of the Clearing House Association were represented at a meeting held on the 9th, when by unanimous vote the proposed action was approved and the necessary committees were appointed. The committee on organization is composed of A. Barton Hepburn, president of the Chase National (chairman); Frank A. Vanderlip, vice-president of the National City, and H. P. Davison, vice-president of the First National. While the new law is not regarded by New York bankers as a statute of ideal excellence, the spirit of the meeting was that it was the duty of the New York banks to organize in accordance with its provisions, and

that they should be ready and willing to co-operate with the Treasury Department in any project designed to improve the currency system. It appears that those banks in the United States which are entitled to be members of such associations have an aggregate capital of \$798,141,375 and \$541,521,011 of surplus. A little more than one-fifth of the total is found in the State of New York. Secretary Cortelyou has issued a circular which gives full instructions concerning the organization of associations, and the Department is preparing the notes, in order that there may be no delay in supplying a demand for them. But neither the Treasury officers nor the leading bankers of New York appear to expect that any of the emergency notes will be issued this year or next.

.... June interest and dividend payments by railroad, industrial and traction companies, according to the *Journal of Commerce*, are \$67,952,000, against \$71,186,000 a year ago.

.... The *Wall Street Journal* reports that the number of stockholders in thirty-one of our prominent railway and industrial corporations is now 326,847, or 101,230 more than there were before the panic.

.... Shipments of anthracite over the coal roads in May exceeded all previous records for a month, and were 6,088,116 tons. For the five months ending with May they were about the same as in the corresponding months of 1907.

.... The output of new securities in this country since January 1st has been very large, the total having been \$722,652,000, or an increase of \$63,000,000 over the corresponding months of last year. May's total was \$166,975,000, or three times the issue of May a year ago.

.... Disbursements on account of the relief fund created by Mr. Carnegie for the benefit of his employees in the Pittsburgh district were \$216,764 in 1907, and since 1902 they have amounted to \$1,129,117. Since the establishment of the fund, 7,531 accident claims and 856 death claims have been paid.

VOL. LXIV

NEW YORK, THURSDAY, JUNE 25, 1908

No. 3108

Survey of the World

The Republican Nominations

The Republican National Convention, at Chicago, last week, nominated William Howard Taft, of Ohio, for President, and James Schoolcraft Sherman, of New York, for Vice-President. In each case the roll was called only once. Before the convention assembled, the national committee, in contests involving 219 seats, had made decisions which gave 216 of these seats to Taft delegates, but action concerning them was still to be taken by the convention's Committee on Credentials. On the first day, the 16th, the convention was in session only two hours, and much of the time was taken up by the address of Senator Burrows, the temporary chairman. The "allies," as they were called, decided to make arguments before the credentials committee in only half of the original contests. Hearings consumed that night. On the following day the convention committee's report confirmed the decisions of the national committee. On that day, also, the Pennsylvania delegation's resolution for a reduction of delegate representation in the South was rejected by a vote of 506 to 471, after a debate upon the rules committee's majority and minority reports (the latter signed by nineteen members). The roll call showed that several State delegations were divided on this question, and it was held by some that Ohio's vote (38 to 8) caused the defeat of the resolution. The proposed change would have reduced the South's representation by 157 delegates, and added nearly as many to the present representation of the North. Senator Lodge was the permanent chairman, and it was in the course of his address on this

second day that a prolonged demonstration in praise of Mr. Roosevelt was made, the applause and other expressions of approval continuing for about forty-five minutes. This surpassed all previous records by fifteen minutes. It followed Mr. Lodge's assertion that the President, because he had enforced the laws against vested abuses and profitable wrongs, was "the best abused and the most popular man in the United States today." The Senator assured the convention that Mr. Roosevelt's refusal of a renomination was final and irrevocable. "That man," said he, "is no friend to Theodore Roosevelt, and does not cherish his name and fame, who now, from any motive, seeks to urge him as a candidate for the great office which he has finally declined." On this day was published a letter in which Mr. Fairbanks said that his determination not to be again a candidate for Vice-President was absolutely irrevocable. The convention was in session on the 18th for more than seven hours. Senator Hopkins, chairman of the resolutions committee, read the new platform. One member, Congressman Cooper, of Wisconsin, presented a minority report embodying the views of Senator La Follette. Upon three of its propositions the convention voted. These called for a physical valuation of railroad property, publicity for campaign funds, and popular election of Senators, the votes being, respectively, 63 to 917, 94 to 880 and 114 to 866. The minority report having been rejected, that of the majority was adopted by acclamation. Messrs. Cannon, Fairbanks, Hughes, Taft, Foraker, Knox and La Follette were then placed in nomination, each by two States and two

speakers, except in the case of Mr. Hughes, for whom no seconding address was made. It was known, of course, that Mr. Taft had a large majority. Those who spoke for him were Congressman Theodore E. Burton, of Ohio, and George A. Knight, of California. At the end of the roll call on the first ballot, it was seen that he had received the votes of 702 delegates. The remainder of the list was as follows: Senator Knox, 68; Governor Hughes, 67; Speaker Cannon, 58; Vice-President Fairbanks, 40; Senator La Follette, 25; Senator Foraker, 16; President Roosevelt, 3 (from Pennsylvania). One delegate was absent. Upon the motion of General Stewart L. Woodford (who had spoken for Governor Hughes), seconded by representatives of the other candidates, the nomination of Mr. Taft was promptly made unanimous and the day's session was then closed. Up to that time there appears to have been no agreement by a majority concerning a candidate for the second place. Until Governor Hughes's fate had been decided, the New York delegates could not promote the candidacy of another from their State. It is believed that he could have been nominated for Vice-President if he had not positively declined the place. That night there was a concerted movement in favor of Congressman James S. Sherman, of Utica, N. Y., and when the delegates assembled in the morning for their last session it was understood that he was to be nominated. It was known that Mr. Roosevelt and Mr. Taft would have welcomed the nomination of Senator Dolliver, but he had repeatedly shown that he did not want the office, and the efforts of those who sought to change his attitude had revived factional bitterness in Iowa. The situation in that State was not improved by those who suggested the nomination of Governor Cummins, as the two men are leaders of their respective factions. Saturday's session was one of only two hours. Those placed in nomination were Mr. Sherman (by Timothy L. Woodruff, Speaker Cannon and others), Governor Guild, of Massachusetts, and ex-Governor Murphy, of New Jersey. Mr. Woodruff remarked that no Republican ticket bearing the name of a New York man had ever been defeated, except on

one occasion, when the Democrats had been wise enough to nominate a man from that State for President. Only one roll call was required. The list was as follows: Congressman Sherman, 816; ex-Governor Murphy, 77; Governor Guild, 75; Governor Sheldon, of Nebraska, 10; Vice-President Fairbanks, 1. Upon the motion of Senator Crane, the nomination of Mr. Sherman was made unanimous, and, a few minutes later, the convention adjourned without day.

Resignation of Secretary Taft

Immediately after his nomination, Mr. Taft resigned the office of Secretary of War, but his resignation will not take effect until the 30th. His successor in the Cabinet will be General Luke E. Wright, of Tennessee, who succeeded him as Governor of the Philippines and was recently Ambassador to Japan. Mr. Taft went from Washington to Cincinnati, and there met Congressman Sherman. Many had expected that Mr. Hitchcock would be made chairman of the Republican National Committee, but he has declined to be regarded as a candidate for the place, owing to ill health. President Roosevelt gave to the public the following statement concerning Mr. Taft:

"I feel that the country is indeed to be congratulated upon the nomination of Mr. Taft. I have known him intimately for many years, and I have a peculiar feeling for him, because, thruout that time we have worked for the same objects, with the same purposes and ideals.

"I do not believe there could be found in the whole country a man so well fitted to be President. He is not only absolutely fearless, absolutely disinterested and upright, but he has the widest acquaintance with the nation's needs, without and within, and the broadest sympathies with all our citizens. He would be as emphatically a President of the plain people as Lincoln; yet not Lincoln himself would be freer from the least taint of demagoguery, the least tendency to arouse or appeal to class hatred of any kind.

"He has a peculiar and intimate knowledge of and sympathy with the needs of all our people—of the farmer, of the wage-worker, of the business man, of the property owner. No matter what a man's occupation or social position, no matter what his creed, his color or the section of the country from which he comes, if he is an honest, hard-working man, who tries to do his duty toward his neighbor and toward the country, he can rest assured that he will have in Mr. Taft the most upright

of representatives and the most fearless of champions. Mr. Taft stands against privilege and he stands pre-eminently for the broad principles of American citizenship, which lie at the foundation of our national well being."

From Senator Foraker, Mr. Taft received a letter sending "heartiest congratulations and best wishes for success in November," altho the Senator expressed fear that his action might be "unwelcome and misunderstood." Mr. Taft replied as follows:

"I assure you that your kindly note of congratulation gave me the greatest pleasure, and I thank you for it from the bottom of my heart. I have never ceased to remember that I owe to you my first substantial start in public life, and that it came without solicitation."

Senator La Follette sent from Wisconsin the following telegram:

"While the platform is disappointing in some fundamental provisions and omissions, and I shall claim the right to say so, I congratulate you most sincerely, and, in the faith that you are more nearly in accord with the great body of Republican voters than the platform, I shall do all in my power to insure your election."

Booker T. Washington said in his message of congratulation: "I feel quite sure you will be triumphantly elected and that my race will assist in bringing about that result." Mr. Sherman has been for twenty years a member of the House, and was an intimate friend of Speaker Reed. His nomination has led the press to revive the correspondence relating to the controversy between Mr. Roosevelt and Mr. Harriman about certain contributions to the campaign fund, for it was to Mr. Sherman (chairman of the Congressional Campaign Committee) that the President addressed the memorable letter narrating the history of that controversy.

The Republican Platform

Much space is given in the new Republican platform to praise of President Roosevelt, a review of the work of the Government under his direction, and a summary of the legislation for which the party claims credit. Mr. Roosevelt's administration, the platform says, "is an epoch in American history. In no other period since national sovereignty was won under Washington, or preserved under Lincoln, has there been such mighty progress in those ideals of

government which make for justice, equality and fair dealing among men." The party declares its "unflinching adherence to the policies thus inaugurated" and "pledges their continuance." We print elsewhere the resolution or plank concerning injunctions. There was much discussion about this in Chicago, representatives of manufacturers' associations urging that no reference to the subject be made, while Mr. Gompers and other representatives of labor asked for much more than the committee or the candidates were willing to give. It is understood that Mr. Taft insisted emphatically upon as much as was finally included in the platform. The manufacturers make no complaint, but Mr. Gompers, dissatisfied, will appeal to the Democratic convention. The party declares "unequivocally for a revision of the tariff by a special session of Congress immediately following the inauguration of the next President," and defines its position as follows:

"In all tariff legislation the true principle of protection is best maintained by the imposition of such duties as will equal the difference between the cost of production at home and abroad, together with a reasonable profit to American industries. We favor the establishment of maximum and minimum rates to be administered by the President under limitations fixed in the law, the maximum to be available to meet discriminations by foreign countries against American goods entering their markets, and the minimum to represent the normal measure of protection at home; the aim and purpose of the Republican policy being not only to preserve, without excessive duties, that security against foreign competition to which American manufacturers, farmers and producers are entitled, but also to maintain the high standard of living of the wage earners of this country, who are the most direct beneficiaries of the protective system. Between the United States and the Philippines we believe in a free interchange of products with such limitations as to sugar and tobacco as will afford adequate protection to domestic interests."

Approving the new currency law, it points out the need of "a more elastic system," saying that the recent appointment of a commission insures the development of a system that will meet the country's requirements. The Anti-Trust law should be improved by "such amendments as will give to the Federal Government greater supervision and control over, and secure greater publicity in, the management of that class of corpora-

tions, engaged in interstate commerce, having power and opportunity to effect monopolies." Railroads should be authorized to make traffic agreements, subject to the Commission's approval, and there should be "such national legislation and supervision as will prevent the future overissue of stocks and bonds by interstate carriers." The platform calls for postal savings banks, a further extension of the rural free delivery service, conservation of natural resources, legislation to "revive merchant marine prestige," a comprehensive plan for the improvement of waterways, a bureau of mines, liberal administration of all pension laws, a national celebration of the approaching centennial anniversary of the birth of Lincoln, an immediate grant of United States citizenship to the native inhabitants of Porto Rico, and the admission of New Mexico and Arizona as separate States. It commends the recent ratification of the Hague conventions and the arbitration treaties, speaks of the party's friendship for the negro during the last fifty years, denounces all devices that have for their real aim his disfranchisement, and, pointing to recent military and naval legislation, declares the party's "unalterable devotion to a policy that will keep this republic ready at all times to defend her traditional doctrines and assure her appropriate part in promoting permanent tranquility among the nations." Recent enactments for the benefit of wage workers are enumerated and commended, and the party binds itself to do "further work in this direction." The "incapacity" of the Democratic party is discussed in several hundred words. That party's trend, the platform says, is toward Socialism, while the Republicans "stand for a wise and regulated individualism."—Mr. Bryan says the Republican party has sounded a retreat, because it refused to stand for campaign fund publicity, a physical valuation of railroad property, restrictions upon injunction procedure, or the popular election of Senators. Reports from Nebraska say he is confident that 100 more than two-thirds of the Democratic delegates will vote for him. On the 20th, Thomas W. Lawson sent him a long telegram, asserting that he could not be elected and urging him to give the first place on the ticket to Governor Johnson,

taking the second for himself. If he would do this, Mr. Lawson promised to raise \$500,000 for the campaign; and, if this should not be enough, to add \$500,000 out of his own pocket.

Prosecution of Trusts

A few weeks ago a Federal grand jury in New York indicted, for violation of the Sherman act, the Fiber and Manila Paper Manufacturers' Association, which was composed of twenty-five manufacturers of wrapping paper. A majority of the factories were situated in New York and Pennsylvania, but there were several in Michigan, and others were in Ohio, Maine and Virginia. Last week twenty-three of the indicted companies pleaded guilty. John H. Parks, secretary of the association and originator of the combination or pool, is under indictment, but for some time past has been in Europe. The aim of the combination was to maintain or increase prices and to restrict output, but the defendants assert that their profits have been small, that some of them are in financial straits, and that since their indictment the combination has been dissolved. The District Attorney does not ask for severe punishment.—The American Ice Company, commonly called the Ice Trust, was indicted in New York last week under the State law. Two grand juries had declined to take such action. This is the case which was virtually taken from District Attorney Jerome by Governor Hughes at the request of Attorney-General Jackson, who was designated by the Governor to conduct the investigation before a special grand jury. The work was done by James W. Osborne as the representative of Mr. Jackson. When Mr. Jerome was elected, Mr. Osborne was the opposing candidate for the office. The American Ice Company has an interesting history, in which politicians and bankers now under a cloud have been conspicuous.

The Philippine Assembly

On the eve of adjournment, the Philippine Assembly, on the 19th, declared, by a vote of 57 to 15, that independence was the aspiration of the Filipino people, and that they were ready for it. The subject was brought forward by

Speaker Osmena, who said there was abundant evidence that the people of the islands were now capable of governing themselves. Leaders of the Progressist party admitted that all desired independence, but argued that the time was not ripe for it. After many conferences, the Commission and the Assembly reached an agreement concerning the appropriations. To the sum granted by the Assembly \$637,000 was added. The Assembly's proposed reduction of salaries and of the number of employees in the civil service was not made. It is stated that the Government regards the conduct of the Assembly during its first session as quite satisfactory and encouraging. The next session will begin in February.

Co-operation in England The Co-operative Congress in England, holding its annual session at Newport, in Monmouthshire, has attracted attention to the astonishing extent and progress in England of the movement which in America has accomplished very little. The Central Board of the Co-operative Union received reports for 1907 from 1,566 societies, having a total membership of 2,434,085, an increase of 101,331 over the preceding year. The shares held amounted to \$160,000,000 in round numbers, an increase of about \$9,000,000. The trade done by the societies during the year 1907 amounted to \$528,600,000, an increase of \$39,000,000, and the profits realized amounted to \$60,000,000, an increase of \$5,000,000. Almost all the branches of wholesale and retail commerce and manufacturing are now being carried on by co-operative associations. The wholesale business is in the hands of two societies; 1,443 societies are negotiating in retail trade, and 127 in production. The productive societies and departments employed 26,938 persons, as against 25,532 in 1906, and the capital runs from \$20,000,000 to \$21,750,000, realizing a net profit of \$1,800,000. The industries in which co-operative production is carried on include cotton, linen, silk and wool; boots, shoes and leather; metal and hardware; woodwork, building and quarrying; printing and book-binding; corn milling, baking, laundries and various others. The conditions which bring a society or company within the

definition of co-operative production are that a definite and fixed share of profits should be allotted to labor over and above the established or current rate of wages; that arrangements should be made for the worker to capitalize all or part of this profit or other savings in his industry, and that, through this capital, the worker should be admitted to membership and have a vote at the society's meetings. Efforts are being made to bring all of these societies into one national organization, which would, on the present basis, supply some 10,000 men, women and children. Co-operative farming has made but little progress, but the Union is now urging societies to take advantage of the opportunity of acquiring land under the Small Holdings and Allotments acts for cultivation on a co-operative system. The Parliamentary Committee of the Union recommended the adoption of a resolution calling upon Parliament to grant votes to women. In connection with the congress an exhibition of co-operative products was held at Newport. All of the goods had been produced upon strict trade union terms, the hours of the persons employed being for the most part forty-eight hours per week.

Revolutionary Tendencies in India The recent bomb outrages in India have compelled the Indian Government to prompt action to put a stop to native agitation and violence by the passage of measures to prevent the use of explosives and the dissemination of anarchistic literature. The first of these acts is similar to that adopted in England in 1883, and yet in force, which imposes penal servitude for life on any person causing a dangerous explosion and provides severe penalties for the possession of explosive substances under circumstances giving rise to "a reasonable suspicion" that they were not to be used for a lawful purpose. According to the Press Act the local government may apply to a magistrate to issue an order for the seizure of a press on which had been printed any article inciting to murder or violence, or the resort to explosives for purposes of murder or violence. The owner of the press has a right of appeal to the High Court for reversal of the order within fifteen

days. In discussing the bills before the Viceregal Council at Simla, Sir Harvey Adamson referred to the case of the *Yugantar*, which during the last year has been prosecuted five times for sedition, a fresh publisher and printer being registered on each occasion. He also read extracts from numerous papers calling on the Bengalis and the Gurkhas to join hands in rebellion and to light a sacrificial fire fed with blood, exhorting the people to die till the swords of their rulers become blunt, and advocating the methods of the Nihilists and the use of bombs. Lord Minto in his speech on the bills said:

"We all know—at least every one who watches the daily story of Indian political life knows—that the lines of Indian thought are changing, that embryo national aspirations are beginning to take shape, and it will be a bad day for the British Raj and a bad day for the people of this country if we ever allow the belief to spread that doctrines of murderous anarchy are even indirectly associated with the growth of those ambitions which British education has done so much to encourage. Nothing, to my mind, has been more unfortunate and despicable than the readiness with which in certain quarters endeavors have been heedlessly made to further the belief that assassination is merely an effort of a downtrodden people struggling to free itself from a foreign oppressor. The conspiracy with which we have to deal represents nothing of the sort. To the best of my belief, it has largely emanated from sources beyond the confines of India. Its anarchical aims and the outrageous doctrines it inculcates are entirely new to this country, but, unfortunately, the seeds of its wickedness have been sown among a strangely impressionable and imitative people, seeds that have been daily nurtured by a system of seditious writing and seditious speaking of unparalleled virulence, vociferating to beguiled youth that outrage is evidence of patriotism and its reward a martyr's crown."

The necessity for the legislation is recognized by the Home Government, altho it is the irony of fate that the duty of approving such measures should fall upon Lord Morley, as Secretary of State for India. In his recent address, however, before the Indian Civil Service Club, Lord Morley showed that the Government was prepared to meet the issue with the necessary firmness:

"I am trying to feel my way thru the most difficult problem, the most difficult situation that I think responsible governments, you and I, and all of us, ever had to face. Our first duty—the first duty of any government—is to keep order. But first remember this. It would be idle to deny that there is at this

moment, and there has been for some little time past, and very likely there will be for some time to come, a living movement in the mind of those people for whom you are responsible. A living movement, and a movement for what? A movement for objects which we ourselves have all taught them to think desirable objects. And unless we somehow or another can reconcile order with satisfaction of those ideas and aspirations, gentlemen, the fault will not be theirs. It will be ours. It will mark the breakdown of what has never yet broken down in any part of the world—the breakdown of British statesmanship. You cannot enter at this date, and with English public opinion, mind you, watching you, upon an era of pure repression, and I do not believe really that anybody desires any such thing. I am confident that if the crisis comes it will find us ready, but let us keep our minds clear now. There have been many dark and ugly moments in our relations with India before now. We have such a dark and ugly moment before us, and we shall get thru it, but only with self-command and without any quackery or cant, whether it be the quackery and cant of order or the quackery and cant of sentiment."

—At the Muzaffarpur Sessions Court the trial of Khudiran Bose and his accomplices for the murder of Mr. and Mrs. Kennedy by the means of a bomb is being conducted. The judge and everybody connected with the prosecution have been threatened with assassination in daily anonymous letters.—The latest report of the condition of India is contained in the Blue Book for 1906-07, just issued, covering the area of British India, which had a population of 225,000,000, according to the census of 1901. The calculated birth rate in 1906 was 37.8 per 1,000, compared with 39.13 in 1905. The death rate was 35.96 per 1,000 in 1905 and 34.73 the following year, the decrease being due to the greatly lessened mortality of the plague. The civil hospitals and dispensaries in India, which numbered 2,464 in 1906, against 2,411 in 1905, treated 404,597 indoor and 24,343,320 outdoor patients in the course of the year. The great bulk of their income is derived from Government, local and municipal funds, and their total expenditure in 1906 was £642,353. Besides these institutions, which comprise all those aided to some extent by public money and intended for the public, there are a large number of special police and other medical institutions, as well as many private institutions which do not receive aid from the state. These numbered 1,469 in all during the

year under report, and provided treatment for about 140,000 indoor and 6,266,000 outdoor patients.

Civil War in Morocco

The cause of Mulai Hafid continues in the ascendant. Tetuan has declared in his favor, and the garrison at Alcazar revolted, killed their commander, and dispatched the Governor a prisoner to Fez. Several thousand of the troops of the Sultan Abd-el-Aziz, stationed at Kasr-el-Kebir, fifty-eight miles south of Tangier, declared their allegiance to the Sultan of the South on the arrival of a band of his horsemen with letters. The officers who refused to join them were made prisoners and five French residents were besieged in a house and nearly captured. An attempt was made to secure the recognition of Mulai Hafid in Tangier by the substitution of his name in the prayer for the ruler in the Friday service at the mosque, but the trick was frustrated by the action of Mohammed el Torres. At Mekinez, Mulai Hafid seized the jewels of the wives of his father, Mulai el Hassen, and married a young girl in their charge who was intended for his brother, the rival Sultan. He celebrated his arrival at Fez by another marriage; this time with one of his cousins, the daughter of Mulai Ismail. Mulai Hafid has claimed the recognition of the European Powers on the ground that he alone was able to restore peace and order to Morocco and to insure respect for the treaties negotiated with foreign countries. Letters which have been turned over to the French authorities at Casablanca prove that he has shown another face to the natives. In a letter address to the Shawia tribes he said: "Since God has confided to me the care of serving and caring for the interests of his servants, he has imposed upon me the duty of doing whatever is in their interests, of relieving them from their affliction and of bringing destruction upon all the foreigners in this land. I am coming to your country like the rising sun which lights the road with his rays. I arose in response to Mussulman appeals in order to drive out the vile foreigners. After having thrown the French into the sea you will wait for me at Rabat." His

lieutenant, Mulai Reshid, wrote them: "Thanks to you, the Christians have been driven away by the Shawia. You are the true descendants of the people of the Prophet. All like you should consecrate themselves to the triumph of Islam. Cut off the heads of the infidels and send them to your master, Mulai Hafid, so that this punishment may impress the bad Mussulman."—In the Chamber of Deputies the Government was again attacked on the ground that it had shown poor judgment in supporting Abd-el-Aziz, and that it would be likely to get into trouble with Germany for violation of the Algeciras Convention. The action of the Government was defended by M. Pichon, Minister of Foreign Affairs, and it received a vote of confidence by 344 to 126.

Korea The power of the Emperor of Korea has been still further restricted by the transference to the national treasury of all his private estate except the palaces of the Emperor and the ex-Emperor. The expenses of the Court will now be a charge on the State, and the Emperor will be deprived of the opportunity of carrying on intrigues for the overthrow of the Japanese power. Ernest F. Bethel, editor of the *Korean News*, which was suspended for seditious articles, was tried before the British court at Seoul and sentenced to three weeks' imprisonment and six and one-half months' surveillance by the police. The prosecution was conducted by the Japanese Governor of Seoul, Mr. Miura, who charged the newspaper with the chief responsibility for the disturbances existing in Korea. The main ground for action was the reproduction with approval in the vernacular edition of the *News* of an article from a San Francisco Korean paper praising the assassins of Stevens, who was murdered by Koreans in San Francisco last March. The claim of the Americans, Colbron and Bostwick, for the right of working the copper mines at Capsan, conceded to them by the Emperor of Korea in 1904, has been at last decided in their favor, and the Japanese Residency General will revise the mining laws of Korea to allow the development of the mineral resources of the country by foreigners.

JAMES S. SHERMAN.

James S. Sherman

[The following account of the candidate for the Vice-Presidency is written by a distinguished constituent of his who has long known him.—EDITOR.]

JAMES SCHOOLCRAFT SHERMAN'S nomination for Vice-President was accomplished by the fact that the State of New York could unite as a unit in his favor. He is still a young man, fifty-three years old, in the prime of manly vigor, and wonderfully well preserved. His stock is good, for his father, General Sherman, was a remarkable man both intellectually and physically, a leader also in political and civic affairs. James graduated at Hamilton College in the class of 1878, and he is now one of the most influential trustees of that institution, co-operating in this position with Secretary Elihu Root. While in college his standing was that of a prize speaker and a prize debater. After graduation he studied law and formed a partnership with his brother-in-law, ex-Assemblyman Henry J. Cookinham. He never won fame at the bar, for he was almost at once drawn into political life. He was beaten for State Senator by one vote, but in 1884 he was elected Mayor of Utica. At the close of his term in that office he past directly to Congress, as Representative for the counties of Oneida and Herkimer; where he has remained to the present time, with the exception of a single term, when the Democrats ousted him by a small majority. Fifty-three years of age, he is a very boyish-looking fellow, with red cheeks, and a very quiet way, that does not indicate the politician.

Notwithstanding his college reputation, Mr. Sherman has never been a prominent debater in the House of Representatives, but has been known as a hard worker on committees, and very sure of his position when he takes it. He was appointed by Mr. Reed chairman of the Committee on Indian Affairs, a place he has held ever since and which he specifically likes. His other committees have been Civil Service, Judiciary, Census, Interstate and Foreign Commerce, Industrial Arts and Expenditures in the Department of Justice. As a legislator his reputation, apart from Indian affairs, is

connected with the reorganization of the Revenue Service, the Filled Cheese bill and the Isthmian Canal. He fathered the first bill providing for a cable to the Philippines, and made the first report favoring a canal across the Isthmus.

As a presiding officer he has gained great reputation. His temperament is steady, reliable, and genial, not easily ruffled by a complexity of propositions or by antagonism. Tom Reed took to him wonderfully, and had him in the chair more frequently than any other Representative. Henderson liked him quite as cordially, and Speaker Cannon's opinion of him was shown at the nominating scene at Chicago. Mr. Cannon unquestionably expressed his honest opinion when he said that Mr. Sherman was his choice. He presided over the debate on the Dingley tariff bill, lasting for many weeks, and again during the struggle over the Cuban war revenue bill—two of the most notable debates known in Congress since the Civil War.

As a business man Mr. Sherman is reckoned high with all the people in Central New York. He has been president of the Utica Trust and Deposit Company since its formation, and has made it one of the most successful and influential of the institutions of that character. He is also vice-president of the Utica City National Bank, president of the New Hartford Canning Company, the Utica Ice Company, and is influential and active in all the industrialism of the Congressional district which he represents. As a good manager he was selected to serve as chairman of the Republican Congressional Campaign Committee during the last campaign.

He is popular with all classes and with both parties. Nearly everybody in Oneida County is accustomed to call him "Our Jim," and they mean it. They like him. There is nothing fawning about his good fellowship; on the contrary, there is just a bit of reserve in his daily contact with the people. In social affairs he is a favorite, and he gives to social

functions a just share of his time. His family relations are notably full of sunshine. His mother was a woman of intellectual and executive power, and his wife is an excellent companion for a public-spirited man. His popularity is concentrated in the little circle consisting of Mrs. Sherman and three boys, and the mother of Mrs. Sherman, who resides with them at their Utica home. His oldest son, Sherill, is engaged in the banking business with his father; the second son, Richard, is professor of mathematics in Hamilton College, and the third, Thomas, is secretary and treasurer of the Smythe-Despard Company. Mr. Sherman's recreation consists of games with his family, and games of golf when he can escape business.

The reception of Mr. Sherman's nomination in Utica was without a shade of partisanship. There were no Republicans and no Democrats to be found;

only a great big city full of friends, all hurrahing for "Our Jim," and everybody genuinely glad. Utica looked to be a big school just let loose; all shouting, shaking hands and as happy as happy could be.

Mr. Sherman is by temperament as well as by training conservative; entering very little into those measures that are "progressive and reformatory," but simply doing with precision what the days lay before him to do. He is never idle, but is never carried off his feet with enthusiasm. His face indicates steadiness and reliability, which can if necessary become stubbornness. Speaker Cannon unquestionably spoke out his real mind when he said that during sixteen years of service in the House of Representatives, Mr. Sherman had shown, both in council and on committee, great strength, great ability and courage; while he had always been true to his convictions, to his party and to the Republic.

Robert Henri—"Revolutionary"

BY CHARLES WISNER BARRELL

THE criticism is frequently made that American art is not sufficiently national in character. The majority of our painters, it is claimed, not only go abroad for their subjects, but are largely aliens in spirit, distrusting the urge of their individual perceptions of life, and seeking to portray—not those aspects of life and nature which are familiar and interesting to themselves as *men*—but such subjects as have already been exploited by path-breakers of the past and on which the artistic world has set the final seal of approval. That there is a generous measure of truth in this charge no one can doubt who has attended the exhibitions of the National Academy of Design and kindred art exhibitions in this country during recent years. The spirit of imitation hovers in the air and breathes from the canvases

that meet one's eyes on nearly every hand. Many of the pictures merely advertise the professional admirations of the men who paint them! They do not express any individual taste or philosophy of life. And is it not the final end of art—every branch of art—to promulgate a philosophy? Many people contend that it is not, that art is an end in itself and is its own excuse for being. The fact remains, however, that in the art of the repeated line and chromatics, as in literature, music, sculpture, the work that has lived and met the test of generations of human taste has always been that of the man or woman of pronounced individuality, who has, consciously or unconsciously, given to the world a philosophy of life through the special medium which he or she has mastered.

But while we may admit that the "imi-

PORTRAIT OF MRS. ROBERT HENRI.

This exquisite human document has been exhibited in many of our largest cities and for it the artist has received several prizes. Mrs. Henri, who died quite recently, was herself a talented painter. Her personality surrounds this canvas like an aura.

tative impulse" rules over much today in American painting, we could not in justice bring in a sweeping indictment of the work of American artists without making a general survey of art in this country and a careful investigation into the conditions which have caused so many of our painters to neglect the privileges of their artistic birthright.

Such a survey would, in reality, disclose the fact that there are in this coun-

try at the present time a number of painters of personality and breadth of vision who do not blindly follow in traditional ruts. The chief reason why the work of most of them is not better known is because individuality in painting has not been looked upon with favor by the juries of our academic institutions devoted to the upholding of conventional ideals. And under such conditions, when the official palm is accorded to facile mediocrity, the American painter who is

YOUNG WOMAN IN BLACK.

After the painting by Robert Henri.

This poetical full length study of a young American beauty is one of Henri's best known and most admired canvases. When it was exhibited at the World's Exhibition in St. Louis in 1904 the artist was awarded a silver medal by the International Jury on Art.

WILLIE GEE.

This naive and compelling study of a Virginia negro boy aroused great interest when shown at the exhibition of the Society of American Artists in 1905. It received highest award in its class.

obliged to solve the bread-and-butter question by means of his art cannot be severely blamed for producing work which he knows will meet with fashionable approval, however much it may lack in the impress of the personal equation.

To stimulate and vitalize American art, there is need for a broader, more tolerant and modern point of view on the part of our official juries, one that will put a premium on individuality and encourage our young painters to express themselves vividly and faithfully, not as pseudo-foreigners, but as native Americans, interested in American life and its problems. The fact that been noted that there is in this country a coterie of artists devoted to these very principles of artistic endeavor. Among the number may be mentioned Robert Henri, George Luks, Arthur B. Davies, Maurice Prendergast, Ernest Lawson, William Glackens, Everett Shinn and John Sloan. These and their associates are considered by many to be the men who largely hold the future of American art in their keeping. In other circles they are often referred to slightly as "the revolutionaries," "the black school" and "the gang."

Herein history may have repeated itself. For was not Corot hooted thru the streets of the Latin Quarter, Delacroix and Manet contemptuously rejected by a salon fed fat on self-complacency, and Millet, the only, dubbed, in derision, the "wild man of the woods"? The art which arouses the antagonism of one generation is often considered a priceless heritage by the succeeding one.

Robert Henri is at present the best-known member of our revolutionaries. It was not, however, until the French Government had purchased his picture "The Snow" from the Paris Salon of 1899 to place in the Luxembourg Gallery

VAGABOND SINGER.

that he was taken seriously in the land of his birth. In 1906 he was made a member of the National Academy of Design when the coalition of the Society of American Artists with the Academy took place, and shortly after he was elected to the jury of selection. Since then, in his capacity of jurymen, Henri has stood out for the recognition of the work of his less fortunate brethren in the revolutionary camp, tho his efforts have not always been crowned with practical success, as witness his difference with the Academy on the matter of selection for last year's exhibition.

Henri noticed a disposition on the part of his fellow jurymen to treat with scant consideration the work of painters who gave evidences of fresh and original points of view. One after another, Luks, Shinn, Glackens and the others devoted to the new idea had paintings rejected which seemed to Henri among the most interesting which were placed before the jury. He protested, but in vain. Several times he had canvases recalled for a second consideration. Again and again the jury voted, but decided each time on the final ballot the pictures were not worthy of the academic traditions, and as such could not be hung. Henri had himself submitted three pictures, all of which were accepted, one receiving a unanimous vote. But when he became convinced that the jury was by its actions placing a premium on the commonplace to the exclusion of works of power and originality, he asked and received permission to withdraw two of his paintings, preferring to count in his lot with the academically unhallowed revolutionaries. In commenting on the stand which he had taken, the artist said shortly after in the course of an interview:

"The fact of a National Academy should mean an organization for the advancement of the art of those who have new ideas to express. That there are such men is the encouraging sign for the future of art in this country, and they should be brought forward and sustained instead of rebuffed in their efforts for recognition. Because they look thru the veil of accustomed things and catch an original point of view is no argument against their art—on the contrary, it is this element which should entitle them to recognition as seers who, out of humdrum life of ruts, have abstracted a new point of view, a new story, a new element of life.

"Carl Sprinchorn, to select an incident that

comes to mind, goes down into a grimy, squalid side street in the slums of New York, and with a blizzard raging, catches a big new note and places it upon canvas with haunting effect. But placed before the Academy jury, does it receive the slightest recognition? Quite the contrary; it is rejected. Sprinchorn is

One of the latest and best examples of Mr. Henri's genre character studies.

young and has never been honored by the admission of a painting in the Academy, yet I know of few more promising painters.

"His story is the story of every man of whatever calling who has brought with him something new. Wagner, expressing great life-thoughts thru music, was pronounced a mere maker of noise; Walt Whitman, whose book of poems Whittier cast into the fire, sent a similar shudder down the spine of conventional Culture; Degas, Manet and Whistler and their Academy of the Rejected; Puvis de Chavannes—oh, ever so many, despised and laughed at at first, but later recognized as dreamers of fresh dreams, makers of new songs, creators of new art.

"The trouble is lack of catholicity as regards point of view. Because one artist does a thing in a way no one else has done it, is no argument that his work is not worthy of a place alongside the paintings of men who have done the accepted thing in the accepted way all their lives."

Henri was born in the unartistic city of Cincinnati, Ohio, in 1865, and spent

many of the years of his boyhood in travel thruout the Far West. He went to school in Cincinnati, Denver and New York, but received his initial training in draftsmanship and the mystery of pigments at the Pennsylvania Academy of Fine Arts in Philadelphia, leaving that institution in 1886 to take up his studies at the Academie Julian and later at the Ecole des Beaux Arts in Paris.

Even at this early stage of his career, Henri seems to have entertained a rather Rodinesque irreverence for the dogmatism of technique. But he was of too robust and determined a temperament to allow himself to degenerate into a habit of mere iconoclastic dilettanteism. Instead, he spent months tramping the streets and picture galleries of France, Spain and Italy, with both eyes open,

turesque beggars and market-folk of Rembrandt, or pass harvest fields where toiled Millet's somber peasants, or country inns from whose windows laughed the ruddy barmaids of Franz Hals. Out under the spreading sky or on the wind-blown river quays, the formulated rules of the art schools seemed cheap and inadequate.

The young man sealed a vow with himself to interpret those things alone in life which appealed to him most vitally, whether the subjects were considered "paintable" or not by the schools. He would make his paintings stand as the history of his own spiritual and esthetic development, and if the world was willing to accept them on these terms, well and good, but if not, then he was resigned to be misunderstood.

Such a purpose, if carried out, usually spells immortality for the artist of broad sympathies and downright genius in his medium. Henri is still working with the enthusiasm of youth to carry out his great idea. His is going steadily forward, and his best canvases now exhale a splendid classic atmosphere. At the time that his picture was purchased by the French Government for the Luxembourg there were only a bare half dozen Americans who had been so honored. Since then Mr. Henri has been awarded a number of medals and has won cash prizes amounting to a substantial sum. Many of our prominent art institutions possess examples of his work. As a figure painter he is often ranked with Sargent, tho there are many in this country and abroad who prefer his work to that of the elder man.

Aside from all matters of purely technical manipulation, the dominant qualities of Henri's art are simplicity and almost passionate sincerity. He does not dodge, pose or juggle with his materials, but works straight to a living climax, and when that is achieved he stops, sacrificing a pretty "finish" every time for vitality and spontaneity. His women breathe and smile at you out of seeing eyes. His men lose nothing of their native dignity and masculinity by translation thru the Henri paint. The artist is in love with the world and with men and women. He dotes on the sacredness

STREET CHILD.

After the painting by Robert Henri.

absorbing life at first hand and studying indefatigably the rugged and imperishable works of the great masters. The ivory tower of Bouguereau was not for him. He preferred the broad democracy of the open road where one could rub elbows with the descendants of the soldiers and gypsies of Velasquez, the pic-

of actuality, and has evidently taken Walter Bagehot's famous dictum to heart:

"Any attempt to produce a likeness of what is not really *liked* by the person who is describing it will end in the creation of what may be correct, but is not living—of what may be artistic, but is likewise artificial."

He usually paints in a sober key, and his simple, enduring colors make for luminosity rather than for garishness or Watteau delicacy. His work displays elegance rather than daintiness, tenderness instead of sentimentality, and a really remarkable perception of character and psychology as expressed in all walks of life. It has a sustained and compelling interest, rather than a transitory charm. The force of his paintings grows on you. They require thoro familiarity for proper appreciation.

As head instructor of the life classes at the New York School of Art, Robert Henri is generally conceded to be our most successful art teacher. He says, however, that he does not endeavor to "teach" painting in the academic sense at all. He merely strives to help the student develop his own personality by in-

spiring him to think and work for himself and solve his special problems in his own way. Many of our older artists shake their heads at this and speak of "anarchy" and "lawlessness," but the fact remains that Henri's students are producing results—big results—many of them. One young man, Rockwell Kent, is already doing shorescapes and marines that are being favorably compared with the paintings of Winslow Homer, our greatest living delineator of the life of the open. Henri's advice to students of painting may be summed up briefly in his own words, as follows:

"The study of art should go broadcast. Every individual should study his own personality to the end of knowing his tastes, should cultivate the pleasures so discovered and find the most direct means of expressing those pleasures to others, thereby enjoying them over again. Art is after all but the extension of language to the expression of sensations too subtle for words."

Earnest adherence to these precepts has enabled Robert Henri to reveal his own latent genius and attain to the present enviable position which he occupies among American artists. He is eminent because he is himself.

JERSEY CITY, N. J.

Upon A Steamship

UPTON SINCLAIR.

ALL night, without the gates of slumber lying,
I listen to the joy of falling water,
And to the throbbing of an iron heart.

In ages past, men went upon the sea,
Waiting the pleasure of the chainless winds;
But now the course is laid, the billows part;
Mankind has spoken: "Let the ship go there!"

I am grown haggard and forlorn, from dreams
That haunt me, of the time that is to be—
When man shall cease from wantonness and strife,
And lay his law upon the course of things.
Then shall he live no more on sufferance,
An accident, the prey of powers blind;
The untamed giants of nature shall bow down—
The tides, the tempest and the lightning cease
From mockery and destruction, and be turned
Unto the making of the soul of man.

ENDFIELD, SOMERSET, BERMUDA.

A New Fragment of an Old Gospel

BY RICHARD LADEGAST

THOSE indefatigable explorers, Bernard P. Grenfell and Arthur S. Hunt, have again excavated a fragment of an uncanonical gospel in the Egyptian mound of Oxyrhynchus.

The fragment consists of a single vellum leaf of remarkably modest dimensions, but tho the written surface only slightly exceeds two square inches the scribe has succeeded in compressing forty-five lines into two pages. The first page contains twenty-two lines and the second twenty-three. Both pages contain together about 250 words.

The editors state that the fragment is practically complete, with the exception of one of the lower corners, and even here most of the lacunæ admit of a satisfactory restoration. There was possibly a reason for the book, to which this fragment belongs, being so minute in size. Either it was written in the times of the Christian persecutions and therefore made small in order to facilitate its being hidden from the eyes of the persecutors or to render it convenient to carry in the pocket.

The editors, with their usual diligence, have given an exact transcript of the text, translation and a commentary, and in their preface they acknowledge their indebtedness to Prof. E. Schürer for several suggestions in the interpretation of the fragment. For the benefit of our readers a full translation, which the able editors have provided, is hereby given:

[TRANSLATION.]•

“ . . . before he does wrong makes all manner of subtle excuse. But give heed lest ye also suffer the same things as they; for the evil-doers among men receive their reward not among the living only, but also await punishment and much torment.

“And he took them and brought them into the very place of purification, and was walking in the Temple.

“And a certain Pharisee, a chief priest, whose name was Levi (?) met them and said to the Saviour: ‘Who gave thee leave to walk in this place of purification and to see these holy vessels, when thou hast not washed (*lousamenōi*), nor yet have thy disciples bathed (*baptisthentōn*) their feet? But defiled thou hast walked in the Temple, which is a pure place, wherein no other man walks ex-

cept he has washed himself and changed his garments, neither does he venture to see these holy vessels.’

“And the Saviour straightway stood still with his disciples and asked him, ‘Art thou, then, being here in the temple, clean?’

“He saith unto him, ‘I am clean; for I washed in the Pool of David, and having descended by one staircase I ascended by another, and I put on clean and white garments, and then I came and looked upon these holy vessels.’

“The Saviour answered and said unto him, ‘Wo ye blind, who see not. Thou hast washed in these running waters wherein dogs and swine have been cast night and day, and hast cleansed and wiped the outside skin which also the harlots and flute-girls anoint and wash and wipe and beautify for the lust of men; but within they are full of scorpions and all wickedness. But I and my disciples, who thou sayest have not bathed, have been dipped (*bebaptisthai bebammetha*) in the waters of eternal life which come from But wo unto thee’”

Besides this publication by the three editors, two other scholars have also published their views regarding the fragment in different reviews, one being written by A. Büchler, a Jewish scholar, whose notes appeared in the *Jewish Quarterly Review* for last January; while the other, by Prof. A. Harnack, appeared in the “Prussian Annales” in the month of February, 1908. It is an interesting fact that neither saw the other’s notes, yet both came to the same conclusion regarding the fragment—a conclusion contrary to the views expressed by the three original editors—Professors Grenfell, Hunt and Schürer.

Before presenting the readers with the opinions of the five scholars it may be as well to state in what points they are in agreement. It seems a remarkable coincidence that no one should have raised any doubt regarding the authenticity of the fragment, but that each of the five scholars who has written on the subject should take for granted that the vellum is a fragment of the uncanonical gospel written about the year 200. Furthermore, the five agree that the contents of the fragment consist of two parts. The first part ends with line 7, the remainder belonging to the second part. All contend that the first part is very obscurely

worded and perhaps corrupt, that it is therefore impossible to come to a definite conclusion regarding its correct meaning, but they all admit that the contents are reminiscent of the words of Jesus Christ in St. Luke, Chap. xiii, v. 15.

Again, the five agree that the bulk of the fragment is concerned with a dialog between Jesus and a Chief Priest which takes place in the Temple at Jerusalem. In its general outline the passage resembles Matt. 15:1-20, Mark 7:1-23, with the exception that the scene is transferred from Gennesaret to Jerusalem.

They also agree that the fragment is either a part of the Gospel according to the Hebrews or that according to the Egyptians; that it is quite orthodox; that it does not advocate the tenets of a particular sect, but that it covers the same ground as the canonical gospels.

The judgment of the three original editors regarding the literary value of the fragment is that it is very unreliable as to historical truth. Some things described in the fragment are considered by them incredible, while others, they say, are due to the imagination of the author; and, therefore, the historical character of the whole episode breaks down and the whole fragment should be regarded as an apocryphal elaboration of Matt. 15:1-20 and Mark 7:1-23.

In direct opposition to this and with great emphasis Mr. A. Büchler and Professor Harnack affirm that the literary worth of the fragment is of the highest value. Mr. Büchler states that the writer of the fragment was accurately informed regarding the matters about which he speaks, that tradition fully confirms the details which sound so incredible. He claims to prove his assertions thru clear, trustworthy, and easily accessible parallels in the Mishna and Talmud. He not only quotes these two works, but also the Old and New Testaments, Josephus, and even a passage in Juvenal (Satire vi, lines 156 ff) to further convince the reader that the fragment is historical, true and faithful. Professor Harnack's final judgment reads as follows: "There is a power and fire in this fragment that cannot be due to either fancy or imagination."

The professor sums up the objections

raised by the three original editors under the following five headings:

1. What is the "place of purification" in the Temple?
2. What are the "holy vessels"?
3. How could the Pharisee ask that the laymen who entered into the Temple should suffer the same purification as the priests?
4. What is "David's Pool," and is it situated in the Temple or outside?
5. How could the dogs and swine be thrown in the same pool as that in which the Jews purified themselves?

As the reader will remember, in the beginning of the second part of the fragment the very place of purification is mentioned. This the five appear to have found the great stumbling-block. Harnack seems to define the meaning of the word best in assuming that it is the name of a part of the Temple, formerly unknown, as we have been informed about other parts of the Temple in the Gospels. Readers will remember, for instance, Solomon's porch in John 10:23, N. 12, and the gate called the Beautiful mentioned in Acts 3:2. The original editors state that the employment of the term may be a mere error, or possibly that it may mean a well-known part of the Temple called by a Hebrew name. Furthermore, the three declare that the author of this Gospel had no clear conception of the topography of the Temple, while Professors Büchler and Harnack hold contrary views.

The second difficulty refers to the inspection of the holy vessels by Jesus and His companions. Professor Harnack says that this may have been the custom in those days, but hitherto unknown to us. He did not know the paragraph in the Mishna quoted by Mr. Büchler. The priest in the fragment reproaches Jesus and his disciples because they look at the holy vessels without bathing or washing their feet. To the priest this seems of much concern, and the sin against the Temple laws is to him a serious one. The editors rightly point out that the holy vessels could not be seen usually from the inner court. But they have overlooked the passage in the Mishna which removes the difficulty, and which places the whole scene of the fragment in its

right setting. It will be seen that the incident occurred on the day after a festival, when all the holy vessels were, in point of fact, transferred to a washing place in the inner court. He gives the full quotation taken from the Mishna Hagaga iii:7, 8.

This reference to the holy vessels is one of the most interesting incidents in the fragment, especially as it seems to place a new light upon Luke 4:41. Jesus, being then about twelve years old, was anxious to see the holy vessels, and that appears to have been one of the reasons why he remained behind in the Temple after his parents had gone home.

Regarding the third objection Professor Harnack is very brief by reason of the fact that it is not of great importance to Christian scholars. More at length, however, is Mr. A. Büchler, the Talmudist, for to him this objection remains the whole feature of the fragment. The text gives him on this question so many details concerning the strict laws of purification and the practice of them in the Sanctuary that Jewish scholars, so he says, must feel a greater interest in this fragment than do Christian scholars. He quotes very voluminously the Jewish religious books and claims to have proved the historical truth of each incident in the fragment, even that which refers to there being two stairways into the bathing place, one by which to enter and the other to leave. In support of this statement in the fragment that the layman on entering the inner court changed his garments, he is copious in his quotations, beginning with Gen. 35:2, and thereby proving the fragment to be in accordance with the facts of tradition.

Referring to the fourth objection, Professor Harnack, as well as Mr. Büchler, is convinced that there must have been a place called the Pool of David, altho

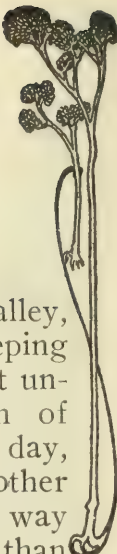

it is impossible to state the exact spot where this was situated in the days of the Temple. Furthermore, they are agreed that this pool cannot have been the result of fancy or imagination on the part of the author of the fragment, as the three assume. Furthermore, both absolutely reject the suggestion made by Professor Schürer that the Pool of David is the "brazen" or "molten sea" set up by Solomon between the porch and the altar.

A few words may be said respecting the fifth objection raised by Professor Harnack and which deals with the running water wherein people living near threw "unclean things." The learned professor, with his usual brilliant analysis, states that the words do not mean that the Jews literally threw dogs and swine in the water which was used in the Temple and which came by conduit from Etam, southwest of Bethlehem, but that the expressions were used by Jesus Christ merely in an allegorical sense. He concludes by saying that washing by water has to be often repeated, whereas the purification by the Holy Ghost is a lasting one.

Professor Harnack, at the conclusion of his essay, assures us once more that there cannot be any doubt regarding the historical truth of this fragment, for the sayings of Jesus Christ therein expressed are in accordance with those to be found in the Gospels. Here and there in both places he is emphatic regarding the inward purity of souls. We should, of course, be grateful that the knowledge regarding the Temple and the customs of the Jews in the days of the Temple have, in this fragment, been amplified and that we have confirmation that the writer was in accordance with the Gospels, which stated that Jesus Christ always placed inward purity above all outward religious observance.

NEW YORK CITY.

June

BY E. P. POWELL

AUTHOR OF "THE COUNTRY HOME," ETC.

I WAS waked at half past three by the bird chorus. I wonder how wide a zone is covered by this wonderful song that precedes the dawn. I did not find it in Florida, nor anything like it. There the mocking birds and the bob-whites were the first to proclaim the break o' day. I love the cry of bob-white, and down there I am making him feel so much at home that he marches around my dooryard and close to my steps. But I miss this marvelous choral melody that rolls westward over the New England and Middle States. What does it mean, when every robin jumps to the top of the tallest tree and shouts robin to robin with every sign of ecstasy? I do not know that it demonstrates reason, but it manifests that religious joy which is the soul of the universe—a pure, sweet uplook, and abandon to joy, which comes with health and good environment. The robin stands for health and for cleanly fitness, and among the birds he seems to be the one most subject to evolution. His life is ideal. He is closer to man in his sympathies, and man responds more fully to him than to the other birds. His house is a poem, and his family life is charmingly ideal. Their domestic economy is ahead of ours, for their houses are not a burden; and they are not slaves of the season. I think that when we come to live the natural life we, too, shall greet the dawn with an outburst of joy.

Dr. Carter, in his new book, "Wanted: a Theology," tells us that the new church will, above all, be full of joy. "Let us fully understand that religion is good tidings of great joy to all people. God loves happiness." Is not this bird song one demonstration of the divine joy, and is it not true that we have not yet discovered the all-filling love of God? The best things of this world are not the mines, or even the fruits. The final religion will go as the Master bade it: "For behold I bring you good tidings of great joy, which shall be to all people." At any rate, when I hear this

magnificent chorus, filling the valley, and climbing the hills, and sweeping westward ahead of the sun, I do not understand it as a mere expression of robin happiness. Repeated every day, and entirely distinct from any other bird service, it tells me that in some way the robins have emotions larger than the sphere of their daily work. One other bird only chimes in with the robin, that is his cousin the wood thrush. I have won this beautiful bird close to my house, and a nest is in easy reach, where I can watch his family growth. His violin like notes fit well with the ecstatic clamor of the robins.

A full hour has slipped away, and half past four is flooding my room with the odor of lilacs. I cannot lie in bed these June mornings. I hear the monotone of the mill dam down the valley pouring its water over the mossy stones, but the miller is just now opening the gates, and the music of sleep is turning into the strenuous song of toil. The robin has ended his song, and is now engaged in his humble domestic work, gathering worms that the last night's shower brought plentifully to the surface. The wood thrush is still rolling his trills thru the acacia trees, and the catbird is whispering his satisfaction in the mock orange bushes. He will not sing till I am out of doors, and then we will have it out. I love the fellow, and he knows it. The robin is an associate, but never familiar; but my dozen catbirds are companions.

Half past five, and I am walking in the tulip garden. There are four gardens, and about one thousand blossoms in each. They nod with the creeping breeze, as if saying to me, Good morning! and yet the tulip is a haughty flower. There are tall red ones, others yellow, or white, and still more that blend the colors with marvelous variety. Some of them are highly perfumed, but most of them are satisfied with being brilliant. I like best those folk who are sweet as well as beautiful. If you grow

tulips you may expect that new sorts will start up in your garden, seedlings that have been self-crossed, so that in a few years you can surpass the choicest collections of the florists. The tulip is a cup, and it is full. Look into one of these rich crimson bowls, and you will be amazed to discover how much of the artistic Nature expends on a single flower. There is the making of a Murillo in one of these tulips. And just now the petals are edged with tiny drops of dew. Each one is so sharply individualized that I do not feel toward them as toward roses, that are strung all up and down the bushes. A few great heavy doubles hang over their heads, but the thousands stand up in morning worship. "This day, O Lord of life and beauty! fill us full of sweetness and rightness." So it is the June morning once more brings me into key with the great emotional life that throbs everywhere. First the birds, and now the flowers. I shall never get tulips enough.

June is flower month, and one should have all the lilacs to begin with, and a lot of roses to close with. I have twenty varieties of lilacs, and every one of these is indispensable. The double whites are perhaps the richest and the rarest, but I wonder at the man who patiently spends his time in this creative art of plant-breeding. Still, the dear old lilac that our mothers kissed and our grandmothers grew under the bedroom window, that still should hold its place at the head of the list. I wonder that more people do not have little shrubberies; not flower gardens, but a collection of those bushes that burst out in such profusion from the first to the last of June. There is no place like it for cozy seats. It is a family sanitarium, where the doctor takes you by your nose to feed you with life-full ozone. We have found out that our worst enemies are nearly or quite invisible, and that our best friends are also exceedingly modest in exhibiting themselves. From the time that the Judas bush turns purple till the mock orange

perfumes the whole hill side, I know that I am being protected, and that fragrance is contributing to my wholesomeness as well as my happiness. In Florida orange groves I have found the fragrance so dense that I did not care to walk thru it; I became its client and it became my physician. So I would have the farmer forget his merchantable crops, and remember that there is a very important wealth in things that are simply sweet. Be sure and get your ozone as well as your nitrogen.

Six of the clock. Down the swale I hear three hoes in the berry garden. The boys are at work, and their hoes keep time with whistling and singing. The strawberries are in blossom, and the beans are breaking the soil, and the peas stand in long prophetic rows, and the spires of corn are just expanding into leaves. It is time to teach the weeds a lesson, and that is what the boys are doing. Weeds are apt to crowd themselves where they are not welcome. I like to hear that click, click of the farmer's hoe. I tell you it is a better note of power than the guns of a bragging navy. There is an army of hoes just now, some tens of thousands, this morning at work, and man's will is supreme. They, too, follow westward with the going of the sun, and if you look at them rightly and listen correctly there is music in the hoe. The poem of the hoe was painted by Millais, but Markham sung a false meaning into it. It is the rise of evolving manhood, of man rising from the brute on all fours,

and at last standing, irresolute, and only half a man, but leaning on the hoe. Yes, we are gaining, and by and by man will stand even more erect and do our hoeing with less sign of toil.

Seven o'clock. The modern hired man gets into sight at this hour. He has packed himself with food, and just as the sun begins to grow hot he is ready to join the workers. Not a bit of poetry in him. He has become a machine, and that is what our social philosophy is making of him. I cannot persuade him to come at an earlier hour

—not with a promise of higher wages and a double nooning. He is a coward, for what his Union orders as a limit of his energies, that he obeys. His ambition is undiscoverable. Once in a while his soul looks over the bars, and we almost get to be brothers. I wish we might, and I am sure that the time is coming pretty soon when a hired man will mean a man with skill and pride. My Harry is a different sort. He came to me seven years ago, pretty well out at the elbows (a lad with a chin, however); now we are partners in all things. You should see how he plants soul and will, as well as seed, and when he handles the hoe it is with a joy of mastery.

Eleven o'clock. This is the natural hour for a let-up. We have been out and at it since four-thirty; now we have our break-fast dinner. I am a crank, to be sure, on several questions, but especially on this of two meals a day—that is, two good ones. Any wife can afford to cook and to think out two meals a day; three would keep her busy and heated beyond reasonable endurance. I know women who are kitchen-bound from daybreak until dark—even in June. It is a shameful affair to see the gorging, without thanks, that goes on in many a family; and I don't wonder the women grow heartless and then reckless. Two meals is all that an ordinary stomach can digest, and leave the blood time to go up into the brain and do decent work. At any rate, at eleven we go into a lilac-adorned dining-room, with an appetite. Mem.: eating, that is, right eating, feeds the soul as well as the body. This sort of eating is a poem, and it should end in music. John Burroughs says that if I believe that animals can reason I ought not to kill them. Well, John; do you see any signs of savagery on my table? First of all, oranges and apples; the twin kings of all fruits; and of these I would eat as freely as my desires. Then should follow bean soup. Shade of Cotton Mather! And all ye dear Bostonians! You devised and invented nothing better, religiously or socially, than the frequent use of beans. Only these are lima beans, scalded and the skins rubbed off. With these are sweet potatoes brought

with us from Florida, and that worthiest of all Irish potatoes, the State of Maine. One might stop right here, and be happy. But with Gladys as house-keeper we must choose between a huge dish of macaroni and cheese, to be eaten with marmalade or plum jelly, and a loaf of corn bread, like gold, built up of Holstein butter and buttermilk. Last of all comes the strawberry short-cake, just one-half strawberries, and the soul of the cook thru the whole of it. A dinner without a soul—that is the trouble with most people—it is indigestible.

All the common trees are in their new clothes today, all except butternut, ash, persimmon, Kentucky coffee tree and *Magnolia acuminata*; and these show us their leaves in all stages of incipient growth. Nature understood very well that heavy shade was not needed early in the spring, not at least before the heated midday, so it is just the thing to plant along the roadsides those trees that do not make shadows too early. The delicacy of new foliage is marvelous, and you rarely see it in perfection after June. This year no sharp winds and no May bugs have disturbed Nature at her loom. A lawn of trees should tell a lot of history, for it should begin with the evergreen needle that dates back millions of years; should come along by the ginkgo trees, whose leaf is but a fan spread of needles; until we reach the maple leaf, which is the very latest and most complete of Nature's conceptions. Yet, after all, what is more beautiful than a hemlock hedge, when the dark green is flushed all over with the lighter green of new foliage? In the flowerless age Nature did not forget the beautiful. I advise you to study leaves more, if not flowers less. I should like to have each town set one avenue to exhibit varieties of trees, and not long rows of one sort. Here let the school children walk and study, and get familiar with what evolution has done. You could easily line up one of your highways with forty or fifty sorts of hardy trees, and it would be a school-master in the land.

I do not understand some farmers. They rarely plant trees, and they have no intimate acquaintances among the

bushes. Their homes are so barren of friendships and companionships that they have to go to the ale house because of loneliness. They raise huge crops of corn and potatoes and wheat, and they do it over again every year for fifty years, and then they die and are buried and become feed for their wheat. It is not a cheerful conception of life. A house in the country without beautiful surroundings is not so sweet and attractive as a pasture lot for cows. I plant lilacs about my barn, grapes climb over my stable walls, and apple trees shadow the yard. Some of the birds are very artistic, and I do not know a single animal that does not love the beautiful. But the real end of home building is the making of fine boys and girls; and to that end the beautiful is as important as the truthful. Domestic economy justly includes the culture of the whole soul.

God walked in Eden in the shade of the evening. We walk out thru the

mingled shadow and moonlight under the apple trees. They are dropping their last petals, and the young apples are just shaping themselves for the future harvest. We do not talk much, but we think, and thinking is not arguing with Nature, only agreeing with her. The honeysuckles, which refused to give out fragrance in the daytime, are now calling the humming moth and ourselves. My collies are also rambling and discovering. All day one shall learn from work, but in the evening wisdom is absorbed in silence. It is a great thing to keep the intellectual pores open. I planted nearly every shrub and tree on my ten acres, and they have all grown up to be acquaintances and friends. Tonight I live over again with them all the past fifty years. Only over there, by the garden edge, there is just one great apple tree that was planted by Sconondoah, the Indian chief, in 1791. It is the only tree that knows more of this hillside than I do. It has seen more Junes.

CLINTON, N. Y.

White Water-Lilies

BY JOEL BENTON

MIDWAY, in a summer lake,
Lilies born of slime and ooze
I can stretch my hand and take—
Without need to sort or choose.

Idly, in the tilting boat,
Thru the watery space I go,
Watching where they seem to float—
Spotless as the driven snow.

Petaled wonders of the wave,
Level to the lake and sun;
Nature's lavish beauty gave
Marvelous grace to every one.

Birds that skip about, and skim
This tempting surface with delight,
Have, perhaps, an instinct dim
Of beauty that impels their flight.

Far from haunts of human kind,
Conscious not of pride or show,
You these argosies will find
Fairer than all fleets you know.

Out of depths of muddy grime
Gleams of gorgeous splendor rise,
Making substance unsublime
Fit to match the azure skies!

POUGHKEEPSIE, N. Y.

The American School at Athens

BY ANDREW BULL CLAPP

[The author is professor in the University of California and is the Annual Professor from this country resident for the year in Athens.—EDITOR.]

THE American School of Classical Studies at Athens, has recently celebrated, in a modest way, its twenty-fifth anniversary.

It is natural that readers should ask, What is the American School at Athens? What has it done? What does it expect to do? First and foremost, the school

teacher as to live for a year or more in Athens, surrounded by fellow-students of like aims, with the help of experienced scholars and the excellent library; to make, under competent guidance, excursions to places of historic or artistic interest, and to drink in with the air he breathes the feeling that Greece is alive

THE AMERICAN SCHOOL AT ATHENS.

has had under its care, from first to last, nearly two hundred young men and women, most of whom are now teaching Greek in responsible positions in the United States. It would be impossible to overestimate the benefit which they, and thru them their pupils, have received from personal contact with the scenes, the monuments, and the people of this most fascinating of lands. What could possibly be so stimulating to the future

and real, that her history is not yet finished, or her language and people dead? Here he may learn that Greek Archeology is one of the youngest and most progressive of sciences, that its achievements in one generation have added a thousand years to Greek history, and that there still remain all over Greece, not far below the surface, countless monuments to reward the future explorer.

This work of training and inspiring

our young people for service as teachers of Greek is perhaps the most weighty which our school has performed. But this is by no means its only contribution. Its achievements in the way of excavation and discovery have been highly creditable and even distinguished, considering the scanty means that it has had at its disposal. The excavation of the Argive Heræum, from 1892 to 1895, was one of the most important ever conducted in Greece, and brought to light a far more extensive group of buildings, in connection with that ancient sanctuary, that had been supposed to exist there.

The work of excavation at Corinth, with which the school has been occupied for ten years past, has proved to be scarcely less interesting and rewarding than the exhuming of the Heræum. That ancient city, the rival of Athens in wealth and magnificence, was completely covered by the débris of centuries, and offered no landmarks which had been identified by modern scholars. Only some monolithic Doric columns raised their heads above the soil, but no one had ascertained to what divinity the temple to which they belonged had been dedicated. The famous fountain of Peirene, where Bellerophon was fabled to have tamed the winged Pegasus, had been provisionally located at the extreme north of the city, and a few ruins of a Roman amphitheater were visible in the same general region. But the topography of Corinth was a sealed book, and the efforts of scholars to elucidate it had resulted in nothing but wild and self-contradicting errors. The latest attempt to determine by excavation the site of the ancient market-place had been made half a mile from the place where it was afterward found to be. Such was the condition of our knowledge of Corinth when the American school began its work there. In the first year the site of the ancient theater was discovered. Next the fountain of Peirene was uncovered, by the energy of two young Americans. Having heard a report of a horizontal passage extending from the bottom of an ancient well, they pluckily descended, crawled many yards thru the blind and slimy canal, scarce wide enough to admit the entrance of a man's head and shoulders, and were rewarded by one of

the most brilliant discoveries of recent times.

The ancient temple of the monolithic columns has been proved to be the temple of Apollo. The vast market-place has been found, lined with the massive ruins of Greek colonnades and Roman shops. The fountain of Glauce has been discovered, and the remains of a small temple provided with a very curious concealed passage leading directly to the altar, the situation of which strongly suggests that it may have been used by the priests to deceive the faithful worshipers, who were to be delighted and struck with awe by hearing a mysterious voice responding to their prayers from the altar itself.

In short, a sufficient number of landmarks has been found, so that the topography of Corinth may be regarded as in the main definitely settled. From now on the description of Pausanias will be a sure and easy guide. For the complete excavation of this great city is a huge task, and very much more remains to be done. It was only last summer that the keen eye of the present director chanced to fall upon a fragment of rock which had been observed a score of times already. But this time something in its appearance struck him as unusual. He examined it more closely, removed the clinging earth from its surface, and discovered that the apparent rock was really a projecting bit of Roman concrete. A few hours' digging sufficed to lay bare the structure of the Roman Odeon. And so it is everywhere in Corinth. New discoveries are constantly being made. The location of the temple of Athena Chalinitis is now so well ascertained that the temple itself must soon be found. It is only the lack of money that holds back our young explorers from making constantly new and dazzling contributions to knowledge which would be of the utmost credit to American scholarship and energy. Nor is the amount which would be required large. The trifling sum of five thousand dollars yearly would suffice, if only such an amount could be depended on for a term of years, so that large plans could be made and systematically carried out. When one reflects on the vast wealth of America, and the constantly increasing number of lovers of

ancient art among our men of large means, it would seem that the requirements for our school need only to be known in order to be fully met. Not merely in Corinth, but everywhere on Greek soil, in Crete, in Asia Minor, in Athens itself, there are most alluring opportunities for excavation, and American scholars stand ready and anxious to do the work if only the resources can be provided. For it is a self-sacrificing task, with no emoluments and little personal glory, while the hardships and privations attending it are by no means slight. Their reward is the joy of dis-

nishing lodgings for the director and for some of the students. Here, in one of the most attractive rooms in Athens, is the school library, of some 4,500 volumes, comprising the most necessary books for the study of Greek geography, history, and the different departments of archæology. The library is the central point of school life. Here students may be found at work from morning till late in the evening. Here the open meetings of the school are held, and such lectures and courses of instruction as are not more conveniently given in the museums or upon the Acropolis. The room is an

THE TEMPLE OF HERA AT ARGOS.

covery, the satisfaction which the scholar feels when his efforts have thrown new light upon the dark places of history or science. They surely deserve the support of American interest and American wealth.

The equipment of the school consists of an excellent plot of ground in the outskirts of Athens, adjoining the British School, and a commodious building, fur-

ideal one for these purposes, except that, with the constant increase in the number of books, and in the attendance at meetings, the need for enlargement is becoming more and more pressing. The director of the school, Mr. Bert Hodge Hill, was called to the place in 1906, to fill the vacancy left by the lamentable death of Dr. Heermance. Mr. Hill had been a student and fellow of the school

from 1900 to 1903, and had even then shown the qualities of scholarship, insight, and sound judgment which led to his appointment as curator in the Boston Museum of Fine Arts, and afterward to the still more responsible position which he now fills so well. Indeed, the school has been fortunate from the beginning in its directors. At first, to be sure, the annual change of directors interfered with the development of a permanent policy, and the leadership of Dr. Waldstein, from 1888 to 1892, brilliant though it was, could not fully cure this evil, since he was able to spend but three months of each year in Greece, so that the real administration of the school still devolved upon the annual professor. With the appointment of Professor Tarbell in 1892 a better day was looked for, but he, too, felt obliged to lay down the work after but one year of the service, to accept a professorship in the University of Chicago. It was therefore not till Professor R. B. Richardson took charge of the school, in 1893, that a settled policy and continuous administra-

tion were really achieved. Professor Richardson's long term of office, from 1893 to 1903, forms the central period in the history of the school; and makes him the leading figure in its life up to the present time. Under his leadership, the excavations at Eretria were brought to conclusion, and the great work at Corinth was begun and carried well on its way. His successor, Dr. Heermance, died after but three years of service, but those who knew him best, the managers of the school at home, the students and foreign archæologists at Athens, agreed that his extraordinary abilities and character gave promise of a career that should raise the credit of American scholarship in Greek archæology to a higher plane than it had ever attained. Of Mr. Hill, the present director, I have spoken already. The faculty of the school consists, besides the director, of a professor of the Greek language and literature, appointed annually from the contributing universities, and a secretary and librarian, who is usually one who has recently been a student in the school.

THE AMERICAN EXCAVATIONS AT CORINTH.

There are also four fellows, students of special ability and preparation, who receive stipends from America. The whole membership of the school, faculty and students, forms necessarily a small circle, but one that is delightfully bound together by common enthusiasm for Greece. The fellowship, with the officers and students of the English, German, Austrian and French schools, is close and stimulating. In short, a year in Athens, or better, two years in Athens, amid such surroundings, is reckoned by

every lover of Greek antiquity among the choicest experiences of a lifetime. To live under the shadow of the Acropolis and Lycabettus, to watch the changing colors on Hymettus and the waters of the Saronic Gulf, to look off to Salamis and Aegina, and the mountains of the Peloponnesus beyond, to study the wonderful remains of antiquity in the rich museums of Athens—these are but a few of the many privileges which membership in our school confers.

ATHENS, GREECE.

The Oregon Election

BY GEORGE A. THACHER

[This is an account of the recent election in Oregon, where, for the first time, the voters of an American commonwealth voted extensively under a State initiative and referendum law.—EDITOR.]

ON May 28th THE INDEPENDENT published an outline from me of the Oregon form of democracy, describing the methods of legislating at the polls as well as the plan for securing the popular election of United States Senators. The right of 8 per cent. of the voters to submit to the people (by initiative petition) any law or amendment to the Constitution which they desire was freely exercised at the election on June 1st, and furnished as sharp a test of the new institutions as could have been devised.

The followers of Henry George submitted a single tax measure which exempted all dwellings and manufacturing plants, all household furniture, livestock, tools and improvements generally from taxation. It did not exempt business blocks, merchandise, money or credits. The measure was offered in such form as to become a part of the Constitution of the State if adopted.

In the pamphlet containing all measures offered, and the arguments pro and con, which is published by the Secretary of State and mailed to all the voters, the association behind the single tax presented nearly five pages of argument for the measure. No opposing argument was offered. The space filled by arguments

is paid for by those offering them, and was estimated at fifty dollars a page.

The voter's "text-book," as it has been dubbed, contained 126 pages this year. The newspapers gave a great deal of space to the discussion of the single tax, especially in the form of letters from individuals. The measure was overwhelmingly defeated. In the city of Portland the vote was evenly divided, showing that the owners of homes felt in many instances that their assessed valuations would be reduced by considerably more than one-half under the new plan. The owners of property thruout the State realized that their dwellings and improvements were worth less than their land, and that consequently their assessed valuations would be proportionately higher than in the cities and towns.

An amendment was offered under the attractive guise of home rule for municipalities (which they already possess) permitting the regulation of gambling, saloons, race tracks and theaters by the voters regardless of State criminal laws. It was cleverly drawn and the stock arguments were offered in its favor. Two reform associations submitted adverse arguments, and the amendment was badly defeated.

The rival interests in the salmon fish-

eries of the Columbia River each submitted a law restricting the business of the other, with the virtuous object of protecting the salmon. Arguments were submitted for and against both measures, and many columns of paid advertisements in favor of each law were printed in the daily papers. The Legislature has never succeeded in protecting the salmon because of these rival interests. The contest is between the up-river fishermen and the lower-river fishermen. The voters settled the matter by adopting both laws. They do not conflict either in their object or the method of securing it.

An amendment was offered to secure woman suffrage. This is the fourth attempt, and it was badly defeated. Curiously enough, there is an organization of women who work and spend their money to defeat the plan, which makes it uphill work.

A corrupt practices act, regulating expenditure of money in campaigns, was submitted to the voters and adopted. The bill fills twenty pages of the voter's text-book and apparently makes provision for every possible contingency. It is said to be modeled on the British laws of 1883 and 1895. It limits a candidate's campaign expenses to one-fourth of one year's salary, and provides for circulating campaign literature partly at the expense of the State. The Legislature failed to pass any law on the subject at the last session, tho one was introduced.

An amendment was offered and adopted to terminate the power of prosecuting attorneys to file an information for crime. An amendment was offered and adopted which prescribes the method for

retiring a public officer and for a new election. Details are left to legislative acts, but not more than 25 per cent. of the voters shall be required to sign the petition for recall. Officers may not be recalled until after six months' service except in case of members of the Legislature, who are subject to recall five days after the beginning of their first session. It seems to be a drastic measure, but it will require some organization and a strong public sentiment to put the machinery in operation. It is expected that

nothing but a flagrant offense will cause the voters to act.

Probably the most important amendment which was adopted is the one providing for proportional representation. The details are left to the Legislature. It is surprising how many efforts to secure representation of minority parties have been made in the United States. None has been successful so far, and the principle of the gerrymander rules supreme. If a simple and efficient plan can be provided in Oregon, and the supporters

GOVERNOR GEORGE E. CHAMBERLAIN,
Of Oregon. An advocate of the Initiative and
Referendum.

of the movement believe that it is practicable, it will be difficult to estimate the far-reaching effects of the reform. Naturally the bosses of the dominant party regard it as abhorrent to the settled order of the universe.

There were four measures past by the last Legislature on which the referendum was invoked by 5 per cent. of the voters. One was of purely local interest to the people of Multnomah County, and the action of the Legislature was approved at the polls. One was an act appropriating money for armories for the State militia. That was defeated.

Another measure which excited great

interest was an increased appropriation for the State university, which was past by the Legislature. The grange organization filed the referendum petition on the score of economy. The action of the Legislature was approved by a rather moderate majority. The last of the four involved a contest between the people and the Legislature. In 1906 the voters enacted an anti-pass law at the polls. The Legislature in 1907 past an act virtually compelling railroads to give free passes to all State, county and district officers during their terms of office, repealing in effect the law of 1906. A referendum petition was filed by the voters, and the action of the Legislature was repudiated by a big majority.

H. M. CAKE,

Of Portland. He received the Republican nomination for U. S. Senator at the primary election.

There were four measures adopted by the last Legislature which that body referred to the voters. One was an amendment increasing the pay of legislators from three dollars per diem to four hundred dollars for each regular session. It was defeated, which seems a pity.

Another was an amendment increasing the number of judges of the Supreme Court and transferring probate business to the Circuit Court. That was defeat-

ed. An amendment permitting State institutions to be located elsewhere than at the capital was approved. The constitutional restriction has always been ignored unless the matter got into court. An amendment changing the time of the State election from the 1st of June to the first Tuesday after the first Monday in November was adopted.

The election of United States Senator claimed the keenest interest. The provisions of the primary law are given in THE INDEPENDENT article of May 28th. Statement No. 1, which is a promise on the part of legislators to vote for the people's choice, has been attacked most bitterly by the old Republican leaders on the ground that a Republican Legislature might find itself bound to elect a Democrat to the Senate. That event has actually occurred this year thru a peculiar combination of circumstances. Mr. H. M. Cake, a Portland lawyer, defeated Senator Fulton in the Republican primaries. Governor George E. Chamberlain received the Democratic nomination. There is probably no doubt that a powerful element in the Republican party in Portland worked for the election of Governor Chamberlain in the hope of throwing the election into the Legislature. Senator Fulton was allied with that element in sympathy, as his published opinion since the election that Republican legislators should repudiate their promises indicates. A number of Republican county conventions wrangled over the question of repudiating Statement No. 1 and nearly succeeded. The Republican State Convention ignored the reform movement. Mr. Cake made the error of not announcing with the declaration of his candidacy that he was enthusiastically in favor of Statement No. 1, for he took that position in the campaign. Governor Chamberlain, who is a most popular man and an exceedingly clever politician, has had the reputation all over the State (and he earned it fairly) of being unqualifiedly in favor of the initiative and referendum and the popular election of Senators. He took advantage of the situation which his political opponents had arranged, and won the election by nearly two thousand votes. There were enough Statement No. 1 men elected to form a clear majority in each house, and most of them have declared their pur-

pose of standing by their promises to elect the people's choice.

The first claims of Republican opponents of Statement No. 1 after the election were that either the Republican legislators would repudiate their promises or that the people would repeal the system. I believe that both ideas are mistaken. The method of popular election of Senators may be ridiculed to any extent, but, nevertheless, it works, and the voters know it. As an indication of public sentiment there was a law offered by initiative petition instructing the members of the Legislature to vote for the people's choice for Senator. The law cannot be defended on constitutional grounds, but when it is remembered that about two-thirds of all the voters in the State voted for it, it sounds a little silly to claim that these same voters are go-

ing to repeal the Statement No. 1 law. The people have exercised the power of electing Senators, and it is idle to hope that they will relinquish it because the dominant party happens to be split into factions, with one of them in favor of the old order. A few weeks ago the United States Senate showed where it stood in the matter of offering an amendment to the Constitution providing for the popular election of Senators. The Oregon method may be clumsy, but it promises to be effectual.

The story of the Oregon election confirms the idea that practically all questions are reducible to the elements of right and wrong, and that the voters have as fair a sense of the distinction as members of the Legislature, and that where the Legislature fails to do its duty the voters can be trusted to fill the gap.

PORTLAND, OREGON.

The Bride of Christ

BY HARRIET McEWEN KIMBALL

Be patient! bide His time who will not tarry;
A thousand years He measures as a day.
All human plans, since human, may miscarry;
His, never; keep His counsel, watch and pray.

Put up thy sword, He saith;
Be faithful unto death.

Still keep with Him the vigil ever lonely;
And wait on Him, for this is fullest prayer;
Tho thine may be no conscious service, only
Abide in Him and so His victory share.

The work that He begun,
Shall it be left undone?

Since the first saints embraced His cross, and
dying

No earthly triumph saw, yet were content,
On His dear Presence, tho unseen, relying,
His holy Church has walked the way He
went;

Afflicted, destitute,
And sore from head to foot.

Betrayed by those in her dear bosom nour-
ished,

Assailed by heresies and often sold,
Her head discrowned while many scoffers
flourished,

And yet her foes how ready to enfold!

Pardon, her message still
For all repented ill.

As one whose place is at her footstool lowly,
Fed by her hand and by her comforted,
Hear her exhort thee to obedience holy,
Bidding thee watch and pray, as He hath
said,

While she thru suffering
Is fashioned like her King.

Thou yet shalt see her, all her trials ended,
Robed as in garments woven white of flame,
When He "by thousand thousand saints at-
tended,"

Their lifted foreheads burning with His
name,

Shall come to claim the rest
Who wait His advent blest.

She will be glorious; neither spot nor wrinkle
To mar the beauty of her holiness,
And all the nations which His Blood shall
sprinkle

The Bride and Bridegroom shall alike con-
fess;

Forever one the Twain;
Forevermore their reign!

Oh! worth the travail of a life expended
By all her countless children multiplied,
When we shall see in her all sorrows ended
And love and joy and peace on every side;
All lives complete in One;
His will forever done!

NEWBURYPORT, MASS.

Draining the Everglades

BY N. P. BROWARD

GOVERNOR OF FLORIDA

IN the State of Florida, in the region commonly known as the Everglades, we have five million acres of land suitable for a most profitable form of agriculture, but valueless at the present time because it is covered by water. It may be needless for me to assert that its richness and fertility have been demonstrated by the investigations of soil and climatic experts.

I can say that at last we have settled this point. For, since the year of 1906, when plans to reclaim the land were undertaken by the State thru trustees of the Internal Improvement Fund, the project has progressed so far that all doubt of its ultimate success has been removed, and we know that it is only a matter of time when most of this vast area will be made fit for cultivation.

To give a clear conception of how this great drainage work will be accomplished, it will be necessary for me to refer briefly to the position of the Everglades and their character. They are sufficiently elevated above the sea to permit all of the surface water to be removed if an adequate system of outlets is constructed, while Lake Okeechobee can be kept at such a level that it cannot overflow the surrounding country when its feeders are filled with flood water. We do not expect to drain the lake. It is not necessary and the task would be too great, for the lake's present area is about 650,000 acres, but we can confine its waters to their normal area by carrying off the overflow thru the canal system we are constructing.

The Everglades lie in an immense basin whose rim, probably of volcanic origin, is composed of coral and limestone rock. There are times when the surface of the Everglades is so slightly submerged that the rim is above the water, while during the flood season it may be partially or wholly covered. This barrier is what creates the Everglades, as but a small portion of the water can escape thru it. Measurements made at various points by State and Government engineers show the elevation of the submerged lands is fully 20 feet above the sea at the lowest point, and there is a

continual descent from Lake Okeechobee to tide water.

Consequently, the problem to solve has been how to make passage thru this rim which would be of sufficient capacity to allow the water it confines to find a lower level and thus escape. This was the problem that my associates and myself—the trustees of the Internal Improvement Fund—have attempted to overcome. I have given such study to it that when I was nominated for Governor in 1905 I pledged myself to drain the Everglades and made this the main issue of the campaign. The project was taken up immediately after election. We had two dredges constructed from designs of my own. They began operation in July, 1906, at the head of what is called the New River, about 20 miles from the city of Miami. The New River flows directly into the sea. Each dredge is excavating, thru the rim I have described, a canal which averages 60 feet in width and has a depth ranging from 12 feet to 15 feet. So far nearly three miles of each canal have been completed, but the work is to proceed much more rapidly, as we shall have at least six excavators in service within the next year. A tax of 5 cents an acre on lands sold to settlers gives us an income of about \$220,000 annually, and will enable us to increase our operations, as the excavation of the canals is being done with great economy—about one-seventh of the usual cost of such labor.

To provide a complete drainage system will necessitate the construction of about 600 miles of outlets. Most of this work, however, will be merely mud excavation. It is intended to pierce the rim at several other points with canals which will connect with tidal rivers like the New River, and the success we have attained warrants the undertaking. As the channels are dug, the surface water in the vicinity finds its way into them and flows seaward, so that already we have over 2,000 acres of what has been submerged soil reclaimed and being sold to the settler for cultivation. Thus, as the drainage proceeds, the farmer will follow to occupy the land.

Is it worth while to make this region fit for human habitation? If any one so questions, let him consider for a moment the benefit it will confer, not only on the South, but upon the whole country, from merely one standpoint. There is now imported into the United States more than 2,400,000 tons of foreign sugar, for which we pay, in duty and to the foreign producer, more than \$150,000,000 yearly. Our total exports per annum of the following articles, corn, wheat, flour, beef and naval stores combined, amounts to but \$144,000,000. In other words, we are paying for foreign sugar, in American money, more than the people of foreign countries pay the people of the United States for all of the corn, wheat, flour, beef and naval stores shipped them from the United States. There are in this submerged Florida 5,000,000 acres of land suitable for the cultivation of sugar cane; 3,000,000 acres of which land is free of trees and shrubs, containing only grass; 3,000,000 acres of muck land, varying in depth of muck from 2 feet at the edges to 20 feet in the middle. A small portion of the territory, when reclaimed by private enterprise and cultivated, some years ago, actually produced 63 tons of cane to an acre of ground — cane which yielded 12,600 pounds. If even 500,000 acres of this soil were put into sugar cane, it would yield more than the 2,400,000 tons of sugar now annually imported from abroad.

In proof of the assertion that Southern Florida affords the site for another great industry, I will briefly refer to the opinions of Dr. H. W. Wiley, the head of the United States Bureau of Chemistry, who has analyzed samples of sugar cane raised on land reclaimed from this section. Dr. Wiley says: "All of these samples are of over 88 per cent. purity and are the most remarkable samples we have ever examined. They contain no glucose (a sign of inferiority) whatever when tested."

Mr. Claus Spreckels, the noted sugar plantation owner and refiner, writes as follows regarding his inspection of these reclaimed sugar lands: "I take pleasure in saying that during my recent trip to inspect your sugar operations, my surprise was great at finding such a country for the growth of sugar cane. The soil

is as rich as any that I have ever seen, and with proper cultivation the yield should be equal to that of any other country on the face of the globe."

What has been already done in the raising of fruit and vegetables on the small areas of soil which have been drained by private enterprise show that such work will be repaid many fold. Not only is this part of the State adequate for the production of every pound of the nation's sugar, but it can be covered with fruit orchards and vegetable gardens. The 5,000,000 acres to which I have referred, however, represent only a small portion of the swamp land, granted to Florida by the United States, on which millions of people might find homes and occupations if it were properly drained, which it is possible to do at a very small expense, considering the value of this land for settlement.

Let me give a few statistics to further show the extent of this land, now a great waste which might be made of such value. It covers a space equal to the total area of three States of the Union—Connecticut, Rhode Island and Delaware—and comprises over one-half of the surface of the State of Florida.

Did not England reclaim the lands in the valley of the Nile? Then can we not reclaim the lands of Florida? Centuries ago the people of Holland found themselves cramped for room, because of the rapid increase of population. Instead of falling upon some neighboring people and taking from them their territory, they looked out over the reaches of the sea and said: "Here is land in plenty, which the sea does not need; we will take it." They built dikes, shut out the sea, pumped out the water—and today the bottom of the ocean has become the garden spot of Europe, the home of a multitude of happy and prosperous people, and the very sea, whose land was taken, has been confined between canal banks and made the carrier of a nation's commerce. Much of Holland is below the level of the surface of the ocean. Our Everglades, as I have said, are above the level of the ocean, so our only task is to let the water run out of them to make habitable a region which is one of the richest in the world and can be made one of the most productive in America.

The Strength of China

It may be a little surprising to hear of China: "Perhaps no form of human government was ever more adroitly contrived to combine stability with flexibility, apparent absolutism and essential democracy." These are the words of Arthur H. Smith, twenty-five years a missionary to the Chinese. As a condensed handbook, no more valuable essay has appeared than this little volume,¹ which brings out vividly the racial traits and the social and religious forces which have been responsible for the unparalleled national virility of China in the past and are at work in the significant transformation of the present. "It is essential," says Dr. Smith, "to gain a distinct impression that from the very beginning the evolution of China and the Chinese has been continuous and uninterrupted." Hence the vital interest in a recital of ancient Chinese history from the Emperor Fu-hi, cir. 2852 B. C., to the fall of the Chou Dynasty in 249 B. C.² Two thousand six hundred years is a good deal to cover in a little over 300 pages, and the rapid succession of names and dates is often confusing, but there is also much to be gleaned from the book. Even in Fu-hi's time society was highly organized, but the "Chou-li," a governmental blue book of about 1000 B. C., discovers the real secret of Chinese greatness and continuity in basing social stability upon an inexorable regulation of the most minute details of life, private as well as public, crushing out spontaneity of action in order to undermine spontaneity of thought and preserve forever the social fabric from the dangers of innovation. And the theory worked. The unprecedented stability of Chinese civilization has resulted rather from the continuity of national feeling which supports it than from governmental power. Smith remarks: "The Chinese have always depended upon edu-

cation as the true bulwark of society and the state," and as early as the "Chou-li" schools were democratic, merit and learning, not birth, paved the way to promotion in the empire, and finally it was to the people that appeal was made, as a court of last resort, not only in criminal cases, but also in the election of an Emperor when there was no regular heir. Confucius, five hundred years later, only elaborated this system and stressed its social morality. It was this conception that held the empire together, defeated warring philosophies and evolved the civilization that against all odds and in the face of conquests such as overturned the Roman Empire has maintained its virility unimpaired for over three thousand years.

It is but an Occidental misconception that China's unprogressiveness and her military inefficiency are signs of weakness. Mencius taught that the soldier was a criminal, a man who destroyed society instead of preserving it, and that an enlightened and righteous nation could overcome "the strong mail and the sharp weapons of their enemies with mere sticks in their hands." He valued the assimilative power of a civilization more than brute force, and it has been the virility of her intellectual and social system that has preserved China, and not her military prowess. It may be food for thought that, in the face of Western aggression, the Emperor issued an edict in 1898 which said: "Shall we be able to hold our own, fighting with sticks against mailed armor and sharp weapons, if we continue to neglect the drilling of our troops?"

Owing probably to limitations of space Dr. Hirth has failed to indicate fully the factors which were potent in the earlier development of the Chinese Empire, but he has furnished a scholarly and convenient handbook for this period of her history, in more detail than can elsewhere be had in English in an ordered form. For all addition to available knowledge of the development of Chinese civilization the student of society

²THE ANCIENT HISTORY OF CHINA. By Friedrich Hirth, Ph.D. New York: The Macmillan Company. \$2.50 net.

Owes a debt of gratitude. Altho from the seventh to the tenth centuries China was probably the most civilized nation on earth, she succeeded in keeping herself singularly aloof from the rest of the world. It was not until 1792 that England dispatched Lord Macartney, her first Ambassador to China, in hopes of promoting the trade then growing up at Canton. He was not allowed to remain over a month at Peking, and could make no definite agreements, but he and his embassy made a favorable impression upon the Emperor and facilitated negotiations later on. Nearly half the book,³ made up largely of extracts from Macartney's diary, is given to the account of this mission, and affords an interesting picture of the Chinese court and customs of the day, of royal entertainments which rivaled Arabian Nights, and of the most amusing subtlety and illusiveness of Oriental diplomacy. Moreover, the Ambassador's reflections upon Chinese character, his recognition of the stability and cohesion of the people and the courtliness of the educated class, form a valuable memorial to eighteenth century impartiality and insight. Macartney showed a tactful diplomacy and a regard for Oriental feelings, which if faithfully practised by Europeans would have avoided many difficulties in their contact with Asia, when he regretted the flaunting of "that superiority which wherever Englishmen go they cannot conceal from the most indifferent observer," instead of "those attentions I always pay, wherever proper opportunity offers, to Oriental customs and ideas." He wisely insists that international relations must be built upon knowledge and sympathy. Western scorn for China has sprung largely from ignorance.

The hinterland of China is still almost unknown, geographically as well as socially, and furnishes ample opportunity for adventures such as filled the wedding tour of Count de Lesdain and his bride of nineteen, who undertook to pass from Peking across Northern China, the Ordos and the Gobi desert, and then south over the highlands of Tibet into India.⁴

³LORD MACARTNEY, OUR FIRST AMBASSADOR TO CHINA. By Helen H. Robbins. New York: E. P. Dutton. \$5 net.

⁴FROM PEKIN TO SEKKIM. By Count de Lesdain. New York: E. P. Dutton & Co. \$5 net.

They, first of Europeans, saw the tomb of Jenghis Khan—which wasn't worth the trouble—and identified in Tibet the headwaters of the Yang-tse River. Perils from cold and hunger, from desert storms and quicksands were innumerable, but the successful crossing of the tremendous mountain ranges of Tibet was a feat to be proud of, and it is a pity that so little has been made of materials for a vivid story. The narrative lacks color and action, and even the real geographical contributions are not clearly set forth.

Count de Lesdain indulges in a not unusual form of anti-missionary sentiment, from experiences with one or two native Christians in his employ. But there is also another side to the picture. A well-written volume of stories,⁵ the first seven retold from the Chinese, the rest narratives from the lives of Christian converts, together with a convincing and distinctly illuminating account of experiences in China, told by a missionary physician,⁶ very successfully paint this other side. Missionary activity in Asia is wielding an influence in the remolding of national destinies second, possibly, to no other outside force. And it is significant for the future that missions have brought peculiarly home to Christianity the necessity for social rejuvenation, for reaching beyond the mere individual into social and political transformations. Said Li Hung-Chang: "Man is composed of soul, intellect and body. I highly appreciate that your eminent (missionary) boards, in your arduous and most esteemed work in China, have neglected none of the three." A study of the Mohammedar East, of Burma, Korea and Siam,⁷ especially the last, gives evidence of a virility in the progress of Christian sentiment which will give a good account of itself in the end. Material forces are not to be the most potent in directing the intellectual and political ferment of the modern East.

One of the big questions in the East

today concerns Japan's ability to maintain, in the face of Western materialism, the individual loyalty and the governmental purity which carried her to victory over Russia. In peace, as in war, it is spirit and discipline that win. M. Nojine has written a book and called it *The Truth About Port Arthur*,⁸ and as war correspondent on the spot he ought to know. Yet he proves the incompetence and treachery of General Stössel so well that he really proves too much—the general may have been a traitor, but he wasn't an imbecile. We learn little that is new about the actual fighting of the siege, but a great deal about the almost incredible conflict of authority between Stössel and General Smirnoff, who, as commandant of the fortress, should by military law have been supreme in command when the Russian lines had been driven back into the defenses of Port Arthur proper. The wonder is not that such folly brought defeat, but that the defeat was put off so long, and in the face of the criminal incompetence of the bureaucracy and its favorites we learn a new respect for the dogged heroism of the rank and file and a few of its leaders. Not Russia, but officialdom, was beaten in the Far East, and the end is not yet. M. Nojine's book must stand on the shelves with the half dozen others that tell the terrible story of that siege—but as a Philippic rather than as a narrative.

Arkinsaw Cousins

HERE is a new novel of Southern life.* It is distinctly Southern in spite of the fact that the scenes are laid in a town among the Ozark Mountains, and the still more remarkable fact that the author is a Missourian. For we all know that the South has contracted year by year since the Civil War, and those who understand this phenomenon did not imagine that its industrial invalidism, and vague, whimsical mannerisms yet reached as far as the Ozark Mountains in Arkansas. And even less were we expecting to read from a Missourian so admirable an interpretation of the same. For altho Mis-

souri is nominally a Southern State only Western people are born there, with a certain Western perversity of nature quite distinct from the slow, wit-cracked perversity of the Southern temperament portrayed in this story. The various branches of the Thornberry family are the inhabitants of the book. There are too many of them and their prominence is too nearly the same to call one the hero or the heroine over and above the rest. The author has drawn each as faithfully from life as if he had learned human nature by heart in all its family manifestations. Every scene in the ugly, shiftless little town, with its streets perpetually riven and torn for lingering gas-pipe improvements, grows as familiar to the reader as if he were himself a native of Care City. Love among the young Thornberry cousins is more patient than ardent, and we find the conversation between old Timothy and Polly more diverting than the exchange of sentiment between "Osk" and Ethel.

The author has introduced a pretty young adventuress in Goldie Pickens, apparently just to show us what he could do if he were not handicapped by the Thornberry leanings toward virtue even after one of them serves a term in the penitentiary. But in spite of the uttermost efforts of Miss Goldie Pickens there is no climax in the book. One feels indeed that the Thornberrys could not produce this kind of dramatic material. But even the shiftless and good, and good-natured, do not escape tragedy. And there is tragedy enough in this tale, only it does not stalk down upon us naked and terrible from barren heights as it does in the Greek plays, nor with a melodramatic shriek as it does in so many modern novels; but it looks at us patiently from the dim eyes of Mrs. Elizabeth Thornberry. It is eased down gently by certain human absurdities into the lives of men like Nicodemus Thornberry, until we bear it almost with a smile.

In short, the book is not written in the romantic fashion of the day, but neither do the people in it belong to the modern fashion of men and women. They are not older, simply different, vaguely, grotesquely different. And the sooner the reading public understands and concedes this about certain invincible South-

⁸THE TRUTH ABOUT PORT ARTHUR. By E. K. Nojine. New York: E. P. Dutton & Co. \$5 net.

ern types the sooner we shall have novels that actually portray these people, whose lazy, gentle lives do not lend them to the sharp distinctions in action and character demanded by the modern dramatist.

Inquiries and Opinions. By Brander Matthews. New York: Charles Scribner's Sons. \$1.25.

Some of Professor Matthews's critical judgments seem a little rash—or at least curious. He makes out a great case for the successful contemporary play, like that of Mr. Pinero, as against the literary drama so called, by contrasting the deliberate exclusiveness of the latter with the popularity of the Shakespearean, and, as he implies, of all great drama, inclusive of Hugo's, without noticing apparently that the plays for which he is arguing are no more popular, as Shakespeare's were, than are the modern literary and "closet" dramas. What reception, indeed, would "The Second Mrs. Tanqueray" or "Cromwell" be likely to receive from a genuinely popular audience left entirely to its own impulses? Again, however we may admire our foremost humorist, it is rather startling, we must confess, to find him classed with Molière and Cervantes. It actually looks in some cases as tho Professor Matthews had made too violent a wrench to get away from the academicism natural to his profession and were in danger of overleaping the saddle altogether. On the other hand, his chat on subjects where he has no delicate equilibrium to think about, is frequently entertaining and even instructive. Such particularly is the case with the papers on "The Art of the Stage Manager" and "Invention and Imagination."

Virginie. By Ernest Oldmeadow. New York: The McClure Co. \$1.50.

There is usually a family likeness between books by the same author. Some parental squint in the ideas offered, or mannerism of expression, will prove that they are all the literary sons and daughters of one mind. But if there is so much as a wink, or a playful verb in *Virginie* to indicate that it is from the same author who wrote that charming comedy of the little maid, "Susan," the reader will find it hard to discover. So

far from meeting a prim, pretty girl and an excellent guardian angel heroine in the first chapter, we are brought face to face with a beautiful young woman, clad in a pink sash and poppy wreath with a silver bugle in her hand, frozen stiff and packed in a block of ice. But this is not so bad on the reader as it is upon the astonished young Englishman to whom she has been pawned as a wax figure of "Fame Asleep." He thaws her and feeds and clothes her, only to discover that she has lost her memory. And if any one is curious to know how difficult it is to get on with a spirited French girl who cannot even recall her own name, let him read this story. But he need not expect to be amused. The author has developed an absurd situation with a gravity that is almost obtuse. There are indeed some pale glimmerings of humor, but not enough to win a smile from the reader. This is why one wonders how the author of such a pretty comedy as "Susan" came to write this melodramatic play upon credulity.

James Francis Edward, the Old Chevalier. By Martin Haile. New York: E. P. Dutton & Co. \$4.00.

Tho there have been many sketches of the last of the Stuarts to be crowned in Scotland, Martin Haile has given us the first connected biography of the man who for more than seventy years sought, under William III, Queen Anne, and the first Georges, to recover the throne which his father had lost. The material for this study of James Francis Edward has been taken largely from unpublished Stuart manuscripts which throw considerable new light on the complicated problems of the period of Jacobitism in England. Mr. Haile is more sympathetic in his treatment of the son of James II than older writers have been. Holding a brief for his legitimacy as King James III, he naturally objects to the political or religious biases which influenced former judgments of the man, and Macaulay receives his due share of criticism on this account. The present author has sought to portray the environment against which the old chevalier struggled, so that his work is really an historical study of an exceedingly interesting epoch. There is a careful analysis of party and church strife as well as a

diplomatic history covering several English reigns. While the royal exile is the central figure, there are sketches of other important actors in the long drama. The Young Chevalier, the obstinate and wayward son, is particularly well drawn and our author eloquently describes the despair of the father at his inability to influence the youth, which filled his last years with intense sadness. An admiring biographer of the mother of James III, Mr. Haile has made the son a worthy one. The volume is got up in a most delightful form with eleven handsome photographic illustrations.

Literary Notes

....*Glasgow Addresses*, by the Rev. G. H. Morrison, M. A., published in America by A. C. Armstrong & Son (\$1.50), is avowedly a volume of sermons, but they are sermons worth printing. Scotch preaching at its best is good, sufficiently charged with thought to be worth the time of an intelligent person, marked also by earnestness and moral fervor, and elevated by the gift of insight and vision. Of this sort is the preaching of Mr. Morrison, and men of many shades of opinion will find it suggestive.

....The Messrs. E. P. Dutton & Co. have done well to reprint Archbishop Trench's classic volume, *Notes on the Miracles of Our Lord* (\$1.00 net). Naturally a volume written thirteen years before the "Origin of Species" does not meet the modern case in reference to miracles, but Trench's essay is the best presentation of the older view that has ever been made, is invaluable for the history of religious thought, and would be worth while for its masterly literary style if for no other reason. The introduction to the present convenient edition is by Rev. A. Smythe Palmer, D. D.

....*The Book of Fish and Fishing*. By Louis Rhead. New York: Charles Scribner's Sons. \$1.50 net. It is easy to see at first glance that the author is writing on a subject that is well known to him. He has taken every game fish that swims, from Labrador to the Dry Tortugas. The book is written in a popular style, with scientific names unmentioned. In addition to descriptions of the appearance and habits of the fish, are chapters headed, "Where to Get Them," "How to Get Them" and "When to Get Them." The book is well illustrated with copious cuts and contains also some interesting maps and charts.

....M. André Tardieu is a diplomatist. On his visit to the United States last winter he was in a sense the accredited representative of France and our national guest. Consequently, we could not expect to find in his *Notes sur les Etats-Unis* (Calmann-Lévy, Paris, 3 fr. 50c.) any of those rash and sensational generalizations about national characteristics that make the most piquant reading. But he has accom-

plished a more difficult feat of giving a sane and well balanced view of American social life, politics and diplomacy, tho based on the impressions of brief residence and circumscribed field. There are few statements to which the most sensitive American could take exception. Our readers are familiar with his style from the chapter we published April 16th, on his visits to President Roosevelt.

Pebbles

ROWND—HORTON.

PROMPTLY at 8 o'clock Wednesday evening, September 26th, 1906, at Summerfield, was the nuptials of Miss Susan Grace, daughter of Mrs. Mary Jane Horton, and Mr. James Trott Rownd solemnized in a very impressive manner by Rev. J. L. Neely, in the presence of about sixty invited guests, at the home of the bride's mother.

The wedding party marched down the stairway and into the sitting room to the strains of a wedding march from Mendelssohn, rendered by Miss Dama Neely, and formed a semicircle in the northwest corner of the room, which was very tastefully decorated. This was marked with goldenrod and other flowers and plants peculiar to this season of the year.

The bride and groom were stationed under a huge wedding bell suspended from the ceiling by beautiful colored ribbons. The best man was the groom's brother, John H. Rownd, of Fairmont, W. Va. The bride's maid was Miss Mary Tracy.

The bride, pretty, petite and piquant was never lovelier. Her gown was of white French mousseline de soi. She carried a shower bouquet of white carnations. The bridesmaid performed her official duties with pleasing grace and was beautifully gowned in white carnations. The bride is the youngest daughter of Mrs. Mary Jane Horton, accomplished and well fitted to preside over a thoroly happy home. The groom is the youngest son of Mr. and Mrs. J. S. Rownd and is a young man of sterling worth, affable, accommodating and a thoroly gentleman in every particular. He is head clerk for the well known firm of Rownd & Rouse, dealers in general merchandise in this town, of which firm his father is the senior member.

These two young people are representatives of two of the oldest and most respected families of this community and we bespeak for them a long, useful, and happy life. During the arranging of the guests, Miss Blanche Calland, of Columbus, sang a very beautiful and appropriate song, entitled, "Oh, Promise Me."

Miss Neely rendered in a soft and pleasing manner "Annie Laurie," during the marriage ceremony.

A delicious supper was served tastefully arranged and it is presumptuous to say it was fully appreciated.

There was on display up stairs, in the south room, a large number of beautiful and costly presents showing that the newly wedded had been freely and liberally remembered by their countless friends.—*Quaker City* (Ia.) Independent.

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, \$2.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, \$1.75 a year extra; to Canada, \$1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with \$1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

Taft and Sherman

It was foreseen that Mr. Taft would be nominated. We had never believed that Mr. Roosevelt could be induced by a stampede in the convention to break his word, or that any considerable number of delegates could be drawn into such a movement. Some had said that Taft must win on the first ballot or not at all. But it was plain in the last weeks of the canvass that no one of the other candidates could get a majority. In the lists of their votes there was no sign of possible growth. Combination was impracticable. The movement for Taft was the only one of national scope. Lack of a majority on the first ballot would not have prevented his nomination. It is unfortunate that this was not realized by the managers of his canvass, for unwarranted anxiety drove them to action that deserved the sharp criticism it received. We refer to the use of the three proxies in the national committee. The contests were of such a character that Mr. Taft needed the help of nothing that looked like injustice or sharp practice in the settlement of them.

It is asserted by some that the con-

vention was controlled arbitrarily by Mr. Roosevelt. In fact, it was controlled legitimately by the supporters of Mr. Taft, and of these, undoubtedly, Mr. Roosevelt was the most influential. Everybody knew that he desired the nomination of Taft. He had a right to prefer some one, and in his own interest it was really necessary that he should do this. Otherwise it would have been said from the beginning of the canvass that he was not sincere in declining a renomination, but was seeking it by indirect methods. He expressed his preference, and it was for the best man. The pre-eminent eligibility of Taft was indicated to the Republican party by the President's choice. Does any one think that Mr. Roosevelt's extraordinary popularity has died out, that he has lost the confidence of a large majority of the American people? The nomination of a reactionary was impossible. It was necessary that the Republican nominee should be a man loyal to the President's policies. Mr. Taft had been officially associated with him for years. Those who trusted the President said quite naturally that no one else could so well know Mr. Taft's qualifications, in respect to both his general ability and his attitude toward those policies, which a majority of the American people desire to sustain. Mr. Roosevelt's preference for Mr. Taft, of course, had much weight.

But the President preferred Mr. Taft for the best of reasons. In many years no more completely equipped candidate has been named for the Presidency. Mr. Roosevelt did not have to tell the people that this was so. It was already known to careful students of public affairs. Mr. Taft has had a remarkably thoro and fitting preparation for the duties of the office to which his party desires to elect him. In the published comments upon his candidacy, many of them in journals politically hostile, the exceptional character of his training has been recognized, together with the fruits of it in the public service, where no failure is found in the record of his undertakings. He had been a prosecutor and a judge when Mr. McKinley induced him to go to the Philippines. But for his conviction that his duty lay in such service as he could per-

form for the people of those islands, he would now be a Justice of the Supreme Court, and this is an office which he had always longed to hold. In what he has done he has shown a rare combination of the judicial attitude with a marked capacity for administration. His tact and the charm of his personality have enabled him to settle many controversies and to gain the respect, and even the affection, of both the opposing parties. His private life has been irreproachable. Concerning his connection with public affairs, there has never been a whisper alleging that his action was shaped by selfish or otherwise unworthy motives.

Light is thrown upon Mr. Taft's character by the history of his relation to the Filipinos. As we have said, he had longed to be a Justice of the Supreme Court. Twice was a place on the bench in that court offered to him while he was in Manila. But he believed that the people there needed him. When he became Secretary of War, he was led to accept that office mainly for the reason that in it he might be able to do more for the Islands than he could by retaining the office of Civil Governor.

But it is not our purpose to relate the history of his public service. That is well known both at home and abroad. The nomination is an admirable one and the strongest, in a purely political sense, that the party could have made.

We thought that the second name on the ticket should be that of Governor Hughes, but he would not consider a nomination for the Vice-Presidency. While Mr. Sherman's name has not the weight that the Governor's would have had, it should be remembered that he has been an influential member of Congress for many years, and that his party has frequently appointed him to places of responsibility. Altho it is understood that neither Mr. Taft nor the President express preference for any one, after the political situation in Iowa and his own attitude had eliminated Senator Dolliver, it may be assumed that the ticket would not have been completed by a nomination unsatisfactory to them. Mr. Sherman is a lawyer and a banker. He has been Mayor of his city. Twenty years' service in the House has made him familiar with national questions. He is a member of the powerful Committee on

Rules, and is frequently chosen to preside over the House when it is sitting in committee. Two years ago he was made chairman of the Republican Congressional Committee, and it was to him that the President addressed a memorable letter concerning Mr. Harriman's contributions to the campaign fund. He has been involved in no factional contest, and he has the support of the entire party in his State, if not particularly strong elsewhere.

Mr. Taft has resigned, and at the end of this month he will be out of office. Thereafter he will probably express plainly his opinions concerning the demands of organized labor and the dismissal of the negro soldiers. Altho it is generally expected that Mr. Bryan will be the Democratic nominee, the Republican leaders must see that they cannot count this year upon such a victory as that of four years ago, when the electoral vote was 336 to 140. Prosperity has not returned, the negro voters are hostile, the party is handicapped by enormous expenditures and a growing deficit, and organized labor failed to obtain at the recent session of Congress the legislation it sought and demanded.

The Republican Platform

A PLATFORM for the Republicans at Chicago had been prepared in Washington some days before the convention assembled. Few changes were made by the convention's committee. There was much controversy over the proposed resolution concerning the granting of injunctions in labor disputes. Mr. Gompers, for organized labor, had demanded a radical declaration; associations of manufacturers had insisted that the subject should not be mentioned in the platform. Mr. Taft would not have it ignored. The resolution adopted really amounts to nothing:

"The Republican party will uphold at all times the authority and integrity of the courts, State and Federal, and will ever insist that their powers to enforce their process and to protect life, liberty and property shall be preserved inviolate. We believe, however, that the rules of procedure in the Federal courts with respect to the issuance of the writ of injunction, should be more accurately defined by statute, and that no injunction, or temporary restraining order, should be issued without

notice, except where irreparable injury would result from delay, in which case a speedy hearing thereafter should be granted."

The court would be free to decide whether there was imminent danger of irreparable injury. Mr. Taft himself said in January last, replying to the questions of the Federation of Labor, that the present practice was sometimes accompanied by injustice and that he would not object to new legislation providing that no injunction should issue except after notice to the defendant and a hearing. He would go beyond the limits of this platform, which is really a compromise that has no substance.

In his messages Mr. Roosevelt has repeatedly asked for a modification of injunction procedure, but Congress has been unwilling to respond with legislation. Organized labor also has asked that trade unions be specifically exempted from the operation of the Sherman Anti-Trust law. The platform does not recommend that this be done. Unions are not mentioned in the brief paragraph calling for amendments to the Sherman act that will give "the Federal Government greater supervision and control over corporations having power and opportunity to effect monopolies." Vague reference is thus made to Mr. Roosevelt's elaborate licensing system, which Congress virtually rejected a few weeks ago and which was not approved by Mr. Taft. But much space is given to the evidence that the Administration and the party have recently caused the enactment of liability, eight-hour, child-labor and other laws for the benefit of wage-workers.

If the tariff is to be revised in accordance with the requirements of this platform, the new duties will "equal the difference between the cost of production at home and abroad, together with a reasonable profit to American industries," and there will be maximum and minimum rates, the latter "to represent the normal measure of protection at home." But who is to decide what a reasonable profit is, and how is the difference in costs of production to be ascertained? It has been shown in the past that some of our duties exceeded not only the difference but even the entire labor cost of production here. The

definition of maximum and minimum rates is apparently intended to warrant minimum rates differing but little from those of the present tariff. There is no promise here of a revision involving such reductions as, in our judgment, ought to be made. But Congress, and not the convention, is to do the work, and Mr. Taft thinks that some rates are too high. We should like to see legislation to prevent protected combinations from exacting from American consumers prices much higher than those for which the same manufacturers sell their goods abroad. Free trade with the Philippines is advocated, but there must be "limitations as to sugar and tobacco." But these, and hemp, are the only products which the islanders have in large quantities for export. Mr. Taft has probably been convinced that the opposition of our domestic producers of sugar and tobacco cannot be overcome.

We hope the approval of postal savings banks will cause the enactment of the pending bill at the coming session of Congress, and that the native inhabitants of Porto Rico will be "at once collectively made citizens of the United States." Railroad companies should be empowered, as the platform recommends, to make traffic agreements, subject to the Commission's approval, but the Republican majority in Congress has not thought so. Overissue of railroad stocks and bonds should be prevented, but surely the Commission cannot prevent it without a prior physical valuation of the property, and Congress has been unwilling to provide for that. The recent appropriation for an examination of railway accounts is commended, but the platform makers appear to have forgotten that the Republican leaders of the House sought to reduce the appropriation to a sum ridiculously inadequate, and were driven to reasonable action only by a vigorous minority of their party, assisted by Democrats and the President. The demand of four years ago for an investigation of negro disfranchisement laws, looking to a proportional reduction of representation in the South, is omitted this year, but all statutory devices for such disfranchisement are denounced. We are glad that the party points with satisfaction to the re-

cent ratification of the eleven Hague conventions and of twelve arbitration treaties, and asserts that "such achievements are the highest duty a people can perform."

The platform contains more than the customary denunciation of the opposing party, and much of it is absurd. For example, the country is informed that the need of a continued supremacy of the Republican party has been demonstrated by "the recent safe passage of the American people thru a financial disturbance which, if appearing in the midst of Democratic rule or the menace of it, might have equaled the familiar Democratic panics of the past." But there are many persons who perceive that this disturbance took place under Republican rule, and who even ascribe it, in part at least, to a defective Republican currency system. And the platform makers appear to have overlooked the panic of 1873. The hearty commendation of Mr. Roosevelt and an accompanying declaration of "unflinching adherence" to his policies have, quite properly, a prominent place in this statement of party creed and purpose, but they are not made more acceptable to independent voters by unjust criticism of the party in opposition.

A University Boys' Stunt

THE word *stunt* is detestable, but it is in college, bad 'cess to it—and here it goes—with a groan.

The boys of the University of Kansas have done a notable—er—*stunt*, and have stirred the town of Lawrence. They have a Press Club, made up of students who have received pay for literary work. One of them is our poetical contributor, Harry H. Kemp. There is also a University School of Journalism, presided over by Charles M. Harger, also one of our contributors, and editor of the local paper of Abilene, under whom the students take practical lessons in journalism, if that is a proper word. The boys of the Press Club got permission from the editor of *The Lawrence Journal* to edit his paper all by themselves one day. He thought that was safe and amusing, and so went a-fishing.

And so did the boys, in another way.

They took in the School of Journalism and assigned duties to each member, editors, editorial writers and reporters, about forty in all, including several of the girls. But the boys planned to do something serious, beyond the callow nonsense and rhetoric expected of them. They would teach their editorial brothers a lesson.

Lawrence is as decent a town as any of its size, but it has a low quarter called the Bottoms, infested by the worst class of negroes and white people. Kansas is a prohibition State, and Lawrence has a Reform Mayor, but somehow the joints had not been crushed out, and the boys planned to make an investigation. And they did it thoroly, and told the whole story in their issue. They gave the places where liquor was sold, and the names of the saloonkeepers, and, worse than that, they told how some of these places were owned by Police Judge Menger. They also told how many gallons of whisky and brandy were sold at drug stores. When the paper appeared it made a great stir in the town. The editor came back from his fishing and was very sad that the boys should have thus smirched the fair name of so speckless a town. The County Attorney said he did not know that any liquor was illegally sold. The Mayor knew nothing of any joints. The chief of police thought some liquor might be sold, but he did not know how to get the evidence. Indeed, the officials whose business it was to enforce the laws admitted general ignorance or inability.

Then the sheriff took hold of the matter. He interviewed the students, got their promised help, and made a raid, the one big raid since Quantrell's Raid in 1863, and the jail was filled to overflowing. When the trial came on the students gave unequivocal testimony, told where they had purchased liquor, proved that they knew what it was, identified the prisoners, who, seeing it was of no use to fight, pleaded guilty, took their fines and imprisonments, and the city treasury is the richer by some \$800 after all expenses are paid. The press of the State praised the enterprise of the boys and approved their "scoop."

There have been previous cases when students have been allowed to issue a paper for a day. The Rev. Charles M.

Sheldon had a notable experience of the kind with a Topeka journal. But to our thinking the Kansas University boys have hit the right way. Their plan was not merely to talk, but to influence people and do things. Journalism is worthless that does not have the aim to cleanse, to uplift, to sweeten the character and life of its readers. Such a "stunt" as that is worthy of young energy. The thing the word is usually applied to is worthy of lunatics or imbeciles.

The Mob Ceremonial

WE congratulate the people of the United States. For more than a century they have suffered from a dreadful mental malady, which more than once has shed innocent blood and disgraced their civilization. Among the great nations of the world they have been peculiarly susceptible to mob-madness. Riots and insurrections marked the struggle to establish social order after the Revolutionary War. The struggle to emancipate the slave aroused all the most hateful passions of the human breast, until infuriated mobs burned private and public property, throttled freedom of speech, heaped nameless indignities upon men and women who attempted to teach the negro, and murdered men whose only crime was their zeal to deal justly and to love mercy. In the struggle of races since the Civil War, the lynching fury has slain both white and black, and not only by the relatively merciful methods of hanging and shooting, but by the unspeakable agonies of burning alive. And even in their religious experiences, as Davenport has told the story in his remarkable book on "Primitive Traits in Religious Revivals," entire sections of this nation have given themselves over for days together to howlings and shriekings, and faintings and writhings, and to the working of all unseemliness.

We congratulate this nation now because the horrible curse of its prolonged mob-mindedness has spent its force. The days of its appalling reality are past or are passing, and it has entered upon that curious second stage which, sooner or later, comes to all profound human experiences—the stage of ceremonial, of conscious make-believe, of the tribute of

imitation which the present ever renders to the past. Henceforth we shall have imitation mobs, just as we have imitation wife-capture and wife-purchase in wedding ceremonies, imitation war-whoops and war-dances in secret society initiations, imitation totemism in crests and coats of arms, and imitation obsequiousness in the familiar forms of address. And when a social phenomenon has become ceremonial, imitative and reminiscent, it has ceased to be dangerous, and is in a fair way to become silly.

The howling mob at Chicago last week was purely imitative and ceremonial. It was planned in advance, like the platform, the composition of the State delegations, and every other feature of the convention. and it was enacted strictly according to program. The convention which gave Grover Cleveland his third nomination at Chicago, in 1892, howled twenty-five minutes by the watch. That howl was the real thing—a genuine, spontaneous frenzy, in which the delegates themselves were the chief participants. Four years ago the Roosevelt convention howled for thirty-six minutes, and at Minneapolis Mr. Bryan's name called forth a shrieking and bellowing that was maintained for forty-two minutes. It was necessary to beat all these records, and so, by well organized and vociferous "rooting," the Roosevelt howl at Chicago was maintained for forty-nine minutes. The "rooting" function was discharged by Pennsylvanians and Wisconsin men in the galleries and by delegates from Southern and Southwestern States—which will vote the Democratic Presidential ticket—on the floor. This careful specialization of labor left the remaining delegates free to enjoy the ceremony. The Ohio and New York delegations, with becoming decorum, as representing the States that were to bring forward the predestined candidates, remained silent in their seats. Altogether the affair was a well devised, well conducted and rather impressive "show"—as shows go. Four large audiphones placed in front of the speaker's platform gathered up the resonance and transmitted it accurately by wire to Washington.

It is not to be supposed that so magnificent an example of the transformation

of true mob-mindedness into the fictitious and ceremonial variety could have been achieved without previous experimentation. We are inclined to believe that when this new phase of our national psychology is scientifically investigated, it will be found that the much criticised football mania has played a large part in mitigating the true and original mob spirit. The mob-mindedness of the football field under prolonged discipline has become largely a thing of form and ceremony. The "rooting," as is well known, is perfectly organized and well timed, and the outbursts of frenzy are graded to a nicety. In one minor point only the Chicago mob seems to have failed to conform to the best football mob etiquette. In the football contest it is always good form for the defeated party to leave the field in tears.

Mental Medicine

WITH nervousness so common that it has come to be called "the American disease," it is remarkable that the United States has been behind European countries in the study of its phases and treatment. We have good insane asylums, but little has been done to keep people from qualifying to enter them. The Church in America has relinquished its historic function of ministering to the mind diseased, chiefly thru fear of being led into the old superstitions. Our medical schools have neglected to provide opportunities for the student to specialize in such lines or even to become acquainted with what has been done elsewhere. Collegiate psychology has kept severely aloof from such lines of investigation as might relieve the afflicted. The field thus neglected by the established organizations has produced an unprecedented crop of religious and medical fads and fakes, undeniably beneficial in some cases, but involving such a break with the scientific thought of the age as to be, fortunately, unacceptable to many people.

Now there seems to be a change in the institutional attitude to such subjects. Johns Hopkins has received from Mr. Phipps a donation of half a million dollars to found the first psychopathic hospital in America. Dr. Morton Prince—he who put together the dissociated and

quarrelsome personalities of Miss Beauchamp—in his commencement address at Tufts College advised that institution to develop courses in the treatment of nervous diseases by suggestion. In the University of Pennsylvania Dr. Witmer has opened a psychological clinic and is doing wonders in the reform of backward children. And the Summer School of Psychotherapy, which has just closed its two weeks' session at the Emmanuel Church in Boston, showed what a deep and widespread interest there is in this unique attempt to combine the forces of religion and science, as described by one of its leaders in our issue of May 21st.

Drs. Worcester and McComb, in their two years' work, have had to make heavy drafts on the subliminal reservoir of energy which they claim we all have at our disposal, for they have sometimes worked sixteen or seventeen hours a day. With eight, and sometimes ten, persons assisting them they have found it impossible to see, even for a single conversation, one out of four of those who presented themselves. They had all sorts of cases to handle: a big policeman who was afraid of the men and boys on his beat; a Harvard candidate for Ph.D., who feared that he could not pass his examination; an opera singer who was troubled by wanting to swallow while singing; a man who could not undress himself because he could not decide which button to unbutton first; a school-teacher who was kept awake nights by the fear that she might have locked in one of her pupils; boys with bad habits; men enslaved by alcohol or morphine; and women tortured by headaches.

The most encouraging feature of the Emmanuel Movement is not its numerous and remarkable cures of functional nervous disorders, but its demonstration that such cures can be accomplished in a rational manner and under the guidance of trained physicians. There has been hitherto a feeling that the field must be left to the charlatan, because he alone possessed the necessary qualifications. Were not the loud voice and dogmatic temper essential for success? To impress the patient with the saving faith must not the physician have confidence in his own infallible power to heal, and how could he have such confidence when

he realized the limitations and lapses of his power? And could an honest man deny the existence of a very real pain and say, "You are sleepy," when he knew you had insomnia? But so far the Emmanuel Movement seems to have been conducted with admirable restraint and to have avoided the temptation to achieve spectacular results by questionable methods. The danger is now that its numerous imitators in other cities will not be as wisely controlled. Dr. Worcester's remark that he "would rather be sick than crazy" is a wholesome maxim.

Nervous sufferers should not be condemned nor neglected. A disease of the imagination is not an imaginary disease. Any physician would rather undertake to cure a broken leg than a case of melancholia. If suggestion, hypnotic or ordinary, can do what dietetic and medicinal treatment fail to do, we ought to know it. In many different ways now the world is being taught the old lessons of the Church; the close relation between sin and disease, the physical advantages of a faith in God, and the benefits, immediate and practical, of prayer and of the forms of worship.

Depression in the Churches

LAST year was a lean year with the Churches. There are times of advance, and times of rest, or even of regression, and too much must not be made of the failure to mark the usual annual progress. We hear complaints abroad as well as at home. In Great Britain the Baptist communicants reported for 1907 were 429,977, 4,864 fewer than in 1906. There were 744 more Sunday school teachers, but 3,161 fewer scholars. The British Congregationalists have almost held their own, but not quite. Their membership is 459,663 for 1907, a loss of 275. While the Sunday school teachers have increased by 1,589, the scholars have fallen off by 9,030. The Wesleyan Methodists show the same loss, the membership of 525,256 being 2,200 fewer than in the previous year, while the scholars are fewer by nearly thirteen thousand. Five smaller Methodist denominations show a total loss of 8,515 scholars and a small loss in members. A single one, the

Primitive Methodists, report a gain of 1,500 members, but they lose 1,203 Sunday school scholars. In Wales the largest denomination is the Welsh Calvinistic Methodist Connexion, which is Presbyterian in government. Its membership is given as 187,768, a loss of 1,396. The total loss in membership of the Nonconformist denominations is about 14,000, and that in Sunday schools over 35,000. Indeed, one of the best ecclesiastical statisticians in Great Britain puts the loss in members in England and Wales at 17,434.

Now, what is the cause of this ebb? A principal cause for Great Britain is the sloughing off of the excess of members who joined the Churches during the excitement of the Welsh revival. Mr. Howard Evans, the statistician quoted above, says:

"The figures show a general tendency toward depression, mainly, tho not exclusively, due to reaction after the revival in Wales. This reaction was foreseen by all impartial observers."

The Baptists report an increase of 31,372 in 1905, so that, if the entire loss in 1907 of 4,864 is to be charged to the Welsh shrinking, there is yet a considerable credit to the good. The conditions have been the same in other bodies. To be sure, the Welsh revival did not extend much beyond that principality, but never in the history of the Free Churches have greater efforts been made for advance, thru the National Free Church Council, and a staff of revivalists has been at work, of whom "Gipsy Smith" is one of the most noted.

There are doubtless other reasons beside the Welsh shrinking for the depression, which is general. The very serious question is as to whether it is caused by a loss of faith among the people in Christianity itself, or by the failure of Christianity to adjust its pulpit teachings to the new knowledge. The terrors of the Lord do not drive men as much as they did; we must make more of the drawing force of love and the Christian purpose to do right. Perhaps we shall have a larger view of what it is to be a Christian, and shall be able to attract to the Churches many who now feel repelled by creeds which they cannot accept.

Spontaneous Generation and Sanitary Science

EVERY now and then, in spite of all the scientific demonstrations to the contrary, articles are published even in serious magazines bearing the names of scientists, which suggest the possibility of spontaneous generation. As is remarked by an editorial writer in the *Journal of the American Medical Association*, such claims are made much more rarely by biologists than by scientists of other departments. Another excellent distinction in this matter is that the less a man wants to attract attention or create a sensation the less does he assume the possibility of spontaneous generation. Men like Lord Kelvin or Pasteur or Virchow and above all those biologists who have had a medical training make no such absurd claims. As a matter of fact, as is stated very clearly by the editorial in the *Journal*, all of our sanitary laws and practically all our practical medicine in its most scientific phases are founded on the principle that life does not originate spontaneously. If it does then is all our attempted prophylaxis of disease vain and most of the work of our great municipal departments of health nugatory and merely an affliction of spirit.

The particular reason for calling attention to this was Mr. Percival Lowell's declarations in the *Century*, in his articles on "Life on Mars," that whenever the conditions for the existence of life occur the lower forms of life at least inevitably come into existence. He says:

"Virtually, only six so-called elements go to make up the molecule of life. It is the number of its constituent atoms and the intricacy of their binding together that give the instability to produce the vital actions. Carbon, hydrogen, oxygen, nitrogen, phosphorus and sulphur are all that are required. If a planet be capable of furnishing these under suitable conditions, it seems as inevitable that life will ensue as that the two elements sodium and chlorine will unite to form common salt when the heat and pressure are right."

Modern medicine is founded on the absolute contradiction of such a proposition and such modes of reasoning. If our modern science of bacteriology means anything its import is to be gathered from its teaching that living things even in their very lowest forms never come into existence except when derived

from preceding life of their own kind. When a physician, and above all a health official in a city, finds a case of typhoid fever he does not entertain for a moment the idea that he has in this an example of the concurrence of the conditions necessary for the new production of a living typhoid germ. He looks at once for the preceding case of typhoid from the stools of which the typhoid germ was somehow conveyed to this new patient. He may have to travel out to a distant farm to find that some one is caring for a typhoid fever patient and without proper cleansing handling the vessels in which city milk is transported. He may have to go to the place where the oysters that the patient ate were kept in fresh water for a while in order to "plump" them, to find that the fresh water is contaminated with sewage. He may find, as in one famous case in the history of American sanitary science, that the case of typhoid fever which gave rise to an epidemic occurred nearly three months before the epidemic broke out, that the patient's stools had been thrown out on the ice in December and had not contaminated the water supply until there was a thaw at the beginning of March, but always he finds the preceding case as the source of the germ.

It is for this reason that living germs always arise only from preceding living germs that modern medicine cherishes the hope of eradicating all the infectious diseases. It is only a question of complete segregation and the sterilization of the excretions of the patient. It probably will not come in our day, but it is not nearly so distant nor so hopeless as is sometimes thought. Even tuberculosis will be made to disappear just as leprosy has disappeared, tho it was probably as widespread in the middle ages as tuberculosis is now. If there were any question of the origin anew of the germs of these diseases because favorable conditions for their existence occurred even without the presence of a previous germ of like kind, then physicians could not legitimately anticipate the eradication of infectious diseases. All the experimental evidence we have is against spontaneous generation; and while this is obviously inadequate to disprove the theoretic possibility that it may have occurred some-

time or may be occurring somewhere, we are justified in leaving this out of consideration in practical science.

The principle of the non-occurrence of spontaneous generation, however, is not only a fundamental proposition in bacteriology, but it constitutes the basic postulate in pathology. As Virchow showed very clearly in laying the foundation of cellular pathology, not only does no living thing, however low in the scale, originate except from preceding life, but no portion of any living thing comes into existence except from another living particle of the organism of which it is to form a part; not only *omne vivum ex vivo* (every living thing from another) but *omnis cellula e cellula* (every cell from a preceding cell). Much used to be said in the old humoral pathology of the *visus germinativus* that gave rise to newly formed tissue after inflammatory reaction, but we know now that no germinative power in any fluid in the body, no matter how powerful it may seem to be, is capable of producing a living cell. As the editorial writer in the *Journal of the American Medical Association* declares:

"Any popularization of science, real or supposed, that tends to weaken this conviction of the impossibility of the origin of life or of any portion of any living thing except from preceding life strikes directly at the modern scientific principles by which physicians have brought about the beneficent reduction in disease, and have so magnificently lessened human suffering and increased the length of life."

Philippine Independence

No doubt the Filipinos, or most of them who know what they want, want independence, and so they have expressed themselves in the Philippine Assembly. They have not quite got it yet, but they have vastly more of it than they ever had before in all their known history. They elect their local rulers, and they have their own constabulary, and they choose one of the two houses of their Legislature, and are represented in the other. If not quite independent they could not have a less onerous dependence. Were we to leave them to themselves how would they like German or French or Japanese rule? But that is not what they ask. It is that they be left independent, with the United States to protect them against other nations.

But that is not independence; it is nothing but dependence, and would run into annexation, as is imminent with Cuba. We may come to that. There are not many of our people who have any great fondness for possessing the Philippines. If the time should come, in the fellowship of nations, that those Islands could be left safe from aggression, and the people could be trusted to keep the peace, beyond question the United States would quite willingly give them up to themselves if they wished it. But that is in the future, and every year of Roosevelt's or Taft's Presidency will make them more fit for independence when the time shall come. If we are not ultimately willing to make them into States of our Union we ought at the proper time to give them independence.

Representation in Conventions

The convention did not change the representation on the basis of the Republican votes, altho the vote was very close. It would be only fair, as things are, and ought to be done. The proposed rule would change Georgia's representation from 26 to 6, that of Wisconsin from 26 to 32. But such a rule applied to the Democratic convention would be very unfair; for in Georgia comparatively few think it worth while to vote at the elections and most are satisfied to do their voting at the primaries. In doubtful States, or where voting is free, it is only proper that representation should follow the votes. Where it is not free, suppress votes ought not to be counted. Where there is only one party allowed to vote, and that is done at the primaries, it is right that population and not votes should be the basis for the dominant party.

Berea College

Surprising and most gratifying is the success which is crowning the effort of Berea College to establish a large school or college to provide for its negro pupils, who were expelled by a law of the State, which forbade white and colored students to be taught together. It was announced at the meeting of the board of trustees last week that Mr. Carnegie had pledged \$200,000 on condition that an equal additional sum be raised. Of the remaining

\$200,000 there has \$90,000 been raised, and an unknown donor has offered \$50,000 on condition that as much more be raised in Kentucky, and every effort is now being put forth to secure it. This success in these hard times is most gratifying. The trustees are so confident of success that they are now trying to select a location for the school near the denser negro population (which is about Lexington in the east and Paducah in the west), where sufficient land can be purchased on a farm and to protect against undesirable neighbors. Kentucky had a negro population in 1900 of nearly 300,000, about 13 per cent. of the population. Such a school, sufficiently supported, would draw from the negro population in States to the south. At present Berea provides for 142 negro students at Fisk University and elsewhere, while it counted over a thousand white students the past year.

Because of his exceptional ability great things were expected of Hon. Alfonso Taft's sons. These expectations have been fully realized, for Charles P. Taft is editor of the Cincinnati *Times-Star*, and an influential man in politics; Horace Taft is the successful headmaster of Taft's School at Watertown, Conn.; Henry Taft is a prominent New York lawyer, and William Howard Taft is the Republican nominee for President. The children of Secretary Taft seem to inherit the mental ability of their father, for Miss Helen Taft has been awarded the Pennsylvania scholarship in passing the best entrance examination to Bryn Mawr College, and Robert Alfonso Taft leads his class in scholarship at Yale.

December 9th will be the three hundredth anniversary of the birth of John Milton. He is one of those men for whom it is well to look backward in history, but it will still be looking forward in the ideal of liberty and the search for all that is true, beautiful and good. America should be ready to take full part in the celebration, for she has best learnt his teachings.

Premier Asquith, in a late speech, put the exact truth in telling terms when he

said that "It almost seems that the only specific against war on which the Christian nations of the world are agreed is the incessant multiplication of instruments of destruction." Sad, but true. We hear it *ad nauseam* that we must increase armaments, add to our battleships, to maintain peace.

The medical profession should be a learned profession. It is well that Cornell University will hereafter receive no students at its medical college that do not possess the A. B. degree. That rule already holds in Johns Hopkins and Harvard Universities. Medicine, law and theology should be treated as postgraduate studies that require the basis of wide education and trained minds.

Dr. Booker T. Washington, in telegraphing his congratulations to Mr. Taft, express the belief he would be triumphantly elected, and that "my race will assist in bringing about that result." Doubtless, and yet some needed instruction in plain facts will be required to secure that assistance.

Winston Churchill stamps all his books with his own initial: "The Celebrity," "Richard Carvel," "The Crisis," "The Crossing," "Coniston" and "Mr. Crewe's Career." Does this fondness for the high C's indicate that he had a pirate or a prima donna for an ancestor?

The pattern of the present fashion of ladies' hats, which has to be tipt like a saint's halo when entering a door, is as old as that worn by Chaucer's "Wife of Bath":

"And on his heed an hat
As brood as is a bokeler or a targe."

A Baptist church and a Disciples church in Chicago have voted unanimously to unite. There is sound Baptist union, which might well be the forerunner of the union of the two denominations.

A correspondent writes us as to a certain college, that it is denominational, but not sectarian. That is a distinction which it would be interesting to have defined and developed.

The Examination of the Washington Life

THE examination of the Washington Life Insurance Company of New York, recently completed by the Insurance Department of the State of New York, shows a very healthy condition of the company. When John Tatlock, sometime associate actuary of the Mutual Life, took the presidency of the company in 1904 its affairs were in a very unsatisfactory condition. The company's business records showed many discrepancies, and it was needful for the Insurance Department materially to revise certain items, both of assets and liabilities. The change of management brought John Tatlock into prominence in connection with the company. Thanks to generous financial aid extended by ex-Vice-President Levi P. Morton at this critical period, and which has never received proper recognition, but which conserved and preserved the estate of the Washington Life, it was made possible for the new administration to build up the company's business and make it a prosperous as well as a going concern. The examination just completed shows executive management of a high order. The expenses of the company in 1907 were kept within the limits of the loadings, a result, by the way, rarely, if ever before, obtained by a non-participating company. Better than all else, however, a substantial profit has been earned during the entire period of the last three years, in spite of the handicap necessarily signified by a criticised concern due to past management. President Tatlock has met the problems confronting him in the beginning, as well as those which have since arisen, in an intelligent fashion, and with rare judgment has been content to inaugurate a policy of moderate progress along sound lines. The assets found under the stress of searching examination exceeded those claimed by the company by more than \$50,000. The capital and unassigned funds were found on exam-

ination to be \$732,812.24, as against the company's figures of \$697,944.68. Nothing was found to criticise and much to commend. The task of Mr. Tatlock, that must frequently have seemed as too grievous a burden for any one man, has not only been done, but well done, and both he and his staff deserve all praise for the work they have accomplished and the showing they have made.

Insurance for Women

THE New York Life Insurance Company, in a recent circular, calls attention to life insurance for women. It is a fact that there are still a very large number of women who are unfamiliar with modern life insurance and its many advantages, at least in so far as it directly concerns themselves. Many women still have a lingering prejudice against the insurance of their own husband's life in their individual favor. Too many women think of insurance in an indefinite way as perhaps being a good thing for some one else. The general impression regarding insurance seems to be that death is the only possible way of winning. Term insurance, endowment insurance, annuity insurance and other forms of insurance protection might as well not exist in so far as many women are concerned. Because they do not know about them does not, however, argue that these forms are not good. Insurance is quite as good for women as for men. By means of it the bachelor maid may create an old-age fund just as surely as can her brother. The modern woman may well study the subject of insurance a little to her own great advantage. If it is a good thing for men and if it is approved and patronized by the wisest and best business men all over the country there is no possible reason why women should not enjoy its benefits if they so elect. When the payment of one premium creates an estate of \$1,000 or more, the thing is of necessity a pretty good thing.

First National Bank of St. Paul

THE new building of the First National Bank of St. Paul is an imposing structure of granite, whose interior is finished in marble and artistically decorated. The First National is one of the oldest banking institutions in the Northwest, having received its charter in 1863. Its first two presidents were James Egbert Thompson and his brother, Horace Thompson. The latter was succeeded in 1880 by Henry Pratt Upham, who is now chairman of the board, E. H. Bailey having taken up the duties of the presidency in January, 1907. The bank's capital is \$1,000,000; its surplus and undivided profits amount to \$1,086,049; it has \$9,183,816 in deposits, and its total resources are \$11,307,510. Among the directors are James J. Hill, the eminent railway capitalist of the Northwest; President Elliott, of the Northern Pacific Railway, and President Louis W. Hill, of the Great Northern Railway.

....Last week's exports of gold from this country make a total of \$45,750,000 since the beginning of the movement, in April.

....The Chatham National Bank has bought from the Corbin estate the building which it now occupies at the corner of John street and Broadway. The quarterly dividend of 4 per cent. which has just been declared is this bank's hundred and fiftieth dividend.

....The National Copper Bank, which was opened for business a little more than a year ago, has been admitted to membership in the New York Clearing House Association. This bank has a capital of \$2,000,000, a surplus of \$2,000,000, and \$361,537 of undivided profits. Its deposits amount to \$17,049,077, and its total resources are \$22,587,900. Charles H. Sabin is president. Among the directors are Henry H. Rogers, Jr., H. O. Havemeyer, Jr., Adolph Lewisohn, Charles F. Brooker, James M. Beck, F. Lothrop Ames, of Boston, and Robert C. Pruyn, of Albany.

FASHIONABLY Moulds Your Figure
ROYAL WORCESTER
ADJUSTO
CORSET

FOR FIGURES
 VARYING FROM
 AVERAGE TO
 OVER-STOUT

PRICE

\$3

The ADJUSTO is equally adapted to medium or average fig-

ures. It is skillfully designed to fashionably mould and shape the form into graceful lines.

The ADJUSTO bands, when tightened, lift the abdomen, hold it firmly, and support it comfortably. Gradually the excess flesh of hips and back is reduced and distributed equally, giving the straight back and new flat-hip effect.

For all women obliged to stand a great deal. the ADJUSTO is absolutely without an equal. A wearer, who is of medium figure, said recently:---

"My duties require my standing most of the time, and until I wore the ADJUSTO it was difficult to finish my day's work without becoming exhausted. I can now do more work with less exertion, and feel much better. It supports my figure perfectly, and is the strongest and most serviceable corset I have ever worn."

Another remarked—"Since wearing the ADJUSTO my hips, abdomen and waist have become noticeably smaller, and my figure is greatly improved. In all other corsets I require size 27, but I wear a size 25 ADJUSTO with perfect ease."

All genuine ADJUSTO corsets have trade-mark "ADJUSTO" stamped on inside of left side steel. This ADJUSTO trade-mark is your protection against imitations.

MEDIUM FIGURE, STYLE 610 WHITE OR DRAB COUTIL, 620 WHITE BATISTE
 TALL FIGURE, STYLE 614 WHITE OR DRAB COUTIL, 624 WHITE BATISTE

REO 5-passenger touring-car, 18-20 h.p. 40 miles an hour. Detachable tonneau. Full lamp equipment. \$1250 f. o. b. Lansing. Top \$50 extra.

Why the REO?

Because it is a practical car at a practical price.—Powerful, enduring, safe, smooth-running, easy-riding, economical to operate, and full of style.

The engine makes unusually big power for its size, and applies this power in an unusually effective way; the transmission is simple and strong; the lubrication the most efficient used in any motor-car; and the construction thoroughly substantial and high-grade.

When you can buy such thorough-going ability (proven by a hundred unparalleled victories) at such a price, why pay twice the money for no better service?

REO 5-passenger Touring-car \$1250; REO Gentleman's Roadster \$1000
REO 4-passenger Runabout \$650
